"Right now the southern Negro is in a better spot educationally, politically and economically than the Negroes any place else in the world. Race relations are continually improving. Every day more southerners are recognising the Negro as a man and according him the respect which he merits, but the southern Negro himself can do more about improving conditions than can courts, legislation or pressure groups."

In the 5-year period from 1951–55, a $274 million school construction program was carried out in the State of Georgia. More than half of this school construction, 54 percent of it to be exact, went into construction of Negro schoolhouses. The Negro schools are exactly the same modern, fully equipped schools as the white. In my own county Negroes have fared better than white students, because now all Negro students are in new construction while many white students are still using old schoolhouses. Here are photographs of some new schools constructed for Negro pupils.

We name the Negro schools after outstanding Negro citizens, which we believe is an inspiration to Negro children to become good citizens themselves.

We also provide for higher education of Negroes. There are Negro colleges and universities in Georgia, and the State has a scholarship assistance program under which, during the school year 1954–55, 2,290 grants were made to 1,825 Negroes studying at 67 institutions, at a cost to the State of $208,217.90 for that 1 school year. So you can see, Mr. Chairman and gentlemen, that the white people in my State and in my congressional district are giving the Negro children, almost wholly unaided by the Negroes themselves, unlimited educational advantages. We have done this, and we are doing this, uncomplainingly.

We encourage them to progress as much as possible. In my home district, Negroes have progressed to a remarkable extent. They own banks, radio stations, insurance companies, drugstores, grocery stores, office buildings, undertaking establishments, and commercial businesses of practically every description. In will probably shock some of you to know that there are Negro policemen serving on the Atlanta City Police Force and that a Negro member serves on the city of Atlanta School Board. There are some 25,000 registered Negro voters in the city of Atlanta. Everyone is registered who wants to register just as the white people are, and everyone votes who wants to vote just as the white people do. They do not have to vote to themselves. They stand in the same lines the white voters stand in and they use the same voting machines which the white voters use.

We insist upon segregation—yes, for the experience of generations and years has demonstrated that goodwill and the mutual advantage of both races is best served on a segregated basis. The Negroes know that as well as we do, and the peaceful relations which exist between us demonstrate unquestionably that our solution of the problem is the best solution.

So long as meddling busybodies will leave the whites and Negroes alone in our section, we have peaceful relations; we will live side by side on friendly terms; the Negroes will have unlimited educational opportunities, and will progress as fast as they are able to progress. They will fare better with us than they will in the North, and the sensible Negroes know it. Our segregated system keeps down the riots which you have had in Detroit, Chicago, Cicero, and other places when a Negro moves into a white neighborhood. We know the Negro must have a roof over his head, and we help him provide it in his own neighborhoods. If that neighborhood grows and expands, we help him get located in another neighborhood. He does not have to move into a section where he is not wanted, and where the white people gather by the thousands and throw rocks

through the windows and inflict personal violence upon the occupants.

Both Negroes and whites when left alone will voluntarily segregate themselves as to schools, churches, dwellings, and social affairs. This is demonstrated in Baltimore where the school pattern is substantially the same as it was before the fraudulent decision of the Supreme Court on May 17, 1954. It is demonstrated by the segregated pattern which is followed in New York City where the cheap politicians and the meddlers are now trying to bolster up a sagging integrated program by hauling bus loads of Negro children from Negro neighborhoods to white schools and bus loads from white neighborhoods to Negro schools, and by putting on a program of forced integrated dancing among the pupils as they are doing there.

This tendency of the races to voluntarily segregate themselves is proven here in Washington where in spite of all the frantic efforts to force integration of the races in schools, the introduction of Negroes into a white school does not turn it into an integrated school—it turns it into a Negro school within the course of a few years, just as fast as the white people can make arrangements to uproot themselves from the community and reestablish themselves over in Virginia or Maryland where they are not plagued with this crack-pot theory of forced integration. These things are the facts of life, and it is far better to settle them peacefully than it is to push things to the breaking point where law and order breaks down and violent rioting with its tragic consequences takes place.

Mr. Chairman, if the American people are to remain a Nation of self-governed people, government must be kept close to the people. There can be no dispute that our Government is a Republic of Sovereign States. Under our Constitution, control of local affairs is the function of the State. It also guarantees to the citizen the right of trial by jury. So long as these two constitutional provisions are respected and carried out, the American people will have self-government and protection of individual liberties and personal rights.

Local government should not be taken from the States and placed in the hands of bureaucrats in Washington. If local self-government is destroyed, and if the right to trial by jury is lost, then individual liberty and freedom will surely be lost along with those two constitutional bulwarks.

This legislation is an attempt to overturn those two constitutional provisions. The radicals who want to remake our Government and remake the world know well enough that substitution of judicial dictatorship for trial by jury is a long step toward that objective. This legislation goes hand in glove with such schemes. It is a strong threat to our form of government.

This legislation is also a threat, and a serious one, to law enforcement. The policemen and sheriffs who have the job of protecting the lives, safety, and property of law-abiding citizens have an extremely difficult task now of coping with the thieves, robbers, yokers, purse snatchers, rapists, and murderers. Even under existing laws, this radical organization, the NAACP, is continually bombarding the FBI, the Attorney General's Department, and other Federal Government agencies with false and unfounded claims that Negro criminals are being manhandled, mistreated, oppressed, and deprived of civil rights. To illustrate the absurd, ridiculous, and unreasonable extent to which these tactics are carried, I want to give you some figures from a statement of the Attorney General introduced by Chairman CELLER at a committee hearing before Subcommittee No. 2 of the Judiciary Committee on July 13, 1955. These figures appear on page 176 of that printed hearing. In the years for which total number of complaints of alleged civil rights violations were given and total number of cases tried and convictions secured, the figures given by the Attorney General were as follows: In 1940, 8,000 civil-rights complaints were received; no figures given as to how many cases prosecuted, or how many convictions secured. In 1942, 8,612 complaints received; prosecutive action taken in 76 cases; no statement as to how many convictions or acquittals. In 1946, 7,229 complaints were received in civil rights and political cases. Fifteen cases were prosecuted, in which 5 convictions were secured. In 1947, 13,000 complaints were received; 12 cases were prosecuted, of which 4 defendants were convicted. In 1948, 14,500 complaints were received; 20 cases prosecuted; no figures given as to convictions. In that same statement the Attorney General estimated that 15,000 complaints would be received during 1949.

Certainly when a situation exists where 13,000 complaints are filed alleging violations of civil rights, of which 12 were considered worth trying, and of that 12 cases tried 4 convictions were secured, undoubtedly the world's record is broken for the filing of groundless complaints.

Yet these groundless charges, stirred up by the NAACP, 41 percent of whose officers and directors are cited in the records of the House Committee on Un-American Activities as having connection with subversive organizations, caused the harassment and hindrance, and in some cases intimidation, of policemen, sheriffs, prosecuting attorneys, and law-enforcement officers all over this country. It cost the taxpayers millions of dollars to process 13,000 groundless complaints. The Department of Justice, according to the testimony of witnesses, maintains in the Federal Bureau of Investigation 172 specialists on civil rights matters, and the Attorney General maintains in his Civil Rights Section 7 civil rights attorneys and 4 other civil rights employees.

While the Attorney General's office is spending millions of dollars of the taxpayers' money on this civil rights foolishness, he is costing the taxpayers of the country other millions of dollars which could be saved if money spent for employees in this useless Civil Rights Section were used to employ attorneys to try cases which are 5 years and more behind, in the Tax Division, and Court of Claims, cases in which interest is running against the Government, and will finally have to be paid, at the rate of $5,000 per day or nearly $2 million per year. If the Attorney General would use this money which he is wasting fooling with 13,000 groundless civil rights complaints, and hire lawyers to catch up with these untried cases in which interest is running against the Government, those millions of dollars could be saved. Testimony on this waste of taxpayers' money is found in the statement of Attorney General Brownell on page 56 of the Senate State, Justice, and Commerce Subcommittee hearings on May 10, 1956, and testimony of Mr. W. E. Burger on page 47 of the State, Justice, and Commerce Subcommittee hearings of the House on March 2, 1953.

One might well ask why the United States Department of Justice would continue year after year to encourage and magnify thousands of groundless complaints, which their experience of 18 years since the civil rights section was set up in 1939, has demonstrated to be groundless. I think the testimony of Mr. S. A. Andretta, administrative assistant to the Attorney General, on page 149 of the State, Justice Senate subcommittee hearings for fiscal 1957, let the cat out of the bag and gives the answer. That testimony is:

"Senator JOHNSON. Mr. Andretta, I want to ask you one or two questions.

"I understand that the appropriation carries provision for several lawyers in the civil rights section; is that right? I understand it is seven.

"Mr. ANDRETTA. Yes; it is.

"Senator JOHNSON. I understand that going back to 1951 you have had the same number.

"Mr. ANDRETTA. Yes; the same staff.

"Senator JOHNSON. If you were not asking for any additional people in the civil rights section in all these years, 1952, 1953, 1954, 1955, why is it that you are asking for a whole new division in an election year, 1956?

"Mr. ANDRETTA. I don't know the answer to that.

"Senator JOHNSON. Thank you very much."

Now the same question presents itself with reference to these pending bills. If the 18 years' experience with this civil rights section in the Justice Department shows that as many as 13,000 civil rights complaints will be stirred up and filed in a year, of which all but 4 were groundless, what reason is there for creating a new "civil rights division" which would be done under this legislation?

One reason, I think, is this: Although there are many good law-abiding Negroes in this country, nevertheless the bulk of the crimes of violence are committed by Negroes. The records show it, and there is no escaping the truth of it. This radical organization, the NAACP, under the guise of protecting civil rights, runs to the assistance of Negro criminals and seeks to protect them from the punishment for the crimes they commit. This has been their record.

This pending legislation, if enacted, would tie the hands of law enforcement officers throughout this country, and would place law-abiding men, women, and children at the mercy of brutal, merciless, hardened criminals.

Much of the crime of this country is committed by dope addicts. A Federal Narcotics Bureau report issued on February 15 shows that 60 percent of the drug addicts in the United States are Negroes. The news item giving this report follows:

"SIXTY PERCENT OF UNITED STATES DRUG ADDICTS ARE NEGROES

"Washington, February 15.—A Narcotics Bureau report that 60 percent of United States drug addicts are Negroes was made public Friday.

"Negroes represent about 10 percent of the total population, the report said. It was contained in testimony by Narcotics Commissioner H. J. Anslinger to a House appropriations subcommittee in closed hearing February 4.

"The Bureau's breakdown gave these other figures: White population, 87.8 percent of the total, with 29 percent of the addicts; Mexican, 1.5 percent of the population, 4 percent of the addicts; Puerto Rico, 0.2 percent of the population, 5 percent of the addicts; other races, 0.5 percent of the population, 2 percent of the addicts.

"Representative PASSMAN (Democrat, Louisiana) said in a statement the analysis was furnished at his request. He commented it shows an 'extremely one-sided' racial distribution of addiction, and he added:

"I think this is significant and should be brought into true perspective, so that the problem may be factually and objectively recognized by the public."

Here in the city of Washington, the Nation's Capital, where both white and black ought to make the best possible showing, crime records for fiscal year 1955 show that of major crimes committe, 82 percent were committed by Negroes, the figures being 1,947 committed by whites, 9,053 committed by Negroes.

The crime records of the Federal Department of Justice show that of 13 Eastern, Northern, and Western States, including Illinois, New Jersey, New York, Ohio, and Pennsylvania, the rate per 100,000 of Negroes

in prison on felony charges was 681 percent over whites. The same crime record of the Justice Department shows that in 10 Southern States the Negro is a better citizen than his Northern counterpart, the rate of Negroes per 100,000 in prison on felony there being only 248 percent over the whites.

Law enforcement officers in every section of this country know that this pending legislation would seriously cripple law enforcement.

On February 1 this year, Police Chief William H. Parker of Los Angeles, Calif., in a speech at Fresno to the California Peace Officers' Association, pointed out the danger of this legislation. He told the association that these very bills pending before your subcommittee, being the civil-rights program offered by the Eisenhower administration through Attorney General Herbert Brownell "would put the police out of business." He further said that he opposes the proposal to establish a Federal Commission to Investigate alleged civil-rights violations by local law enforcement agencies. He declared that such a group (Federal Civil Rights Commission) would play into the hands of the Communists, "who know they cannot bring about a revolution or make advances in the face of a resolute police force."

The California Peace Officers' Association, after hearing Chief Parker, authorized its executive committee to petition Congress to "look at both sides and beware of legislation which might seriously cripple law enforcement."

The following news item regarding this action was carried in the Lost Angeles Times for February 2:

"PARKER HITS CIVIL RIGHTS LEGISLATION—LAW ENFORCEMENT MAY BE HAMPERED, HE TELLS OFFICERS

"FRESNO, February 1.—The California Peace Officers Association, at the urging of Police Chief William H. Parker of Los Angeles, asks Congress to be careful of any civil rights legislation which would hamper law enforcement officers.

"The group's action was taken here today. The executive committee was authorized to caution Congress to 'look at both sides and beware of legislation which might seriously cripple law enforcement.'

"San Diego Police Chief Elmer Jansen, association president, said the action will not commit the organization to oppose or support any specific legislation but will state the organization's views.

"Parker declared the civil-rights program offered by the Eisenhower administration through Attorney General Herbert Brownell 'would put the police out of business.'

"He said he opposes a proposal to establish a Federal commission to investigate alleged civil-rights violations by local law-enforcement agencies.

"Parker declared such a group would play into the hands of Communists 'who know they cannot bring about a revolution or make advances in the face of a resolute police force.' "

Mr. Edward Scheidt, motor vehicle commissioner of North Carolina, a former FBI agent for 22 years, has already testified before your subcommittee. He has warned that this legislation would be an open invitation to any complainant to circumvent local governmental facilities by dealing directly with Federal authorities merely by claiming that some civil right was endangered or violated. This would bring law enforcement to a complete halt, inasmuch as there is no possibility that Federal courts can take over and expeditiously handle the trial of State law violations. There are not enough of them and they do not sit long enough.

There is no necessity for this legislation in order to protect voting rights. Ample law now exists to protect any person from being deprived of his right to vote. I can cite you to a case tried in Georgia in 1955 which will refute any claim to the contrary. The case was that of Charlie W. Thornton et al versus C. C. Martin et al., registrars of Randolph County, Ga. It was civil action No. 520 in the United States District Court for the middle district of Georgia, Columbus division. This is the congressional district so ably represented by my distinguished colleague, Congressman E. L. FORRESTER.

This suit was brought by nine Negro plaintiffs on behalf of themselves and others who alleged that their names had been illegally removed from the voters' registration list in 1954. A jury verdict was taken in which the allegations of the plaintiffs were sustained, and $880 damages was awarded to the named plaintiffs. A decree was entered by the court upon the jury verdict in which the registrars were ordered to place the names of 134 Negroes back on the voters list within 10 days of the decree, and the order was complied with.

If there are any other Negroes in Georgia who claim they are illegally deprived of the right to vote, the same remedy, under the same law, is available to them in the United States District Court just as in the Randolph County case. Being brought under Federal laws, in a Federal court, the same remedy is available to citizens of any State, a fact which is well known to the Attorney General, and to his civil rights section.

Mr. Chairman, this legislation is not only dangerous in that it threatens a complete breakdown of law enforcement; it is unconstitutional; it is absurd and ridiculous; and finally, it is unnecessary. I urge this subcommittee to so declare it.

Tribute Paid to Ruth W. Jessee Upon Receiving Doctor of Philosophy Degree in Nursing Education

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of February 25, commenting on the recent honors bestowed upon Dr. Ruth W. Jessee, of Wilkes College, Wilkes-Barre, who is the first nurse in the Wilkes-Barre area to receive a doctor of philosophy degree in the field of nursing education:

The tribute associates paid over the week end to Ruth W. Jessee, the first nurse in this area to receive the degree of doctor of philosophy in the field of nursing education, bespeaks the pride of the community as well as Wilkes College and the profession in her achievement. She is in charge of the nursing education program at Wilkes.

A bachelor of science and a master of science, Dr. Jesse has had a distinguished career, now heading for new heights as a result of the recognition that has come to her from the University of Pennsylvania.

Nursing is one of the oldest of the professions and it is making considerable strides as graduates of accredited nursing schools seek college degrees after completing the basic 3-year course, qualifying them as registered nurses when they pass State board test. Many nurses these days go in for specialization.

Like every line of endeavor, nursing offers opportunities commensurate with the talents of the individual. That is why an increasing number are going in for advanced training. Dr. Jessee has set a new standard with her accomplishment.

America's Indians Get a Chance

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BERRY. Mr. Speaker, recently I have read a number of articles which leave the impression there is little hope in our modern society for the American Indians. I cannot agree with this position. In this connection, I would like to insert an article appearing in the February 1957 issue of Together, the official organ of the Methodist Church, entitled "America's Indians Get a Chance." The author, James Daniel, was formerly a reporter for the Scripps-Howard newspapers, and is currently on the staff of Time magazine. I believe it is a much more accurate picture of present-day conditions.

The article follows:

AMERICA'S INDIANS GET A CHANCE
(By James Daniel)

Johnny Begay is a 10-year-old Navaho Indian boy with wide, dark eyes, straight, black hair, and a dazzling smile. Born in a 1-room, windowless, mud-and-log "hogan," third of 5 children of a poor, disease-cursed family (the first 2 children died in infancy), Johnny might have grown up to be just another blanket Indian, living on a Government dole like thousands of others on the huge Navaho Reservation in New Mexico and Arizona.

But one day when he was 7 and herding sheep, the principal of a school down in the valley drove up the canyon to talk with Johnny's father. Through an interpreter she explained that there was a new Commissioner of Indian Affairs in Washington, Glenn L. Emmons, who was distressed because half the children of the Navaho Tribe, largest of all Indian groups, were not attending school. She quoted from a talk he was making to all tribal councils all over the country: "Other children can grow up to be doctors, lawyers, teachers, nurses, businessmen, bankers, skilled operators. They can be Congressmen, governors. Your children can, too, if they have the education and we give them their chance."

"What does she want me to do?" the father asked the interpreter uneasily.

"Put that boy in school," said the principal firmly.

"Oh, no," the father protested. "Who would do his work?"

"I will," spoke up Johnny's mother. "The strange woman has a good face. What she says is true. If we keep the boy here, he will never have any life but this."

Half an hour later Johnny was waving a shaky good-bye to his family and riding the rutted trail down to the reservation boarding school. Starting without a word of English, Johnny made such progress in the next 3 years that last fall he went with 500 other Navaho boys and girls to Gallup, N. Mex. There he lived in a big new dormitory staffed with house mothers and entered the city schools of racially cosmopolitan Gallup, striking up friendships and studying with chil-

dren of Yankee, Italian, German, Polish, Mexican, and other stock.

Johnny Begay stands for a new era in Indian relations. It is an era that began in 1952 when Presidential Candidate Dwight D. Eisenhower pledged to work out a solution of the age-old problems of our original Americans, in close and continuous consultation with the Indians themselves, and to bring them into the main stream of American life. To redeem that pledge the following year, he appointed Glenn Emmons, a small-town country banker from Gallup and long-time champion and friend of the Indians, as the 38th Commissioner of Indian Affairs.

Under Emmons, Indian poverty, disease, and ignorance have been subjected to their most concentrated attack in history. Indians have been freed from humiliating laws that point to them as second-class citizens. Best of all, their own creative self-help potentialities have been powerfully stimulated.

"No longer is our problem prodding Indians to get going," confides a veteran Indian Bureau official. "It's trying to keep up with them."

Born in Alabama 61 years ago, Emmons got out the Army in 1919 and headed for Gallup and a job as a bank clerk. Gallup was a coal-mining town with hitching posts in front of the saloons. Indians and their squaws thronged the streets on Saturdays.

Many old Indian warriors still bitterly recalled the Navahos' terrible forced march into exile with Kit Carson. Until the Yankees came along, the Navahos had been a proud and powerful tribe. Now despised, they were discouraged, ragged, and dirty, and some drank themselves petrified to forget. But Emmons saw they were just ordinary people in trouble, and his heart went out to them.

Incensed that Indians, forbidden by law to mortgage their land, could not borrow money except at scandalous rates from professional moneylenders, he and a brother, who had built up a little bank of their own on borrowed money, experimented by making character loans to Indians. Sometimes Emmons struck out the bank's name on the note, substituting his own and advancing personal funds. He counted on the Navahos' natural thrift and skill as livestock men, and the Indians kept faith with him.

Emmons was one of the Southwestern leaders who joined behind the Indians' right to vote, which led, in 1948, to court decrees that Indians were being deprived of their citizenship rights by party machines in Arizona and New Mexico. And in 1952 Emmons urged Eisenhower to come to the Gallup Indian Ceremonial. There, at the big festival of Indian tribes from all areas of the country, Eisenhower signalized the political maturity of Indians by including them in his program, to bring them into the mainstream of American life.

After the election, the Navaho tribal council sent emissaries to Washington to urge Emmons' appointment as commissioner. The President waited until more than 150 tribes had had a chance to express themselves on this issue. Then in July 1953 he named Emmons as the preference of the elected tribal leaderships and promptly sent the new Commissioner on a 2-month tour of Indian reservations throughout the West.

When Emmons returned to Washington, he was the best-informed Commissioner since the job was created in 1824. He reported that "Indians want what other Americans want: help in overcoming ignorance, poverty, and disease, of which they have more than their share." He pointed out that Indian infant mortality was nearly 3 times as high as for the rest of the country, and tuberculosis mortality 5 times as high. Indians suffered 8 times as much infectious hepatitis, 10 times as much dysentery.

Despite solemn treaty promises, we had failed to provide Indians with even minimum education. Some 20,000 children of school age hadn't been in a classroom; many times that many adults were unprepared to earn a living. As recently as the 1940's Government policy strove to isolate the Indians on the reservations, on the theory that they were incapable of competing or even protecting themselves against modern American society. And so on the 54 million reservation acres, some of it so arid that it took 160 acres to provide forage for 1 horse, were crowded some 250,000 to 300,000 Indians. Furthermore, a high birth rate which even now is expected to double the Indian population in the next 21 years meant that every year the Indian standard of living, already abysmally low, would decline considerably.

In a move which Emmons approved, Congress cleared away an underbrush of archaic Indian law. It was ridiculous that in 1953 the Indians were denied the elementary right to own firearms. It was a Federal offense to sell liquor to Indians—a law that served to emphasize the alleged inferiority of Indians and was flagrantly disobeyed. Now, local option determines if there's to be prohibition and the Indian tribes, using their own police forces, courts, and jails, bear down on Indian drunkenness more effectively than the white man ever could.

Emmons succeeded in getting the United States Public Health Service to take over full responsibility for Indian health. Health cycles ordinarily respond slowly. But already this move, which led to an 87 percent increase in the number of sanitarians working among Indians, has caused such indices as tuberculosis deaths to decline markedly.

In education, Emmons started a crash program aimed at getting 100 percent of the school-age children into classes. On the Navaho Reservation, he speeded up the conversion of infrequently attended day schools into boarding schools, so that children would attend classes regularly. And one-room trailer schools were spotted over the reservation to test new school locations.

In a daring move, Emmons asked the cities of New Mexico, Arizona, and Utah to admit Navaho children to their public schools. Back came the reply: "Sorry. No funds."

"O. K.," said Emmons. "If we get you Federal money to build extra classrooms, put up Indian dormitories, and pay tuition, then will you take our children?"

Public opinion was on the spot. Racial prejudice long had been camouflaged by the practical argument that since Indian-reservation property is exempt from local taxation, it would be unfair to taxpayers to extend public services to Indians. Now this excuse wouldn't do, and after much public discussion Gallup and Aztec, N. Mex., and Holbrook, Winslow, and Snowflake, Ariz., agreed. A sixth town, Richfield, Utah, agreed to participate on a year-to-year basis with a limited number of Indian pupils.

Today, after only 2 years in operation, the public-school project has 1,400 Indian pupils and is the pride of the whole area. Of the 126 enrolled in Richfield, 86 made 3 grades in 2 years; 8 made 4 grades in 2 years; only 1 has failed.

Community attitude? Congressman H. A. DIXON, of Utah, reports that Indian children have been welcomed into Scouting; the Rotary Club has a standing committee in their behalf. The churches have given big dinners for them, and every single Indian child was invited into a Richfield home for Thanksgiving and Christmas dinners. Best of all, 14 Indian children have been placed in foster homes in the community.

In these schools young Indian lives that would otherwise be wasted are being made meaningful and productive. I recently spent a day at the Intermountain School at Brigham City, Utah, where 2,300 teen-agers are getting accelerated academic, combined with vocational, training. "We're doing a strictly profitable salvage job on these deserving youngsters," Superintendent George A. Boyce told me. "Forget, if you want to, that they deserve this. Remember that if we weren't helping them they would be on the taxpayers' backs for 50 years."

Boyce told me there is apparently a spontaneous movement among Indians toward Christianity. "It used to be that hardly any child came to us with a church affiliation or preference stated by the parents. Now hardly one comes without."

Intermountain has graduated a total of 518 boys and girls. Seventy-seven percent are holding down jobs, most of these off the reservations. The others are in service, or taking further education. Unemployment is an unbelievably low 3 percent. Typical graduates include a $297-a-month railroad-shop carpenter, a $258 sheet-metal worker, a $232 brick tender for an Ogden, Utah, construction firm; two $360 bricklayers in Denver; a $208 body-fender man for the Ford assembly plant in San Jose, Calif. Other young men are in the Army, Air Force, and paratroopers here and abroad.

Girl graduates go into domestic service, nursing, waiting tables, working in laundries, and clerking in stores—where there is work to be done. "They don't mind starting out humbly," says Boyce. "But get their foot on the first rung of the ladder and up they go under their own power."

Last fall an adult-education program stressing courses in English was launched among the Florida Seminoles, Arizona Papagos, South Dakota Sioux, North Dakota Chippewas, and Idaho Shoshones. "Thousands of people on reservations today are separated from the modern world by a language barrier," says Emmons. "No wonder they have such difficulty earning a living."

There's already proof that maturer Indians are employable, given a knowledge of English. During 1956 some 8,000 Indians, singly and in family groups, migrated from reservations to Chicago, Denver, Los Angeles, and other cities, where the Indian Bureau has job-placement offices. Some were middle-aged, some had never seen a telephone or a streetcar. Yet Bureau officials estimate that these newly transplanted Indians pay an average of $210 a year in income taxes—ceasing to be dependents of the United States and becoming cosupporters.

There is a significant movement of industry to the reservations, with the Indian Bureau helping tribes get in touch with companies seeking new plant sites. Currently, Indians are working in electronics assembly plants in Wisconsin and footwear factories in North Carolina. A west-coast furniture company has started a new factory in Gallup and has contracted to use Indians for supervisory as well as bench jobs.

Today we see the reservation Indian moving eagerly, confidently, into our society. Johnny Begay is not one little Indian boy—he is thousands. In 3 years the Navahos, largest and till recently the most backward tribe, have raised their primary and secondary enrollment from 14,000 to 26,000.

A few years ago you could count on one hand the Navahos getting higher education. This year 250 are enrolled in colleges, medical schools, nursing centers, and business schools. Of these, 99 have full scholarships from the tribal council, which not only pays tuition and board but sees to it that Navaho students have as much spending money as other college youth.

There is a new-found pride in personal appearance and grooming. On a recent trip to the Navaho country I marveled at not seeing even one unkempt or shabbily attired pupil. "There's a reason," said Wade Head, Indian Bureau regional director. "The tribe appropriated $400,000 of their own money to buy clothes for any child needing them." They specified there was to be no institu-

tional garb, but attractive individual clothing.

All this is only an outward sign of an inward change. As wards and dependents of the Federal Government, the reservation Indians naturally were suspicious, resentful, and often demanding. Today they have something to give. Recently a Navaho girl graduated from an eastern college and was offered a position teaching back East. Having held a scholarship awarded by her tribal council, she had a moral obligation to return to teach on the reservation.

She took her problem to Paul Jones, the wise chief of the Navahos.

"Accept the offer," he told her. "Those people back East have been sending us teachers and doctors and nurses for a long time. I reckon the time has come for us to begin returning the favor."

The American Legion and the Salk Polio Vaccine

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BEAMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a press release of the Indiana American Legion and the resolution that the Indiana Department of the American Legion presented to the National Rehabilitation Conference in Washington, D. C.

The American Legion is to be complimented and congratulated on their attempt to help in making possible innoculation against polio. This is a worthy community service project being carried on by this public-spirited organization.

The press release follows:

THE AMERICAN LEGION AND THE SALK POLIO VACCINE

Department Comdr. Reed Beard, of the Indiana American Legion, today issued a call from the national rehabilitation conference in Washington, D. C., to the 464 Hoosier posts to make adult inoculation against polio their outstanding community service project of 1957.

Commander Beard's action call was given a tragic accent by the first reported 1957 polio death in Indianapolis.

Groundwork for the nationwide adult polio inoculation campaign was laid in Washington last Sunday by the national medical advisory board of the American Legion composed of distinguished doctors and surgeons. Following its recommendation that the American Legion support the inoculation of all American people to stamp out polio. Dr. N. R. Booher, of Indianapolis, national rehabilitation vice chairman of the American Legion, drafted a resolution which was adopted by the national rehabilitation commission. It urged the 17,105 posts of the American Legion to get behind the completion of adult polio inoculation before the end of March 1957.

Department Commander Beard emphasized that the Salk vaccine has given Indiana children substantial protection against polio.

"But if we are to stamp out polio as a public-health hazard in Indiana and the Nation, adults must also be protected against this dreaded disease," he stressed.

Commander Beard has sent the following call to all Indiana American Legion post commanders, adjutants, and service officers:

"Enclosed find a resolution on poliomyelitis inoculations unanimously adopted by the national rehabilitation commission in Washington on February 24.

"This letter is going to each of our posts in the department of Indiana with the urgent request that each post immediately contact its county medical society and local physicians and offer the services of the post in the polio inoculation drive in each community.

"This is a golden opportunity for each and every post in the Indiana department to render community service.

"I trust you will take immediate action on this important matter."

The resolution submitted by Dr. Booher and unanimously adopted by the National Rehabilitation Commission of the American Legion follows:

"Whereas a successful, effective and proved vaccine against poliomyelitis has now been developed by American medical scientists led by Dr. Jonas Salk and known as the Salk polio vaccine; and

"Whereas it has ben recognized that children up to 16 years of age and pregnant women are the most susceptible to poliomyelitis and therefore the early programs for inoculation with Salk vaccine while the supply was limited were confined to these groups; and

"Whereas the supply of this vaccine is now adequate for all purposes; and

"Whereas it is now recognized that persons in the age groups up to and including 40 years of age also are relatively susceptible to poliomyelitis and when the older age groups are stricken that their form of the disease is likely to be the most serious, bulbar type that brings early complete incapacity and death; and

"Whereas medical scientists including Dr. Salk are now on record as urging that the older age groups, certainly through 40 years of age or older should be inoculated; and

"Whereas it is the opinion of competent medical people that if polio is eradicated from the younger population it is likely to seize on the older citizens with increased vigor; and

"Whereas it is a proved fact that in many areas there is widespread public apathy to completion of the inoculation of the American public with Salk vaccines as shown by the best statistics available; and

"Whereas the medical profession is making strenuous efforts all over the Nation to complete these inoculations and help stop this disease before the next polio season in the spring of 1957: Now, therefore, be it

"*Resolved*, That the National Rehabilitation Commission of the American Legion, upon the advice of its medical advisory board, does hereby go on record as approving the inoculation of all of our American people against poliomyelitis; and be it further

"*Resolved*, That all means available to the American Legion be used to bring this message to the American people and that all means be exercised by all units of the American Legion to assist in the completion of this worthy and necessary endeavor before the end of March 1957, not only within this membership but the public at large."

Retirement of Rev. Robert Graham, of Ashley, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of February 25, which comments on the retirement of Rev. Robert Graham, pastor, Ashley Presbyterian Church, after 35 years service to the congregation:

Retirement of the Reverend Robert Graham, pastor of Ashley Presbyterian Church, on Thursday after serving the congregation for 35 years, will sever another link with the past. He was ordained in 1917 and served only one other charge.

Earlier in the month, the Very Reverend Nicholas Chopey, pastor of St. Mary's Greek Rite Catholic Church, retired from active duty after 54 years in the North Wilkes-Barre charge. During the past decade or two, practically all of the veteran clergymen on the local scene have disappeared, leaving only a handful to carry on in the old tradition.

The Reverend Mr. Graham is the fifth minister in the history of the Ashley congregation that dates back to 1844, although it was not formally organized until 1866. The list includes the Reverend William Day, the Reverend Melvin Custer, the Reverend George H. Broening, and the Reverend McKeen Polk, all deceased. These clergymen, the Reverend Mr. Graham included, played a leading role in the community as well as in the denomination. Ashley Presbyterian Church, in fact, is older than the borough itself.

The Reverend Mr. Graham not only is loved by the congregation, but he is highly respected by the presbytery which honored him with the posts of moderator, stated clerk and delegate to the synod and general assembly.

While there will be regret that the Reverend Mr. Graham's fruitful career is drawing to a close, members of the congregation and other friends will rejoice that at long last he is about to reap the harvest of fidelity to duty in the form of leisure in the remaining years of a useful life.

Confusion in the United Nations

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. REED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

CONFUSION IN THE U. N.—MOVE FOR SANCTIONS CALLED PREMATURE, IGNORING STEPS LAID DOWN IN CHARTER

How can fear between nations be removed? Is this the task of the United States alone or is it the responsibility of the United Nations? And if the U. N. has failed in the past to give assurances that it will act to remove fear of attack does this mean that it should not be asked by its members to try again?

These questions go to the heart of the Middle East crisis. They are answered in the words of the United Nations Charter. Skeptics and cynics point to the ineffectiveness of the U. N. heretofore, but the fact is that the major powers themselves failed to utilize the U. N. and make it effective.

Many people have a vague idea that the U. N. can somehow become effective as a means of maintaining peace in the world, but few persons really know how precise the language of the charter happens to be. A good example of this lack of knowledge is the emphasis recently given in the press to sanctions—as if this were a first instead of a last step and as if this is a discipline to be

finally imposed by the General Assembly when actually that body can only recommend and hasn't any binding authority on this subject at all under the charter.

What the founders of the United Nations drew up in 1945 was a charter which said specifically that "in order to insure prompt and effective action by the United Nations, its members confer on the Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility, the Security Council acts on their behalf."

No other body—neither the General Assembly nor any U. N. committee—has such sweeping power and responsibility.

The charter itself recognized that fear of attack might be basic in bringing about the use of force to meet a threat. So the charter says that "all members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any member state."

If this is not heeded, the charter in article 40 declares: "In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in article 41, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims or position of the parties concerned. The Security Council shall duly take account of failure to comply with such measures."

Now article 41 enumerates the possible sanctions—economic and military. But, so far as the United Nations is concerned, these can be imposed only by the Security Council. Individual members can, if the Security Council fails to act, impose sanctions collectively, but this is not a United Nations action and, under international law, the nation against which the sanctions are imposed can regard such sanctions as an unfriendly act or even an act of war.

So the problem is to get unanimity in the Security Council where in the past the Soviet veto has barred the way to enforcement action except in the case of Korea when the representative of the Moscow Government happened to be absent from the all-important meeting of the Security Council.

Would the Soviet Government or any other government today veto a resolution which calls merely for the pronouncement by the Security Council of an intention to devise a program of provisional measures that will be presented by the Council to both parties in the Israel-Egypt dispute? Certainly the withdrawal of Israeli troops could be more readily accomplished now if the Security Council under article 40 repeats the words of the Charter that "such provisional measures shall be without prejudice to the rights, claims, or positions of the parties concerned."

This is an orderly procedure designed to remove fear and to assure justice. It is a first step and an immediate one whereas sanctions is a last step to be taken only after all the other methods of settlement stipulated in the charter itself have been exhausted. Discussion of sanctions is therefore, at best premature, especially since article 33 of the charter prescribes that the Security Council shall first call upon the parties to settle their disputes by "negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional arrangements or other peaceful means of their own choice."

The world is waiting for the U. N. to function as its charter requires and in that way fear can be removed and faith in the effectiveness of the U. N. can be restored.

U. N. Policing Idea Gains Favor in United States

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, on several occasions I have urged the administration to take the lead in exploring the possibility of establishing a permanent United Nations, police force. It is my feeling that present conditions offer us a great opportunity to establishing such a force. Indeed, the future effectiveness of the U. N. might well depend upon our seizing this opportunity to begin the development of a U. N. military force responsible directly to the U. N. itself.

In this connection I wish to insert an article from the Newark Star-Ledger of February 24, 1957, entitled "U. N. Policing Idea Gains Favor in United States," by Elmo Roper and associates:

THE PUBLIC PULSE: U. N. POLICING IDEA GAINS FAVOR IN UNITED STATES

From time to time many harsh words are spoken and written about the United Nations. It has been called everything from a glorified debating society to a threat to United States sovereignty—even a propaganda mouthpiece for the Communists.

So it becomes important to record the fact that with all its alleged faults and frailties, the United Nations nevertheless enjoys a high degree of confidence among the rank and file of the American people.

A short time ago we asked a sample of public opinion a long and detailed question about the U. N.:

"Some people say the United Nations should have a permanent police force in order to enforce or put teeth into its decisions. This would be composed of troops from all the United Nations countries, including the United States. Others are against having a permanent police force because the United States could not completely control what its own troops in the police force were used for. Would you favor or oppose a permanent U. N. police force with American troops in it?"

This is a very explicit question. Moreover, one reason for a "No" answer is prominently provided for anybody who wants to seize it. The question was not asked in a time of international relaxation, but against the grim background of the Suez crisis, and of the U. N.'s first sponstaneous and actual placing of such a police force in the field, so the overall answers have a great deal of significance:

	Percent
In favor of such a police force	57
Opposed	22
"Don't know" or "It depends"	21
	100

Such opposition as there is to a U. N. police force containing American troops is greatest in the South.

The Far West's vote of confidence in the police force idea is very high. The East is more restrained and the Midwest might be described as lukewarm. But even if every "Don't know" or "It depends" vote were ultimately cast against it, the idea of a police force with American troops would still gain a majority in every part of the country except the South, where the results would be only a 50–50 standoff.

Thinking in terms of an international force to keep world law and order is a new thing for the American people. Even when we were fully involved in World War II, 15 years ago, our obvious desire was to stay clear of actual ties with other countries once the war was won.

Against this background, it is remarkable that we find ourselves now taking the U. N. as much for granted as we do. It is even more remarkable that we are so ready to go along with the idea of a standing U. N. force—not one just thrown together hastily for a time of emergency, but one which would be a safeguard against emergencies arising, and ready to nip one in the bud if it did. Our old ways of thinking have been dear to us, but our survival seems to be dearer.

How much of this feeling is just a willingness to follow Eisenhower's lead? It is hard to tell. His own emphasis seems now to have shifted to more reliance on United States power and policy to prevent conflict from flaring up again. When we ask this question again some months from now, we shall be able to get some indication of how solidly grounded these attitudes are among the American people.

Attorney Arthur Maguire Sworn in as Judge of Luzerne County (Pa.) Orphans' Court

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of February 25 commenting on the newly appointed judge of the Luzerne County orphans' court, Attorney Arthur Maguire:

Having resigned as chief counsel for the Pennsylvania Turnpike Commission, Attorney Arthur A. Maguire is scheduled to take the oath of office this morning as the newly appointed judge of the Luzerne County orphans' court. The honor comes as a climax to an eventful career which began with his admittance to the bar, September 14, 1929. He was named as assistant United States attorney in the middle district in 1934 and later became the United States attorney.

He comes from a family long prominent in educational circles in this area. A brother, John, was a well-known teacher in Wilkes-Barre, Dr. Frank Maguire; another brother was at East Stroudsburg State Teachers College for years. William was city editor of the Times-Leader for a lengthy span.

Enlistment in the Air Corps in 1917 cut Arthur Maguire's teaching career short and after the war he took to the study of law, completing a course at Georgetown University.

A ceremony such as today's has not been frequent in the history of the local orphans' court. Maguire will have had only seven predecessors going back to 1874. Judges Daniel Rhone served from that year until

1895; Alfred Darte, 1895 to July 20, 1901, dying in office; George H. Troutman, October 8, 1901 to 1902;" Andrew M. Freas, 1902 to 1922; E. Foster Heller, 1922 to October 26, 1940, died in office; Andrew Hourigan, Sr., December 16, 1940 to 1951; Ben R. Jones, 1952 to 1957.

Delay Vote on Israel Sanctions

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of February 22, 1957:

DELAY VOTE ON ISRAEL SANCTIONS

Following the Israeli Cabinet's decision to to make another effort to reach an understanding with the United Nations, the imperative need is for the U. N. to delay for a few days any moves to punish Israel with sanctions for failure to withdraw her forces completely from Egyptian territory.

That Israel did not offer to withdraw at once, after President Eisenhower's speech outlining the position of the United States, and the U. N., may be disappointing to some.

But so long as Israel appears willing to negotiate further with the U. N., and has left the way open for eventual withdrawal if Israel's security can be protected, prospects of peace in the Middle East will be aided by go-slow tactics in the United Nations.

Even in advance of any U. N. vote on sanctions, Israel was under tremendous moral pressure to remove her forces from the Gaza strip and the Gulf of Aqaba without getting the guaranties she is insisting on.

Part of that pressure came from the U. N. General Assembly, which ordered Israel, as well as France and Great Britain, to withdraw after their invasion of Egypt last fall.

A greater part, perhaps, came from the United States, when President Eisenhower called on Israel to accept generalized assurances regarding the Gaza strip and rights of free passage through the Gulf of Aqaba and held it would be a setback for hopes of international order if the U. N. failed to exert its full influence to make Israel withdraw.

The President's argument was persuasive to many people. For Israel, with her record of respect for world opinion, to join Soviet Russia in flouting the U. N. might be a grave mistake. For the U. N. to fail to follow through on its moves to restore peace in the Middle East might drastically damage prospects of settling future disputes.

But the argument is not at all one sided. For if the U. N. should go to the lengths of voting sanctions against Israel, where it has failed to apply them to Russia for the crushing of Hungary's bid for freedom, it would be applying one law to the weak, and another to the strong.

'It is regrettable that the President in his speech did not emphasize what Egypt did to bring on the crisis, and is doing to prolong it. The background of Egypt's murderous border raids against Israel, and the vow of President Nasser to exterminate the infant nation, is vital to any discussion of the invasion.

Even before that, Egypt committed economic aggression against Israel by barring Israeli shipping from the Suez Canal. The U. N.'s order that Egypt lift the blockade was defied—and the U. N., it should be remembered, did not even consider sanctions.

These are matters the U. N. should consider in any further discussion of the situation in the Middle East. It ought to take account of the large share of blame borne by Egypt for provoking the invasion, and of the need for guaranties that if Israel withdraws, it will not merely set the stage for further provocation by Egypt or other Arab nations.

In offering to use American influence to secure the guaranties Israel wants in the Gaza strip and the Gulf of Aqaba, President Eisenhower went as far as he could to show that the United States sympathizes with Israel's problems. That should be borne firmly in mind by Israel's government in any further discussions of the crisis.

But the U. N. is in a position to offer stronger guaranties, which would certainly result in Israel's withdrawal. More than that, by recognizing that the crisis stems from Egypt's aggressive acts, the U. N. would show that justice, rather than the size of a nation, is the main factor in its search for peace.

United States Economic Aid to Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of February 25, which discusses the recent speech made by Attorney Charles Rozmarek, at Wilkes-Barre, with reference to United States economic aid to Poland. Attorney Rozmarek, a native of Wilkes-Barre, is now president of the Polish-American Congress:

In advocating United States economic aid to Poland, Charles Rozmarek, speaking here last night at the golden jubilee banquet of branch 790 of the Polish National Alliance, drew a line to distinguish between the Red regime in Warsaw and the people of Poland.

Far from asking the Government in Washington to throw in with Communists in Poland or elsewhere, Mr. Rozmarek, who is president of the Polish American Congress which represents 7 million Americans of Polish extraction, saw an opportunity to drive a new wedge between Poland and Russia, thus accelerating the demise of communism.

It is bold thinking and, in military circles, it might be regarded as a calculated risk. But battles are not won without taking chances. Victory usually goes to the side that has the courage of its convictions. This, of course, does not mean America should deliver to Poland a check for $100 million or some such sum with its blessing. That would be foolhardy and Mr. Rozmarek has not such assistance in mind.

He would limit assistance to credits in the United States, thus controlling the type and flow of aid. In addition to that, he would institute an American inspection system to follow through and take such other safeguards as are necessary to prevent any of the aid from finding its way to the Soviet Union or its satellites.

The people of Poland are hard pressed. They need so many things to keep body and soul together. If their insustry is built up, it will make them less dependent on Moscow and it will breathe new life into the faltering Polish economy. From a practical viewpoint, the country needs help to rehabilitate existing plants and its mining industry where working conditions are especially hazardous. The Polish farmers could use machinery and there are ever so many things that would ease the lot of these brave people who are on the front lines in the struggle for liberty.

There is ample precedent for the program Mr. Rozmarek proposes. Admittedly, there is a possibility the setup could fall flat on its face, but that is a chance we have to take if we wish to exploit development since the Poznan uprising. The alternative is to drive the national Communists back to the Kremlin for aid, not a very pleasing prospect.

Mr. Reserve in House: Overton Brooks

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent to extend my remarks, I include the following article from the New York Times:

MR. RESERVE IN HOUSE: OVERTON BROOKS

WASHINGTON, February 26.—Years of unspectacular legislative spadework in National Guard and military reserve affairs paid off in a spectacular way today for Representative OVERTON BROOKS.

MAN IN THE NEWS

Mr. BROOKS, a Louisiana Democrat who has trudged for 20 years in Congress without tasting national fame, suddenly emerged as the peacemaker in one of the hottest disputes of the day. His achievement: Settlement of differences between the Army and National Guard over active duty training requirements for National Guard recruits.

To bring about the agreement, Mr. BROOKS reports, he took on the role of mediator as an unofficial part of his duties as chairman of the House Armed Services Subcommittee on Reserve Forces Policies.

He held a series of separate conferences with spokesmen for each side, gently prodding first one and then the other to give some ground. The product, announced today, was a compromise formula that satisfied everybody concerned.

Mr. BROOKS attributes the successful outcome largely to the fact that the disputants came to know him well and to trust his impartiality over the two decades that he has worked on legislation in their field.

A strong Reserve, including a well-trained National Guard, has been his No. 1 project from the day in January 1937, that he first took the oath as a Member of Congress. Most of the major Reserve bills enacted since then bear his name as chief House sponsor.

STAFF AIDE FOR SPADEWORK

But he has been overshadowed consistently by the powerful and colorful figure of CARL VINSON, the Georgia Democrat who heads the full Armed Services Committee. His role, in fact, is likened by some colleagues to that of a staff lieutenant in charge of spadework for the general in command.

Mr. VINSON, however, has bestowed the title Mr. Reserve on his friend from Louisiana with the following citation:

"OVERTON BROOKS knows more about the Reserve and has done more for the Reserve than any Member of Congress."

At 56, Mr. BROOKS is the committee's ranking Democrat next to Mr. VINSON, and consequently is in line for the chairmanship should it become vacant with his party still in the majority.

Today, he looked forward to a new era in development of an effective Reserve program. He declared he had never before seen such a feeling of good fellowship between the National Guard and the Army Reserve.

His interest in building a well-trained Reserve goes back to his own service in World War I. He enlisted in the Army at the age of 18 and was thrust into combat as a private after 30 days of training.

He had never ridden a horse but found himself astride one, helping to pull an artillery caisson, on his first day of battle.

"I fell off three times," he recalls.

GOT OUT WITH HIS SKIN, BUT—

"I got out of it with a whole skin, received two battle stars and even rose to the rank of sergeant," he reports. "But I decided then that if I was ever in a position to do so I would see to it that others were never sent into combat without proper training."

Aside from that goal, his main continuing interest has been the advocacy of Federal flood control projects—a subject close to the hearts of flood-weary constituents.

This helps to explain why he seldom faces serious opposition in his biannual bid for another term. He is president of the National Rivers and Harbors Congress, which has more flood-control projects as a major aim.

On other national questions, his line has been that of a more-or-less typical Southern conservative. He voted against most of the New Deal-Fair Deal proposals of Presidents Franklin D. Roosevelt and Harry S. Truman, and has become increasingly hostile to foreign economic aid since the early days of the Marshall plan.

Though he could not be described as a colorful or dynamic person, Mr. BROOKS has won influence through diligent work and a detailed knowledge of his specialty. He does not speak often on the floor, and when he does his talks are sometimes tedious.

In conversation, he evidences the quiet charm of a serious-minded and thoroughly sincere schoolmaster.

Although he stands 6 feet tall and weighs 195 pounds, he is unspectacular in appearance. He dresses conservatively, combs his graying blond hair in a semipompadour and wears conventional horn-rimmed glasses.

Mr. BROOKS was born in Baton Rouge. He served his political apprenticeship as a young lawyer and later United States Commissioner in Shreveport, where he settled after graduation from Louisiana State University.

Mr. BROOKS married Mollie Meriwether of Shreveport in 1933. They have a daughter, Laura Anne, a student at Louisiana State, who also has political ambitions.

"I hope she changes her mind," Mr. BROOKS says. "It's a rough life."

Department of the Interior and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5189) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. EDMONDSON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time not to offer any change in the language of this legislation but to express the appreciation which I am sure is in the hearts of many Indian people in this country for the action taken by the committee with regard to funds for the work of the Indian Claims Commission. The work of that Commission has been lagging. It is a problem of which the House Interior Committee is well aware and which we are pleased to see cognizance has been taken of by the Appropriations Committee in providing additional funds.

I hope the Appropriations Committee will follow the very desirable action with regard to this appropriation by insisting that the Department of Justice when it seeks its appropriation will also secure sufficient funds to do the job that it needs to do to bring these cases to issue. Much of the lag that is present in the work of the Indian Claims Commission is due directly to the failure of the Department of Justice to file its pleadings in these cases and to bring these cases to trial.

I think this subcommittee has taken the very necessary first step toward getting this problem behind us, a very necessary problem to be resolved before we can actually have a full resolution of our Indian problems.

If the Committee on Appropriations will just follow up by seeing that the Justice Department also obtains the money and uses that money to get these cases tried, then I think the Congress will have taken a very, very long step toward a complete solution of the Indian problem. I want to thank the committee for the work done in this regard.

Letter to the President From Bronx Division, American Jewish Congress

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BUCKLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to President Eisenhower, copy of which was sent me by the Bronx Division of the American Jewish Congress:

FEBRUARY 13, 1957.

President DWIGHT D. EISENHOWER,
White House, Washington, D. C.

DEAR MR. PRESIDENT: The executive board of the Bronx Division, American Jewish Congress, respectfully urges you, as President of the United States, and as a person who is looked to by the entire world for guidance in its fervent quest for peace and the fulfillment of human dignity, to do all in your power to influence the Egyptian Government to cease its persecutions of the Jews in Egypt.

The Egyptian Government's harrassments, imprisonments, and deportations of its Jewish citizens has been so intensified as to touch the conscience of all men of good will.

The cast of this Egyptian program is so strikingly similar to that of the Hitler oppressions and the pattern of persecutions practiced in the Communist orbit as to increase our fears for the lives of those involved.

To date more than 8,000 members of the Jewish community have been forced to leave Egypt after being hard pressed, imprisoned, and deprived of even elementary means of making a living.

Jewish families, who have been long-time natives of Egypt, many having lived in Egypt for centuries, and who have no other allegiance and no other nation to whom they can turn for protection, have been expelled, their life savings and possessions seized and have been permitted to take with them only 1 suitcase of bare necessities and $56 to start life anew elsewhere.

In Nasser's "Egyptianization" program, we recognize a similar amoral "Aryanication" plan to liquidate the Jewish community. Concentration camps have been set up and at present Jews have been interned in them. At least 1 member of each Jewish family is being held hostage so as to silence those who are forced to leave.

The Bronx Division, American Jewish Congress, is fearful that unless the long delay by our Government in expressing itself strongly against these persecutions is ended that the entire Jewish community in Egypt will be annihilated.

We therefore urge you in the spirit of brotherhood, to intervene directly with the Egyptian Government to cease its cruel actions. Such persecution violates the Universal Declaration of Human Rights, the Fourth Geneva Convention, the United Nations Genocide Convention, as well as the moral principles of civilized human beings everywhere.

We urge you to instruct our delegate at the United Nations to secure a resolution condemning the Egyptian reign of terror against its Jewish community and directing it to desist from these actions.

We also urge that our Government do all in its power to make available asylum in the United States to the persecuted Jews of Egypt in the same generous terms that it is now providing asylum for the refugees of Hungary.

Respectfully yours,
HYMAN KORN,
President.
LOUIS L. SCHWARTZ,
Chairman, Commission on International Affairs.
DR. GEORGE SCHWARTZ,
Cochairman, Commission on International Affairs.
ALVIN F. KLEIN,
Cochairman, Commission on International Affairs.

TWA's New President: Carter L. Burgess

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BOLLING. Mr. Speaker, the reputation which Trans World Airlines has earned as one of the world's foremost carriers may be attributed, in large part, to the vision, enterprise, and leadership of the men who have steered TWA's course of progress. No group of people is more aware of this fact than my constituents in Kansas City, Mo., where TWA has been a symbol of our city's economic growth since 1930.

. The recent election of Carter L. Burgess as president of TWA, succeeding the late Ralph S. Damon, presages another important chapter in TWA's history, and brightens the future not alone of that company, but also of the whole aviation industry to which Mr. Burgess brings his exceptional talents.

Although Mr. Burgess is just 40 years old, he is accustomed to assuming heavy responsibilities. His record as Assistant Secretary of Defense was outstanding, as was his performance in the other Government agencies where he has served.

In Carter L. Burgess, TWA has a dynamic administrator whose rare abilities and dedication to duty insure TWA's continuing success in the ever-growing field of air transportation.

With the jet-transport era fast approaching, new and increasingly complex problems confront the aviation industry. How effectively airline managements will respond to new and bigger challenges will depend upon the resourcefulness and acumen of men like Carter L. Burgess.

The future outlook for TWA is one of great promise. Kansas City shares the confidence and enthusiasm of TWA's 6,000 employees located in Kansas City, and TWA's personnel halfway around the globe in greeting their new chief executive officer.

The Optima Flood-Control Reservoir

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include enrolled Senate Concurrent Resolution 6, as the same was adopted by the Senate and House of Representatives of the 26th Legislature of the State of Oklahoma:

Enrolled Senate Concurrent Resolution 6

Concurrent resolution memorializing the 85th Congress of the United States to act promptly and favorably and enact any additional authorizing legislation necessary or required to immediately begin construction of the Optima flood control reservoir (Hardesty site) on the North Canadian River located in western Oklahoma, and to provide the necessary funds to begin construction of the Optima reservoir project (Hardesty site) at the earliest possible date; directing that a copy of this resolution be transmitted to Dwight D. Eisenhower, President of the United States, and to each Member of the Oklahoma congressional delegation

Whereas the Congress of the United States did authorize for construction the Optima Reservoir for flood control and other purposes under House Document 308, 74th Congress, 1st session, 1936; and

Whereas the Congress did reaffirm its prior authority for construction of the Optima project by enactment under H. R. 5472, Public Law 516, 81st Congress, 2d session, in 1950; and

Whereas the State of Oklahoma, through its Oklahoma planning and resources board, on July 1, 1942, did adopt a comprehensive plan for the control and development of the water resources of the North Canadian River which includes the Optima project; and

Whereas the present severe drought has demonstrated without question the urgent need for the additional regulation and control of the water resources of the Canadian River that would be provided by the Optima Reservoir; and

Whereas the President of the United States recently made a personal inspection of this area of Oklahoma to determine ways and means of relieving the economic stress in this area and to find a solution to prevent as nearly as possible a recurrence of the present situation; and

Whereas the construction of the Optima project at this time would greatly arrest the economic stress of the area, and at the same time provide a sound long-range investment in the general welfare of the area, the State and the Nation: Now, therefore, be it

Resolved by the Senate of the 26th Oklahoma Legislature (the House of Representatives concurring therein), That we respectfully request the 85th Congress of the United States, now assembled, to act promptly to provide ways and means and the necessary funds to initiate construction of the Optima Dam and Reservoir at the earliest possible date; be it further

Resolved, That a duly authenticated copy of this resolution be transmitted to Dwight D. Eisenhower, President of the United States, and that a copy hereof be transmitted to each Member of the Oklahoma congressional delegation.

Adopted by the senate the 6th day of February 1957.

DON BALSHEIM,
President pro tempore of the Senate.

Adopted by the house of representatives the 7th day of February 1957.

GLEN HAM,
Acting Speaker of the House of Representatives.

CERTIFICATION

STATE OF OKLAHOMA,
County of Oklahoma, ss:

I, Leo Winters, secretary of the senate of the State of Oklahoma, do hereby certify that the above and foregoing is a true and correct copy of Enrolled Senate Concurrent Resolution 6 as the same was adopted by the Senate and the House of Representatives Senate and the House of Representatives of the 26th Legislature of the State of Oklahoma, the original hereof being on file in the office of the secretary of state of the State of Oklahoma.

Witness my hand and the seal of my office at the State capitol this 19th day of February 1957.

[SEAL] LES WINTERS,
Secretary of the Senate.

Partnership With Government in Power Production

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. YOUNGER. Mr. Speaker, recently Secretary Seaton, Department of Commerce, recommended a partnership proposal for the Trinity project in California.

In connection with the history of these partnership proposals, I submit an article by Ralph A. Tudor, formerly Under Secretary of Interior:

PARTNERSHIP WITH GOVERNMENT IN POWER PRODUCTION

(Ralph A. Tudor, M. ASCE, consulting engineer, San Francisco, Calif., formerly Under Secretary of the Interior)

During the Presidential campaign of 1952, Candidate Eisenhower made a speech in Seattle, Wash., in which he supported a partnership between the Federal Government and local interests in the development of the Nation's potential hydroelectric resources. He opposed domination by the Federal Government. Since this was a national campaign the subject itself, which had been a somewhat dormant political issue, then became one for extended public debate. Significantly the political cleavage is not at all definite, for members of each party have been equally vehement in support of, and attack on, the partnership concept.

In the public debate that has ensued, many explanations of the partnership plan have been given; many questions asked; many assertions made that it is unworkable; and many other assertions made that it is entirely practical. There is thus some honest confusion in the minds of many. Without any reference to the political philosophy of public versus private power, free enterprise versus socialism, or States rights versus Federal paternalism, there are a great many people who simply want to know what is meant by this partnership proposal and whether it is practical from an economic and engineering viewpoint.

If the partnership proposal were new and untried there could well be reasonable doubts and a withholding of support and judgment until some limited trials had been made. But the partnership plan is not a new idea. It has been used repeatedly over a long period and it is ready to be judged. It is therefore appropriate—and the purpose of this article—to examine specific instances of where, when, and how it has ben used in the past, and to review some of the proposals now pending.

BEFORE 1953

The partnership concept has been used for almost 50 years and during that time has not been the exclusive property of any political party. It has been utilized under every administration, since it was first employed during Teddy Roosevelt's tenure of office, and during the tenure of the present administration it has, in various instances, been supported by strong blocs in both major political parties.

As early as 1906 the Bureau of Reclamation built three small hydroelectric plants in connection with an irrigation project in the Strawberry Valley in Utah. Under an agreement with the Bureau, these plants are operated by the local water users. This general plan was repeated in 1909 at the Roosevelt Dam in Arizona, in 1911 on the Newlands project in Nevada, in 1916 on the Yakima project in Washington, and in 1932 on the Grand Valley project in Colorado. In 1946 the Bureau of Reclamation made a comparable arrangement with the Pacific Power & Light Co.—a private utility—at the Cove Plant on the Deschutes River in Oregon.

In 1912, 1913, and 1914 local water users provided the funds for the Bureau to build as many powerplants on the Salt River project in Arizona. These three plants were then turned over to the local interests to operate.

Beginning in 1919 and running through 1941, the Bureau entered into partnership arrangements in six instances whereby local water-users' organizations built and operated the hydroelectric plants connected with reclamation projects built by the Bureau. Four of these were on the Salt River

project in Arizona, one on the Klamath project in Oregon, and another on the All-American Canal in California.

A unique partnership agreement was reached between the Bureau of Reclamation and the California-Oregon Power Co. in 1917. In this instance the private power company built at its sole expense a dam and powerplant on the Link River near the outlet of Upper Klamath Lake. The primary purpose of this dam is to control the level of the lake and regulate the release of water from it for irrigation of the Klamath project and for the generation of power at the dam and in plants downstream. The agreement provided that the company would convey the ownership of the dam and the property on which it was built to the United States, but would itself operate the dam first to provide water for irrigation and thereafter to produce power. In addition, the company agreed to furnish low-cost power to irrigators for irrigation and pumping. The company has an installed capacity of 3,200 kilowatts at Link Dam and an additional amount downstream to give a total of 50,000 kilowatts.

While the Bureau of Reclamation was making its own partnership arrangements with local public and private parties, the Army engineers were pursuing a somewhat different course but accomplishing similar results. The Army approach was to look to the Federal Power Commission to license local interests to build powerplants at navigation or flood-control dams and assess charges for benefits from the falling water.

As early as 1897 a Federal navigation dam was built on the Kentucky River. While the dam was capable of producing power, no equipment for this purpose was installed. However, in 1926 the Kentucky Utilities Co. sought and was granted a license by the Federal Power Commission to build a hydroelectric plant with installed capacity of 2,040 kilowatts. For this privilege the company pays the Government $4,708 and delivers not to exceed 17,500 kilowatt-hours for lock operation per year.

In 1917 a navigation lock and dam were built by the Army engineers on the Hudson River at Green Island near Troy, N. Y. Four years later, in 1921, a Federal Power Commission license was issued to Henry Ford & Son, Inc., and this industrial partner installed 6,600 kilowatts. It pays $5,000 and delivers up to 600,000 kilowatt-hours per year for this use of the falling water.

In 1923 the Ford industrial interests were granted another license to install 14,400 kilowatts of generating capacity at the navigation dam built in 1917 on the Mississippi River at the Twin Cities of St. Paul and Minneapolis. The yearly reimbursement to the Government in this instance is $95,440 and up to 60,000 kilowatt-hours for lock operation.

The Florida Power Corp. was licensed in 1924 to install a small 500-kilowatt plant at a navigation dam built on the Oklawaha River in 1925.

In 1925 a license was granted to the Louisville Gas & Electric Co. to install 80,320 kilowatts at a navigation dam under construction on the Ohio River. The fee is $95,000 per year and delivery of an unspecified amount of power for operation of the lock and dam.

A series of three navigation dams were built on the Kanawha in West Virginia from 1934 to 1936. These are the Marmet, London, and Winfield Dams. They cost the Federal Government a total of $13,175,000. Licenses were issued to Kanawha Valley Power Co. to install 43,560 kilowatts, which cost $4,717,000. The company pays $104,000 per year and is obligated to deliver 40,000 kilowatt-hours of power per month for lock and dam operation.

In 1941 the Army Engineers built the Narrows Dam on the Yuba River in California. Its primary purpose was to catch and retain debris from hydraulic mining operations upstream, and a charge was levied against miners for this service. The Pacific Gas & Electric Co. was licensed to install 9,350 kilowatts, and for the use of the falling water the company is obligated to pay $18,000 per year for the first 30 years and $48,000 per year for the remaining 20 years of the license.

Vermont has a partnership arrangement in connection with the Federal flood control dam built on the Waterbury River in 1938. In 1951 the Green Mountain Power Corp. was licensed to install 5,520 kilowatts. In this instance the State of Vermont is a third party for it operates the flood control features.

The Northern States Power Co. was licensed, in 1951, to install 8,000 kilowatts in the lower dam at St. Anthony Falls, Minn., on the Mississippi River.

Thus by 1953 there were at least 26 time-tested examples of partnership in power production between the Federal Government and local interests. They were to be found in 13 different States from Vermont and Florida on the east to Washington and California on the west. The local partners included 14 public bodies, 10 private utilities, and 2 industrial users. Twelve partnership agreements have been reached during Republican administrations and 14 during Democratic administrations. These items are tabulated in the accompanying table.

Partnership projects before 1953

State	Project name	Federal purpose	Power licensee or operator	Year of license or installation	Administration
Utah	Spanish Fork [1]	Reclamation	Water users	1908	T. Roosevelt.
Arizona	Roosevelt	do	do	1909	Taft.
Nevada	Lahontan	do	do	1911	Do.
Arizona	South Consolidated	do	do	1912	Do.
Do	Arizona Falls	do	do	1913	Wilson.
Do	Cross Cut	do	do	1914	Do.
Washington	Rocky Ford	do	do	1916	Do.
Oregon	Link River	do	California, Oregon Power Co.	1917	Do.
Arizona	Chandler	do	Water users	1919	Do.
New York	Green Island	Navigation	Henry Ford & Son, Inc.	1921	Do.
Minnesota	Twin City	do	Ford Motor Co.	1923	Coolidge.
Florida	Moss Bluff	do	Florida Power Co.	1924	Do.
Kentucky	Ohio Falls	do	Louisville Gas & Electric Co.	1925	Do.
Do	U. S. Dam 7	do	Kentucky Utilities Co.	1926	Do.
Arizona	Morman Flat	Reclamation	Water users	1926	Do.
Do	Horse Mesa	do	do	1927	Do.
Do	Stewart Mountain	do	do	1930	Hoover.
Colorado	Grand Valley	do	do	1932	Do.
West Virginia	Marmet	Navigation	Kanawha Valley Power Co.	1934	F. Roosevelt.
Do	London	do	do	1934	Do.
Do	Winfield	do	do	1936	Do.
Oregon	C Canal Drop	Reclamation	Water users	1938	Do.
California	All-America Canal	do	do	1941	Do.
Do	Narrows	Debris control	Pacific Gas & Electric Co.	1941	Do.
Oregon	Cove	Reclamation	Pacific Power & Light Co.	1946	Truman.
Vermont	Waterbury	Flood control	Green Mountain Power Corp.	1951	Do.

[1] 3 plants.

President Eisenhower felt, and rightly so, that the principle had been tested and found entirely workable. In order to meet the increasing demands of the industrial growth and ever-improving standards of living of the Nation, and at the same time avoid increasing the Federal tax burden, he strongly endorsed extension of this partnership formula.

SINCE 1953

A number of new partnership proposals were initiated after the Eisenhower administration took office. Some have been adopted while others are pending.

Markham Ferry Dam

One that has been approved by Congress and President Eisenhower is the Markham Ferry Dam and Reservoir on the Grand River in Oklahoma. This was strongly supported by local interests and Senator KERR was the driving force that successfully obtained congressional endorsement.

Actually, the Markham Ferry project goes back several years to 1937, when the Grand River Dam Authority, a State agency, started construction of the Pensacola Dam and Reservoir on the Grand River. This combined flood-control and power project cost $27 million, of which 60 percent was loaned and 40 percent granted to the authority by the Federal Public Works Administration. Under a Federal Power Commission license the authority installed 90,000 kilowatts. This was in itself a partnership arrangement. The entire project was owned and operated by a local body made possible in this instance by funds loaned and granted by the Federal Government.

In 1938 a general plan of Federal development of flood-control reservoirs on the Grand River was authorized by Congress. In 1941 Congress specified that this plan should include the already built Pensacola Dam and new projects at Markham Ferry and Fort Gibson, all to be operated as a coordinated unit in the interest of flood control and power development.

Subsequently the second in this series of dams—the Fort Gibson Dam and Reservoir—has been built and is now operated by the Corps of Engineers.

In the case of the third dam, Markham Ferry, it appeared that for fiscal reasons there might well be a long wait before the Federal Government could undertake its construction. Therefore, a partnership proposal was made by the local interests to the 81st Congress and again to the 82d Congress, but without success. The legislation was finally passed by the 83d Congress and approved by President Eisenhower on July 6, 1954.

The Markham Ferry Dam and Reservoir will be built, owned, and operated by the Grand River Dam Authority of Oklahoma. The Federal Government will contribute to the authority not to exceed $6,500,000 to pay for the flood-control features of the project. Flood-control operation will be in accordance with rules established by the Army engineers and to assure coordinated operation of the other two dams. The remaining cost of the project, estimated at about $32 million, will be provided by the authority from the sale of revenue bonds secured by power revenues from this and other facilities of the authority.

Thus there is here a partnership involving the coordinated operation of three dams built in the interests of flood control and power generation, with one dam built, owned, and operated by local interests using

loaned and granted Federal funds; a second dam built, owned, and operated by the Federal Government; and a third dam to be built, owned, and operated by local interests with funds partially supplied by the Federal Government and the remainder by the local interests.

Coosa River development

Another power-partnership plan authorized by the 83d Congress was that for a development on the Coosa River in Alabama and Georgia, which was approved by President Eisenhower on June 24, 1954. In 1945 there had been a Federal authorization for building a series of navigation, flood-control, and power dams on this river at an estimated Federal cost of $60 million. No construction funds were appropriated and no work accomplished. In 1954 all members except one of the Alabama congressional delegation and the Governor of the State joined in supporting new legislation for the development.

This legislation authorizes the development by a local interest, which will be the Alabama Power Co. The company has proposed to spend $100 million to build the dams—probably five—and to install initially 240,000 kilowatts with an ultimate goal of 360,000 kilowatts. The legislation requires that basic provisions be made for future construction of navigation facilities. It also requires that provisions for flood control be made as may be found economically feasible in the judgment of the Army engineers. Unlike the Markham Ferry project, where a Federal grant was made for flood-control costs, there is no grant at this time for these costs on the Coosa River. There is only a provision that if at some future time Congress adopts a general policy of compensating local interests for flood-control navigation costs, such general authorization will be specifically applicable in this instance.

The legislation provides ample safeguards to assure a development by the local interests that will be no less effective than one carried out according to the Federal plan. This project is an example of partnership where the Federal Government has authorized local development of a project that had earlier been planned and authorized for Federal handling. It is partnership in the broadest sense and looks toward the greatest possible participation by local interests.

Priest Rapids Dam

At Priest Rapids on the Columbia River in Washington, another partnership plan has been authorized. This is in many ways comparable to the Coosa River plan except that at Priest Rapids a local public body is the partner while on the Coosa the local interest is a privately owned utility. Here too the project was earlier (1950) approved by Congress for Federal development. It is a large project, estimated in 1950 to cost $364,000,000, of which $65,000,000 would be for flood control, $10,000,000 for navigation, and $289,000,000 for power production.

In this instance the legislation, which was passed by the 83d Congress and approved by President Eisenhower in 1954, authorizes a local public utility district to develop the project. Its plan must be approved and a license issued by the Federal Power Commission to assure optimum development of the resource.

The legislation provides that if the Federal Government requires the local utility district to include navigation and flood control facilities as a part of the initial construction, the cost allocated to these features will be paid for by the Federal Government in the form of a contribution to the district. If such features are not included in the initial construction, the district is required to provide basic features for future installation of these features and the cost of these basic facilities will be at the district's expense. Thus, according to present cost estimates, the local district would finance approximately $289,000,000 of the cost, and only if the Federal Government requires initial inclusion of navigation and flood control facilities will it participate in the cost. This Federal participation is now estimated at a maximum of $75,000,000.

An unusual partnership provision in the legislation is authority for the local district to have the Army engineers act as the construction agency since the district is relatively small and has no adequate construction organization of its own.

Several other partnership proposals are now being debated in Congress but have not been acted on.

John Day Dam

One of the most interesting of these is a proposal by local interests to share in the cost of the John Day Dam on the lower Columbia River where it forms the boundary between the States of Oregon and Washington. This is a navigation and power dam estimated by the Army engineers to cost $310 million of which approximately $273 million would be allocated to power production.

A group of local utilities have proposed that they advance to the Federal Government the full cost of the power allocation and that in return they receive the power from the project for a period of 50 years, less any power needed to operate the dam and its locks. In effect these utilities would pay in advance for their power, and this advance payment would be used to pay for construction. Ownership and operation of the dam would remain with the Federal Government. The Federal contribution would be about $37 million.

The legislation under consideration is such that any local utility wishing to do so may participate in the proposal, and if there are more applicants for power than there is power available, allocation is to be made by the Federal Power Commission. It also provides that the local utilities must pay their proportionate share of the costs of operation and maintenance of the power facilities and portions of the joint project costs allocated to power.

This plan has the merit of providing the navigation facilities which are badly needed now, and the power which the Pacific Northwest will surely need in a few years, without the delay that is inherent in waiting for large Federal appropriations.

It is significant to note that for the Priest Rapids and John Day projects on the Columbia River the Federal Government would be expected to invest an estimated $684 million exclusive of transmission-line costs, and to pay all maintenance and operating expenses unless some partnership arrangement is worked out. It is unlikely that this amount of money will be appropriated by Congress for this one geographical area without extended delay. If, on the other hand, the two partnership plans described above are effected, the Federal contribution will not exceed $112 million. If navigation and flood-control facilities are excluded in the Priest Rapids Dam, the Federal contribution will be nearer $37 million. This is a much more likely amount to expect Congress to appropriate in the reasonably near future.

Trinity River project

In northern California there is a proposal to develop the upper reaches of the Trinity River for power and irrigation. The Bureau of Reclamation has a plan which is estimated to cost $219,067,000. Of this amount $156,538,000 would be allocated to power and the remainder to irrigation, municipal, and industrial water, and fish and wildlife protection.

The Pacific Gas & Electric Co. has made a proposal that it build all the powerplants and transmission facilities under the existing licensing provisions of the Federal Power Act in very much the same manner as was done in those numerous cases described in the first part of this article. According to the company estimates, this would reduce the Federal investment by some $50 million, and during the 50-year license period it would pay the Government $3,500,000 per year for the use of the falling water to generate power. This is estimated by the company to be $36 million more net revenue than the Federal Government would receive from power sales if it does its own generating and sells at existing Federal rates in this area. In addition, the company estimates it will pay $135 million in taxes, of which $70 million would be Federal and $65 million to State and local governing bodies.

This project was authorized just before the Congress adjourned in August. The authorization includes a condition that the Department of the Interior fully investigate the proposal of the company and report to Congress on this phase of the plan within 18 months.

This review, while probably not a complete record of all the partnership-in-power projects involving the Federal Government that have been accomplished or are now under serious consideration, does demonstrate that the principle has worked and how. It demonstrates that there are no serious financial or engineering problems involved. On the contrary, it shows that in many instances a partnership arrangement has been the practical means of promptly financing a badly needed multipurpose project which includes power.

Acceptance or rejection of the partnership concept is therefore a matter of political ideology, and it is on that basis that the issue is being debated and will be decided.

Washington

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am privileged to include an article written by August W. Kopke, ex-president, Kansas State Elks Association, and past deputy grand exalted ruler, appearing in the Elks national magazine:

WASHINGTON

(By A. W. Kopke)

This month, February 22, we celebrate once again the anniversary of the man who has come to symbolize the independent spirit of this Nation; who refused a crown because he believed in a republic of brothers; and who left us a passion for freedom that has never been equaled. None can deny him the distinction he earned by leading an infant nation to freedom. A young Republic, which in less than two centuries later, stands as the dominant hope for the saving of civilization.

No discussion of the character of the man, Washington, would be complete today without making the unchallengeable statement that he is incomparably the greatest of all Americans. There are those who believe Thomas Jefferson to be the greatest; others that Abraham Lincoln deserves this honor; still others that Woodrow Wilson will one day attain this place in history. Great as these men were, they are all surpassed by the greatness of Washington, who stands today, like the pyramids above the boundless sands of the Egyptian desert—a towering giant among the world's immortals.

Many things have been said about Washington, but as a student of history I have tried to study his character, and the thing that struck me the most is: There is only one thing about Washington that moves the imagination. Think of that great sober figure; a very practical man; a man who could lead and govern; who knew how to appear before crowns, but who nevertheless had a stern resolve. The more people crowded about him the more silent he was. A man who never spoke to a great audience in his life, and who could not have stirred it if he had, but who, despite all this, impressed everyone with his passion for service because he had an abiding faith in the righteousness of his cause, which was the sacred cause of human freedom.

The writer doubts if there has been a President more revered and perhaps less understood by the great masses of today's Americans than the Father of Our Country. I think, however, we are all agreed on this: No great leader in all history faced graver trials, overcame greater handicaps, or achieved a greater victory against odds that were more overwhelming.

Supreme in war and in peace, hero, patriot, churchman, father of a nation, friend of mankind, who, when he had won all, renounced all, and sought in the bosom of his family and of nature retirement, and in the hope of religion, immortality.

Strength in Unity

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting article which appeared in the Daily Evening Item, Lynn, Mass., under date of February 25, 1957:

STRENGTH IN UNITY

Once more Western Europe has moved a big stride toward the economic and political unity which may in time bring it truly abreast of the modern industrial age.

France, Italy, West Germany, Belgium, Holland and Luxembourg have just agreed to establish—over a 12- to 17-year period—a broad common market for their respective industrial products.

This means that their present constricting tariff walls and other trade barriers would go down and the 6 nations would in a very real sense become 1 country economically. In fact, the agreement also embraces all their overseas territories.

In addition to this, the six agreed upon a pool of their atomic-energy resources under a European atomic energy commission. To a continent continuously short of other power sources, this combine may prove of the most vital significance.

A common market for Western Europe already exists in coal and steel. What is now to be set up would be an extension of that arrangement to the full range of Europe's output.

Such a tariff-free union has been urged for years as a basic step toward giving the continent the real benefits of industrialization. The economists insist that mass production techniques, with consequent advantages in lower prices to consumers, cannot be realized without broad mass markets. A Europe chopped up into various walled-off segments fails to provide them.

It should be noticed that Britain is absent from the group of nations which will sign the Common Market Pact in Rome next month. But this does not mean Britain is different to the need for a wider European trade area.

Britain has in fact proposed a European free-trade zone which could include the common-market nations and any others who might care to join. Somewhat different rules would be applied to the use of tariffs, but the general aim would be the same.

All of these developments are viewed most hopefully in America, where for many decades the advantages of the broad single market have been apparent. Here mass production has reached its highest levels.

If these plans are executed well, Western Europe may also move toward a higher economic plane. And it may lay the groundwork for a political union that could contribute heavily to the peace of the world.

Ship Lines Join Forces in Two-Way Trade Promotion

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. POAGE. Mr. Speaker, recently there appeared in the Journal of Commerce under date of February 18, 1957, an article by Mr. Larry Guerin entitled "Ship Lines Join Forces in Two-Way Trade Promotion."

This is a very interesting article and shows the importance that shipping plays in our economy in Texas. Under unanimous consent I place this article in the Appendix of the RECORD:

SHIP LINES JOIN FORCES IN TWO-WAY TRADE PROMOTION

(By Larry Guerin)

Expanding industry and agriculture in the Midcontinent and Southern United States, hungry for foreign sales outlets, are daily using the overseas promotion facilities of American-flag steamship lines to good advantage in developing export markets out of the gulf ports.

According to a recent report by the Department of Commerce, more than $1 billion worth of goods were exported from Mobile and New Orleans, two typical gulf ports, during the first 10 months of 1956. Exports from Mobile were $95.6 million, an increase of 41 percent over the corresponding period in 1955. Exports from New Orleans climbed 27 percent to $957.6 million. The gains in Mobile and New Orleans exceeded the 20.7-percent rise in value of exports recorded for the entire country.

IMPORT EXPANSION

Imports, too, increased sharply at Mobile and New Orleans in the 10-month period. Imports clearing through Mobile were up 8.3 percent to $75 million and imports through New Orleans climbed 7.7 percent to $545.9 million.

Lykes Bros. Steamship Co., of New Orleans, is a typical gulf steamship company that has been working with more than 600 firms in the area fed by the Mississippi River to boost sales abroad or to find new sources of foreign raw materials.

Lykes Bros. has found that it must budget generously to create new trade between the markets reached by its six ocean trade routes if it is to compete successfully with other American and foreign-flag lines.

Veteran steamshipman, J. R. Aston has been given the job of managing Lykes' Trade Development Division, established 6 years ago in Houston, Tex., with overseas offices in all parts of the world.

Aston's instructions from Solon B. Turman, president of Lykes, are "to keep our trade development division on its toes constantly to bring together buyer and seller and thus create the additional markets required to keep American production machinery humming."

PROMOTE NEW BUSINESS

Promoting new business between the countries they have an interest in is a basic policy with all American steamship lines serving essential world trade routes. It helps assure continuous cargo traffic.

American industry is fast learning that this promotion work of the lines is one of the best available sources for help in sizing up the opportunities and problems of distant world markets.

American-flag contract lines are just as enterprising in stimulating American imports in order to assure large and continuous return loads for their ships. More than 300 foreign businesses, for example, have made us of the know-how of Lykes' trade promotion experts in selling the American market, since its trade division has been in operation.

TEXAS BENEFITS MOST

Texas, more than any other State benefits from foreign trade and United States shipping, according to a study by the Committee of American Steamship Lines.

Lone Star exports are more than 2½ times the per capita national volume—and are increasing at twice the national rate.

Texas imports are about eight-tenths the per capita United States volume, but are increasing 2.82 times faster than the United States as a whole.

Texas foreign trade overall, then, is proportionally about twice that of the United States.

Mr. Texan's job, income, farm prices, and standard of living, therefore, are doubly influenced by the soundness of the United States maritime policy.

One million Texans in factories, service industries, and on farms benefit directly from merchant ships and foreign trade.

About two-thirds of the 500,000 Texans on 330,000-plus farms depend upon trade carried on oceanbound freighters.

More than 54 percent of Texas factory workers are in industries that rely in part on overseas markets.

DEPENDABLE SHIPPING

Dependable American-flag shipping, fostered by the Merchant Marine Act of 1936, makes the outstanding growth of Texas foreign trade possible.

The nearly 4,000 oceangoing ships calling annually at Texas ports reveal its immense productive capacity, yet its need for raw material imports.

Texas' 8 million residents are more evenly divided between industry and farming than those in most States. They also rely more on ships and foreign trade than the average American citizen. And their State is growing faster than most.

PORTS BOOST ECONOMY

Texas ports, at the mouth of the vast inland waterway system, have been vital to the State's economy. They offer both industry and agriculture the easy, low-cost access to world markets that must accompany high productivity.

Six natural resources—cotton, mineral oil, natural gas, wheat, sulfur, and iron—bring Lone Star residents 2,738,000 jobs, untold wealth, and an unmatched brand of living. Ships figure prominently in developing each of these resources.

One million Texans in factories, on farms, and in transportation and communications

industries, have jobs that benefit directly from the overseas sales and imports of raw materials that American ships help make possible.

Quibbling on Mideast Doctrine

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, appearing in the Washington Star of February 26, entitled "Quibbling on Mideast Doctrine":

QUIBBLING ON MIDEAST DOCTRINE

The Senate quibbles while the Middle East burns and American leadership is frustrated. Will the American people begin to ask themselves soon if they made a grave mistake in electing a Democratic Congress last November? For the effects of a divided Government—with one party in control of the White House and the opposite party in control of Congress—are growing so serious as possibly to endanger the peace of the United States.

The leadership of the United States—and particularly the leadership of President Eisenhower which has meant so much throughout the world to the cause of peace and the prevention of world war III—is being steadily undermined by a group of captious Democrats in the Senate. They are making all kinds of excuses for delaying passage of the Eisenhower doctrine resolution. This delay has every appearance of sabotage and filibuster.

The Senate has had ample time for debate—from the week of January 7 when the resolution was introduced. But after 7 weeks of drifting, the leader of the Senate Democrats, LYNDON JOHNSON, of Texas, had to say frankly to the Senate that one of the problems he had last week was to find 1 Senator to speak and another to be present. He said the Senate itself is "on trial" because the country cannot understand why so few Senators have been present during the discussion of an issue as important as the Middle East resolution.

Yet, when the Democratic leader attempted to set a time limit for the debate, a Democratic Senator promptly served notice he would object and, of course, only one objection is necessary to block an agreement to limit debate.

This has all the earmarks of a filibuster by a bloc of Democrats who do not favor the resolution but know that if it comes to a vote it will pass by a substantial majority. The Republicans generally have spoken in favor of it and are ready to vote, so the tactics of the Democrats now are to drag the debate along from day to day when 1 or 2 Senators to do the speaking.

But the country will hold the Democratic Party responsible for what happens in the Senate. The House, under the statesmanlike leadership of Speaker RAYBURN, Democrat, passed the resolution promptly by a vote of 355 to 61 on January 30, but the House has rules with which to limit debate and prevent an organized minority from filibustering.

It is a strange and unusual development to see Members of the United States Senate filibustering on a matter of foreign policy. The last episode of this kind was fatal. A handful of Senators—mostly Republicans—would not let a resolution pass which President Wilson, Democrat, wanted in order to arm American merchantmen and repel attacks by German submaries. The filibuster lasted till Congress automatically adjourned at noon on March 4, 1917. But the encouragement derived by the Kaiser from this disunity in America was such that unrestricted warfare by his submarines was soon begun against vessels of all flags, and the consequence was that within 4 weeks—on April 6, 1917—the United States had to enter World War I to defend the rights of American citizens to travel the high seas.

There are Democratic Senators who say they see no "urgency" in the situation, thus setting themselves up as better judges of the risks involved than the President of the United States with all the secret and confidential information available to the Chief Executive from all parts of the world concerning Soviet subversion and penetration in free-world countries.

The debate thus far in the Senate by the critics of the resolution has been a hodgepodge of excuses and conflicting claims. Some Democrats say the United Nations is being bypassed and that America should work more closely with it, while others say America should not place its reliance on the U. N. One Democratic Senator says the President already has the authority he requests, and another Democratic Senator says the President wants to use the Armed Forces without regard to the Constitution. One might infer that he thinks the President is right in asking for congressional authority, but other Democratic Senators say that's all wrong—that it's a power frequently exercised before by Presidents.

Most of these Democratic Senators have no common viewpoint except one—to block and delay. They disclaim partisanship in foreign policy and insist that only the Republicans are partisan. But the record shows that there is a remarkable unanimity on the Republican side of the Senate. The "isolationist" comments about "entangling alliances" are nowadays coming from Democratic Senators who usually call themselves "liberal." It's just a tragic fight against the administration by its opponents.

The issue that may emerge from all this is one the people may have to settle in the elections of November 1958—whether, when they voted overwhelmingly for President Eisenhower in 1956 and gave the Democrats control of the Senate by a narrow margin, they intended to vote for the chaos of a divided government in Washington and thus weaken the hand of their leader and spokesman before the world.

A Magnificent Obsession

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Minot (N. Dak.) Daily News on Thursday, February 7, 1957:

A MAGNIFICENT OBSESSION

When Harold Stassen served as Governor of Minnesota he was rated as a sound-thinking public official with every promise of attaining the rank of statesman.

All that would be required, it was held, was the seasoning that experience would bring.

The youthful governor commanded nationwide attention. He was classed by members of the Republican Party as the "white hope" of the years to come.

Stassen went into the armed services, was given a rank in the Navy and came out sound of body and mentally alert.

As president of the University of Pennsylvania nothing occurred to mar an otherwise good record.

However, all through these years Mr. Stassen appeared to place a high rating on publicity. He seemed to know how to bring the gentlemen of the press double-timing to get his ideas of just about any subject.

As candidate for the presidential nomination something must have happened to make him think he was appointed to save the Republican Party. Backed by a minority opposed to the accepted Republican organization he started a career that has mystified the Nation.

He decided that RICHARD NIXON was unworthy of holding the position of running mate with Dwight Eisenhower. It might have been expected that with the result of the San Francisco convention he would have quietly folded his tent and silently withdrawn from the Washington scene.

The ridiculousness of his position in blaming NIXON for the loss of Congress to the Republicans is developed by a survey conducted by U. S. News & World Report.

"Would Republicans have captured control of Congress if Christian A. Herter had been the party's nominee for Vice President?"

That was the query put to losing Republican candidates in 37 States. Of these 77 declared that DICK NIXON was a definite asset and assisted in the campaign. There were two who held Herter would have been better.

Congressman RICHARD M. SIMPSON, of Pennsylvania, summed the situation rather clearly when queried on the Stassen charge:

"This is a most absurd and ridiculous charge.

"As chairman of the Republican committee, I can say that nobody in the party campaigned as vigorously or as effectively for the Republican ticket, for the congressional and local tickets as DICK NIXON.

"In connection with Mr. Stassen's assertions I assume that Mr. Herter must have given his best for the Republican ticket in Massachusetts, and I note regretfully that Republicans lost the governorship in that State. This alone seems to belie Stassen's strange thesis."

We have heard of people going through life with an obsession of some kind or other. It would appear from where we stand that Harold Stassen's could be properly rated as a magnificent obsession, with the time properly at hand for him to remove himself from the Washington scene, and not further embarrass the administration, even though Mr. Eisenhower seems willing to further tolerate him.

The Year of Buildup for the Highway Era

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Kansas City Times of February 4, 1957.

The editorial is as follows:

THE YEAR OF BUILDUP FOR THE HIGHWAY ERA

This is the year that the United States will get ready to build the highway system of the future. By all past standards it is a program of almost fantastic scope. A country that has counted its modern freeways in a few hundred miles is preparing to build an arterial system of 41,000 miles in 13 years. And for most of the distance the goal is construction as modern as the turnpikes.

At this early stage you begin to hear conflicting reports that the program is moving both remarkably fast and discouragingly slow. Apparently the opinions depend on what each individual expected of the first year. According to prevailing estimates 1957 will show a total construction increase of amound $600 million over last year, a substantial step-up on the side of the optimists.

An emphatic opinion on the slow side comes from contractors in a Wall Street Journal roundup at the Chicago convention of the American Road Building Association. It is natural that the builders should compare the moderate 1957 increase with expectations for the program at its peak. The ultimate increase over 1956 may reach a staggering $3½ billion a year.

The brakes come both from the program itself and the national economy. Acquiring right-of-way on the superhighway scale is a tremendous undertaking. The routes must be planned for the greatest driving efficiency to serve the next generation. Such a highway cannot be turned aside to avoid the resistant property owners. And every objector who insists is entitled to hearings as well as a court fight.

Such a vast program is a challenge to the national economy. At the start contractors are being forced to wait for delivery of steel with delays of 6 to 8 months in some cases. And this is the situation in the early construction stage. According to the Wall Street Journal, this bottleneck may necessitate a shift from steel to prestressed concrete. When construction approaches its peak it will produce a tremendously increased demand for everything, for many types of machinery, cement, and asphalt, along with engineers and labor.

And the full plan of the program of today may be only a broad hint of tomorrow. Building to the scale of such a vision creates its own demand for more and more. This year, in fact, marks the beginning of an unprecedented era and no limits are in sight.

Poultry Inspection Bill

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. ANFUSO. Mr. Speaker, on February 5, 1957, I introduced H. R. 4357, a bill for the compulsory inspection of poultry. This measure is the same as H. R. 12016, which I sponsored last year.

It would provide an excellent program of poultry inspection. However, I find that a great deal of misunderstanding about this measure has developed and has aroused fear in some sections of the poultry processing industry. Some processors have thought the measure dangerous to them.

These fears have no basis. H. R. 4357 would only help the poultry processing industry, just as it would benefit consumers, poultry workers and poultry farmers. But I would like to avoid all misunderstandings and suspicions lest they harm the chances for poultry inspection legislation, which is truly effective.

I am therefore, introducing a new poultry inspection bill today. This measure clearly spells out my views on all of the points which have previously disturbed some individuals concerned with this subject.

This new bill provides mandatory ante mortem inspection, to be carried out in such a manner as the Secretary of Agriculture may determine. There need be no fear about a bird-by-bird ante mortem inspection. If the Secretary decides to fulfill the ante mortem requirement by an examination of each flock, coop or batch, that will be satisfactory.

Post mortem inspection will be on the carcass of every bird. Plant sanitation and sanitary processing rules would be established by the Secretary of Agriculture. A processor who fails to meet the sanitation standards would not have his poultry inspected. Uninspected poultry would be banned from shipment in interstate commerce.

Areas of intrastate commerce in which poultry is handled or consumed in so great a volume as to affect interstate commerce, could be designated and brought into the Federal program. But the designation could be achieved only with the consent of the governing body of the area or locality affected.

The inspection would be handled by Federal employees working under the direction of the Agricultural Research Service of the United States Department of Agriculture. One of this Service's units has handled meat inspection for over 50 years. But to ease any industry fears that poultry might be subordinated to meat inspection, let me say that I look forward to the Secretary of Agriculture establishing a poultry inspection branch in the Agricultural Research Service, independent of and equal to the meat inspection branch.

The cost of inspection would be paid by the United States Government—except in the case of overtime of inspectors.

A farmer who slaughters his own poultry or a retailer who only cuts up poultry products, would be specifically exempt from the provisions of the bill. The measure would also establish sound labeling practices.

In short, Mr. Speaker, this bill would establish an effective and practical inspection program. It would truly benefit the poultry consumer, the poultry worker, the poultry farmer, and the poultry processor.

Fort Detrick Appreciation Week

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the Frederick News, dated October 17, 1956, and a statement by the mayor of Frederick, Md., in recognition of Fort Detrick Appreciation Week, which was held the week of October 15, 1956:

DETRICK APPRECIATION

For 13 years this community has enjoyed the associations and reaped the benefits accruing from Fort Detrick. That they have been highly advantageous is generally accepted.

It is only fitting, therefore, that Fort Detrick be given the public recognition the installation well deserves.

Such a move has been sponsored by the Frederick Chamber of Commerce, and as a result the current period, October 15–19, has been set aside as Fort Detrick Appreciation Week. To make the designation official, and at the same time exhibit cooperation on the governmental level, proclamations have been issued by the board of county commissioners and the mayor and aldermen of Frederick. Private citizens join with the commercial, industrial, and professional interests of the entire community in extending felicitations.

Any attempt to dwell herein on the cultural and economic benefits derived in this area through Fort Detrick would be repetitious. Suffice to say, they are legion. The personnel, military and civilian, particularly those from other sections, have been absorbed and many now occupy positions of leadership in all local activities. They have been sincerely welcome and similar greetings will be extended to the many others expected in the future.

No one knows better than we of the Frederick News-Post the extent to which Fort Detrick and its staff have become thoroughly integrated in our way of life—and to community advantage. Our press relations have been most pleasant and cooperative and, we believe, mutually beneficial.

The News-Post, therefore, joins all other local groups in expressing to the Fort Detrick military command, and all others under its supervision, our sincere appreciation for all you mean to us.

FORT DETRICK APPRECIATION WEEK

The civic bodies and service organizations of our community, the city government, and the chamber of commerce recognize the great service rendered to this community by Fort Detrick.

There is great tension in the world and the peace of the world is constantly challenged and the efforts of Fort Detrick helps maintain the peace and protection of our people.

During Fort Detrick Appreciation Week I am sure that every citizen of Frederick will want to join in the observance and extend a salute to the military and civilian personnel of Fort Detrick.

JOHN A. DERR,
Mayor, City of Frederick.

Some Thoughts on the $10 Billion Advertising Industry While Driving to Trenton, N. J.

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I am introducing a companion

measure to Senator NEUBERGER's bill providing standards for the control and limitation of billboards within 500 feet of the right-of-way on each side of the highways to be built under the huge road program authorized by the 84th Congress.

This does not mean that I do not approve of billboards, but I fear what certain abuses can do to the landscape along this new highway system. In their proper place billboards serve a useful purpose and in that place I approve of them, just as I approve of the $10 billion American advertising industry.

I hope, however, that this new Federal highway system can be built to the high standards of excellence which have been set in my State by the New Jersey State Turnpike and the Garden State Parkway, for these highways are an inspiration to the entire country. Absence of an unsightly array of billboards has helped put these New Jersey highways so far ahead of some highways in some other States that it is hard to believe they are in the same country.

Certainly the practice of plastering our great traffic arteries from one end of the country to the other with an endless string of billboards carrying a monotonous repetition of advertising copy is one of the less appetizing aspects of American advertising—one that could well cost this essential $10 billion industry, and the American business firms which use it, much of the good will which they now have.

The great growth of the automobile in our country is due in part to its efficiency, and it has become a necessity in our everyday business life.

But there is in each of us something of the nomad, and we like nothing better than to get out on the open road, leave the clutter of the city behind and head for the country, the green fields, the woods, the fresh streams.

With the growth of urbanization, the countryside is diminishing and we find there is no escape from the city. It stretches along the Eastern seaboard for hundreds of miles. The green fields, the woods, the fresh streams these days are increasingly and effectively hidden behind an overpowering, depressing, and neverending forest of billboards.

Yet this is but one aspect of advertising.

There is another side, a side which we must foster. It is with this other aspect that I am particularly concerned. My measure is a hopeful attempt to save American advertising from excesses that undoubtedly will be harmful to it in the long run.

Let us look at the brighter side, the contribution of American advertising to educational and cultural values.

Today if we want Shakespeare and Shaw, Sibelius and Mozart, a lesson in music appreciation or the ballet, a collective lecture on literature from the foremost savants of our time, or a pictorial presentation of the great events of history it is no longer supplied us, as in the past, only through the classrooms of our schools. The education and the pleasures that go with it are ladled out to us in enormously expensive portions by Ford and General Electric, by Goodyear and Firestone, by Westinghouse and the manufacturers of kitchen appliances, cornflakes, soap and cosmetics, floor-coverings and hardware. This juvenile and adult educational curricula augments the education we receive in our schools.

The businessman, I imagine to his own amazement, has found a new bonanza of public relations and commercial approach. This approach is through the medium of the dissemination of the richest materials in western civilization.

Electronics is the new and additional conduit for the education of the American people. Instead of merely endowing a school, as in the past, the businessman or the corporation he runs, has now become in effect the board of overseers, the chancellor, the faculty board, and everything else in a new order of things where the classroom is the collective living rooms of America.

This is a potential of such significance to the progress of mankind that we here are too close to its origin and development to appreciate its significance for the future.

Just how much the advertising enthusiasm of our age has contributed to the public welfare and to the enlightenment that brought with it the hunger for better living and more and still more public education, I cannot say.

But the contribution has certainly been immense.

Recognizing all this, and with all due credit to business and advertising, I still say that gross imperfections have developed because it is not the primary function of business to educate us in the arts and the humanities. Nor, as we see from much of roadside advertising, for instance, does business make any pretense of being the educator of America and the promoter of America's cultural interests. The net effect is mixed. There is an obvious conflict between maintaining and improving America's cultural values and persuading us to buy a particular package of breakfast cereal or a particular automobile.

Nor can it be gainsaid that while the contribution of the businessman's advertising budget to the culture of our country has been considerable, much of the contribution cannot be called culture at all.

I am hopeful that America's $10 billion advertising industry will see its long-term interests in this matter and join me in supporting this measure which I am introducing.

American business, which consumes the raw materials and the rich resources of the earth in such phenomenal quantities, has become conservation minded and has adopted techniques for the wise and efficient use of these resources.

So I have hopes that American business and the advertising industry generally will do what it can to make America more beautiful, and support legislation which has this end as its purpose.

I include here an article from the New York Times of February 24, 1957:

A BILLBOARD BILL—NEW LEGISLATION TO RID UNITED STATES HIGHWAYS OF COMMERCIAL SIGNS IS EXPLAINED

(By RICHARD L. NEUBERGER)

(EDITOR'S NOTE.—Mr. NEUBERGER, the junior Senator from Oregon, is sponsor of a bill to control and regulate billboards along the new Federal System of Interstate Highways.)

Despite the inexorable growth of industrial suburbs and residential subdivisions, the American countryside still retains some of its original glory and grandeur. Will motorists have a fair and fighting chance to thrill to this outdoor majesty as they drive through the land over the 41,000 miles of the new Interstate Highway System? The vista seen by these travelers either can be the green solitudes of trees and fields or else a never-ending stockade of signboards.

During the next 13 years an unprecedented sum totaling $25 billion is going to be invested in the expansion and rebuilding of an interstate road network which will link all 48 State capitals, to say nothing of its contacts with every major metropolitan center in the Nation. Because the Federal Government will contribute 90 percent of the huge amount, I believe Congress has an obligation to protect wayside beauty along this vast mosaic of four-lane roads from being blotted out by commercial signs and similar blemishes.

THREE REQUIREMENTS

For this reason I have introduced legislation in the Senate imposing three specific requirements. They are these:

1. The Secretary of Commerce shall prepare a set of standards for the control and limitation of billboards within 500 feet of the right-of-way on each side of interstate roads.

2. These standards will apply directly wherever the interstate system crosses Federal public lands.

3. On other lands the Federal Government will pay 90 percent of the cost of buying up advertising rights along the 500-foot adjoining strip beside the highways whenever any State wishes to join cooperatively in such a project.

Many nomads of the open road, unalterably opposed to a picket fence of billboards between them and God's country, will wonder why this method was chosen for approaching the problem.

It is a concession to the issue of States rights, which was successfully raised on the Senate floor against an antibillboard proposal that Senator ALBERT GORE, of Tennessee, and I had included in the original interstate highway bill of last year. After this earlier billboard-regulation clause had been eliminated, it seemed obvious that any future proposal must provide for joint action with the States in order to have the slightest chance of prevailing against the well-organized lobby which invariably represents the signboard interests.

My present bill attempts to meet the States-rights argument by offering to every legislature in America an opportunity to put into effect high standards of roadside beautification at little financial cost to the individual States.

The Federal Government will pay 90 percent of what is required to buy up advertising rights along the new roads. Furthermore, any State government declining to take advantage of this bonanza will be under heavy pressure from those among its citizens who feel that billboards and scenery do not blend.

OLDER ROADS

Because some of the interstate system merely will be reconstructed rather than started from scratch in the open countryside, motorists have expressed curiosity over the fate of signboards which already line a considerable number of these highways.

One method will be employment of Federal funds to purchase from adjoining landowners their rights both to existing and prospective use of their land for advertising purposes. Another proposal is to require the old signs to come down after they have been amortized over a period of 3 or 4 years. Such a delay might not be too serious because completion of the interstate system will require at least 13 years.

It also is well to remember that the prohibition against signboards under my bill will be absolute and final in one realm where such protection of the outdoors is most needed and merited—on the vast Federal lands of the Western States. This includes national parks, national forests, wildlife refuges, public domain and all other Government acreage threaded by roads. In some of these thrilling areas, billboards already are taboo. But in others they stand, competing uncouthly with the wide open spaces for the eye and attention of the tourist.

CRITICAL MOMENT

The urgent nature of antisignboard legislation at this particular moment should be self-evident. The Nation is about to begin upon the most ambitious roadbuilding program in American history. The time to protect these roads from defacement by commercial signs is now. Unless some proposal such as mine becomes law soon, more and more billboards will be erected beside thoroughfares destined to become part of the interstate system.

Some so-called grandfather rights will be acquired by these billboard owners. It will become more expensive to buy them out. Even under compulsion of Federal purchase, they will demand more time to amortize their investment. In addition, there will be protests of discrimination by advertisers who failed to get in under the wire against those already paralleling the new roads.

Lest I seem unduly harsh with the signboard companies, several points should be made clear. It is quite evident under my bill that advertising signs still will be legal in the crowded metropolitan areas, where most Americans now live. This bill is designed only to protect the scenic outdoors, not to redesign American cities. On top of all that, the bill specifically exempts any sign in a commercial area alongside the interstate highways which advertises a business or activity which takes place in such a commercial area.

The other side of the argument is crucial, too. The motorist pays for the highway with his fuel taxes, the excise levies on his car, and in a myriad of other invasions of his wallet. Because he has paid for the road, surely there should exist some right on his part to enjoy the road free of a clutter of signs and billboards. Without the road, the billboard would be worthless.

The highway gives the signboard its entire value. Thus the owners of the interstate system of highways—namely the traveling public of the United States—ought to retain final decision as to whether or not their roads are to be hemmed in by a corridor of billboards.

Where the Water Falls

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial written by Herbert A. Meyer, Jr., editor of the Independence (Kans.) Reporter. The editorial of February 15, 1957, is as follows:

WHERE THE WATER FALLS

The drought-stricken Midwest and Southwest are not the only parts of the country having water troubles. The problem of assuring an adequate water supply is becoming more and more urgent in many areas.

Even in some rainy sections the need is pressing and will become more so. The reason is that industry and irrigation, plus a swift rise in population, have greatly increased our use of water. The figure is now about 200 billion gallons a day and it is going up rapidly.

There is no known method of obtaining more water than we are now getting. Thus, the problem becomes one of conserving and making better use of all available water. One way to do this is to capture the water where it falls—that is, upstream in the small watersheds.

Former United States Representative Clifford R. Hope, of Garden City, Kans., recently focused new attention on this method in a talk before the National Association of Soil Conservation Districts. Hope, who dealt with such matters during many of his 30 years in Congress before his retirement last term, thinks there should be a "greatly expended" Federal program of upstream water conservation work.

Certainly it would be sensible to allocate funds for an upper watershed program. Together with the large downstream dams and reservoirs already under construction or planned—like Fall River, Toronto, and Table Mound—the two programs combined would conserve water, save oil, and reduce the danger of floods.

Before either program individually or together can be successful, however, we must have consistent and adequate rainfall.

Men Who Come to Dinner

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Boston Pilot on February 16, 1957:

MEN WHO COME TO DINNER

(By Rev. George W. Casey)

The troubles that the President is having over his invited guests of late brings out sharply the difficulties of keeping everybody happy in a democratic and pluralistic society. The Jews were shocked by his sitting down with Saud; the Catholics are shocked by the very thought of his sitting down with Tito; and wait until you hear the yell that will come from the Protestants when, and if, he invites Franco.

These troubles further serve to accentuate the great and thorny problems that arise from cooperating with those of different faiths, and the difficulties of determining how far a man approves, encourages and abets sin, heresy and opposition by association, for whatever purpose, with the sinner, heretic or foreign devil.

Mayor Wagner of New York implied that the President's invitation to King Saud gave so much comfort to his anti-Semitism, anti-Catholicism and the slavery in his kingdom that his great city could have no part of it.

It is very obvious that the President did not feel that way at all. His main preoccupations these days are peace and containment of Soviet expansion. He feels that these three men whom he wants to talk with this winter can do more for him in the attainments of them than anybody else he could get. So, though without doubt he regrets any condonation of the moral and political heresies of these men, he is willing to risk it for what he considers the greater good. And if pressed, he could report that Mayor Wagner, in carrying out his administrative and political obligation in all probability also had to work with men who were not without sin of various sorts. He could add that when we were in desperate war with the Axis we welcomed Russia with all its sins, and now we are equally welcoming the alliance with Germany and Japan, with all our memories of Malmedy, and the Death March of Bataan.

Far be it for me to bother coming to the defense of a Republican for whom I have never voted, but this does not seem to me an indication that expedience is his only guide in high policy, or his judgment that right and wrong are merely relative. It is only that people who are wrong on some things can be right on others and working with them for the right does not necessarily confirm them in their wrong nor aid them in extending them. And furthermore that having nothing to do with those from whom we differ, whom we are deeply convinced are wrong, is not always and absolutely the way to serve truth and right.

Walls and curtains, Iron Curtains, Bamboo Curtains, Spanish Curtains, American Curtains (like our McCarran-Walter Act); inquisitions, segregation, nonfraternizations, etc., are old techniques for the preservation of truth and order as we see it. They do shut out undesirables, subversives, deviates, outsiders, and inferior stocks to a degree.

They also prevent, to a degree, contamination, innovation, curiosity, and skepticism. But they shut out many things besides. They shut out charity to begin with, and they also shut out the opportunity to correct, enlighten, elevate, and convert the infidel. And since, as St. Paul says, presumably even of the faithful, "we see now in a manner darkly" those who draw the various curtains may even shut out some new glimpse of truth vouchsafed to the others before themselves.

No compromise with evil, no communication with error, no cooperation with the wrongdoer are brave and ringing statements and they are the safest positions for those dedicated to truth and virtue to take. But spelling them out in detail is something else again. And carrying them out in our fluid and pluralistic society with everyone we meet, in every phase of life could lead to bitterness and division, to fanaticism and injustice, and as is possible in the case of the President and these very un-American fellows he is having to dinner, it could be the loss of some service to peace.

Whatever turmoil the President has stirred up for himself, he can take comfort from the fact that it was complained of the Lord as of himself that he "eats with sinners."

Anniversary of Estonian Independence

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BENTLEY. Mr. Speaker, on February 24, 1957, the 39th anniversary of the proclamation of independence of the Estonian Republic was celebrated throughout the free world.

Like its Baltic neighbors to the south, Latvia and Lithuania, the country of Estonia has been held in the grip of Communist tyranny ever since 1940, with

the exception of a brief period during World War II when Soviet tyranny was replaced by the Nazi variety. But even this grim fact of 17 years of slavery under a totalitarian regime, even the unlawful and immoral incorporation of these three small countries into the Soviet Union, has not destroyed the hope of the Estonian people for freedom.

It is fitting and proper on this anniversary which has such great significance to the people of Estonia to remind them that the United States has never recognized or admitted the legality of their enslavement and still maintains diplomatic relations with an Estonian Government in exile. It is further fitting and proper to remind them that the United States Government has always expressed its hope and its belief in the peaceful liberation of all captive peoples behind the Iron Curtain. Surely the powerful combination of our determination and the burning desire for independence of the Estonian people themselves will one day bring freedom and self-determination to Estonia as it will to captive peoples everywhere. It is a privilege to salute the people of Estonian descent everywhere on the 39th anniversary of their independence and to assure them of my own solemn conviction that the day will soon come when their homeland will be freed from the chains of the oppressor.

George Washington's Birthday

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. VAN ZANDT. Mr. Speaker, it was my privilege on Thursday, February 21, 1957, to deliver the following address at the annual George Washington's Birthday banquet at the George Mason Hotel, Alexandria, Va., sponsored by the Veterans of Foreign Wars of the United States:

SPEECH IN OBSERVANCE OF GEORGE WASHINGTON'S BIRTHDAY BEFORE THE VETERANS OF FOREIGN WARS, ALEXANDRIA, VA., ON FEBRUARY 21, 1957

I am greatly honored by the invitation to address you in this historic city on the eve of George Washington's Birthday.

Washington belongs to Alexandria as Alexandria belongs to him.

At every turn in your city one is reminded of George Washington:

1. As a little boy on his brother Lawrence's barge bringing Mount Vernon tobacco to the Hunting Creek warehouse;

2. On horseback riding to the village of Belle Haven;

3. As a young surveyor carrying the chain to plot the streets and lots.

George Washington danced at the balls in Alexandria, visited the young ladies, drilled the militia, launched vessels, engaged workmen, and dined in many homes.

As a citizen of Alexandria he ran for office, sat as justice, sponsored the Friendship Fire Co., a free school, the Alexandria Canal, and other civic enterprises.

He was pewholder of Christ Church, and master of the Masonic Lodge.

George Washington came to Alexandria to collect his mail, to cast his ballot, to have his silver or his carriage repaired, to sell his tobacco or his wheat, to join the citizenry in celebrating independence.

His closest friends and daily companions were Alexandrians.

The dwellings, wharves, and warehouses of the town, were as familiar to him as his Mount Vernon farm.

In Alexandria Washington took command of his first troops.

From the steps of Gadsby's tavern he received his last military review.

An Alexandria doctor closed his eyes, and Alexandrians wept as he was carried to his last resting place.

The geographical location of Alexandria, in the shadow of our capitol dome, its intimate association with the lives of prominent men and the numerous historic points of interest, constitute an ideal climate for my efforts this evening—to pay tribute to the father of our country.

The boyhood of Washington was as healthy and normal as a Virginia boyhood could be.

VERY LITTLE STUDY—A GREAT DEAL OF OPEN AIR

He had, as a matter of fact, only some 7 or 8 years of formal schooling, but it is significant to note that period included an excellent grounding in mathematics and surveying.

For 4 years, under the hard necessity of earning his livelihood, he assisted in plantation work and took field lessons in surveying.

The private character of George Washington was to a great degree molded by his surroundings and the influences to which he was exposed.

Left fatherless at the age of 10 years, he fell under the influence of his brother Lawrence, his senior by some 14 years.

Lawrence had received a finished education in Europe.

The ambitions of young George were stimulated by the well-bred, graceful, easy, and polished manners of his tall and distinguished-looking brother.

At 17 Washington entered the public service and his life as an official and citizen began.

He was the appointed surveyor of Culpeper County.

During his lifetime, excepting 7 years, he was, in some capacity or other, in the public service.

He was surveyor, militiaman on the frontier, member of the colonial assembly, member of the Continental Congress, General of the Continental Army, President of the United States, and, finally, lieutenant general of the Nation in prospect of European war.

It is the destiny of America that, in periods of crisis, we have a vast reservoir of human resources from which to draw the leadership that sees us through.

In each of the trials that have beset America's growth and development the opportunity has been there for our form of government to prove its vitality, its wisdom, its greatness.

As we, the Veterans of Foreign Wars of the United States, observe Washington's birthday it is well for us to pause and recall that the Father of our Country in his time also faced perplexing and burning problems similar to those which confront us now.

All of us can profit by emphasizing that in those early years enemies both from without and from within beset the new Republic.

Truly, history repeats itself.

In George Washington's time the powerful nations of the world then stood ready to prey on our commerce, to stifle our economic growth, and to grab our territory.

In a message to both Houses of Congress in 1789 Washington pleaded for an "effective system for the Militia of the United States."

In terms that might well fit our present situation, he said: "It is unnecessary to offer arguments in recommendation of a measure on which the honor, safety, and well-being of our country so evidently and so essentially depend."

In those days it was the militia—soldiers on foot.

Today, along with the army, it is the navy, the marine corps, and the air force.

This Nation finds itself in the midst of a revolution in military affairs, brought about by scientific advances in the development of nuclear weapons and means of delivering them.

As the result, the capability to destroy has reached unprecedented proportions.

This capability to destroy, in my opinion, has forced upon the free world and Communists a nuclear stalemate which in plain words means that the free world or Communists can now accept the hazards of a full-scale atomic-hydrogen war.

From the United States standpoint the striking power of the United States Armed Forces, joined with those of our allies, and enjoying worldwide deployment by air, sea, and land around the Soviet perimeter, constitutes the deterrent element that makes the risk of war unacceptable in Soviet calculations.

In addition to the striking power of our Armed Forces and allies, designed for an atomic-hydrogen war, we must at all times maintain an all-around force to handle brush fire and local emergencies.

The striking power of our Armed Forces is mainly represented by:

(a) Increased nuclear firepower.

(b) Ever-increasing mobility of our three armed services.

(c) New types of aircraft.

(d) Navy nuclear-powered task force including carriers.

(e) Smaller and more mobile groups for the Army.

(f) Development of air supply.

(g) Wide dispersal of airfields and supply bases.

In our laboratories you will find the weapon of tomorrow with the trend continuing toward the guided missile with a nuclear warhead which, in the not too distant future, will provide the major element of firepower for all of our Armed Forces.

A strong and ready reserve force, designed to take its place alongside of the Regulars in the maintenance of combat-ready force for the present, while developing one to face up to defense threats of the future.

The maintenance at all times of a strong and expanding peacetime industrial structure, readily convertible to the tasks of defense and war.

In the building of such a force, we very definitely must take into consideration the importance of maintaining our economic strength at all times.

Otherwise, as a Nation, we could lose the war without military action.

National unity, so essential today, was of equal prominence in the days of George Washington—who constantly pleaded for unity among his people.

Disturbing elements tore our land with inward strife.

State was jealous of State, faith opposed faith, and race persecuted race.

Those were really dark days in the life of the infant Nation.

A great statesman, as well as a great general, Washington realized that the young Nation could grow in strength and take its place among the other nations only if intolerance and bigotry were conquered.

He feared what was happening, therefore he admonished his countrymen.

He pointed out how small are the differences that form the basis for misunderstandings and conflict.

He emphasized that love and pride of country must rise above selfish personal interests.

Today we realize that there are those nations in the world that are jealous of America's greatness.

In addition, they are fearful of our efforts to build a God-worshipping world. A world wherein freedom and happiness shall prevail for all mankind.

Our first President, I feel sure, would have been elated at this convincing evidence of our belief in his concept of the principles upon which our country is built.

If George Washington could step out of the pages of history tonight, I am confident he would repeat what he asserted in the struggling, creative days of our Republic, as he fought to create the civil and religious liberties of the American people.

To the United Baptist Churches in Virginia and other Protestants, George Washington wrote: "Every man ought to be protected in worshipping the deity according to the dictates of his own conscience."

To the Catholics in the United States he wrote in 1789:

"I hope ever to see America among the foremost nations in examples of justice and liberality.

"And I presume that your fellow citizens will not forget the patriotic part which you took in the establishment of their Government."

To a Hebrew congregation in Rhode Island, he said:

"All, possess alike, liberty of conscience.

"The Government of the United States gives to bigotry no sanction, to persecution no assistance."

Yes; we Americans do possess this precious heritage that now unites us, a legacy that transcends any political, religious, or economic difference.

Our heritage secures to us the ideals that mankind has longed and searched for since the dawn of time.

As one approaches our Nation's Capital from the South, driving through Alexandria, the George Washington Masonic Memorial, reminds us of his Masonic activity in the Masonic Lodge of this city.

But George Washington was not great because he was a Mason.

Nor was he great because he was from Virginia.

He possessed natural gifts and rare qualities of mind that enabled him to successfully meet and gain the esteem of the most distinguished diplomats of the Old World.

He was a man of magnificent presence.

He impressed all with respect and admiration, not only because of his excellent qualities, but on account of his unerring judgment, strong appreciation, and consideration of the rights of others.

He was not gifted with what we might term "eloquence," yet because of his honesty of purpose, both of heart and mind, he inspired his hearers with that confidence that carries with it conviction.

When we survey other characters in the American military and political field in the last quarter of the 18th century, we look in vain for anyone with Washington's unique combination of qualities and abilities to meet our country's need.

It is true that Washington was surpassed by others in various ways:

Patrick Henry was more eloquent.

Jefferson was a greater political theorist.

Thomas Paine a more ready writer, and some have thought General Green a more clever militarist.

But it is certain that no one had the combination of qualities which made Washington the "Father of His Country."

Someone has suggested that Washington became commander in chief of the Continental Army and first President of the United States merely through chance.

Such critics cite as examples his military experience in the French and Indian War and his financial independence obtained by a fortunate marriage.

But when in a nation-forming and world-changing crisis the one prepared leader appears, is it not more reverent to keep still about the wheel of fortune and acknowledge the working of divine providence?

The world needed America, America needed Washington, and he was prepared. God saw to that.

Washington's public service falls into four parts:

(a) The first was his work for Virginia, mainly preceding and during the French and Indian war, and it was preparatory to his greater accomplishments as our Founding Father.

(b) His second great service was as commander in chief of the Continental Army.

Here the value of his personality is most plainly manifest.

When Congress was well-nigh powerless to furnish money or supplies, when jealously, slander, and treachery were abounding and when trusted leaders proved traitors, Washington would not quit.

His persistent courage, his bravery, his poise, his unselfishness, and his deep sense of justice held together the tattered remnants of a hungry army.

A man of less character would have been disgusted, disgruntled, and discouraged.

He would have sent his resignation to Congress the first time that Gen. Charles Lee (no relation to any Virginian) misbehaved.

But not George Washington.

The Father of Our Country might have tried to make himself king.

Others have done it with less occasion.

But when his unpaid troops at the close of the war were ready to use military power on the Congress to enforce their rights, Washington persuaded them, with pleading eloquence, to preserve the civil authority and abide respectfully by the decisions of the Congress.

He assured them that he would use his influence to get just pay for them.

(c) Washington's third contribution was in connection with the Constitutional Convention, where he presided from May 25 to September 17, 1787.

He was a natural-born President.

He was by instinct and by training an administrator.

In the Virgina House of Burgesses, where Washington served for years in its colorful sessions, he had very little to say.

He shunned the free-for-all debates enjoyed by Jefferson, Madison, and Patrick Henry.

On the other hand, with Washington in the chair he was right at home.

Whether directing his servants at Mount Vernon, an army in the field, or a deadlocked constitutional convention, he had an instinct for avoiding rashness and for getting the right thing done.

And so, as chairman, he is said to have admonished the delegates as they began their task in these words:

"Let us raise a standard to which the wise and honest can repair.

"The event is in the hand of God."

And, as chairman, he signed that great document, the Constitution of the United States, which Gladstone said was "the most wonderful work ever struck off at a given time by the brain and purpose of man."

But signing the Constitution was one thing and its adoption by the States was another.

The sentiment in Virginia was closely divided, and without Virginia there could be no Union.

Washington, with his thorough knowledge of the Convention debates, threw his influence strongly in favor of adopting the Constitution and was without doubt responsible for the happy outcome.

This is George Washington, our Founding Father.

(d) It is little wonder Washington was chosen our first President.

This was his fourth great public service.

With no precedent to guide him he had to depend largely and often upon his deep sense of propriety as to how a President of the United States should act.

He acted like the gentleman and citizen of Alexandria that he was and set a worthy example for a long line of notable successors.

Washington was no infallible prophet.

He did not claim to be one.

He did not foresee the development of political parties in our country.

Neither did he know that within a century and a half one could travel from New York to London more quickly than he in his day could go from Alexandria to Philadelphia.

Yet even with his necessarily limited vision Washington enunciated some great principles of government when he said:

"My politics are plain and simple.

"I think every nation has a right to establish that form of government under which it conceives it may live most happy; provided it infracts no right, or is not dangerous to others; and that no governments ought to interfere with the internal concerns of another, except for the security of what is due to themselves."

The fame of George Washington stands apart from every other figure in history.

In conclusion, as we commemorate his birthday on this occasion, let us hold high the faith in America, which he bequeathed to us, and which the Veterans of Foreign Wars of the United States have constantly helped to preserve.

Yes; let us move forward through peace to preserve George Washington's ideals for all future generations.

Inventory at 63

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith the remarks of the Reverend James H. Strayer, of Calvary Methodist Church, in San Jose, Calif., with respect to his 63d birthday. I feel that the article entitled "Inventory at 63" might be helpful if considered by every Member of this very busy Congress:

INVENTORY AT 63

Next Sunday I plan to celebrate my 63d birthday. If my plans culminate properly I hope to preach a sermon on: "If I Were Young." It is always easy to speak on the shortcomings of youth since I will not pass that way again.

The year of my birth is contemporary with Coxy's army marching on the Capital. Neither of us succeeded well judging from an economic slide-rule scale. So far my business of living leaves me with a 60-percent heart, 90-percent vision, 85-percent hearing, and 90-percent[1] pedal digits since stumbling over the bathroom scales.

[1] Statistics based on personal guessometer.

Spiritually it seems I am more sympathetic with the unfortunate—which comprises most of whom I know. No longer am I interested in perfectionism in my fellow man since I care more and more for fellowship. One can't have both. The behavior pattern of people is of more concern than their oral expression. I am more certain that the world will go on with or without me although there is a constant interest in my being a part of it. I am learning to accept the limitations of increasing age without worrying about earning my salary. My value in my work is not measured by how much I do as in doing what is really important. I try to strike only when the iron is hot instead of banging away on cold metal. I envy no man his job, his success and with reasonable limitations, his material security. I have learned to believe my beliefs and doubt my doubts assuming that God loves honesty.

Professionally I try not to play a role that could not be acted in Bermuda shorts as well as in ornate flowing robes. I try to have the same estimate of my race, color, religion, and politics as I would have others estimate theirs. I have no desire to persecute nor be persecuted.

I have no interest in a morality not based on truth. The world has yet to build a moral culture where the brute facts of life are the foundation stones.

What joys and satisfactions come to me, and they are many, are due not to my own attainments so much as the good will of my fellow men. Beginning with my own fireside and broadening out through my church, community, and nation, there are compensations in living beyond description.

What is my wish for the world? Well, stripped of all nonessentials I think more than anything else the world needs a good night's rest.

The National Guard Controversy

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include enrolled Senate Concurrent Resolution 5, as the same was adopted by the Senate and House of Representatives of the 26th Legislature of the State of Oklahoma:

Senate Concurrent Resolution 5

Concurrent resolution relating to certain statements made by Charles E. Wilson, Secretary of Defense; requesting said Charles E. Wilson to reconsider said statements in the light of certain factual information and to determine whether a retraction should not be made; directing that copies of this resolution be forwarded to President Dwight D. Eisenhower, Secretary of Defense Wilson and to each member of the Oklahoma congressional delegation

Whereas on January 28, 1957, there was released to the press, radio, and television mediums of the Nation a statement by Charles E. Wilson, Secretary of Defense, that "a sort of scandal * * * a draft-dodging business" developed in National Guard enlistments during the Korean military conflict; and

Whereas the National Guard has the longest continuous history of any military organization in the United States of America; and

Whereas the basic concept of national defense is "a small Regular force complemented by a large Reserve"; and

Whereas this basic military concept has been tested and proven successful in many wars, most recently in World War II and during the Korean conflict; and

Whereas Congress by its official action regarding military service did authorize certain services in the National Guard of the United States and in the United States Army as a means of fulfilling military requirements; and

Whereas the State of Oklahoma is proud of the record and achievements of the National Guard units of this Nation, and is especially proud of the record and achievements of the 45th Infantry Division, a National Guard Division composed exclusively of Oklahomans; and

Whereas the Legislature of the State of Oklahoma desires to call to the attention of the Secretary of Defense and to the people of this State and of the Nation the sterling record of the 45th Infantry Division; and

Whereas it is the feeling of this 26th legislature and of the people of Oklahoma that it is grossly unfair for the Secretary of Defense to urge, on the one hand, the enlistment of youth in the National Guard program as authorized by law and, on the other hand, following such enlistments in good faith by youths thus encouraged, to denounce such youths as draft dodgers; and

Whereas it is the further feeling of this 26th legislature and of the people of Oklahoma that the reputation of the 45th Infantry Division, and other National Guard divisions, has been done severe harm as a result of the above-quoted statement, and that such statement constitutes a gross and unwarranted insult to Oklahoma National Guard men and to those of other States, especially those who served during the Korean conflict; and

Whereas it is inconceivable that such a statement could be made, except in the heat of anger, or without proper reflection and due consideration of the history of such divisions as Oklahoma's 45th Infantry Division and others which have distinguished themselves in the defense of this Nation; and

Whereas this Oklahoma Legislature and the people of the State have awaited a retraction by the Secretary of Defense, but, instead, said Secretary has reiterated and expanded his initial statement: Now, therefore, be it

Resolved by the Senate of the 26th Legislature of the State of Oklahoma (the House of Representatives concurring therein):

SECTION 1. The Legislature of the State of Oklahoma respectfully requests that Charles E. Wilson, Secretary of Defense, reconsider his statements in the light of the above facts and determine whether a retraction of said statement should not be made, especially as it relates to National Guard divisions, bearing in mind that the several National Guard divisions did not enact such legislation but acted faithfully in compliance therewith in all particulars.

SEC. 2. Be it further resolved, a copy of this resolution be made a part of the permanent journals of this 26th legislature, and that duly authenticated copies of this resolution be forwarded to Dwight D. Eisenhower, President of the United States, Charles E. Wilson, Secretary of Defense, and to each member of the Oklahoma congressional delegation.

Adopted by the senate the 30th day of January 1957.

FRANK MAHAN,
Acting President of the Senate.

Adopted by the house of representatives the 13th day of February 1957.

B. E. HARKEY,
Speaker of the House of Representatives.

CERTIFICATION

STATE OF OKLAHOMA,
County of Oklahoma, ss:

I, Leo Winters, secretary of the Senate of the State of Oklahoma, do hereby certify that the above and foregoing is a true and correct copy of Enrolled Senate Concurrent Resolution No. 5 as the same was adopted by the Senate and the House of Representatives of the 26th Legislature of the State of Oklahoma, the original hereof being on file in the office of the secretary of state of the State of Oklahoma.

Witness my hand and the seal of my office at the State capitol this 19th day of February 1957.

[SEAL] LEO WINTERS,
Secretary of the Senate.

Sanctions Against Israel

SPEECH
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. RODINO. Mr. Speaker, in the past week the Israeli-Egyptian conflict has reached a new stage of crisis. The United Nations called for the withdrawal of Israeli forces from the Gaza Strip and Sharm el Sheikh, the strategically important area along the Gulf of Aqaba. This Israel refused to do until it had ironclad guaranties that both areas would not be used by Egypt to stage future attacks. Pending in the United Nations General Assembly is a resolution calling for sanctions against Israel.

At first our Government had not entirely clarified its position on the issue of sanctions. It apparently took the position that some pressure ought to be exerted by the United Nations upon Israel. On February 26, however, the press reported that the Government was prepared to submit a resolution to the General Assembly which would call for the United Nations control of the Gaza and Aqaba areas but would omit any mention of sanctions.

In many respects the initial position taken by our Government was somewhat precipitate. No doubt it had reasons for this action; but the issue at stake goes far beyond the question of Israeli-American relations: It vitally concerns our relations with the entire Middle East.

In this complex of international politics our guide should be to seek justice and accomplish the objectives of our policy interests. The question is, Can justice and our enlightened self-interest be achieved by imposing sanctions on Israel? I think not. I welcome, therefore, the change of mood in our Government on this question. More than any other nation, Israel depends upon the United States for its economic sustenance. Were we to cut off all economic ties with Israel, that small democratic nation would be perceptibly weakened and clearly placed in an indefensible position. Certainly a course of action which would bring about such results would not be just. Nor would our best interests be served. Egypt is not without guilt in this present crisis. Indeed, it was the uncompromising hatred that Egypt so often voiced for Israel and the continued Egyptian threats to eradicate

Israel from the face of the globe that was the root cause of the crisis. And while America would not wish to reward Israel for her action, certainly it would not want to whet the Arab appetite for conquest by a move which would inevitably invite an attack on a economically weakened Israel.

The solution to this highly complex problem is difficult. The world has had this seemingly insoluble problem for over a decade, and the prospects are still not bright for reaching a reasonable agreement. However, sanctions against Israel are not the answer. A just solution would seem to require concrete guaranties to Israel that once withdrawal from the disputed areas was effected, Egypt would not use them to stage attacks on Israeli territory and shipping.

In addition, every effort should be made to persuade Egypt to permit the final clearing of the Suez Canal and to accept a form of control of the canal that would be consistent with both Egyptian national interests and the interests of the other nations of the world which look upon the canal as a vital waterway. Once success has been achieved in these matters all energies should then be directed toward building a broader Arab-Israeli understanding.

America has entered the Middle Eastern political arena in full force. Let our force, both physical and moral, continue to be applied to serve the ends of justice, as well as our own enlightened national interest, constructively at all times. Sanctions, gentlemen, are neither constructive nor do they serve our interests.

Your Congressman Speaks

EXTENSION OF REMARKS
OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. FEIGHAN. Mr. Speaker, under leave granted, I herewith insert in the RECORD my address delivered Saturday, February 23, over Radio Station WHK, Cleveland, on the regular weekly program conducted by WHK Radio Station to enable the Congressmen from the Greater Cleveland area to offer regular reports from Washington to their constituents. This program is known as Your Congressman Speaks and my address follows:

This is my first report from Washington since last July when Congress adjourned.

Immediately upon the convening of the 85th Congress we were confronted with what the present administration called an issue involving war or peace. This has more lately been termed the Eisenhower doctrine for the Middle East.

Congress was warned by the President and the Secretary of State that unless Congress adopted a resolution making clear to the Russians that the United States intended to prevent further infiltration of Russian influence in the Middle East area, the Russians would then engage in actions which might very well bring about World War III. This has been the overriding issue in Congress since the day it convened.

During debate on the floor of the House, I expressed very serious misgivings and grave reservations about the Eisenhower resolution. In the first place, the resolution was very limited in that it suggested opposition only to internationa communism. The clear inference was that national communism was acceptable to the administration. I expressed concern that the loose wording of the Eisenhower resolution would make it possible for the Communist dictator Tito to infiltrate the Middle East with his brand of communism and that the administration would not be empowered to stop him. Upon questioning during the debate, I was assured that the Eisenhower resolution did not intend to do this despite its faulty language. The second concern I expressed was that if Congress did pass the Eisenhower resolution we would, in fact, be endorsing support for what Secretary Dulles has fanatically defended as national communism or independent communism. I raised this question in the House because for many months I have been concerned with the lack of understanding shown by Secretary Dulles of the latest Kremlin tactical maneuver to confuse the leaders of the free world on the basic question of communism. To those people who have been compelled to live under the tyranny of communism, there is absolutely no difference between the two brands and it is obvious that the Russians have merely invented the slogan of so-called national communism as a device for confusing gullible people throughout the world. Again I received assurance that in voting for the proposed Eisenhower resolution, I would not be endorsing the devotion of Secretary Dulles to the misguided notion that we can defeat the Communist conspiracy by splitting its camp into various so-called national or independent segments.

It was only after receiving assurances on the floor of Congress on these vital points that I voted for the resolution. By this process I removed any doubt on these two critical points as to the intention of Congress with respect to the Eisenhower resolution. I shall keep a close watch on developments to make certain that the Eisenhower administration does not violate the spirit of the resolution or the intent of Congress.

Upon conclusion of Senate hearings, the resolution was amended to make it clear beyond any doubt that we are prepared to use force if the Russians move into the Middle East.

While Congress has been giving very careful study to the proposed Eisenhower doctrine for the Middle East, Secretary of State Dulles suddenly and unexpectedly proposed that sanctions be imposed upon Israel unless it abided by a United Nations resolution calling for the withdrawal of the Israeli troops from the Gaza strip. The new Dulles proposal for sanctions against Israel raises a series of very pertinent questions which apparently had not occurred to the Secretary of State or his advisers in the Department of State. Those questions are—

First, how could we recommend to the United Nations that sanctions be imposed against Israel for noncompliance with a United Nations resolution when we have made no effort to impose sanctions upon the most infamous aggressor, the Soviet Union, for its failure to comply with a United Nations resolution passed last December, calling for the removal of all Red army troops from Hungary. In this connection it will be recalled that after the Hungarian freedom fighters had driven the Russians out of Budapest and had won 4 historic days of freedom and independence, the Red army reinvaded Hungary in the early morning hours of November 4. At the very time the Red army had reentered Hungary with 5,000 tanks, 200,000 reinforcements of infantrymen and supported by a major effort of the Russian Air Force, the Russian representative in the United Nations, then meeting in emergency session, was assuring all the United Nations delegates that the Russian troops were withdrawing and there was no cause for the United Nations to be concerned with developments in Hungary. A few hours later, when the cruel and shocking truth of the Russian slaughter of the Hungarian patriots was made known to the free world, public indignation reached the point where forthwith and decisive action by the United Nations appeared necessary for the survival of the United Nations itself. This caused the United Nations General Assembly eventually to pass a resolution demanding the withdrawal of all Russian troops from Hungary, a resolution which the Russians and their satellites voted against and which, up until today, the Russians have refused to recognize.

It would be a violation of all that is just and decent if we, as a nation, were to support any resolution imposing sanctions against Israel unless equal sanctions were simultaneously voted against the Russian Communists. There is firm support for this position among all people who seek a just and lasting peace, and the prevention of world war III.

The second pertinent question raised by the Dulles proposal to apply sanctions only against little Israel is whether our current foreign policy is based upon the notion that we should punish little nations when they stand up for principle. It is important that the American people remember that Israel has taken a public stand against the Russian Comumnists and has pledged itself to fight against any Russian maneuvers in the Mideast area. Has Colonel Nasser, the Egyptian leader, given similar assurances to our Government? The answer is "No." The record shows that Colonel Nasser has been receiving military assistance and economic aid from the Russian Communists. Before the conflict in the Middle East broke out, it was a known fact among competent newspapermen—but apparently not to the Central Intelligence Agency of our Government—that there were over 5,000 so-called Russian technicians on Egyptian soil, who in fact were Russian military officers, jet pilots, and Russian secret-police operatives. It is also interesting to note that the Israeli troops captured a stockpile of 1 million Russian-made army blankets in the first days of the conflict—which indicates the number of so-called volunteers the Russians intended to parachute into Egypt. On the record, there can be no reasonable doubt that it would be national folly to put any dependence upon Colonel Nasser. He has collaborated with the Russian Communists and betrayed his own people.

Congress now has been called upon to cooperate with the administration by simply putting a rubber stamp on Mr. Dulles' proposals. We should not depart from our time-honored position as protector of the smaller and persecuted nations. We should not depart from the principle of equal treatment for all nations, large and small. We Democrats stand ready to give full cooperation to the Eisenhower administration in meeting any and all situations which in any way threaten the safety, progress, and security of the American people. We are prepared to take an active part in the formulation of foreign policy. We are prepared to help the administration out of its present confused position, but we must be in on all phases of planning the rescue.

It is regrettable that our Government took only half-hearted action in connection with the Hungarian revolution and the heroic effort of the Hungarian people to throw the Russian Communists out of their beloved homeland. If the courage of the Eisenhower administration in facing up to this matter was one-half that of the brave little chil-

dren of Hungary, the conspiracy of communism would be in its death throes and we would be on the way to lifting the terrible burden of taxation from the backs of the American people.

It will be to our everlasting discredit if we, as a nation, fail to take action in support of the cause of Hungarian freedom and national independence. It is not too late for us to take action. Popular public opinion can force the Eisenhower administration to call for the expulsion of the Russians from the United Nations unless they get out of Hungary.

Remove Political Restrictions on Government Employees

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. ANFUSO. Mr. Speaker, I am introducing a bill which calls for the removal or elimination of certain restrictions imposed on the political activities of officers and employees of the Federal and State Governments under Public Law 252 of the 76th Congress. This is the law which is commonly referred to as the Hatch Act, passed by Congress in 1939.

It is my firm conviction that under this act the civil-service employees of our Federal and State Governments are relegated to a position of second-class citizens. I do not believe that this was the original intention of the sponsors of that act when it was enacted some 16 or 17 years ago. Nor do I think that the assertion of political privileges can be denied under the United States Constitution to a large segment of our population simply because they happen to be Government employees.

Political freedom and the freedom of expression should be granted on the same scale to Government employees as to all citizens of this Nation. Federal or State employment should not in itself become a means of depriving American citizens of rights guaranteed them in the Constitution. These people are entitled to express their views and opinions on political parties and candidates, regardless of their employment.

For this reason, I believe it is high time to ease such restrictions imposed on civil-service workers and that we extend to them the same privileges of participating in the political life of the country as all others enjoy. Originally, the Hatch Act was intended to curb unorthodox and pernicious political activities on the part of certain individuals or groups, who abused these privileges. It was not intended to punish all civil-service employees and to deprive them of the full benefits of citizenship. In the long run, our country will be the loser and our democratic processes will suffer if we continue to deny such rights to several million of our citizens, who are among the most loyal and most patriotic.

My bill simply seeks to remove the restriction contained in the Hatch Act which forbids any officer or employee in the executive branch of the Federal Government from taking any active part in political management or political campaigns. It also seeks to remove the same restriction with respect to officials and employees of any State or local agency whose principal employment is in connection with any activity which is financed by loans or grants made by the Federal Government or its agencies.

Mr. Speaker, our country is regarded as the moral leader and moral spokesman of the free nations of the world. As such, it does not befit the United States to deny basic rights and to discriminate against many of its citizens merely because they are employed by the Federal or State Governments. Government employment should be a badge of honor, not a status of second-class citizenship.

Chamber of Commerce Pays Tribute to the Cooper Union

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the East Side News, a publication circulated in the 19th Congressional District of New York. Cooper Union, as it is better known in New York City, or to use its proper name, the Cooper Union for the Advancement of Science and Art, last week celebrated the 100th anniversary of its first charter. It is an institution well known and most beloved by the people of New York and one which we hope will continue to function for many years to come:

[From the East Side News, New York, N. Y., of February 23, 1957]

CHAMBER OF COMMERCE PAYS TRIBUTE TO THE COOPER UNION

A demonstration of mutual respect between the Cooper Union and its East Side neighborhood was a feature of the student-staff convocation, held last week in observance of Peter Cooper's birthday and the 100th anniversary of the Cooper Union's first charter.

The East Side Chamber of Commerce, with which the administration has long maintained a friendly relationship, presented to the Cooper Union at that time a congratulatory resolution. In behalf of the chamber, David I. Kaplan, president, presented to Dr. Edwin S. Burdell, president of the Cooper Union a framed manuscript, hand-lettered in color on parchment. The resolution reads as follows:

"Whereas the Cooper Union for the Advancement of Science and Art is situated on the lower East Side of the city of New York, where for 100 years it has welcomed countless students seeking knowledge and enlightenment in the arts and sciences, and by reason thereof has become their alma mater, and whose fame as an institution of higher learning has spread throughout the civilized world; and

"Whereas Cooper Union, as we lovingly call it, is celebrating the 100th anniversary of the granting of its original charter by the legislature of the State of New York to the immortal Peter Cooper: Be it unanimously

"*Resolved*, That the East Side Chamber of Commerce offers its homage to its illustrious neighbor, felicitates it on its centennial, and extends to its officers, directors, faculty, and students heartfelt wishes for many years of continued dedicated service to our city, State, and Nation."

Attitude of Jewish Citizens of America Regarding the Gaza Strip

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. AUCHINCLOSS. Mr. Speaker, I am gratified to have this opportunity to place in the CONGRESSIONAL RECORD copies of letters dated February 25, 1957, addressed to the Honorable David Ben-Gurion, Prime Minister of Israel, and President Dwight D. Eisenhower, signed by Dr. Eugene H. Lehman, president of Monmouth College in West Long Branch, N. J. Dr. Lehman is a former instructor of Biblical literature at Yale University and, therefore, speaks with authority on a subject he knows something about. I think his views as expressed to President Eisenhower and Prime Minister Ben-Gurion are well worth reading and I think they aid in the clarification of a very much befuddled situation. The letters follow:

MONMOUTH COLLEGE,
West Long Branch, N. J., February 25, 1957.

The President, DWIGHT D. EISENHOWER,
Washington, D. C.

SIR: You will find enclosed a copy of a letter under date of February 25 which I sent to Prime Minister David Ben-Gurion.

I was prompted to send this letter partly because I know you desire to become acquainted with the attitude of at least some of the Jewish citizens of America with reference to the withdrawal of the forces of Israel from the Gaza strip and from the Gulf of Aqaba.

With reference to the charge brought up against you by your opponents to the effect that you are following one moral principle against strong Russia and the opposite principle against the comparatively weak Israel, there are, of course, several effective arguments you can make in reply.

I will here limit myself to merely one of them; namely, a resolution has already been introduced into the United Nations recommending the application of sanctions against Israel. If that resolution is adopted, you apparently intend to comply with it. If a similar resolution should be introduced into the United Nations recommending the application of sanctions against Russia and if that resolution should be adopted I assume you will, likewise, comply with it. Hence, there is no validity whatsoever in the charge that you are following one set of moral principles against Israel and a different set against Russia.

I have the honor to remain,
Yours faithfully,
EUGENE H. LEHMAN, *President.*

MONMOUTH COLLEGE,
West Long Branch, N. J.,
February 25, 1957.

The Honorable DAVID BEN-GURION,
Jerusalem, Israel.

YOUR EXCELLENCY: In the New York Times for February 22, 1957, you are quoted as having addressed the Kenesset in the following words: "These principles (of the prophets of Israel) are no less precious to

us than to any other people." These words imply that the State of Israel is founded on the principles enunciated by our prophets.

I am a former instructor in Biblical literature at Yale University. I have, therefore, made a fairly careful study of both the priestly element and also of the prophetic element in the Old Testament. These two elements were in constant and bitter conflict with each other throughout the entire Biblical days. Indeed, the conflict has continued almost uninterruptedly and with equal bitterness throughout Israel's long history down even to the present time.

The fundamental principle of the prophetic element is this: that the kings should build up a strong civil and political state supported by a large army. The priests were to play an important part in this state.

The fundamental principle of the prophetic element is this: that the people should build up a purely ethical and universal religion. Whenever a dispute arose between the military state and the ethical religion the priests invariably sought to overthrow the state and to perpetuate the religion.

The present State of Israel is, therefore, founded not on the prophetic element, but solely on the priestly element in the Old Testament. The aggressive action of the present State of Israel is in direct opposition to the fundamental teachings of the prophets. If Amos, Hosea, and Isaiah were alive today, not one of them would support such hostile action as you recently took against Egypt. May I, therefore, as a Jew and as a former instructor in the prophetic religion of Israel in one of America's leading universities, strongly urge you to comply with the frequent requests made to you by President Eisenhower. It is our President who is basing his action on the principles of the prophets. It is you who is basing your action on the teachings of the priests.

Yours faithfully,

EUGENE H. LEHMAN, *President.*

Max Abelman

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a brief article about Brooklyn's "good-will ambassador," Max Abelman. The article was published in the New York Journal-American, Sunday, February 17, 1957, and reads as follows:

MAX ABELMAN, 70, STILL HELPS CHARITY

Max Abelman, officially designated as "Brooklyn's ambassador of good will," just celebrated his 70th birthday with a capital F—for Flatbush, fund raising, and the Federation of Jewish Philanthropies.

He was on hand recently to participate in the final "Dial-a-Thon" telephone marathon to help raise $18,100,000 for federation's 116-member agencies.

Commuting from Brooklyn to federation headquarters, 130 East 59th Street, Manhattan, where he manned one of the 40 telephones installed to call in pledges and contributions, Abelman truly lived up to his surname, and proved himself to be an "able man" as one of the most persuasive fund raisers in federation history.

LONGTIME HELPER

The federation campaign goal did not perturb Abelman, who has devoted 50 years to fund raising for good causes in general, and the federation's institutions in particular.

Twenty years ago, when the Jewish Federation of Brooklyn Charities merged with the New York federation, Abelman had already established himself in the Brooklyn picture, both as an administrator and fund raiser.

He was called in by the late Felix M. Warburg, who was first president of the newly formed Federation of Jewish Philanthropies of New York, to help in its organization and fund raising.

PROLIFIC NIGHT

Abelman had made a reputation by netting $1 million in pledges in one night for the Brooklyn federation along with Fritz Kreisler, the prominent violinist.

According to Brooklyn records, Abelman has raised more than $100 million in the borough during the past 50 years. At one event he organized for 44 banking institutions at the Brooklyn Academy of Music during a Liberty Bond drive, he chalked up a collection of $43,900,000 in Government bonds in one evening by staging a tableau and having the leading opera stars and celebrities of that era sell kisses for a good cause.

A grandfather of two, Abelman made a resolution on his 70th birthday to pass on his tradition of tolerance and philanthropy "even unto the third generation." He wants to continue being active in Brooklyn and in federation.

Teen-agers Form Council To Help Solve Vital Community Problems

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the East Side News, a publication with wide circulation in the 19th Congressional District of New York. This district is a rather heterogeneous one with a population representing all parts of the world. It is heart-warming to know that when so much is being heard of juvenile delinquency and discrimination that this group of teen-agers has the foresight to make their own neighborhood a better place in which to live. This group will visit Washington in the early part of March to see for themselves how the Congress of the United States functions. I look forward to their visit and to the opportunity to acquaint them with their Nation's Capitol:

[From the East Side News of New York, N. Y., of January 14, 1956]

TEEN-AGERS FORM COUNCIL HERE TO HELP SOLVE VITAL COMMUNITY PROBLEMS—GRANT TO NEW YORK UNIVERSITY MAKES CONSTRUCTIVE PROGRAM POSSIBLE

The Lower East Side is one of the fortunate Manhattan areas whose teen-agers spend their leisure planning ways to help make their community a better place in which to live.

Twenty-one boys and girls between the ages of 15 and 17, Negro and white youngsters, including those of Puerto Rican extraction, this week launched a campaign to organize all of the neighborhood's teen-agers into a youth council that would undertake a constructive community program.

The 21 potential charter members of the council now belong to the New York University Social Club, which meets weekly at either St. Augustine's or St. Christopher's Chapel. Their adviser is Mrs. Shirley Jones, of 575 Grand Street, an New York University graduate student who is a leader in the university's current civic youth council program.

The goal of the overall New York University project, which includes a professional study and evaluation of organized youth groups in various sections of the city, is to help New York's teen-agers develop an interest in civic problems. The program was made possible by a grant of four Richard Welling Fellowships from the National Self-Government Committee.

Mrs. Jones, who holds one of the fellowships, selected the Lower East Side because she and her husband, Sande, have been associated for some time with programs of leadership for the youth of St. Augustine's Chapel. The Reverend Kilmer C. Meyers, of St. Augustine's, and Mr. and Mrs. Jones work with the teen-agers primarily on an auxiliary and advisory basis.

The 21 young people organized their New York University Social Club in July, when Mrs. Jones began her 1-year study, as a core group to attract the area's teen-agers, and, according to Mrs. Jones, to prove to the neighborhood's adults that they meant business when they pledged help in solving community problems.

The campaign for the larger youth council during the next few weeks will take the form of disseminating the social club's plans and goals for community improvement. The club members will emphasize the importance of a constructive youth council, and one that cuts across racial lines, in the changing neighborhood of the Lower East Side.

Once the council is formed, the teen-agers will concentrate on a program of leadership development. They hope then to obtain the sponsorship of the adult community group of the section, the Lower East Side Neighborhood Association. The teen-age organization, in return, will offer the energies and talents of its leaders to the adult association.

The teen-age group is especially interested in trying to help solve the housing problems of the Lower East Side, which at the moment, according to Mrs. Jones, is the most urgent in the area.

"Basically," Mrs. Jones says, "the youngsters' goal is to demonstrate to the adults that teen-agers of various ethnic origins can work together amicably for the good of the community. They are very much interested in proving that the community house and the settlement house is for and open to teen-agers of all races and colors."

Fortieth Anniversary of United States Citizenship of People of Puerto Rico

EXTENSION OF REMARKS

OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. ZELENKO. Mr. Speaker, March 2, 1957, will mark the 40th anniversary of the United States citizenship of the great people of Puerto Rico. I rejoice with them in the celebration of this memorable day.

Love of freedom and adherence to democratic ideals have been the outstanding characteristics of these fine Americans.

The present administration of the island, under the inspiring leadership of the Honorable Luis Muñoz-Marín, is to

be congratulated upon its almost unbelievable progress in all fields of social, political, and economic development.

May the years ahead see its continued growth and prosperity.

Excerpts From Address by Adlai E. Stevenson

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27, 1957

Mr. HUMPHREY. Mr. President, the distinguished former Governor of Illinois, Adlai E. Stevenson, delivered an important speech in San Francisco on February 16, 1957. I ask unanimous consent that excerpts, including those portions of Governor Stevenson's speech dealing with foreign policy, be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

TEXT OF SPEECH OF ADLAI E. STEVENSON, DEMOCRATIC NATIONAL CONFERENCE, SAN FRANCISO, FEBRUARY 16, 1957

This meeting in San Francisco tonight has a special meaning to me, and I am not referring to the fact that I was born in California, or that it has now produced three Republican pretenders to the throne simultaneously—which certainly must establish California as the mother of candidates if not Presidents.

Rather I am happily reminded tonight that just a year ago this month I came to California, my birthplace, to celebrate my birthday, and to thank many of you for urging me to run for President again. It was a birthday party no man could forget. It began in Sacramento and ended a week later in San Diego. We counted 410 birthday cakes and about 410,000 friends along the way. And I'm glad to see so many of them again tonight, together with Democratic friends from other Western States.

As some of you may have noticed, something happened on my way to the White House—again. But I haven't lost heart. I haven't even lost weight, as I'm sure all of you have noticed.

Horace Greeley, you know, was, like myself, the victim of a presidential contest with a Republican general. When he said, "Go West, young man," I don't know whether he was thinking about Democrats, but this meeting here in San Francisco proves again what the election last fall has already told us—that our party has no greater source of hope for the future than in the West.

For here Democrats carried the standards of our party to success unmatched in any other corner of our Nation. We would have had a little pleasanter evening that Tuesday in November if the rest of the Nation had been as rational and perceptive as the West.

The record of the election entitles the Democrats of the West to speak in the councils of the party with a louder voice than ever before. I trust that you will not hang back. The Democratic Party of the Nation needs your counsel and your leadership.

* * * * *

For surely we know by now that if we working Democrats don't try to clear the air of the Republican incense no one is going to do it for us. We could, as I say, complain that the press in its columns and editorial pages should do a large part of the job for us. And it would be a just complaint. We know that most of the newspapers cast a more tolerant eye at the excesses and defects of Republicans than at those of Democrats. But this is a fact of life. We must do it ourselves—all of us, from United States Senators to private citizens in every walk of life.

To demand the truth, to get the facts, to denounce fraud, to unmask imposture; to revive the concept of a fighting opposition to its true dimensions—this is the greatest task before us. If we don't do it, if we fail in this—the supreme task of the opposition party, we face defeat not only in 1960 but in years beyond. God helps those who help themselves.

The conduct of American foreign policy illustrates our problem and affords us our greatest challenge and our greatest opportunity as a responsible opposition. For here is the Nation's greatest need for truth and reality; for here half truths and lullabys have done us the greatest injury.

We don't need to rake the ashes of the past, or revisit all of Mr. Dulles' "brinks," or recall all the foolish words about "unleashing Chiang," "massive retaliation," "the immorality of neutrals." And heroic Hungary, crushed and bleeding, is a mute witness to the hollowness of those cynical vote-catching boasts about "liberating the satellites."

We don't need to marshal the dismal record. The current scene is evidence enough that we have come perilously close to disaster in the Eisenhower years. We missed our great chance and Hungary was crushed in blood. Russian influence has penetrated the Middle East for the first time. Israel is isolated again. Britain and France have blundered and been badly hurt. Our great alliance is tottering. NATO is enfeebled. The Suez Canal is still closed, its future unsettled. Our best friends are crippled by the oil shortage. And whose friendship have we won? Nasser's? I doubt it.

This is the sorry harvest of appeasing and provoking the Arabs; of misleading and exasperating our best friends.

Yet it was only yesterday, just before the election, that President Eisenhower said of the Middle East: "It looks like there's a very great crisis that's behind us"; that Vice President NIXON said: "It appears that Mr. Eisenhower's tolerance and wisdom and leadership will serve to avert armed conflict in the Middle East"; that Secretary Dulles called it amazing, the degree to which the United States, Britain, and France had developed a common policy; that Secretary Wilson called it a relatively small thing; and the ineffable Mr. Dewey solemnly predicted a lasting and secure peace.

But then, after the election, they proclaimed the Middle Eastern crisis more serious than any we have faced for 10 years, more serious than the fall of China to the Communists; more serious than the threatened economic collapse of Europe; and Secretary Dulles said that even delay in passing the President's resolution would mean that in a short time the Middle East would be dominated by communism.

Before the election it was sweet peace; after the election it was the imminent threat of war.

And let it not be said that anything had changed; that British influence had suddenly died. It hadn't. It died when Britain withdrew from its great Suez military base 3 years ago—at our insistence, by the way.

I think we have had enough of this rock-and-roll diplomacy.

This is not the place to ask how they allowed this sense of isolation and reckless despair to develop among the people of Israel (and I winced when I heard our Government say it would consider sanctions to force Israel to withdraw from Sinai without any security for its borders or its shipping, when no such pressure was put on Russia for its defiance of the General Assembly on Hungary, or India's defiance over Kashmir, or, indeed, Egypt's defiance of the Security Council in respect of Israel shipping in the Suez Canal. You don't have to condone Israel's defiance of the General Assembly to feel a thrill that someone is ready to risk life itself for national survival.)

Nor is this the place to ask how the Eisenhower government allowed a situation to develop which caused Britain and France, our oldest and best friends, to act secretly and desperately. Nor need we recall that melancholy spectacle when the American delegate to the United Nations lined up with Russia against our allies to save a dictator's neck, or Mr. NIXON's shocking exultation over what he called our declaration of independence from Britain and France.

You don't have to condone what they did, or what Israel did, or anyone else to realize that people have lost confidence in us. The brilliant cross-examination by Democrats in Congress has amply demonstrated the failure of this Government to maintain, let alone advance, America's leadership in the Middle East.

Behind the ill-judged action of our friends was the pacifism of the United States, that lullaby about peace and prosperity, and the gloomy sense that America did not recognize the significance of Russian penetration, Israel's mortal danger or the utter dependence of Western Europe on oil and the Suez Canal.

It was, I suppose to correct the impression that the United States didn't care much and wouldn't do anything that President Eisenhower after the election suddenly and dramatically reversed himself and announced that the Middle East was about to be overrun by the Comunists and that he must have a resolution authorizing the use of force to resist them—an authority he already possessed.

Well, I was glad the President at last admitted what we Democrats had been shouting for over a year—that we're in plenty of trouble in the Middle East. But, I thought resistance to Communist aggression had been the settled policy of the United States for a decade and that Greece and Turkey and Korea were the best evidences of it. And I trust that the President's resolution wasn't intended to limits our resistance to Communist aggression to the Middle East alone.

I was glad to see the Democrats in the Senate start to clear up this resolution. It seemed to me not only to create an unnecessary and dangerous precedent, but not to meet the real problems. The danger isn't overt Communist aggression but covert Communist penetration; the danger isn't military aggression from the outside, but from the inside. And this resolution doesn't protect Israel from the Arabs or the Arabs from Israel. We won't be on the road to stability until we face the real economic and political problems.

The resolution looks less to me like a serious approach to the real problems of that area than another example of Madison Avenue diplomacy to distract public attention from the administration's failure.

Rhetoric and dramatics will not open the canal to the ships of all nations, or quell the strife between Arab and Jew, or fill the vacuum we hear so much about. Indeed, I think these past weeks have proved what some of us have been saying for a long time—that the first vacuum that should be filled is not in the Middle East but in the State Department.

But if I have misgivings about this effort to implicate every Member of Congress in everything that takes place hereafter in the Middle East, I have no misgiving that we must make it perfectly clear that this is an area of vital American interest. If we do no more than restore this strategic area to the condition it was in before the trouble began with a promise of protection from aggression and some economic improvement, we will have missed a great opportunity and perhaps the last.

Our objectives, I take it, are clear and simple: To open the canal to the traffic of all nations, to establish peace between Israel and her Arab neighbors, and while we

don't propose to dominate anyone ourselves, we don't propose that Russia dominate anyone either.

I would make it perfectly clear that we propose to pursue these objectives even at the risk of war, and call on all like-minded nations who want peace, national independence, and economic progress in the Middle East to join us. Obviously economic development is imperative and we should help generously, either alone, or in concert with others through the United Nations, or through a regional development agency.

If the disaster in the Middle East has jolted us into a realization of the enormity of our failures and our perils it may yet do some good. And the greatest peril of all is the collapse of our western alliance. I applaud the steps the administration is now taking to repair the damage and restore the Atlantic alliance which two world wars have shown is essential to our safety.

It will take time. I can imagine how we would feel if we had kept Russia out of the Middle East for a hundred years and thought Britain's blunders had let her in. And I can imagine how we would feel if we had no secure oil supply for our homes and factories and thought Britain was to blame for that, too. I think we must make it clear by firm deed as well as fair word that we don't propose to weaken the powers who alone have some stability in the free world, and that an expanding economy in Western Europe and the Atlantic community is still an abiding interest of America.

I have talked about the Middle East tonight not because it is the only great problem we face—there's China, Germany, the satellites and the great Afro-Asian revolutions—but to illustrate the opportunity and the obligations of our party. With the shrinkage of empire, the fateful shifts in world power in Asia yesterday and in the Middle East today—are dumping more and more responsibility in the lap of the United States. How are we doing?

Well, not very well obviously. It is evident everywhere you look that we have lost confidence and leadership. What we should be doing is asking ourselves why; for until we do resolutions, threats, gestures, and dollars won't do much good. And that's why I agree emphatically with Senator FULBRIGHT and Senator MANSFIELD and other Democratic leaders that the Senate should bring the whole international situation into perspective. Certainly we can't go on tottering from brink to brink and blunder to blunder while our leaders assure us that all is well and tell us to relax and buy another car or swallow another tranquilizer.

The other day I asked one of our greatest scholars what American needed most. "Foresight", he replied.

Well, I agree. Our duty as Democrats is identical with our duty as Americans. It is to face into the future, to ask hard and searching questions about where we are going, to help provide wise answers, and to help develop policies that will restore American leadership in the world.

This will not be an easy task, because it is not easy to work constructively with the President if he pays no attention to our suggestions, seeks no counsel and closes his mind to all our utterances. Mr. Eisenhower never uttered more revealing or disheartening words than his attack on his Democratic critics at his press conference on January 30: "I notice this: they don't bring out any particular project. They just talk about great blundering and lack of leadership. I have seen no proposals—no constructive proposals. * * * On the contrary, we just hear these generalized attacks."

If Mr. Eisenhower has seen no constructive proposals from Democrats on the Middle East and on other foreign problems during these past years, then I would plead with him to enlarge his reading and his listening.

Let no one mistake the mood of the Democratic Party. We believe that statesmanship is the goal of politics, and we will do everything we can, regardless of party interest, to support this administration in honest endeavors to meet the great challenges at home and abroad that are piling up on us. I know, you know, that patriotism must come before partisanship. I know, you know, that to do the right thing is the right thing to do.

But we resent, we cannot tolerate, slickness and hypocrisy. We resent the whole notion that the way to secure the solemn assent of a great democracy is through slogans, showmanship and half truths—through fairy tales in November and ghost stories in January. We want facts not fancy. We want the truth about our affairs, the whole truth, and all the time. We want foreign policy conducted for the Nation's advantage and security, not for the Republican Party's advantage and security.

Our problems are great; the Republican administration needs our help and our cooperation—in the foreign field above all. Let us give it to them with a will—on the condition of total honesty with the people.

It is time that we lifted these matters of life and death, of national security, out of the realm of petty politics and partisan interest. Our period is as dangerous as any since Lincoln. Democracy's command to think, to reason, to know gets ever more trying. But it can't be evaded. We have to shoulder our burdens, make our decisions—and lead. And we Democrats, in and out of office, have to help.

Herman Melville once reminded us Americans that: "We are the pioneers of the world, the advance guard sent on through the wilderness of untried things to break a new path in a new world that is ours."

We must help each other, Democrats and Republicans alike, to break this new path to the new world.

The Advance of Automation in Industry Makes Imperative Wise Planning Now for the Future

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a most timely and scholarly article concerning the threat of automation to our industrial society and emphasizing the imperative necessity of planning now against its threat of future disruption of our economy.

The article, authored by Mr. James B. Kelley, a consultant in the technical industrial research section of the New York State Department of Commerce, appeared in the February 16, 1957, issue of the magazine America, and I commend its reading.

The article follows:

MAN AND AUTOMATION

(By James B. Kelley)

A simple definition of automation might be: "Automation is mechanization with judgment." Labor-saving devices started with the wheel, but it was not for centuries that judgment was added. Some nameless genius recognized that a windmill was a pretty useless device unless it faced into the wind, so he added a rudder which automatically turned the mill into the wind. This added judgment to the mechanism which pumped the water from the ground.

Practically every adult in the United States who has lived in a home with a central heating system has heard of a thermostat. The thermostat is one of the most advanced of all the automatic-control instruments. The thermostat possesses feedback, which means that a part of the power generated is fed back into the system which controls the basic process. When a home thermostat is set at, say, 70 degrees Fahrenheit, the heating system will not become operative until the temperature around the thermostat drops below 70 degrees. As soon as the temperature rises again to 70 degrees, the heating system will shut off. If the homeowner wishes, he can install a cooling system and then, when the temperature rises above 70 degrees, the cooling system will be turned on and the temperature reduced. In this way the home temperature can be kept at exactly 70 degrees for an indefinite period.

Automation is really not very new when we think of it in this way. The farmer has been using it, the city dweller has been using it, and now the factory is using it. Without its technical name, it has been with us a long time. Only since it has shown such promise in the industrial life of America has it moved from the world of gadgetry to the world of economic significance.

MACHINES REPLACE MEN

Almost everyone will grant that a machine can do most things better than a man. Where many repetitions of an act are needed, a man finds it impossible to repeat it exactly even once, let alone hundreds, thousands, or tens of thousands of times. For a variety of physical and psychological reasons, repetitious acts dull a man's senses; the man becomes bored and, because of boredom, sometimes dangerously careless. Machines never become bored. Their accuracy remains high, and their reliability is extraordinary.

While a machine has not yet been made which will repair itself, it requires no special genius to build a machine which will signal when it is no longer operating as it should. Machines can select and reject with greater precision than the best of human inspectors. A machine can distinguish between two pieces of material which a man would consider identical. It can count, measure, weigh, examine for smoothness, geometric conformity, chemical composition, and general consistency of quality? Machines are now being built to accept experimental data previously recorded in a laboratory, and to analyze and report back to the experimenter how his work is going. The time and money saved by having a machine which does this can be appreciated only by a laboratory scientist.

The importance of computing machines, present and future, cannot be exaggerated. They have revolutionized office practice and increased the speed at which our vast paper empire moves. If the computer had no place in the field of business, but were limited solely to the world of research, it would still justify its existence.

Because the computer, or the "electronic brain," can do in minutes what the most expert of human computers might need months or even years to do, it has opened whole new areas of research. In the field of astrophysics, for example, there are certain types of equations which might well take teams of human computers decades to solve. The equations must be solved in sequence; hence putting more people on the job would not speed up the operation. The "electronic brains" reduce the time to a few years—and of these few years about 90 percent is expended in preparing the equations for insertion in the machines. The machines still must solve the equations sequentially, but it takes a machine a month or less to go through a sequence which might otherwise take 15 or 20 years. In the past such equations were just not solved, because neither time nor personnel was available.

This is only one of thousands of applica-

tions where results are obtained in a small fraction of the time formerly consumed. The machines thus release mathematicians and others for more important work, while at the same time doing a better job than the mathematicians were able to do.

Whether we are dealing with research, office practice or banking, it becomes clear that machines are replacing people. In some instances the replacement is necessary for efficient operation, and the loss of jobs becomes merely a shift in assignment within the organization. Insurance companies, for instance, have pointed out that the introduction of machines to replace office staff has, in fact, served to improve the staff's chances for advancement through retraining and reassignment. The companies claim that not a single person has lost his job; workers are merely doing something different, and frequently something they enjoy more.

AUTOMATION AND INDUSTRIAL SOCIETY

Granting that all this is true, and that in many businesses the advent of the machine results in an improvement for the employee, we still must give some thought to the effect of automation on our industrial society as a whole. There is no doubt that, technologically speaking, almost any production line can be automated without special difficulty. If there are not more automated factories, this is solely because they do not at present appear to be economically advisable.

Automating a factory is a different undertaking from automating an office. A factory normally employs a larger number of skilled and semiskilled men and women, who are useful only in relation to the special skills they possess. They cannot be readily shifted within the organization unless there is some place where their skills can be used. An automobile plant will not, in general, be able to absorb the machinists it replaces with automatic equipment. Production can not only be maintained but can frequently be increased at the same time that fewer men are being employed.

We must realize that no matter how advantageous technologically an automatic assembly line can be made to appear, it is an economic quicksand if it destroys the earning power of a substantial segment of the working force in a community. At the present time it may seem fantastic to talk of a factory which employed 10,000 persons becoming automatic and employing only 100 persons. Yet, technologically there is nothing fantastic about it; such a thing can and will happen. Now, a working force of 10,000 could easily be the means of support for as many as 50,000 people. What happens when 99 percent of the means of support dries up? Talk about overall benefits to the economy can be pretty thin gruel for people who are already eating belt holes.

This, it seems to me, is the fundamental problem. What do we do for the workers who are forced out of jobs because automation can do the jobs better? There is going to be the problem of retraining and relocating the individual worker, and there is going to be the problem of keeping an entire community from following Atlantis into oblivion. For if 10,000 people are out of work, the butcher, the baker, and the fluorescent-tube maker have lost 99 percent of their customers.

The hypothetical situation we have imagined is not impossible; there are many one-industry towns in the United States. While a factory could dismiss almost its entire production staff and continue in business, it obviously doesn't make sense to put people out of work indiscriminately. It is true that machines do not go on strike; but neither do they buy automobiles, television sets, or washing machines.

Shortsighted men can do irreparable harm by holding out the hope that machines can be used to keep labor in line. Such an attempt to make automation an ally in an antilabor movement would be immediately frustrated by the business world itself. No matter how good the product may be or how low its cost to the consumer, there must be a consumer. The ultimate decision is made over the counter of the retail store.

CALL FOR COOPERATION

The threat which the prospect of a largely automated industry holds for many workers can be removed if all those involved—the State, the community, management and labor—realize the nature of the problem and resolve to do something about it. A factory is more than a place where people work; it is a place which produces wealth upon which the community depends for its life. An industry usually has a legitimate economic and technological reason for introducing automatic equipment. The pressure of competition—which can have the effect of putting the industry out of business and destroying jobs—and the need for a better product face every industrial concern every day.

At the same time, the industrialist himself is faced with the problem of treating fairly those who work for him, and of rewarding faithful service with reasonable securrity for the future. The labor force in the industry has a stake in seeing that the product does meet competition successfully, or else the failure of the business will cause the loss of jobs. Labor has also the responsibility to recognize the inevitability of human progress and to view such progress positively, not just to think of it solely as a device to frustrate labor.

The community, of which the workers and management may form a substantial group, must realize that it has an interest in maintaining an economic stability by holding purchasing power at the highest possible level. This can best be done by long-range community planning for diversified industry. The community that depends on a single industry, unless this industry is itself diversified, can be in for a bad time.

The State, of course, has an interest similar to the community's. Through its economic and industrial planning groups, it can offer advice and assistance in the development of new industrial prospects. Since it is doubtful that several industries in a given area would be automated simultaneously, diversification can offer great protection.

Workers are persons. This is not a superfluous statement. In these days of punchcards and magnetic tape, it is easy to reduce a human being to a series of holes in a card or blips on a cathode-ray oscilloscope. It is easy to talk about workers as though they were on the same level as nuts and bolts. I say this, despite the extensive happiness programs which many companies have introduced. Softball teams, weekend hikes, and the all one big, happy family routine can become a kind of private-enterprise socialism.

PEOPLE ARE NOT STATISTICS

The individual tends to lose his identity in a welter of industrial psychological jargon. He is assigned aptitudes and sometimes even a personality which he does not possess. The phrase "dynamic conformist" was recently used by a businessman to describe the ideal future executive. Originality was strangely missing from the prerequisites for success. Needless to say, independence of thought was not even mentioned in passing. The greatest danger to man in the development of the new industrialized society may be in his loss of individuality. This is something we might well ponder. Collective leadership can have its pitfalls and disadvantages.

It would be foolish to think that automation is not going to cause serious disruptions in the economic life of many individuals. It is going to have effects which will work definite hardships on many families. The extent of these hardships and the numbers of people affected can be controlled and curtailed, if we decide in advance that this is a problem that concerns all of us.

No matter, then, how effective a machine may be as a "thinking" device, it seems ridiculous to believe that it can outthink rational men who do not want to be outthought. Only if men remain in control will machines bring to our economy the benefit they are capable of bringing. Just as no automobile is foolproof when a fool drives it, so no machine can solve an economic or human problem which a man has previously refused or failed to solve.

The School-Shortage Problem

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 27, 1957

Mr. HUMPHREY. Mr. President, I have earlier brought to the attention of the Senate the articles from the Bloomington Sun, of Bloomington, Minn., by Miss Betty Wilson concerning the school-shortage problem. In her two concluding articles Miss Wilson discusses the prospects for legislative assistance and Federal aid.

I ask unanimous consent that these two articles, entitled "Any Legislative Help?" be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE SCHOOL PROBLEM, IV—ANY LEGISLATIVE HELP?

(By Betty Wilson)

Education and its financing will be among the most important problems facing both the State legislature and Congress when they meet next month.

To enable a complete examination of our local school problem, the Sun made inquiries of a number of elected officials as to their views on recommendations for Federal aid to education with a larger appropriation than proposed last year in order to do in 4 years what was planned for 5.

In 1955 he sent a message on education to Congress stating that emergency action was needed to meet a national crisis.

He indicated his concern about the inadequacies of education and made explicit his belief that the Federal Government must carry part of the financial responsibility for education, and that it could be done without Federal control.

This month the Presidential appointment of Lawrence G. Derthick to the post of United States Commissioner of Education was announced.

A Chattanooga, Tenn., school superintendent, Derthick is on record as favoring Federal school aid—not only for school construction but also State and Federal aid to education, and specific legislation coming up which will affect Bloomington and similar distressed school districts.

President Eisenhower's program, although not yet assembled, is expected to include for general school operations after local communities and States have carried as much of the load as they can fairly bear.

Senator THYE, of Minnesota, was one of the sponsors in the Senate of a bill for Federal aid for school construction during the past session, and assures constituents that he will continue the same stand and active support of this legislation in the next session of Congress.

Senator HUBERT HUMPHREY told the Sun

last week that he intends to sponsor and support legislation in the next session of Congress to make Federal funds available for school construction.

It will be along the lines of the Elliot proposal, similar to legislation which he supported in the 84th Congress and which was defeated.

Senator HUMPHREY also stated that he intends to introduce an omnibus youth education bill which, among other provisions, will provide for a Federal scholarship program.

Third District Congressman ROY WIER said in a special interview last week that the same Kelley school construction bill defeated last July will be reintroduced to the House Committee on Education, of which he is a member.

WIER said he is confident the committee will again vote for its recommendation.

The Kelley bill was one of the most publicized issues before the 84th Congress and most debated since.

Supported by the National Education Association, liberal Republicans who backed President Eisenhower's views, many northern and some southern Democrats, the National Farmers Union, the AMVETS, and VFW, it was nevertheless opposed by traditional opponents of Federal aid to education.

These included the United States Chamber of Commerce, the National Association of Manufacturers, the American Farm Bureau Federation, and the American Legion.

It was a bill providing for a flat-grant or flat-matching formula whereby the money that goes to any State must be matched dollar for dollar by that State.

Apportionment to the States would take place under a needs formula. For example, Mississippi, with the lowest rating would receive the most.

It provided for $100 million yearly grants for a 4-year program. Execution and control was to be vested in a State educational agency.

Before the rollcall vote, however, the controversial Powell amendment was tacked onto it, which would withhold funds from States operating racially segregated schools.

Whether or not this political maneuver was partisan or sectional has been much debated, but it was sufficient to kill the bill.

South Hennepin County legislator Alf Bergerud had this to say:

In the last legislature he was one of the authors of a bill that would create a revolving fund of $10 million to be utilized for loan purposes for construction and which was defeated.

"I am certainly mindful of the school problem," said Bergerud, "not only in Bloomington but in other fast-growing suburbs."

Bergerud, a member of the State legislative committee on education, does not feel that outright State grants are the answer, and says they could never be controlled.

He is also opposed to Federal school construction aid.

"A constitutional amendment to loan money to distressed school districts from the $150 million State trust fund is O. K. with me," he said.

But he believes this would be a battle between rural and metropolitan legislators

Representative Bergerud suggests that the State board of education should come up with some solution aimed at the trust fund and brief the legislature on the possibility of a constitutional amendment or change in statutes that would permit some loans to these districts in distress.

Last year Representative Bergerud, together with Senator Marvin Anderson, helped to pass a bill which allowed new homes to be placed on assessment rolls immediately, a bill which aided district 142.

A recent report to the Minnesota School Board Association by a committee headed by the MSBA executive secretary, W. A. Wettergren, endorsed the principle of more borrowing by local school districts from State funds.

School borrowing from Minnesota permanent trust funds is tightly restricted by the constitution, but proposals for liberalizing it are expected to get consideration by the 1957 legislature.

Some officials say our entire tax structure needs reforming with assessments made uniformly on the full and true.

School districts are limited to borrowing up to 50 percent of their assessed valuation, and Bloomington's assessing is now on a 40 percent basis of the full and true.

Many teachers throughout the State advocate a State withholding tax which they say would bring in more new revenue which could be used for schools.

FEDERAL AND STATE AID—PITFALL OR CURE-ALL, AND THE WHITE HOUSE CONFERENCE ON EDUCATION

(By Betty Wilson)

(EDITOR'S NOTE.—This is the last in a series of articles on Bloomington school problems, their causes and the outlook for the future.)

Federal aid for education is not a new idea but as old as the Federal Government itself, beginning with the ordinance of 1787 which declared that "schools and the means of education shall forever be encouraged."

Lincoln in 1862 signed the Morrill Act establishing an agricultural college in every State.

Wilson in 1917 approved the Smith-Hughes Act establishing and providing for the partial financing of a nationwide program of vocational education in public high schools.

In recent years, however, the Federal Government has appropriated large sums for almost every public service but the schools.

We find eminent men supporting both sides:

On record in opposition is John Foster Dulles. In favor was the late Robert Taft and Walter Lippman.

The principal arguments for Federal aid to educations are:

The Federal Government alone can assure equal opportunities for all to get a public school education.

The high mobility of our population makes the wide variation in local public school educational standards a problem of national concern. Federal aid is the only way to reduce these variations.

The Federal Government can provide adequate funds for schools without controlling schools.

The Federal Government has a fundamental interest in equality of education for all, since such equality is necessary for the progress of the Nation in peace and its security in war.

The principal arguments against Federal aid to education are these:

Federal aid to education would inevitably lead to Federal control of education.

The States and local governments can themselves meet their own school needs.

Traditionally the public schools in America have been the responsibility of State and local governments, primarily the latter.

Education is not mentioned in the Constitution. Therefore it is obvious the authors of the Constitution intended education to be a State or private responsibility.

For every dollar that the Federal Government takes away from local sources, only a portion is returned.

Each one of the foregoing points has many aspects too lengthy to discuss here.

The coming year in Congress will see this as one of the major issues with many arguments on both sides.

The Minnesota White House Conference on Education held at the Nicollet Hotel in May 1955 went on record against Federal aid to education other than the present program of aid for school lunches and vocational education.

Their report said, "The State of Minnesota has the resources for providing a high quality of education for its children at all levels."

The vote was 257 against increased Federal Government aid and 108 in favor.

A resolution favoring Federal aid by the minority was written into the report and signatures here included Minneapolis School Superintendent Rufus A. Putnam, Hennepin County Superintendent of Schools Viola S. Thompson, and Lt. Gov. Karl F. Rolvaag.

In 1954 President Eisenhower called for a national White House Conference on Education which met on November 28, 1955, in Washington, D. C., with nearly 2,000 participants from all over the country.

The agenda of the conference centered around six areas selected to cover the field of education and its problems.

To the disappointment of some no pat answers were found here to the solution of problems. The reports were presented in broad general language.

The conference did, however, favor Federal aid to education, saying:

"This committee also recommends that every community and every State do all that is economically possible to construct the buildings required, and that during such emergency periods as now exists, Federal funds also be used wherever shown to be necessary. * * *

"In the opinion of this committee, money for schools must continue to come from all three levels of government, with a portion of funds for school buildings being made available by the Federal Government on an emergency basis.

"Good schools are admittedly expensive, but not nearly so expensive in the long run as poor ones."

Nasser's Sanctions

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. MULTER. Mr. Speaker, each time that Mr. Nasser applies a sanction of his own, he is told he is a bad boy and "mustn't do that again." It is anomalous, in my opinion, that we are in the midst of a world crisis because Israel has asserted herself. The following editorial, which appeared in the New York Times of February 25, 1957, is worthy of the attention of our colleagues:

NASSER'S SANCTIONS

While everybody else has been talking about sanctions to make the Israelis go away from the Gulf of Aqaba and the Gaza strip, President Gamal Abdel Nasser of Egypt has been quietly applying sanctions of his own.

The difference is that, whereas the sanctions discussed in Washington and at the United Nations have been aimed at Israel, Nasser's sanctions are aimed at practically everybody except the Israelis. Nasser's sanctions are the same sanctions he has been illegally applying for eight years past to keep Israeli ships and cargoes from going up to Elath or passing through the canal.

Nasser's sanctions consist in keeping the canal plugged, in spite of the efforts of U. N. salvage crews, operating with his explicit consent, to open it up. Nasser's sanctions are directed against those who profit by the normal operation of the canal. They include almost all customary users of Arabian oil. They are particularly damaging to Western Europe: To France and Britain, who obeyed the General Assembly's request to remove their forces from Egypt; to other oil-burning European countries, who never even sent troops to Egypt.

Lieut. Gen. Raymond A. Wheeler got his U. N. salvage fleet into operation on January 1, after Nasser had already caused as much delay as possible. General Wheeler believed he could have a 25-foot channel open, capable of carrying 10,000-ton tankers, by the end of March. The most formidable obstacle appeared to be a concrete-laden ship called the *Akka*. On February 15 two German salvage boats toted the *Akka* into the Great Bitter Lake and came hungrily back for more.

A vessel called the *Edgar Bonnet* then came into the limelight. General Wheeler has been trying since January 14 to get permission to take this craft out of the way. The Egyptians have replied that it was loaded with explosives which, for some peculiar reason, only their own divers could remove. Their own divers couldn't remove them either. At least they have been vainly trying for more than a month. The *Edgar Bonnet* remains on the bottom, 4 miles south of Ismailia, about midway down the canal. General Wheeler thinks he could get her out in 3 weeks and open the waterway to heavy shipping by May 1.

If President Nasser desired to convince the world of his good faith he could tell General Wheeler to go ahead. If he doesn't do this he is fatuous indeed to expect the United States or any other self-respecting nation to play his game by the use of pressure against Israel. Let us trust that this thought will arise at the United Nations as the debate on Israel reopens.

Department of the Interior and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5189) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. GRAY. Mr. Chairman, I have the highest regard for my good friend the gentleman from Ohio [Mr. KIRWAN] and I regret exceedingly that I find myself in disagreement with him and the other members of the committee concerning their actions relating to the defense minerals purchase program. As I explained to the House a few days ago when the emergency supplemental appropriations bill was being considered, we in southern Illinois produce approximately 50 percent of all domestic fluorspar and the failure to allow funds with which to continue this program will be disastrous to the entire fluorspar mining industry. Our operators have spent a considerable amount of money preparing their mines for operation under the assumption that the Government would continue its program as indicated by the passage of Public Law 733.

There are many reasons why this program cannot afford to be stopped. I will not take the time of the House to enumerate the many reasons, but instead refer anyone who is interested, to my remarks appearing in the CONGRESSIONAL RECORD on page 1377 under date of February 5. Surely the Congress is not going to break faith with those producers who have done much and will continue to do all they can to insure that this country has an adequate supply of defense minerals. My friend the gentleman from California [Mr. ENGLE] has given a very forthright and clear statement concerning the true facts surrounding this controversy. As he has told you, Dr. Arthur Flemming, Director of the Office of Defense Mobilization, testified in the Senate this morning that this program is needed. I believe he is in a position to know.

I urge my colleagues to give this matter very serious thought as it means not only providing this country with an adequate supply of defense minerals, but in my district alone in southern Illinois where we have 30,000 able-bodied men and women unemployed, it will mean a further loss of 500 jobs if these funds are not restored and the program continued. This, we cannot afford.

There is one question to which my constituents are demanding an answer: They want to know why very few people raise their voice when millions are sent to foreign countries but find strong opposition such as this to a program that not only will help preserve an adequate defense, but help thousands of needy miners in this country. Would you deny your child a loaf of bread and give it to a stranger down the street? That, too often, seems to be the case with a lot of our domestic programs.

Distressed or Surplus Labor Area Legislation

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1957

Mr. SAYLOR. Mr. Speaker, for many years, I have been advocating enactment of so-called distressed or surplus labor area legislation. I have contended that such action is a necessary step toward achieving economic stabilization on a countrywide basis. It would serve to bridge the gaps and crevices which inevitably occur along the road to economic progress in a highly industrialized society.

My program calls for a Federal program designed to assist in maintaining a high level of prosperity and employment. It provides for the planning and construction of useful public facilities, not only to mitigate substantial unemployment, but to provide permanent capital improvements of a nature which will strengthen the national economy and increase the well-being of all citizens.

As a firm advocate of the free economic system, unfettered by Government restraints and devoid of Federal invasions into fields of business, I feel that my program would in effect serve to safeguard this philosophy. I believe that my proposal is especially necessary in a period of international uncertainty, for it would help to maintain the industrial flexibility required for a sound defense structure. It is additionally essential in an era of rapid technological advance in which local employment conditions are subject to sudden disruptions with extended applications of automatic devices. In brief, the legislation which I propose would tend to allay whatever fear might otherwise seize workingmen and women when automation threatens to dispense with their jobs.

Introduction of new machines has engendered consternation in human minds through the ages, at least since the time that the industrial revolution in England had a tragic impact upon so many families. Their jobs taken away by the use of power-driven machines, they were ruthlessly turned into the streets to forage for themselves. At times in isolated areas of this country there have been parallel cases, though to a lesser degree. The thought has continued to plague segments of the working populace. To counteract it, Congress should adopt my program and thereby substitute a feeling of security in place of trepidation.

Obviously, automation should be encouraged. One of the most lucid and logical explanations to be presented on this subject was contained in the testimony of Thomas Roy Jones, president of Daystrom, Inc., when he appeared before the Subcommittee on Economic Stabilization of the Joint Economic Committee last year. Mr. Jones started his engineering career as a laborer on a railroad signal gang, and in his rise to the top level of industrial management he has familiarized himself with the many advantages of technological progress. Here is a summary of his reasons for wanting to accelerate the application of automation:

First. Automation is essential to the economy in that it provides an opportunity for the American worker to increase his real wages through increased individual productivity.

Second. It is a psychological necessity that man continually seek to extend himself to the limit of his inherent capabilities.

Third. Automation is essential to the national defense, for it could determine the extent to which the civilian economy could support military production.

Mr. Speaker, some of the recommendations contained in Mr. Jones' testimony might well be adopted by Congress in its determination to accelerate training of technical talent and to encourage more of our youth to pursue a teaching career in science and engineering. I would suggest that, when the committee report is available, my colleagues peruse this convincing statement advocating a step-up in the drive toward further automation.

Once this philosophy is accepted, enactment of surplus labor area legislation should follow immediately. We in Pennsylvania have had ample evidence of the need for such a program. When coal mining companies invested in labor-saving machines to increase productivity, the United Mine Workers of America made no protest. They realized that employment would be affected, yet they refused to oppose progress. Had my proposed legislation been made into law, the surplus workers could have moved

into public works projects while waiting for new industry to enter the State and absorb them. Certainly it has not been fair to penalize this far-sighted organization for its unselfish attitude toward mechanization.

The solution to the situation calls for continued cooperation between management and labor, plus application of sound Christian social principles. The latter consideration requires passage of a surplus labor area bill as quickly as possible.

The Strategic Air Command—The Citadel Hears LeMay

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address by Gen. Curtis E. LeMay, Commanding General, Strategic Air Command, to the Corps of Cadets, the Citadel, Charleston, S. C., on February 9, 1957:

THE STRATEGIC AIR COMMAND

(An address by Gen. Curtis E. LeMay)

General Clark, members of the faculty, and students, 160 years ago, Thomas Jefferson wrote a letter to his friend Edward Rutledge in which he said: "A debt of service is due from every man to his country proportioned to the bounties to which nature and fortune have measured to him."

The very fact of your presence on this Citadel campus is evidence that you subscribe to Jefferson's view, and that you are determined to undergo the training that will fit you to discharge your debt to your country to the very best of your ability.

Your spirit of dedication, and of determination to be of good service excites the admiration of the more than 200,000 men and women of SAC. We know of and respect the Citadel tradition and the always honorable—frequently brilliant—records of Citadel alumni in the military service. With admiration, we recall that The Citadel was represented in Jimmy Doolittle's famous raid on Tokyo, with Eddie Rickenbacker throughout his ordeal in the Pacific, at Bataan and Corregidor, in the occupation of Iceland, with the commandos at Dieppe, in New Guinea, Guadalcanal, Europe, and more recently, Korea.

Today there are alumni of The Citadel in the Strategic Air Command as well as elsewhere in the National Military Establishment.

My purpose here is to discuss with you a problem that deeply concerns everyone, whether in the military service or not. It is the problem if how to wage peace successfully, now and in the future. It is truly said that even the degree of peace we are now enjoy will be lost unless the military front is continuously held by an effective deterrent force.

A little later on, I propose to give you SAC's definition of an effective deterrent force, and to outline SAC's ideas about what it will take to maintain that force on into the future. But as a prelude to that discussion, let me first put SAC in perspective with the other major combat commands of the United States Air Force. In all there are three of these combat—or fighting, commands. One, the Continental Air Defense Command, is charged with air defense of the United States proper. The other two, both offensive in nature, are the Tactical Air Command and the Strategic Air Command, widely known as SAC.

Of these latter two, Tactical Air Command has the mission of conducting battlefield—air operations in close coordination with the Army—such jobs as interdiction of enemy surface forces, troop carrier operations and relatively short-range bombardment. The Strategic Air Command, as most of you very likely know, is the Nation's long-range nuclear striking force, which has the responsibility of continuing readiness to conduct offensive air operations on a global basis.

We in SAC are deeply conscious of our responsibility for helping hold the military front; and we are pardonably proud of our record thus far in discharging that responsibility. We like to feel that Sir Winston Churchill was speaking for the whole free world when he said during a Parliament debate on air power only a year ago:

"The United States Strategic Air Command is a deterrent of the highest order and maintains ceaseless readiness. We owe much to their devotion to the cause of freedom in a troubled world. The primary deterrents to aggression remain the nuclear weapon and the ability of the highest organized and trained United States Strategic Air Command to use it."

What constitutes an effective deterrent force?

We in SAC define the deterrent force to be "an effective intercontinental nuclear air offensive force which is secure from destruction by the enemy regardless of what offensive and defensive action he takes against it. It must be of such size and composition and be alerted to such a degree that the Soviet Union will realize that an attack on the United States will mean committing national suicide.

You may be familiar with the widely discussed article entitled "Courage or Perdition? The Fourteeen Fundamental Facts of the Nuclear Age," written by Ferreus of the University of Notre Dame. To my mind, this article should be required reading for anyone concerned with the defense of this Nation. If you have not read it, I commend it to you as being well worth your time and attention. In his article, Ferreus clearly outlines the modern-day military task in these words:

"The military task, briefly, consists of maintaining armaments in such quantities and of such quality that the opponent of the United States will find it impossible to solve his military problem through the employment of nuclear weapons. More particularly, he must be prevented from knocking out the American retaliatory forces through surprise blows and from delivering a substantial portion of his atomic stockpile on American targets."

In other words, Ferreus says to us in SAC: "Now and in the future—at any hour of any day, of any year—you must be ready at a moment's notice to launch a strategic bomber force, armed with nuclear weapons, capable of destroying anywhere in the world any targets that constitute a threat to the security of the United States and its allies."

That is a large order. But if a deterrent force is to be genuinely effective, it must have unquestioned capacity to fill that order. And by unquestioned, we mean unquestioned by the potential enemy. Just so long as this Nation's capacity to win war is clearly recognized by the potential aggressor, there will be no war; but once the potential aggressor doubts this capacity, the peace of the world is in jeopardy.

The cardinal element of this Nation's war-winning capacity (hence its war-deterrent capacity) is its combat-ready airpower—in particular, its ever-combat-ready nuclear air arm of global reach.

As one would expect and understand, we of SAC cannot help being subjective in discussing this point; and so we submit these two pertinent questions for your objective consideration:

The first question is: "Would any future aggressor grant this Nation the time and the opportunity with which to build up military forces as we did following that shocking Sunday morning at Pearl Harbor 15 years ago?"

In pondering the question, we ask you to bear in mind that present-day bombers operate at altitudes above 10 miles; they fly faster than 650 miles an hour; with aerial refueling they can reach any significant target anywhere on earth; and a single bomber now can carry a nuclear weapon whose firepower equals that of the combined total of all high-explosive bombs dropped on Germany during World War II.

Is it probable that an aggressor possessed of such weapons would deliberately deprive himself of the decisive advantage to be gained by destroying the retaliatory force and perhaps the industrial plant of the United States in a nuclear Pearl Harbor type of attack? Surprise has always been important in war, but never more so than now.

From this does it not follow that if this Nation becomes engaged in nuclear war, that war will be fought—and the issue decided—by whatever forces are in existence on the day war begins?

The second question is: "Can any major power conduct any significant war operation on the surface of land or sea until after the airpower battle has been won?"

Of course SAC is subjective on this point also; but we know of no responsible military men—be they airmen, soldiers, or sailors—who would answer "yes" to that question. Objective planners in all military services now must start with a primary fact that airpower's long arm and smashing fist can reach and utterly wipe out any targets anywhere in the world. Therefore one primary task in war—a job that must be done early—is the defeat of the enemy's airpower, and particularly his long-range nuclear air arm. The air leaders of the Sino-Soviet bloc recognize this fundamental truth, just as we do.

And so we have identified two of the fundamental characteristics of an effective deterrent force:

First, it must be a force in being, everlastingly combat ready; and second, it must include forces which are capable of winning the air battle.

This task of winning the air battle requires a powerful offensive punch; and the strategic bomber provides that punch. This is not to say that air defense systems in themselves are not essential. However, all responsible airmen agree that it is an economic impossibility to provide an airtight defense against a well-coordinated and properly executed nuclear bombing attack.

Of course, a modern, skillfully operated continental air defense system can inflict losses upon the attacking bomber force. Such attrition will vary, depending upon the relative capabilities of offense versus defense; but a substantial part of the offensive force will always get through the defense. Therefore, the primary defensive force is actually the offensive nuclear strike force which can destroy enemy airpower at its roots. In this role, the strategic bomber actually becomes the intercontinental air defense system.

However, in order for our nuclear offensive force to be really effective, it must be able to write off the attrition exacted by the enemy's offense and defense, and still possess the punch required to accomplish its mission.

To retain this residual punch, such a force must be adequate, both quantitatively and qualitatively, by comparison with our best estimates of enemy strength. Moreover, it must be made as secure as possible from destruction by enemy surprise attack. Only then does our force possess the necessary relative superiority over the enemy.

Unless SAC possesses this relative margin of superiority over the Soviet long-range air force, and the Soviet continental air defense system, it cannot be considered an effective deterrent force.

Despite recent Soviet gains in aircraft and weapons technology and production, it is my considered judgment that SAC—now—possesses this relative margin of superiority. We must give increasing recognition, however, to the rapid strides being made by the Soviet Union, both in their long-range nuclear attack capability and in their continental air-defense systems. These Soviet gains are steadily narrowing our presently favorable margin.

Five years ago I would have said we could win a war with the Soviets without suffering serious damage to this country. But during the past 5 years the Soviets have built up their long-range nuclear capability to a point where, in my opinion, we are not now capable of preventing serious damage to this country in event of general war. As of now, I believe we could win such a war; but this Nation would suffer serious losses. And I feel further that unless we continue to improve the combat capacity, readiness, and security of airpower, we will be still more vulnerable to still greater damage by the Soviet long-range air arm 5 years hence.

Again, I must stress the importance of maintaining a satisfactory margin of relative superiority over the Soviet long-range air arm. This is not solely a problem of producing more long-range bombers than they do—although relative numerical strength is certainly a basic consideration. The present-day margin of relative superiority I am talking about includes (in addition to an adequate number of aircraft) five other principal elements: an adequate supply of the proper nuclear weapons, adequate operating bases (including overseas bases), thoroughly reliable refueling capability, unquestionably dependable maintenance of equipment, and combat air and ground crews possessing the highest degree of professional skill attainable through constant training and practice.

The sum of these six essential elements—aircraft, nuclear weapons, operating bases, refueling capability, maintenance dependability, and highly proficient crews—represents global combat effectiveness. This composite is what gives SAC, in my judgment, its present favorable margin of superiority.

Thus far, we have been talking mostly about SAC now—the present-day SAC. Let's turn then to the problem of maintaining SAC's deterrent capacity in the future.

The dynamic nature of this problem cannot be overemphasized. You are already aware of the accelerating pace of technology in the Soviet Union. They are allocating proportionately more of their gross national product to defense and to scientific education than we are. Their unexpectedly rapid progress in development of modern weapon systems that bear directly on SAC's deterrent effectiveness is already well known to you.

The crucial question is: Faced with this competition, what must we do to maintain SAC's deterrent capacity at the required level in the future?

In my opinion five principal actions are necessary. In outlining them to you, I am not listing them in order of their priority. All these actions are vital and pressing, and in my opinion, they should run concurrently.

1. We must continue to improve the range, speed, altitude, and penetrating ability of SAC's bomber force. As soon as possible we must free SAC from any vestige of dependence on refueling and on overseas bases.

2. We must accelerate the construction and improvement of suitable operating bases for this force—including bases necessary to permit its wider dispersal for physical security reasons.

3. We must continue improvement of the weapons which arm this force.

4. We must spare no effort in the development of reliable intercontinental missiles.

5. We must maintain a highly professional military force by seeing to it that material rewards in the military service are made commensurate with the rewards for corresponding skills in private industry and business.

As you know, President Eisenhower directed some time ago that the development of the Intercontinental Ballistic Missile be given first prority among all programs in which the Department of Defense is engaged. The Strategic Air Command is in complete agreement with this policy. You may wonder why SAC urges continued improvement and expansion of the manned bomber force and its bases, concurrently with strenuous efforts to develop the intercontinental guided missile. Don't we intend to replace manned bombers with missiles? Each program costs billions. Why the expensive duplication?

The answer is: As soon as the missile qualifies as a reliable weapons system there won't be any duplication; but until it so qualifies, the missile is not actually a deterrent.

No weapons system in the research and development stage—however attractive—can be considered an effective deterrent. As Secretary Quarles recently stated: "We must not forget, however, that our research and development program deals with the future whereas deterrence depends on our force in being."

Our potential enemies fully appreciate this elementary fact. Furthermore due to the nature of a democracy, they will always be better informed on what we are doing than we are on what they are doing.

It follows then that we cannot afford to curtail the expenditures necessary to keep our force in being currently effective as a deterrent. The promise of success in missile development does not weaken this logic. Putting it another way: To finance missile development at the expense of current deterrent capacity could have fatal end results.

Let me assure you that nobody in the free world wants reliable intercontinental missiles any more than we in SAC want them. SAC's combat air crews are devoting the best years of their lives in maintaining the ever-ready proficiency required to guarantee—within the limits of human error—accurate delivery of nuclear weapons on their assigned targets. Should war come, these air crews are ready and willing to stake their very lives on the long hazardous ride to their targets. In human self-interest, they would be delighted to turn this life-or-death task over to a robot. But being patriotic Americans, they are reluctant to relinquish their responsibility until they are sure the robot can do the job as well as manned bombers can.

Let me say again, in closing, that peace in these times cannot be successfully waged unless this Nation continues to maintain an effective deterrent force—and that means a force in being, everlastingly combat ready, and clearly capable of winning the air battle.

We in SAC are dedicated to the task of maintaining just such a deterrent force. It is an extremely difficult task, and we solicit support and help from all Americans who recognize their debt to this Nation. We know we can count on support from you here at the Citadel—in fact, the day is probably not far distant when some of you in this audience will join other Citadel alumni who are already in SAC.

To those future SAC members, I take this opportunity to extend a hearty welcome in advance.

The Critical Week

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. MULTER. Mr. Speaker, the following editorial from the New York Herald Tribune of February 24, 1957, is most timely, and I commend it to the attention of our colleagues:

THE CRITICAL WEEK

The coming week will be critical for the Middle East, for the United Nations, and for the policy of the United States. A resolution asking that military and economic sanctions be applied against Israel for its failure to withdraw from Gaza and the Gulf of Aqaba has been introduced by six nations. At the same time a White House statement on Premier Ben-Gurion's response to President Eisenhower's speech was friendly in tone and, what was more, promised to withhold any American presentation on the issue before the U. N. until Ambassador Eban can give his government's position in detail. There is still hope that an agreed settlement can be reached which will satisfy Israel's requirements for security without involving sanctions.

This newspaper has consistently held that unilateral sanctions against Israel are not the answer to the Mid-Eastern crisis or to the crisis of prestige that confronts the U. N. It has also recognized the need for a positive American contribution to a fair solution. As far back as September 23, before the shooting broke out in Sinai and the canal zone, we stated editorially that the policy of the United States in that area had "been a series of improvisations and inconsistencies, motivated by the high purpose of preventing violence but feeble in execution and confusing in effect." We have hailed every forward step made by the administration, the Eisenhower doctrine, and Mr. Dulles' proposals for free navigation in the Gulf of Aqaba; we have seconded the President's efforts to obtain an Israeli withdrawal by diplomatic action. But, believing as this newspaper said on November 6, that "some recognition is essential of the fact that the use of force, however regrettable, has changed the situation in the Middle East," we hold "that a return to the status quo ante between Israel and the Arab States is out of the question; that a permanent settlement of the underlying issues is necessary." This was asserted in an editorial on page 1 on November 29.

There is a widespread acceptance of the necessity of getting to the bottom of Israeli-Arab difficulties. Speaking of the breakdown of the 1949 armistice terms, Secretary-General Dag Hammarskjold has said: "There is universal recognition that the condition of affairs, of which this deterioration formed part, should not be permitted to return." But how is the improvement to be brought about? Dr. Fawzi, the Egyptian Foreign Minister, said that Israel shall not "exact a price" for ending its "aggression" in Sinai and the Gaza Strip. Apparently, the Egyptian Government has given some private assurances to Mr. Hammarskjold about the stationing of UNEF troops in the disputed areas, just as the United States has given individual assurances of supporting Israeli claims to navigation in the Gulf of Aqaba and of endorsing U. N. entry into Gaza. But unless these assurances—which are private or individual, not those of the United Nations—are accepted, the Arab States demand, and the United States seems willing to indorse, sanctions on Israel.

Mrs. Clare Boothe Luce, recently Ambassador to Italy, said in an exclusive interview in this newspaper on Friday: "I doubt that the time has come when the United States is prepared to say it wishes to vote for the destruction of Israel through sanctions, especially in view of the conduct of other nations which have flirted openly with the U. S. S. R. and insulted the United States and on whom we have not been able to impose sanctions." The Herald Tribune agrees. As Mrs. Luce said, "The cardinal principle of a statesman is that his nation has a right to survival." Israel's actions have been predicated on this principle, and while all its moves may not have been wise, the danger was very great. To invoke penalties against that state alone would be unjust. "For," as we said editorially on January 27, "unless the U. N. administers the law as an impartial international agency, it cannot morally prevent nations from taking the law into their own hands." And, speaking specifically of sanctions, the Herald Tribune stated on February 10: "To discipline the weak and give free rein to the powerful is no way to gain respect for an international organization or international law."

The President has made a distinction between those nations—like the Soviet Union—against which it is impractical to bring other than moral pressure and those, like Israel, which, he implies, should not need even moral pressure. But if sanctions are to have any moral connotation at all, if the workings of international law are to have respect, they must be based on equality and justice for all. Israel cannot be punished while the Soviet Union, India, Egypt itself go scot free. Therefore, the objective of the General Assembly in the coming debate must be to reach a settlement, not a one-sided judgment.

By the same token the United States must exert itself in the days ahead to see that the settlement is just; that Egypt's participation in the acts which led to this crisis is recognized and, for the future, corrected; that the pressures, in and out of the U. N., which have been directed toward Israeli withdrawal, are equally directed toward ending Egypt's belligerency.

The United States and the United Nations have an opportunity in this debate to demonstrate their capabilities for constructive contributions toward international peace. If they content themselves with Israel's stand alone, the opportunity will be lost. If they return to the principles of the American resolution of November 3, and seek to remove the underlying causes of tension in the Middle East and to achieve a final settlement between the parties of the general armistice agreement, they will have turned a crisis into a triumph for peace and justice.

Encouraging Higher Education

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mrs. KELLY of New York. Mr. Speaker, on January 3, 1957, I introduced H. R. 712, to provide a 30 percent credit against the individual income tax for amounts paid as tuition or fees for higher education.

Nearly 40 percent of those qualified high-school graduates who do not continue their educations do so because of financial need. This bill would help these persons as well as the thousands of other families who barely have sufficient funds to educate their children.

Our country must encourage higher education, particularly in the scientific and technical fields. We are engaged in a qualitative defense race with Russia, upon which the survival of the free world depends.

Russia now has an estimated 890,000 trained scientists and engineers, while the United States has some 760,000. They are training this technical personnel at a more rapid pace than this country.

Through use of the tax credit, we would be encouraging more youngsters to continue their educations. In the long run, this would reflect in great benefits to our Nation—at home and abroad. It would also be a stimulus to the growth and development of our country's institutions of higher learning.

According to my bill, 30 percent of the total amount spent on tuition or fees for the individual at a level above the 12th grade at a recognized institution of higher learning, would be credited to the taxpayer. I believe the enactment of this measure is imperative.

A Matter of Morals

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Detroit News of January 29, 1957:

U. N. AND THE MIDDLE EAST—A MATTER OF MORALS

The best that can be said for Dag Hammarskjold's report on what the United Nations might do to settle the dispute between Egypt and Israel is that it occupies a legalistic middle ground so unsatisfactory to both sides as to insure its rejection by the U. N. Assembly. The worst is that the report implies moral bankruptcy in the U. N. leadership which not only admits helplessness to enforce a solution but inability even to come to grips with the rights and wrongs of the problem.

Mr. Hammarskjold still insists that Israeli troops must be withdrawn unconditionally from the Gaza strip and fortified places along the Gulf of Aqaba. He suggests then that U. N. troops might follow them into occupation here as they have elsewhere in the Sinai Peninsula. But he also maintains that the U. N. operates as a guest of the Egyptian Government. Colonel Nasser would, therefore, be free at his leisure to dismiss the guardians of the peace and resume his interrupted aggressions against Israeli frontiers and Israeli shipping.

This solution continues to assume that Israel has been an unprovoked aggressor and that Egypt desires a peaceful settlement. It ignores the central fact of the last 8 years, that despite the armistice, Egypt has steadily maintained a state of war with Israel and has openly pursued and justified acts of war against her. Colonel Nasser has never suggested that he seeks peace. On the contrary, he has repeatedly refused any negotiations that would remotely imply acceptance of Israel's right to exist at all as a nation.

These are political facts. They are also moral facts. If the U. N. wishes to maintain that war is wrong and undertakes to punish aggressors, it cannot condone, much less strengthen, a government whose avowed policy is to remain at war until its enemy is annihilated. It cannot pretend to work for peace by recreating the conditions of inevitable conflict.

The worst of this sorry business is that the U. N., abetted by the United States, is crucifying itself. A world organization so indifferent to international justice and so proper that it can keep peace only with the consent of those who are breaking it may be worse than useless. It may serve chiefly to promote anarchy among nations and hang a cloak of piety over international immorality.

How Not To Handle Foreign Aid

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks, I submit the following article from Reader's Digest titled "How Not To Handle Foreign Aid," by Bernard S. Van Rensselaer:

HOW NOT TO HANDLE FOREIGN AID

(EDITOR'S NOTE.—We want to help people in other countries to help themselves. Instead, we're perpetuating an entrenched bureaucracy of United States planners and spenders. The story of our mission to Iran shows how good-will millions can go down the drain.)

(By Bernard S. Van Rensselaer)

It is to the interest of the United States, and it is the aim of President Eisenhower, to maintain a sensible, constructive foreign economic aid program. But is our present program sensible? Is it constructive? For many months congressional investigations have been piling up damning evidence of waste, extravagance, and loss of international prestige.

It is time for the American people to seek the reasons for this woe. Chief reason is a group of free-spenders, who, through the years when free-spending was a Government policy, entrenched both themselves and their philosophy. Of this there are many case histories. Consider, as an example, the story of the International Cooperation Administration mission to Iran, and its head, William E. Warne. This case has recently been under investigation by the House Subcommittee on International Operations.

Warne's background for his ICA job is revealing. He joined the Department of the Interior in the 1930's as a writer of publicity, emerged as an advocate of public power and a skilled promoter of large hydroelectric-irrigation projects. A believer in Government spending on a grandiose scale, he advanced rapidly. He became Assistant Secretary of the Interior, charged with urging the Bureau of Reclamation to ever-faster spending for multipurpose dams.

At least $60 million worth of the dams promoted under this hurry-up policy turned out badly because insufficient attention was given to details. There isn't enough available water in the Rio Grande to fill the reservoir created by one of these dams. Another contains water so salty that to date it has not been put on crops.

With such a record to qualify him, Warne decided late in 1951 to join others of the planning-spending era who were finding in foreign-aid jobs a chance to test their socio-political theories on a worldwide basis. He was sent to Iran to help that country of 15 million rebuild its economy, which had collapsed after expropriation of the British-controlled Iranian oil industry.

Rarely, except in foreign aid, has there

been such a spending campaign as Warne launched in Iran. Some $300 million in economic aid have been passed out to that country to date. This is equivalent to the income taxes paid by 721,000 average $5,000-a-year American families in a year.

Warne spent some of the money usefully: for vaccination, sanitation, antimalarial work, and other such programs for which point 4 was designed. These advances are an important reason why Iran has so successfully resisted Communist infiltration.

But in addition Warne launched outright gift projects. For example, he built a beet-sugar refinery. It couldn't operate at capacity for 2 or 3 years because Iranians had to be taught to grow the necessary beets. Nevertheless, Warne bought machinery for a second refinery—which could only be stored. When there weren't enough ready projects for which to obligate funds, Warne, with the approval of his Washington chiefs, distributed United States Treasury checks directly to Iranian ministers. He provided cash with which the Iranians not only met their regular Government payrolls but raised their own salaries. He subsidized the national bank.

In doing such things, Warne built up a staff of more than 400 assistants in 10 regional offices. One of these offices needed 53 automobiles and 41 chauffeurs for its 55 employees (including clerks and office boys).

General Accounting Office auditors, sent out since to learn what happened in Iran, have reported finding new farm equipment unused because it was unsuitable for the region and no one had authority to send it elsewhere. Machinery and other physical assets worth at least $25 million were scattered in such a way that no one has yet been able to discover where they all went.

When any of these expenditures is questioned today by investigators, it is justified by Warne and the International Cooperation Administration as necessary to save Iran from communism. One might ask if it wouldn't have been possible to contribute a stated sum to the Iranian budget without creating a staff of 400 people and sponsoring questionable projects.

The first principle of foreign aid—as it has been sold to Congress—is that projects should be those which the beneficaries themselves propose and want, and which are economically necessary. Yet Warne would not advance $500,000 to enable Iran to supply Teheran, its capital, with one thing the country needed badly—steam-driven electrical generators. A public-power supporter, Warne wanted Iranian instead to have a great United States style hydroelectric dam on the Karadj River.

The story of Iran's great dam will interest everyone. Teheran's population was 1,200,000, but its electricity supply was that of an American town of 15,000. In serving 30,000 customers the overload was such that light bulbs at certain hours became as glowworms. To make matters worse there were 40,000 applications for new electrical connections, if and when further power became available.

These were not just applications for home use; they came from industrial plants which desperately required electricity in order to create jobs. Warne himself had handed out $2,246,000 to construct an ultramodern cotton mill for Teheran, but there was no power to turn its wheels.

The cheapest and most practical solution for Teheran was the one which Iranians had themselves evolved, based on their large resources in fuel oil. Their plan was to more than double their power supply by adding 2 12,500-kilowatt generators to their existing oil-fueled, steam-driven dynamos. Five hundred thousand dollars, combined with Iranian funds, would serve as advance payment to get manufacturers working on the generators. Why should Iran build a vastly expensive hydroelectric dam?

Warne's own power engineers studied the Teheran plan and approved it. The United States committed itself on January 15, 1953, to try to supply the needed funds. When the Iranians asked for the agreed-upon dollars, however, Warne wrote back that "it would be greatly to the advantage of the country to concentrate on the use of hydroelectric generation rather than steam generation in the Teheran area." He added that "any contribution in the immediate future" would go for such purposes. He later refused money for the Teheran plan but pledged United States funds for construction of what had long been little more than a promoter's dream—the Karadj Dam.

This dam had been proposed in the 1920's by a group of German engineers—a 565-foot-high concrete block to be thrown across an isolated, narrow mountain canyon through which flowed a stream that all but dried up in summer and briefly became a springtime torrent. Nothing came of it; the project would be very expensive and the electricity that could be generated for Teheran would be utterly inadequate.

A French company, however, won a Karadj contract, and a little site work was done before activity halted in 1951.

Now, Warne pledged initially $1,400,000 toward construction of the dam according to the incomplete French plans. More money followed. But, in justifying the project to Washington, Warne said the total cost would be $17,300,000, whereas the Bureau of Reclamation's preliminary reviews showed an estimated cost of at least $28 million. On Warne's justification alone the United States and Iran were committed.

Work on the dam site began immediately and continued until June 1955, although technical experts in Iran and in Washington were in immediate revolt. Everett Eslick, then Chief of the Power Branch in Washington, insisted that the dam could not be justified by Warne's information. So did Howard Morrison, the engineer who was the Washington manager for the Karadj project.

On the demand of these and other Washington technicians, an independent board of hydroelectric experts from three leading United States firms were consulted.

"The stream flow and reservoir capacity are not commensurate with the cost of this dam," the board reported. "The project will not provide Teheran with an adequate power supply. The thermal alternate [steam system] can be made available sooner, at smaller cost."

Warne appealed to the engineering headquarters of the Bureau of Reclamation for data to support his program. While Bureau engineers conceded that it was physically feasible to construct the dam, they said it was no substitute for steam power. To meet the comments of the board of experts, they could only propose a still higher dam.

"Nothing has been developed to change the board's original conclusions," the consultants replied, fixing the cost now at $90 million. "The Karadj Dam is not a wise venture for improving the economy of the Teheran area."

It was now obvious that the dam's construction was too expensive to be carried on indefinitely out of foreign-aid grants. As an escape, Warne assisted the Iranians in trying to prevail upon the Export-Import Bank to finance completion. Ever since, ICA has represented that, under tentative approval of financing given by the bank, the dam was no longer an ICA concern. The facts are that Export-Import representatives who looked over the project in Iran advised Iran to abandon it. Nevertheless, as a result of our aid to this project and the publicity accorded the dam, the Iranians couldn't withdraw. Though work has long since halted, they must resume this dubious undertaking in order to save political face, even though they may be compelled to offer a prior lien on their national oil revenues in order to attract a lender.

What does Iran have to show for all the cash we've handed out?

Well, north of Teheran deep into the wild mountain canyons, your guide points out an uncompleted 14-mile road hacked out of the mountainside and tunneled through solid rock; it provides a fine overlook of a dam that isn't there. There is also a construction camp, complete with swimming pool. It all cost $3,500,000, a price that would buy a lot of generators.

"But perhaps you need not worry too much for us," your guide says. Then he smiles. "You must understand that we are getting our generators after all—later than if you'd helped us with that down payment we wanted, but they're now being installed."

How? Did Warne and ICA finally make the money available?

"No," says your guide. "When times gradually got better, we bought the generators ourselves."

The Iranian experience with our foreign-aid program is a sad story. But it is not unique. There are similar stories about waste and mismanagement in country after country.

Despite recent pressure to eliminate boondoggling, the fact is simply that the entrenched holdovers from another political era believe that paternalistic social welfare, outworn share-the-wealth ideas and vast spending are synonymous with helping people help themselves. To them this represents what foreign aid really should be. It is a closely-knit club that can reward its members and punish those who don't cooperate.

Douglas Reeves, a comptroller sent out from Washington to improve the fiscal procedures of Warne's mission, reported back that there was laxity in handling funds, a charge since confirmed by State Department auditors and General Accounting Office investigators. Reeves was relieved of his post and transferred to other duties until his contract expired.

Robert Alexander, Warne's chief power and utilities engineer, continued to voice approval of steam power for Teheran as opposed to the Karadj dam. He lost his job. To keep him from talking, his critical report on Karadj was marked "Classified."

What happened to Warne? In ICA circles his Iranian program is pointed out as one of the agency's outstanding achievements. He has become economic coordinator in Korea, in charge of the biggest foreign-aid program of all.

The ICA club which makes possible such rewards stems back to the 1948 legislation which established the first foreign-aid organization. This legislation set up a large number of special jobs with salaries above the usual civil-service rates. These jobs were intended to be filled by foreign-trade experts, manufacturers, engineers and the like from outside government. Congress considered that much specialized practical experience was essential to the biggest international business operation in the world.

Most of these specialists retired after 1 or 2 years, however, and the vacuum was filled largely by theoretical economists from other Federal agencies and by social workers and planners. Earnest men and women, they had great ambition but little practical experience. These men brought in or elevated friends with similar backgrounds. The bona fide technicians and operating men were pushed into minor roles.

Evidence made public by the Senate Appropriations Committee in 1953 disclosed that a number of the key people in foreign aid were holding jobs for which they had no background of experience. An agricultural economist, for example, served as director of the industry division, charged with all industrial planning and procurement throughout the world. He was succeeded by a real estate man. The person in charge of increasing industrial productivity in all countries was a former civil-service

personnel man. These are not exceptions, even today.

Meanwhile the foreign-aid organization has constantly grown more complex. It has had four different names—Economic Cooperation Administration, Mutual Security Agency, Foreign Operations Administration, International Cooperation Administration. In addition, the agency has taken over the functions of the Technical Cooperation Administration. In the last 6 years it has had five titular chiefs. There are now so many different kinds of aid, embracing anything and everything the planners may want to do, that more than 2,000 projects are being carried on in some 50 countries.

Congress got lost in this morass. It couldn't keep track of what was going on. It didn't even know how the appropriated funds were spent. But now, at last, congressional frustrations are coming to a boil. At least three investigating committees have gathered data. Another investigation is being carried out by the White House. It is likely that Congress will attempt basic reforms.

Whatever remedies are undertaken, they should be aimed first at curing the fundamental troubles discussed here—the troubles caused by planners and spenders run wild, in an oversized, self-perpetuating agency. Otherwise there can be no sensible foreign-aid program—one which will give American taxpayers their money's worth in helping to build a strong and friendly free world.

Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. MULTER. Mr. Speaker, as a member of the House Small Business Committee, I receive numerous letters from small-business men. The following letter, addressed to Mr. George J. Burger, sums up the tone of most of these communications.

With the writer's permission, I am pleased to commend this communication to the attention of our colleagues:

SALTER CANNING CO., INC.,
North Rose, N. Y., February 11, 1957.

Mr. GEORGE J. BURGER,
National Federation of Independent Business, Washington Building, Washington, D. C.

DEAR MR. BURGER: I have your letter of the 6th, with a copy of your communication to the Senate Small Business Committee. At this late and repetitious moment, I feel the NFIB is altogether too polite. Events are reaching beyond the usual courtesies. We all, I believe, are tired of kicking this dead horse up the Capitol steps every time Congress convenes, only to see it roll down the Capitol steps when Congress disbands. Session after session the political mourners gather around, drop tears, spout platitudes, then take off for the nearest barbecue served up by consolidated corporations. It's time these delinquents quit shoving the fried chicken down their guts and exposed their brains to the elements. Travel through our large towns and our cities and observe how little anyone, locally, owns. Neither the fellow pumping gas nor those operating the retail outlets. You won't see it and I may not, but I have a hunch Dame History has a resounding thwack hidden in her satchel that won't be pleasant when time comes to use it.

First, let us get off our chest the idea that bigness means efficiency. My father-in-law was with the General Electric for 43 years and he had some great tales to tell of that outfit. He started with Edison in Brooklyn when Sam Insull was Edison's secretary, and was among the first to move into the Schenectady plant. The largest canner in our State, in recent years, has had ups and downs of earthquake proportions that would put the average small canner out of business. But he is kept afloat by his canmaker—and in the past year I believe both American and Continental Can have had to bolster him. Another large competitor takes so much time in loading trucks that carriers shy away from him. Truckdrivers tell us the story. We will load a truck in 30 minutes while at our large competitor's, 4 to 5 hours are required. Following the war and at least up through 1949 the Robinson-Patman Act was enforced and at the close of 1949 General Foods discontinued the canning of fruits and vegetables at some 20 plants across the land. One of its vice presidents informed me it was losing money heavily, being unable to compete with smaller operators. So much for bigness and efficiency. The TNEC investigations confirmed this almost 20 years ago. If you recited this to the House and Senate Small Business Committees, the members would be surprised. Recite it to them 12 months from now, they again would be surprised. "Surprise" is their specialty.

It is no secret that two rather famous antitrust proceedings under the Robinson-Patman Act virtually started in our office. In each the Government won. One was the action against the tin-can cartel that wound up in the San Francisco Federal court in 1949. There the judge hit the saddle but let the horse go. Neither the givers nor the receivers of fat kickbacks were fined and the receivers never handed back the loot. If a theoretical burglar in the dead of a theoretical night lifts a theoretical egg from under a theoretical hen, that in light of the law shakes the Republic to its foundation.

I have seriously proposed that, nationally, we have one giant corporation and one giant bank. That is where we are headed and the Federal Trade Commission, the Justice Department, and our high courts have provided substantial momentum in that direction. The recent release of Du Pont is a point. The court concluded Du Pont had no monopoly in cellophane for you could also pour food into derby hats, cowboy shoes, tin pans, wash basins, bass tubas, manholes, and kitchen sinks.

I enjoyed the professor's observations. The boys out of school have usually had, in school, only big business' point of view thrust upon them. I know because I had the same "big business massage" back in the mid-1920's. My school (Ivy League) has so dedicated itself to big business that I some years ago discontinued contributing to it. If big business is to run it, big business can support it. The boys, out of school, consider small business a dead duck; but few follow the picture through. At 45 or 50 they may be on the street, replaced with another crop of youngsters. I have seen this repeatedly. One occurrence was tragic: A swell fellow, about 55 years old, went to the Continental Can plant in Syracuse on a Sunday morning and hung himself in its lockerroom. Such dismissals rip families apart, not to mention that many of them are nomads, to be shoved all over the continent as the monster above dictates. I say "monster" as top management of giant business is now so thin and ethereal that its remoteness can be measured in astronomical light-years. Congressmen are impressed by this, also court judges. They call it genius.

The collapse of Collier's is a point. The mounting cost of paper was one major cause. The directors had the circulation and the medium by which to bring home to millions what is happening to free enterprise. Through words, Collier's could have stacked enough TNT under the international paper cartel to blow it high and dry. But no, the directors supinely surrendered—a measure of today's journalism and the pink-handed boys controlling it. Several other magazines are looking lageared, destined for the same ignominious grave.

Giant business wants yes-men, Arrow-collar slaves. Our constitutional form of government was built around the concept that property and enterprise should be widely spread, competitive and protected under the law. The basic concept was that economic freedom and security was the avenue to intellectual freedom. Of all the Arrow-collar slaves I have met—and I have met many—though college bred, they are 100 percent frightened to open their mouths. That is why I earlier dragged in dame history. I have a hunch that, under some unpleasant circumstances, this dam holding back intelligent minds may burst.

The financial seas must be running high to occasion Herb Hoover to stick his head out of the crow's nest and shout: "Rocks ahead." Soon, Congressmen may be attending a wake in the cloakrooms, the wreath at the bottom of the coffin reading: "In memory of our beloved free economy—from brethren of the local debating society and knitting club."

Most sincerely,

L. J. SALTER.

Near Eastern Policy

SPEECH
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. GRAY. Mr. Speaker, will the gentleman yield?

Mr. ROOSEVELT. I yield.

Mr. GRAY. Mr. Speaker, I would not want the occasion to pass without taking this opportunity of congratulating the gentleman from California [Mr. ROOSEVELT] for the very fine and forthright statement he has made on this very serious problem. I will not delay the deliberations other than to make some brief comments.

First, I would like to say to the gentleman from California [Mr. ROOSEVELT] that I am sure the majority of Americans join with him in expressing the sentiment that the United States is taking the wrong attitude when we talk about imposing sanctions against Israel. The clouds over Israel are dark and heavy. I believe conditions will be worse instead of better if sanctions are imposed on that country. So I say to the gentleman that I hope his forthright advice made in this House today is heeded, and I hope that those people who are guiding the affairs of the United States in the United Nations will give some serious thought to the proposals made today. I reiterate that I predict that conditions will become much worse instead of better if sanctions are imposed.

I want to congratulate the gentleman. He has made a wonderful statement today, as he always does when he takes the floor. I thank him for his statement and agree with everything he has had to say on this very important subject. I am sorry that more Members were not present to hear his enlightening and eloquent statement.

Mr. ROOSEVELT. I thank the gentleman.

The SPEAKER pro tempore. The time of the gentleman from California [Mr. ROOSEVELT] has expired.

A Canadian View of the Eisenhower Doctrine

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article written by J. B. McGeachy, associate editor of the Financial Post, Toronto, Canada:

WEEKEND REVIEW

(By J. B. McGeachy)

Tens of thousands of words, maybe millions of words, have still to be spoken and written to make plain the meaning of President Eisenhower's Middle East policy statement of yesterday afternoon. It will take weeks, maybe months, for these words to get themselves uttered. Therefore, anything I, or anyone else, can say now must be preliminary comment. It must consist largely of questions, rather than final judgments.

But let me begin with a tentative overall opinion. I think Mr. Eisenhower has taken a small step in the right direction. Perhaps he has gone as far as it was prudent for him to go (at the moment) seeing that this is a brandnew policy he has enunciated, a policy completely at variance with the position of the United States as recently as 2 months ago.

When Britain and France intervened in Egypt last November, Mr. Eisenhower could find no merit in their action at all. He used polite words in his public condemnation; but it is said on good authority that on the telephone to Sir Anthony Eden in London he allowed his indignation full play.

It was under American pressure that the British and French stopped short of their objectives and agreed to pull out. Washington's ukase at that point was that they should decamp forthwith and that the United Nations should take over. It appeared to be, quite seriously, the official American opinion then that U. N. resolutions, plus a small multilingual army with apparently nothing to do but act as sentry, plus Mr. Dag Hammarskjold's good offices could take control of the very untidy and dangerous situation that has developed in the Middle East.

It has not taken the President very long to recognize how unrealistic that policy was. Now he is prepared, in certain circumstances, to use American military force to do what Britain and France were obligingly prepared to do with their military force; namely, to buttress the western position in the Middle East against Soviet penetration.

This immediately raises several questions. Why did not the American Government give this commitment when invited to do so more than a year ago by Prime Minister Eden? Because, I suggest, it needed the events of the past 2 months, and especially the Anglo-French intervention, to wake Washington up to the seriousness of the Russian threat in the Middle East.

Why would it be moral and noble for the United States to send troops there to protect Western interests when it was immoral and ignoble for British and France to do just that?

Well, the correct answer might involve peevish comment on an American tendency to be self-righteous and to assume that only the United States can and does use its strength in an enlightened way for the general good.

But I think you should take note that another interpretation is being put upon events by some people in Britain. I will put it in the form of a question. It is a fact that United States oil investments in the Middle East now exceed British oil investments there. Can it be that, for this reason, Washington would like to substitute American for British influence in that part of the world?

I don't know; I merely mention this as one of the questions that ought to be, and may be, explored in the course of the debate now to begin in Washington. And I hasten to add that if one of the motives of the Eisenhower policy is the protection of American oil holdings, that strikes me as a wholly legitimate motive. But it would be nice to have it stated without hyprocrisy.

But—to return to what the President said. He is not proposing to move into the Middle East now having just ordered the British and the French to move out. That would be a bit too sudden. He has hedged his proposition in several ways to make it unassailable on legal grounds.

His first hedge is the mere fact that he asks Congress for authority to take certain military action. He has no need to do so. The authority is his already under the Constitution. I won't take time to give you the argument in detail. I merely assure you there's no doubt whatever, that as Commander in Chief, the President can order American Army, Navy, and Air Forces into action wherever and whenever he thinks fit.

However—specific congressional authorization to do this in the Middle East, which Mr. Eisenhower is pretty sure to obtain, will strengthen his hand and demonstrate American solidarity to the world; and that will be all to the good.

As to Mr. Eisenhower's other hedges, they don't strengthen his policy but weaken it to the vanishing point.

He says he will send American forces only in response to a request from victims of Soviet military aggression. But this is precisely the source from which he will never receive such a request.

The world has recently seen the Soviet military machine in action against the Hungarian patriots. Was there any call for help from the Hungarian government? Of course not, because that government is a Moscow puppet. If and when Moscow ever does move into the Middle East militarily, you may be sure that a similar puppet will already be performing—in Cairo, in Damascus or somewhere else; and it will be the Russians, not the Americans, who will get the call for help.

But in any case, it isn't Soviet military intervention in the area that's to be feared. It's the spread of Soviet power by coup, by economic infiltration, by propaganda. Suppose that Nasser, who's rated by many people a Soviet dummy now, suppose that Nasser takes orders from Moscow on the operation of the Suez Canal when it's reopened? (By the way, he has already proclaimed that British and French ships will not be permitted to use it until Israel has handed the Gaza strip back to Egypt—shades of Ferdinand de Lesseps.) But suppose that in this way Moscow becomes master of Suez without firing a shot, how does Mr. Eisenhower's policy apply? It doesn't appear to apply at all, but somebody, I suggest, is bound to raise the question—in London if not in Washington.

Mr. Eisenhower's final hedge is the most startling of all. Any military action he takes in the Middle East, he says, will be subject to the over-riding authority of the U. N. Security Council. Now, Russia has a seat and a veto in that body. Does Mr. Eisenhower really mean that he would send a force to, say, Egypt and then withdraw it if the Russians disapproved? It's hard to believe that this is what he means; but this is what he says.

You see how many questions there are to be asked about the new Eisenhower doctrine as it's called. It's to be welcomed as a sign or symbol of American acceptance of responsibility in the Middle East; but as a practical program it's as full of bugs as an ancient jalopy. And for lack of time I haven't even touched on the fact that Mr. Eisenhower doesn't propose to use American strength to influence the Suez settlement or the Arab-Israeli settlement. These are to be left to U. N.—heaven preserve us. It was U. N. that voted in 1947 for the creation of Israel in the first place, then left the Arabs and Jews to fight it out and proved completely, helplessly incompetent to stop or solve their quarrel. It needs a pretty vacuous optimist to suppose that U. N. can do any better from now on.

At this point I'm going to divert the discussion to a statement by Mr. Nehru I heard reported on the radio this morning. The Indian Prime Minister attached the theory of the power vacuum; the theory that when one strong power moves out of a country where it has ruled or exercised influence, another strong power moves in. Mr. Nehru is against this assumption.

He is, I suggest, talking about the world the way he would like it to be, not the way it is. His own country, it's true, has managed to stand on its own since British rule ended 9 years ago—thanks to a number of factors, including India's immense size and population, and the efficient political system, civil service and army Mr. Nehru inherited from the British period. But suppose the Government of Pakistan collapsed (as it very nearly did last year)—wouldn't Mr. Nehru take steps to fill that particular power vacuum by adding the Pakistani provinces to the Indian federal union?

I think he would; but we needn't discuss a hypothetical case. We're talking about the actual case of the Middle East. The United States has turfed Britain out of that region; this is not debatable nor is it denied in Washington. On the contrary, it's a matter of pride there. And the moment British influence evaporated, Russian influence appeared. Why? Because the Middle East, though it's rich in oil and populated by interesting people with an ancient culture, is divided into small countries that are jealous of one another and is hopelessly backward in both politics and economics.

With Russia standing on the sidelines, eager to snatch the strategic and material prizes of the area, does it make sense to suppose that a powerless body like the U. N. General Assembly, able only to express opinions, can settle anything at all that's at stake in the Middle East? Mr. Eisenhower, in my opinion, is gradually coming around to the rational view that it doesn't make sense. Gingerly and cautious, he is edging up to the responsibility that now belongs to his country because his country forced the British—and the French—to give it up. But he still has a long way to go, and he may already be too late.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Good Government Award to Senator Karl E. Mundt

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. CASE of South Dakota. Last Friday night, on the anniversary of the birthday of George Washington, the American Good Government Society presented its award for distinguished service to two great Americans, my senior colleague [Mr. MUNDT] and the honorable WILLIAM L. COLMER, of Mississippi, a Member of the House of Representatives.

The presentation to the senior Senator from South Dakota, my colleague, was made by another of our distinguished colleagues, the Senator from South Carolina [Mr. THURMOND]. With the consent of the Senate, I offer for printing in the RECORD the citation given in the remarks of the Senator from South Carolina and, following that, the response by the Senator from South Dakota.

Then, to show that my distinguished colleague is not without honor in his own State, I ask leave to insert thereafter an editorial from the Rapid City Daily Journal.

There being no objection, the addresses and editorial were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR STROM THURMOND, DEMOCRAT, OF SOUTH CAROLINA, ON PRESENTING THE GEORGE WASHINGTON AWARD TO SENATOR KARL E. MUNDT ON BEHALF OF THE AMERICAN GOOD GOVERNMENT SOCIETY AT THE HOTEL STATLER IN WASHINGTON, FEBRUARY 22, 1957

Mr. Chairman, ladies and gentlemen, any award made in the name of the first President of this great country should be made to a recipient who is of the same high character and integrity, and who has the same courageous statesmanship which set George Washington apart from others in the fight for representative government.

I congratulate the trustees of the American Good Government Society on selecting the man named on the scroll which I have the honor of presenting tonight. He measures up to the standards set in the early days of this Nation by the Father of Our Country.

In every way he has demonstrated that he possesses the ability, the integrity, the penetrating interest and understanding of public affairs, and the unbounded capacity for work, which are the essentials of an outstanding representative of the people of this country.

He had been successful in several fields of endeavor before entering public life. He is a compelling speaker whose words attract the attention of citizens all over this Nation. They recognize him for the patriotic public servant that he is.

After his experience as a member of the Un-American Activities Committee in the House of Representatives, he was instrumental in the enactment of legislation in 1950 to establish the Subversive Activities Control Board. Then, as now, many people did not see the necessity for such an organization, but all of us should be grateful to this man that he had the courage and vision to sponsor this legislation.

Another achievement I want to mention is the success he has had in developing a national consciousness of the desirability for reformation of the Electoral College system. Here again he has exhibited courage as well as a deep concept of how practical measures should be applied to the functioning of government so as to more truly reflect the will of the people.

Many times this man has shown his adherence to the principles of constitutional government by his advocacy of the rights of the States as delineated in the Constitution.

I am proud to call him my personal friend and I am happy to present this scroll to the senior United States Senator from South Dakota, the Honorable KARL E. MUNDT.

The inscription on the scroll reads as follows:

"KARL E. MUNDT

"Farmer, educator, statesman, master of forensic arts, has served the people of South Dakota and the Nation for 18 years in the Congress of the United States—the last 8 in the United States Senate.

"Among his notable achievements are the provisions of the Internal Security Act of 1950, which established the Subversive Activites Control Board to halt Communist subversion; and the creation by Congress of the Alexander Hamilton Bicentennial Commission, to reemphasize Hamilton's enduring contributions to the cause of personal liberty and national independence—separation of powers and checks and balances in State and Nation, honor and integrity in Government, and immortality of the public credit.

"Senator MUNDT has raised the twin standards of political realinement in Congress and reform of the electoral college, to the end that the separate powers of the President and Congress shall rest on the same principles of representation, thus serving his creed: 'A fair chance for a free people.'"

GEORGE WASHINGTON DINNER AWARD, AMERICAN GOOD GOVERNMENT SOCIETY, FEBRUARY 22, 1957

(Response by Senator KARL E. MUNDT, of South Dakota)

Mr. President, distinguished guests at the head table, fellow Americans. Certainly to receive a certification of this kind from an organization like this makes one at the same time feel very humble and very happy. I recall being in the audience in 1953 when the first annual Good Government Award was presented. It was presented at that time to two good friends of yours and mine, the late Senator from Ohio, Senator Bob Taft, and Senator HARRY BYRD, of Virginia.

Nothing was further from my mind that night certainly that the time would come when I would be standing here receiving an award of that type from the American Good Government Society. And for that, I certainly wish to thank you all very much indeed.

To you, Senator THURMOND, for that altogether too generous statement in connection with the presentation of this award, I am doubly grateful to have it come not only from a warm personal friend but from a great statesman in his own right from a great State in a great section of the country.

And to Senator BURKE, the president of the Good Government Society, and the trustees of the society, I am certainly more than grateful for the generosity expressed in the words recorded on the scroll which I have been awarded here tonight. I am especially grateful that this scroll referred to my work in connection with the Internal Security Act of 1950 because that was a bill which most of you recall as the old Mundt-Nixon bill, which we batted around the Halls of Congress for a good long while. You remember the long, hard, bruising battle that we had to finally get it enacted into law. I think virtually every Member of the Senate and the House who is here tonight voted for that bill when the chips were down and it was necessary to decide whether we could pass it over a Presidential veto as it ultimately was done.

I think that ensuing events have demonstrated that our decision then was right when we decided that the best approach to communism in this country was not an attempt to delude ourselves into a sense of false security by a statutory outlawing of the party but instead to permit it to operate but compel it to come out of the dark and into the open and expose itself.

The years since then have pretty clearly demonstrated what so many thought correctly was the situation then, and that is that the germs of communism on American soil once they were treated to pitiless spotlight of public opinion could not advance and grow when they had been identified so people could clearly know them for what they were. Communism can withstand almost any other attack on our homefront except complete exposure and pin-pointed identification. The cowardly self-serving little men and women who still cling to communism lack either the good cause or the great courage required to promote their doctrines effectively in an open battle for the minds of men. And this act, along with others, has caused the rats among us to come out of the dark and squeal ineffectively in the open or else perish in the confines of their own dark and infested dens.

I would also like to say here that it was the American Good Government Society that first interested me in the possibilities of an Alexander Hamilton Bicentenial Commission.

When I spoke before this annual dinner in 1954, on George Washington's Birthday—Yesterday and Today—I mentioned the fact the society has already established a committee to see that the 200th anniversary of Alexander Hamilton's birth was properly signalized. I remember praising the society for this leadership and offering whatever cooperation I could provide.

Sometimes it is wondered on Capitol Hill whether any of the many speeches that we give ever produce results or win decisions. I can testify to the fact that sometimes they do because I so convinced myself in talking about Alexander Hamilton that night that I introduced a resolution creating the Alexander Hamilton Bicentennial Commission and ended up as its chairman.

Most of you, I am sure, have seen or read something about the work of this Commission.

We have sent each Member of Congress a copy of the new book edited by Prof. Richard B. Morris of the Department of History,

Columbia University, entitled "The Basic Ideas of Alexander Hamilton." Preparation of this pocket-book compilation of the writings of Hamilton has led Professor Morris to a larger compilation of Hamilton's writings designed, I believe, to become the standard one-volume Hamilton reference work.

The third new book published this year is Alexander Hamilton in the American Tradition, by Dean Louis M. Hacker of the School of General Studies of Columbia University. We are also proud of the great project underway at Columbia University to edit and publish a definitive edition of The Papers of Alexander Hamilton. Dr. John A. Krout, whom you have already heard this evening, is chairman of the editorial board of this project which is financed by private funds of $200,000 made available by Time, Inc., and the Rockefeller Foundation.

I am sure you are all also aware of the new 3-cent Alexander Hamilton commemorative stamp issued in New York City on January 11th—his 200th birthday. In addition, a British stamp was issued the same day on the Island of Nevis where Hamilton was born.

Insofar as we have been able to determine, this is the first time in history the 2 governments have honored 1 man simultaneously with a commemorative stamp. Also, we are told it is the first time a British stamp has been issued in honor of an American.

In cooperation with the Department of the Treasury, your commission has established an Alexander Hamilton exhibit in the Department of the Treasury here in Washington. Displayed there, are priceless historical items and you are all invited to visit this exhibit.

A major undertaking was finalized this week when plans were completed for holding a series of contests in high schools and colleges for Alexander Hamilton commemorative scholarships and fellowships. Frederick C. Crawford, chairman of the board of Thompson Products Co., Cleveland, Ohio, has accepted chairmanship of a committee of prominent Americans who will raise $400,000 from private sources for this purpose.

However, our commission seeks not to glorify Hamilton, the man—but rather it is our purpose to emphasize the quality and permanence of his work on the foundations of the Government of the United States under the Constitution.

As has been indicated here by earlier speakers tonight, it seems that we face in this country a crisis in good government—a sort of constitutional crisis. For more than 20 years we have witnessed, all of us, a tendency for a growth of the Central Government—in power and strength and cost far beyond that anticipated by our constitutional forefathers. Certainly it has grown far beyond what we would anticipate by a careful reading of the 10th amendment of the Constitution which I have always construed to be the headstone of our Bill of Rights.

Since 1940, at least, we have had developing in this country what, in my opinion, is something of an American phenomenon because it has been a whole series of pretty sharp disagreements between the executive branch of Government and the legislative branch of Government. Disagreements over matters of substance and importance in policy and in principle. Disagreements which in the main have not been attributable to differences of political affiliations, not simply created out of a situation such as we have now where the President is of one political party and the Congress is of another or such as we had during the 80th Congress when with reverse English we had a President of one political party and a Congress of another. Differences which, in my opinion, are deeper rooted than that. Rooted in the fact that there is developing, it seems to me, an executive position or an executive attitude vis-a-vis a congressional or a legislative attitude in Congress and it seems to me as those differences become increasingly apparent we approach a crisis in this whole business of good government.

I might say here tonight for the benefit of those who have come from Mississippi and South Dakota and from many other States across the length and breadth of this land and who are not regularly inhabitants upon the hill, that you find here seated in this room tonight in the main Democrats and Republicans who while they have differed frequently at election time have agreed even more frequently when it comes to voting in the Halls of Congress. It has been a long source of personal perplexity to me why it is that a coalition or a working machine or a political mechanism which for 20 years has been able to go far and do much in Congress toward preserving constitutional government in America should not be able to extend its ramparts out to the voting precincts of this country so that parties can begin meaning more than they do once again in American political life, and so that like-minded people can vote together effectively for President regardless of where they live geographically or how they are registered politically.

I think it would be a wonderful thing if behind these congressional Democrats and Republicans represented here tonight in the Statler Hotel in this dining hall we could create lines of party affinity running into the courthouses and into the statehouses and into the voting places of all the States in the Union. I have a feeling that the course of events in American history would be different if we had this same kind of working arrangement among people generally that has done so much and meant so much to America as it has operated for many years in the Halls of Congress. I believe political realinement is long overdue in this country and that the time is here, now, when we should begin thinking about what our parties should clearly advocate and where we should best find ourselves to have the greatest degree of congeniality and sympathy with other people of the party.

In addition to that, another reason why this executive position and the legislative position have come to clash so frequently even among members of the same political party stems from the fact that we elect our Presidents from one voting constituency and elect our Congressmen from quite a different constituency.

This grows out of the electoral college system whereby practice, use, custom, and necessity we have gradually adopted the system of bloc voting in the electoral college—the system of winner take all in a general ticket approach—so that when the voters have voted in the polls in November, the electors whose votes actually chose the President vote in blocs when they meet in December to determine the deciding votes. In December of last year, for example, in all of our State capitols, members of the electoral college met to decide who should be the President of the United States, casting votes not in accordance with the way voters back home had cast them but casting them on a basis of winner take all. The winner taking the votes of the loser as well and voting them all one way for President.

Let's take what happened in December in New York State, for an example, our biggest, our most potent and powerful State of the Union. There in December at Albany, N. Y., 45 electors met to cast their votes in the electoral college. I wonder if it wouldn't be a splendid lesson in American political life if somehow or other on the same occasion we could have taken the 45 members of the New York congressional delegation and had their meeting at the same time in the city of Albany, N. Y. After all, with the exception of Senator IVES, all of the 45 had been elected in the same election, in the same campaign, at the same day in November as the members of the electoral college. But when they came to vote in the electoral college the 43 electoral votes given to New York State because of its 43 Congressmen and the two awarded it because of its 2 Senators, the 45 voted in toto—45 votes for the Republican candidate for President. Actually, of course, had the Senator and Representatives themselves done the voting, the men who had been elected at the same election by the people voting in their respective parties, the people from whom the electoral college delegates got the votes that enabled them to vote at all, we would have had quite a different vote because there, there were 27 Republicans and 16 Democrats elected to Congress from New York State last November.

It seems to me that points up to the fact that there is a reason why we find this growing tendency to have disagreement between the legislative branch of Government and the executive branch. Take Texas, for example; twice within 4 years the electoral college vote of Texas has gone unanimously for a Republican President and with 1 notable exception all the members of the Texas congressional delegation have been Democrats. Louisiana, in the last election, cast its electoral vote unanimously Republican and as far as I know, Louisiana has not sent a Republican Member to the Congress since the war between the States. I point this up to indicate that if we could find a way so that the same constituencies voted for President as voted for Congress, I think it would eliminate this tendency for a growing centralized government in Washington and the tendency for there to be an executive position differing from a legislative position.

In company with STROM THURMOND, in company with FRED COUDERT of the State of New York, and others, I have introduced a simple amendment which would do exactly that. It would have the electors to our electoral college elected from precisely the same districts as the Congressmen and at the same time, and in the same manner. So that each congressional district expressing itself for a Congressman could also express itself for an elector to vote for one candidate or the other. So that, in the main, you wouldn't have the kind of situation which you have with all the electors going one way and many Members of Congress going another. It certainly would bring about a closer meeting of minds on the problems which confront the voters as they try frantically once in 4 years to write the pattern of performance they would like to have in America.

This amendment would do something in addition to that—it would do away with the most conspicuous class of second-class voters that we have in the country and that is the situation whereby a single voter in New York State when he votes puts 45 electoral votes into motion. If one voter in New York breaks the tie of the popular vote his vote thunders with the power of 45 electoral votes. An equally intelligent voter, equally wise and careful and cautious and prudent, voting in the State of Delaware if his vote breaks the tie of the popular vote in that State, his vote counts for only 3 electoral votes. So each New York voter actually has 15 times as much vote power and influence in a Presidential campaign as an equally intelligent citizen from Delaware and measured against your own State wherever you live, the disparity is not quite as great but it is also there. You too are second-class citizens.

None of us are first-class citizens in a presidential election today unless we live in New York when it comes to voting for President under our present electoral college system. And that means, of course, the pressure groups operate to secure the clusters of votes available in the congested cities of America and that 8 or 10 or 12 crowded metropolitan areas have tended to have a tremendous influence in what we write in national platforms, in whom we nominate

for national President, and in how we elect the candidates for the other end of the Avenue because, necessarily, that great influence is imbedded in our electoral college system. But because it is not necessary for very many Congressmen to make apepals to clusters of votes in crowded areas, to make appeals to groups and pressure organizations, we get a different congressional viewpoint up on Capitol Hill and I think we should reconcile those points of view by constitutional amendment. To do so would go far toward correcting what I consider a most unwise tendency to have too much of our spending and to have too much of our tax authority and too many of our functions operated from Washington. My amendment would tend to put the Government back where Hamilton and Washington wanted it to be in the hands of the people. It would tend to give the people of all States an equal voice in selecting not alone their Members of Congress but also Presidents and Vice President. It would put the same constituency behind both groups of candidates and I think do more than any one thing to bring about permanent conditions which would keep budgets in balance and do more than any one thing to discontinue encroachments by the Feedral Government on the domains of the separate States. It would also do more than any one thing to dignify again the individual in America and in American political life because each of us then would be as important as a voter in the State of New York.

So I suggest as we conclude tonight that as we ponder over the changes that have occurred in the 225 years since the birth of Washington and the 200 years since the birth of Hamilton, as we try to find the causes for the situations of which we disapprove, so that we may find the answers to the problems which seem so prodigious, I propose that we think a little bit about our political machinery. Much of this mechanism isn't in the Constitution; it just grew up like Topsy and necessity compels each State of ours to cast its electoral votes en bloc—en masse—and if by constitutional amendment we break them up we move back in the direction of putting Government in the hands of the people. I would say in all sincerity to these fine Democrats here tonight with whom I have served so long and these fine Republicans from Capitol Hill, that after more than 100 years now of having our two political parties we're convinced I know that we want to maintain a two-party system in America. But perhaps we should reexamine what's behind the labels of the parties, perhaps a transmigration of political forces in this country would find most of us happier if we could surround ourselves with some new faces as we picked recruits from one area and lost supporters to another. We should rebuild our parties around principles and policies as clearly definable as the positions of the group of Congressmen you find here tonight quite regardless of their party preference.

I recall with Hamilton his words when he said: "We are laboring hard to establish in this country principles which are free from all foreign ingredients, so that we may be neither Greeks nor Trojans but truly Americans." We have something unique in America but something which we uniquely must continue to keep functioning and in tune with the times adjusted to influences which otherwise can use machinery which has not been kept up to date to challenge and undo the work of these great forefathers of ours.

And with Washington tonight let us conclude by saying as he did "Let us raise a high standard to which the wise and honest may repair. The event is in the hand of God." As it was then, so it is now. Thank you all very much indeed.

[From the Rapid City (S. Dak.) Daily Journal of February 5, 1957]

GREAT HONOR FOR SENATOR MUNDT

South Dakota's Senator KARL E. MUNDT has been selected for one of the American Good Government Society's two 1957 George Washington Day awards.

These awards are presented annually on George Washington's birthday, at a dinner in Washintgon. The honorees are chosen for outstanding contribution to good government.

Senator MUNDT will share honors this year with Representative WILLIAM M. COLMER, dean of the Mississippi congressional delegation.

Senator MUNDT was first elected as East River Congressman in 1938. He served most usefully and with distinction in the House of Representatives until 1948 when he was elected United States Senator. He was reelected to the Senate in 1954.

Among Senator MUNDT'S many accomplishments, perhaps his outstanding contribution has been his efforts to win the world batle for men's minds. He is coauthor of the Smith-Mundt bill which bring foreign students and leaders to this country where they have an opportunity to better understand the United States. The same law enables American students and leaders to travel abroad, learning the problems and getting to know the people of other nations.

Senator MUNDT also is the "father" of the Voice of America program and the United States Information Agency which tell the truth about America abroad through libraries, lecturers, and other mediums.

Senator MUNDT constantly works for the benefit of the people of his State. He has been influential in the Missouri River development program with its benefits of power, irrigation, navigation, recreation, and flood control.

He has worked hard to attract industry to South Dakota and to develop the national parks and forests, minerals and agriculture in the State.

MUNDT is coauthor of the pending Mundt-Coudert electoral college amendment which is designed to localize the power of minority groups in presidential elections.

He believes that conservative, patriotic Americans are in a big majority in this country, but that they are divided by traditional party ties. MUNDT is convinced that such a division has played into the hands of the Communists, Communist-fronters and other leftist elements in their program to divide the American people and destroy the system of private enterprise that has made ours a great Nation.

Senator MUNDT and Congressman COLMER will take places of honor by the side of Virginia's Harry Byrd and Howard Smith, Ohio's Bob Taft and George Humphrey, Texas' Allan Shivers, Herbert Hoover and Georgia's Walter George, who have received the Good Government Society's George Washington Day awards during recent years.

Mr. RUSSELL subsequently said: Mr. President, a moment ago, when the junior Senator from South Dakota [Mr. CASE] obtained consent to have an insertion made in the RECORD, I sought to get in one word edgewise, before he surrendered the floor. However, the controversy over the O'Mahoney amendment prevented my doing so. I understand that he inserted in the RECORD an award which had been made to his distinguished colleague the senior Senator from South Dakota [Mr. MUNDT] for his valiant services in the cause of good government.

Mr. President, I merely wish to make this brief observation: The information that this deserved award has been made gives me hope for the quality of awards of this kind which may be made in the future. In my book, if any Member of the Senate deserves to receive a reward for constructive service to good government and for courageous service to his country, it is the distinguished senior Senator from South Dakota [Mr. MUNDT].

Immigration and Anticommunism

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the Right Reverend Monsignor Edward E. Swanstrom, executive director, Catholic Relief Services, NCWC, at Fordham University alumni dinner, on February 11, 1957. It is one of the most significant analyses on the subject I have ever heard.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IMMIGRATION AND ANTICOMMUNISM

It is not too many weeks since I saw one aspect of the Hungarian crisis at close quarters. I was standing not far from the border of Hungary in a camp of Hungarian refugees from the dark side of the Iron Curtain. They had started to come out in a human tide of agony and misery on that fateful November 4 when Soviet Army units, comprising 200,000 men and about 5,000 tanks, based outside of Hungary's borders, entered Hungary to perpetrate a massacre that has been termed a turning point in the history of our times.

I had seen the other waves of refugees that reached Western Europe since the end of World War II.

I had seen the displaced persons of Eastern European nationalities in 1945—just released from slave labor and from concentration camps—broken in body and so often broken in spirit.

Then had come the wave of millions of expellees into destroyed Germany, uprooted, dispossessed of home, of all that was meaningful in their lives, of hope. These were the 12 million ethnic Germans whose fate had finally been sealed by the Potsdam Agreement to which our own Government gave its signature.

I had stood in a great open railroad station covered with twisted steel as a train rolled in, out of which the dead, including children, were placed in waiting hands before the living descended on to the platform. It has been said that no less than 2 million of them died in that forced expulsion.

In sporadic groups in the following years came the escapees from Czechoslovakia, Poland and the other countries behind the Iron Curtain.

And here before me was the latest wave of refugees to reach Western Europe—a group of people to whom the whole world was in debt. Without an army, without a government to their own choosing, they had challenged a great slave empire that had gathered into its dark orbit of terror eight free nations of Western Europe—and having

straddled Europe, had extended its political and ideological power to the China Sea.

For 5 days Budapest and the greater part of Hungary were intoxicatingly, gloriously free. Film audiences around the world held their breath at the sight of exultant Hungarians, so many of the so very young, riding Soviet tanks, tearing down the Soviet star from the buildings of Budapest, toppling the great metal statue of Stalin from its pedestal, ripping Soviet emblems from the flag of Hungary.

The world that shared the feeling of exultant triumph could not participate in the actual struggle to maintain the triumph of freedom. From the maws of Russian tanks came death for the freedom fighters of a people's uprising—to the students, factory workers, peasants, poets, writers—who had made common cause against a common foe. But a significant thing had been accomplished—the conscience of the world had been aroused.

Just as events within Hungary had aroused the world's conscience, so this tide of human misery aroused the world's compassion. As I visited the camps of Hungarian refugees—camps so lately vacated by the Soviet troops garrisoning Austria—I saw evidence of help and concern from many nations—clothing, food, medicine, funds for the purchase of needed items. In many camps were missions from various countries, including Canada, the United Kingdom, and Australia, arranging for the overseas migration of the newly arriving Hungarians. Every free nation in the Western World realized that Austria could not possibly provide for all of the refugees, and the offers to take them in were truly heartwarming.

As Catholics and Americans, you might well be proud of the part that the American bishops' agency—not because I happen to be its director—played during this great crisis. During those fateful days of freedom, our was the first American agency to get medicines and other relief supplies into Hungary and to extend aid to the refugees from that beleaguered country. I saw our American staff literally working round the clock.

On the very day the uprising broke out, we established an office at the border town of Nickelsdorf to expedite convoys of relief into Hungary. As events turned out, however, it was used largely to help the fugitives from terror. I believe we were the last American agency to get a shipment of relief supplies into the country before the Soviet again closed the border. One of the trucks in this final convoy never returned. The driver was imprisoned and returned to Austria a week later.

Naturally, America was as anxious as anyone else to provide refuge for some of the refugees. That took some doing. When the Hungarian refugees were arriving in Austria, the United States Refugee Relief Act was rapidly expiring. As of December 31, 1956, no further refugees or escapees could qualify for entry to the United States under emergency legislation. And, in any event, there were only about 6,300 visas still available under that act that could be used for Hungarians. Here we were caught with the tremendous challenge of the Hungarian crisis, the first major wound in the Communist world, and we could only counter with gestures and improvisations.

With the Refugee Relief Act about to end and our regular immigration law, familiarly known as the McCarran-Walter Act, too inflexible an instrument to deal adequately with such a crisis, there was no other course possible but improvisation. President Eisenhower declared that the 6,300 Refugee Act visas remaining should be made available to the Hungarians, and then arranged to have another 15,000 or so of them paroled into the country. Our leaders did the best they could, given the legal framework within which they have to act.

One significant aspect of the Hungarian crisis, then, is that it has pointed up the crying need for a more flexible immigration policy on the part of the United States. Our immigration policy is no longer a matter of merely national concern. It is intimately bound up with our foreign policy, with international crises as they present themselves and with the whole changing tide of events in Europe and the Far East.

The national origins provision, which makes our basic law so inflexible, is a holdover from the past, a cultural lag that prevents us from seeing the realities of the present. A basic immigration law which, by and large, restricts the yearly quota of 154,857 United States visas to national groups whose ancestors were lucky enough to reach these shores first is hardly in line with today's realities. Not only does the retention of such a law militate against real understanding with southern European peoples and the rising nationalities of Asia, but it fails tragically when an emergency such as the Hungarian exodus cries out for immediate action.

An American immigration policy that would permit the entry of about 250,000 people a year, based upon our national needs, and the need on the part of the immigrant for asylum or resettlement opportunities or his relationship to others in the country would be a reasonable approach. If such a law had been on the books when the Hungarians fled through snowdrifts, swampland, and rivers to reach the bright side of the Iron Curtain, the United States would have been in a position to meet this aspect of the crisis with a surer hand.

I have discussed the immigration aspect of the Hungarian crisis first, because it is the one where your opinion, expressed through the many channels open to free citizens in a democracy, may have great weight in the coming years. Perhaps I missed it—as I did so many other things that would have been helpful in later life—but I don't recall having studied much about American immigration policy in our student days at Fordham.

If you have the time and you would like some enjoyable and enlightening reading, get hold of John Higham's Strangers in the Land, and you will find that during the twenties when some of the older men among us were at Fordham, there was being developed in the United States an immigration policy and legislation that was in a great part built on false fears, prejudices, and hatreds. It took the McCarran-Walter Act of a few years ago, which was designed to be nothing more than a recodification of our immigration laws, to awaken us to the thought that there is something contrary to the ideas of our Founding Fathers—something very un-American and un-Christian about our immigration policy.

But now to the deeper and more significant aspects of the Hungarian crisis. We have been led to believe in various books of fiction and nonfiction that a steady diet of Marxism, or Stalinism, can so deform the human spirit that men become essentially different from what they were originally, or what they would be in a state of freedom. It was thought that a lie stated often enough so seizes the human mind that the mind loses its anchor in truth or its aim toward truth.

It was the youth of Hungary which was subjected to the barrage of Marxist propaganda, a propaganda which had the field to itself, since all other associations, including such religious youth groups as Catholic Action, were destroyed. Every medium of communication, including the entire press of the nation, was controlled by the Communist apparatus. All truth was to emanate from the party in power, and truth, it developed, was not constant, but could veer as the party veered.

The "truth" the Communist Party huckstered was one that was protected by terror from open questioning. Terror can unhinge rationality, can upset the balance of objective reasoning. But this is true only for a limited time, in a limited area, and for a limited group. A whole people cannot be consistently terrorized. The weapon of terror seems to lose its edge with time.

And after a decade of psychological conditioning, it was the youth of Hungary, the students and young workers, many of them in their teens, who sparked the revolt. Marxism with its inner contradictions and its lack of anchor in objective truth could not capture the youth of Hungary. I must confess—having seen the curtain come down on these satellite countries—Hungary, Poland, Roumania, Czechoslovakia—with its control of press, schools, organizations, everything—I was afraid that eventually the moral fiber of the young would be destroyed beyond repair. But no.

Many of these young people have been separated from religion through no fault of their own. We've already seen that in many of the young refugees who have come to Camp Kilmer, but here in a free country where the church flourishes we can repair that—please God—but we can never lose sight of the fact that their hunger for absolutes was never satisfied in anything offered by the Communist apparatus that ran Hungary.

Even now when the revolt for freedom has been crushed in blood and deportations, the spirit of the Hungarian people has not been broken. They know they are right and they have shown an amazed world that despite hunger, bloodshed, and terror, they can continue their demonstrations and protest strikes. A rather odd way for the so-called proletariat, who are supposed to be the mainstay of any Communist regime, to behave.

Observers who have just come out of Hungary report that morale is still high, that despite all the murders, deportations, and general privation, the people of Hungary are not cowed. Even the Soviets fear a second revolt in the spring. So terrified is the Kadar regime that it has decreed the death penalty for striking workmen.

I can testify to the spirit of the Hungarian exiles. Though they wept when they spoke of their dead, of the poor tortured country they had left behind them, they were not the pitiful, uncomprehending, helpless refugees I had known in earlier waves of refugees.

The Hungarians feel that the future will be a better one for their sacrifice, and that the glimpse of freedom they have given the people on the dark side of the Iron Curtain is only the first act of a great and inevitable drama to come.

What of the political significance of the Hungarian crisis.

A man is now in prison in Belgrade because he wrote an article whose main theme was "that the wound which the Hungarian revolution inflicted on communism can never be healed."

The wound in communism reaches from the Kremlin itself, right through the satellite world to the Communist Parties of the free world. There are persistent reports of a split within the Communist leadership—a split which betrays itself in a wavering party line—a return to a praise of Stalin as a good Communist. Tito, of Yugoslavia, a prophet of the national Communist movement, after attempting to whitewash the return of Soviet imperialism to Hungary, had to call it a fatal mistake.

There has been controversy in the American Communist Party, defections of top writers and leaders from the British Communist Party, general defection from the rank and file in the Italian Communist Party, and a general striving in the French

Communist Party toward a reorganization, a de-Stalinization, of the party itself.

In Poland, the spirit that moved 250,000 people to stand like men and women of stone before the Warsaw Palace of Culture while they demanded the return of basic freedoms still prevails. The Polish cardinal, freed from prison, exhorts his people to further sacrifice, and they remain immovable in their demands, relying on moral strength rather than violence.

He tells his people that they are known for being able to die heroically. "A man can die once and thus quickly cover himself in fame," he says, "but our lives are spent in long years of toil, trial, tribulation. This is still more heroic. This is the kind of greater heroism which the present time requires."

Perhaps such heroism is indeed the only weapon which seems feasible for the victims of the empire ruled by the Kremlin. Every revolt in the past decade, from the revolt of the young slave laborers in Vorkuta, to the riots in East Berlin, to the Poznan rising, to the Hungarian revolution, all have ended in bloody massacre. Perhaps the politics of the next few years must be a politics of patience, where moral strength without provocation of violence stands before totalitarianism with clear demands which mobilize the conscience of the world.

Finally, what was the significance of the Hungarian crisis to our church behind the Iron Curtain—called so often nowadays the church of silence.

When Father Fabian Flynn, an American priest who heads up our relief work in Austria, and who had been director of the American Catholic relief program in Hungary until banished by the Soviets in 1948, was leaving Budapest on the evening of October 31, after a lightning visit to the capital and to Cardinal Mindszenty, he was amazed that almost every house with unbroken windows had candles burning—some with as many as half a dozen alight in the one window.

It was Halloween, the eve of All Saints, and on that night it is a traditional Hungarian custom to begin to burn candles in memory of the souls of the departed. The streets of the city were black, but thousands upon thousands of candles shone bravely through the night. For 8 years the Hungarians had been forbidden to celebrate this feast publicly, and now, in the face of the Russians, they were celebrating it again for the first time. Here was one of the first of the restored freedoms, the right to honor one's dead in the tradition of one's fathers.

In that stricken city on the Danube, there is a prisoner of hope, a cardinal who was free, as was his See City, for 5 incredible days. To him, the past has its lessons. He has said: "History teaches us that all things on this earth are transitory, even as were the achievements of Genghis Khan, Napoleon, and Hitler. * * * When the bony hand of death touches such men, the peoples and the nations breathe once more."

As all Hungarians know, Cardinal Mindszenty knows, that Genghis Kahn's hordes, in speeding across Europe, got no further than Budapest. At that point, the Mongolian commander turned his men around and retreated to Mongolia because he received word that Genghis Khan, his grandfather, had died and all the men of the family had to return to choose a new Khan. The peoples and nations of Europe breathed once more since they had been in dread of the Tarter invader whom no European army had been able to halt.

This was one of the turning points of history in the 13th century. Seven centuries later, the Hungarian crisis in its human, psychological, political and religious significance, may in the profound designs of God be a similar turning point in history.

Gentlemen, let us pray, as did the Europeans of the 13th century, that the forces of brutality and oppression, now so seemingly invincible, be turned back by the mighty hand of God. They were turned back then, and can be again by that same mighty hand—more powerful than that awesome thermonuclear weapon held so threateningly in the puny hand of man.

Review of the Book Revolution on East River: The Twilight of National Sovereignty

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 28, 1957

Mr. BRICKER. Mr. President, I ask unanimous consent that a review of the book entitled "Revolution on East River: The Twilight of National Sovereignty," be printed in the Appendix of the RECORD. The author of the book, Mr. James Avery Joyce, explains how the United Nations is whittling away at the concept of national sovereignty. The review of Mr. Joyce's book was written by Mr. J. Boyd Stephens, and it appeared recently in the Indianapolis Times.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

U. N. ASSAULT ON NATIONAL SOVEREIGNTY

Whether you go down the line with Indiana's Senator JENNER, or whether you consider him "slightly to the right of Louis XIV," as one quipster has put it, some startling things are happening on the East River in New York, site of the United Nations.

It may be 700-plus miles away from Meridian and Washington, but the red light is flashing and the warning bell sounding—brightly enough and loudly enough to be heard here at the Crossroads of America.

Midwest isolationists will welcome the information. One-worlders will scorn it.

But all midwesterners sooner or later must take sides because economic observers, political forecasters, and most writers on international affairs foresee the day when Americans will go to the polls to elect a President who either is for or against world government.

The red light and the ringing bell may be found in many places. They invite attention this week in a book called Revolution on East River, the Twilight of National Sovereignty. It is written by James Avery Joyce and is published by Abelard-Schuman, New York. You can buy it for $3.50.

Mr. Joyce documents the revolution. He says, in effect, that the United Nations is aiming at "universal sovereignty," that the United Nations is superseding the national sovereignty of the United States, and that the United States soon will be a "minority of one" which will be left "strangled, high and dry."

The author has acted as consultant to the United Nations Economic and Social Council, the International Labor Organization, and UNESCO.

Some quotations:

"A casual reading of the daily newspapers * * * would produce a crop of examples of the steady erosion of the sovereignty of the United States, as of all states, over the last decade * * *."

"Experienced delegates and observers, administrators, and officials at the United Nations accept this whittling away of state sovereignty as a stubborn and inevitable fact * * *."

"National defense is obsolete. * * * No security can be collective any more unless * * * arms are taken out of the hands of national governments and put under world-wide supranational control."

"Daily de facto sovereignty is being transferred to the United Nations which * * * can never go back to national governments."

Citizens of the United States will change their minds about admitting Red China to the United Nations, Mr. Joyce predicts, when they discover the United States is a "minority of one." He calls the United States refusal to recognize the fact of Red China as "the greatest diplomatic blunder of all * * *."

He takes a passing whack at "the daily clatter of propaganda in press and radio, which sometimes passes as free speech across the United States."

How the "supranational" way of life is going to come about is outlined by Mr. Joyce. He indicates the office of the Secretary-General of the United Nations and is doing the job.

"We now turn to the dramatic emergence of the Secretary-General as the symbol of universal sovereignty," he writes, "and as world citizen No. 1."

"Many of the functions of the old-school diplomat are being automatically absorbed by routine activities of the secretariat," he writes. "We are thus witnessing the supercession of the type of gunboat diplomacy on which the Western World was built. * * * Year by year, the United Nations organs are becoming integrated as policymaking and, to some extent, legislative bodies."

In commenting on the book, Mrs. Alice Widener, publisher of the magazine, U. S. A., in New York, writes: "Mr. Joyce has let the cat out of the bag." She notes his book "proves that patriotic Americans' fears about the United Nations are grounded on solid fact. * * * It scares the living daylights out of this writer, who knows from considerable study that most of Mr. Joyce's statements about the United Nations are true."

J. B. S.

What Partnership Did Not Do

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, February 28, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Partnership Did Not Do," which appeared in the February 24, 1957, issue of the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT PARTNERSHIP DID NOT DO

The failure of the Eisenhower administration's partnership policy to bring new power production into being, and to make existing production effective, was strikingly shown in the Sunday Post-Dispatch. In the 1951–55 period United States production grew only 29 percent while Russian production grew 60 percent. These figures are not wholly comparable because United States production was so much larger than the Russian to begin with that every percentage point of gain required a great many more kilowatts. Still, they roughly measure the lack of aggressiveness in this country that has come about

from relaxing Government leadership in pressing forward.

The partnership policy's shortcomings in making existing power output effective are documented by the case of the Pacific Northwest. That region has for years been growing faster than its power supply.

The administration's private-power-alone policies, which have denied the region maximum development of new power sites, have also denied it the advantage of forming a grid through connection with the Central Valley Federal power system in California.

The tremendous advantages of the grid system—which means simply the exchange of productive capacities among neighboring systems—had been evident even before TVA, principally through the example of England. Yet, as the Portland Oregonian, a Republican newspaper, complains, the administration by selling its transmission line through central Oregon to a power company prevented connection between the two valleys.

One consequence is a one-third cut in aluminum production which could have been averted, says the Oregonian, by power brought in from Central Valley.

Not so-called partnership policy has failed because it is not a partnership, but a let-George-do-it. The partnership policy has failed because it is not a policy, but a drift.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Civil Rights Bills Threaten Liberty," from the Greenville (S. C.) News of February 26, 1957. The able editor of this great newspaper is Wayne W. Freeman, and the distinguished publisher is former United States Senator Roger C. Peace.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS BILLS THREATEN LIBERTY

(EDITOR'S NOTE.—The following editorial is taken from a statement prepared by the editor of the News at the request of the Governor of South Carolina. The statement is to be offered to the subcommittee of the House Judiciary Committee this afternoon by representatives of this State who are appearing in opposition to the civil rights bills.)

The civil rights bills of 1957, like those proposed during the last 20 years and more by individuals of both parties and by administrations of both parties, are anachronistic.

An anachronism is something that is misplaced in time. In this instance, it is a throwback to a more primitive age which is, at best, a misfit and, at worst, a destructive force in the age in which it occurs.

And when intelligent and otherwise dedicated men ignore more pressing and more serious problems and pass up greater opportunities for service to deliberately create such an anachronism, the result is bound to be tragic.

Even if we could assume, which we cannot, that the broad and untested powers these proposed laws would confer on an already oversized and unwieldy Federal bureaucracy would always be wisely and fairly administered, the need for them, if it ever existed, has long since passed.

The purposes now claimed for them have been better served by processes springing from the people themselves than ever they can be by pressure and threat of punishment imposed upon the people by an omnipotent and omnipresent "Big Brother" sort of government.

Furthermore, the instruments now proposed to protect liberty and to uplift men are such as to be capable of being used to destroy liberty and to oppress men.

To appreciate the origin of the civil rights bills and the natural resistance to them in many parts of the country, especially the South, one must consider them in their proper perspective with past history and present trends.

To put it bluntly, this legislation grows out of a latter day extension of the overzealous efforts of the abolitionists, who profited and were exalted during the era preceding the War Between the States. It is being pushed in the same sort of spirit that motivated the vengeant and vindictive planners and executors of the reconstruction.

Not even during the tragic and oppressive reconstruction did a Congress, which was dominated by radicals and in which the conquered South had few friends and spokesmen, see fit to enact such laws as now proposed.

There was military occupation and corrupt government imposed from Washington, but there was no permanent board of inquisitors that could be turned into an agency of harassment and intimidation. There was injustice, but there was no permanent overturning of the processes of the courts.

Purged by bloodshed of the sin of slavery, which was not his alone, nor his country's alone, the southern white resisted the reconstruction. He resisted it because he feared, with justification, that it was intended to take from him in order to give to the Negro. He resists court-decreed integration and the civil rights proposals for the same reason—again with justification for his fears.

NEGRO IS MISLED

The Negro was misled in those days, and he is being misled now.

The end of the abominable institution of slavery was inevitable, and it could have been accomplished without fratricide and without threatening the Union and creating abiding bitterness. As its end, the Negro was led to believe he could switch from the status of slave to that of master. In some instances, for a time, he did. In others, he was promised "40 acres and a mule," but more often than not he didn't know what to do with the 40 acres and he never got the mule.

The Negro again is being falsely led to believe that integration will solve all of his remaining problems and that all he needs to realize the millennium is a few more court decrees and Federal laws. He has been led to believe that political largesse will bring to him those things that he can best realize by earning and exercising the rights and privileges already available to him.

Until fairly recent decades, southern whites and Negroes engaged in a pathetic sort of competition for the lesser degree of poverty, but they have made progress together and they have achieved a mutual understanding. Education and a rising prosperity were easing the old bitterness and misunderstanding and improving relations between the races at a rate that has been positively amazing.

The tragedy of this era is that, since 1954, with the Supreme Court decision in the school cases, and especially since the renewal of agitation of civil-rights legislation with almost virulent vigor, this progress has been slowed down. And the Negro stands to lose the most. The bitterness and the old suspicions are being revived.

A few years ago in a prosperous South Carolina industrial city, a joint committee of white and Negro citizens conducted a survey of the needs of the Negro community, ranging from health and housing to transportation and recreation. Much progress came of it.

Also, a few years ago, with the help of the newspapers and interested white citizens, certain racial barriers in the public hospital were broken down and qualified Negro doctors were granted staff privileges for the first time on full equality with their white colleagues.

Along about the same time, the newspapers and interested white citizens campaigned for better housing for Negroes. City substandard housing laws were strengthened and better enforcement machinery established. The improvement in rental property has been marked.

Also, it was urged that property be made available to Negroes of means who wanted to build better homes away from congested areas in which Negroes tend to congregate. Subsequently, a fairly exclusive Negro residential section, near white neighborhoods, was started. There were no objections.

PROGRESS IS SLOWED

This sort of thing would be more difficult now, if not impossible, in no small part because the Negro is reluctant to cooperate. Both he and his white friends are subject to pressure and unpleasantness from radical elements among their respective races. The Negro apparently has been led to believe the moon may be within his grasp; and lawless and more extreme whites have been aroused.

In many cities in the South, the newspapers have sought for years to treat the Negro with the dignity any citizen deserves in their handling of the news. Special sections devoted to news of the Negro community, often prepared by Negro reporters, were started. Until recently, there was no protest. Now there are murmurs, direct protests and anonymous letters.

None of this has to do with integration. Neither race is ready for integration, and may never be. But if they become so it will be on the only basis of successful close human association—natural affinity, mutual appreciation and individual choice. Neither court decrees nor laws can create these conditions.

In his speech on conciliation with the American Colonies in 1775, Edmund Burke said, "I do not know the method of drawing up an indictment against an whole people."

With the help of the proposed legislation, and the injunctive process, the Federal Courts may one day find such a method, but the result will be the destruction, not the preservation of civil rights.

Burke also said in his "Thoughts on the Cause of the Present Discontent" in 1770 that, "When bad men combine, the good must associate; else they will fall one by one, an unpitied sacrifice in a contemptible struggle."

This cause is not the South's alone. The extension of the judicial process into areas it was not intended to reach and stretching it for purposes it is incapable of serving; the striking down of the police power of the States in field after field; the unprecedented use of the injunctive power without jury trial to punish for contempt persons not before the court; all of these, as able judges and lawyers are solemnly warning, threaten the future security of all Americans.

The granting of the powers the Justice Department is now asking can only hasten this process. Even the layman can see that. The proposed commission, with power to investigate and harass at its own will could,

in the wrong hands, become an instrument of coercion and intimidation.

Like other Americans, no southerner of good conscience condones the denial of rights, either by violation of the law or by threat or violence. But the atmosphere created by agitation is not only inciting lawless elements to violence, but is making such incidents even harder to deal with.

Of laws we have aplenty. The Federal Government has ample power to deal with the violations the Attorney General alleges but doesn't specify. The States have laws against violence, and many of them, like South Carolina, have laws making violation of any citizen's rights a crime.

They should be left free to enforce them.

Opposition by Seneca Indians to Warren Dam on the Allegheny River

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the building of dams in various places throughout the Nation, while most important, has created some controversy. In Pennsylvania and New York, where we hope to complete the flood-control work on the Allegheny River, the Seneca Indians, who have a 30,000-acre reservation, are protesting that it violates the treaty signed in 1795 guaranteeing the Seneca tribe domination over their lands forever.

The discovery of gas on this land makes it much more valuable.

A statement relative to this matter in the Pittsburgh Post-Gazette and an editorial from the Pittsburgh Sun-Telegraph of February 6, are interesting reading. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Post-Gazette]

SENECAS ARE FIGHTING MAD—WOULD DECLARE WAR ON UNITED STATES IF THEY COULD, INDIAN LEADER SAYS

The Seneca Indian Nation is fighting mad over Federal Government plans to build a huge dam at Kinzua, Pa., which would flood 9,014 acres of their 30,000 acre reservation at Salamanca, N. Y.

"In fact," said Cornelius Seneca, president of the Senecas, "if we were powerful enough we might declare war."

He smiled rather enigmatically after making that statement in an interview last night at the Penn-Sheraton Hotel, and then added:

"If it were a 100 years ago there would certainly have been violence. We would have never let the surveyors come on the land."

President Seneca and Attorney Edward O'Neill, of Washington, general counsel for the Senecas, are in Pittsburgh to tell their side of the Kinzua controversy. They will appear with other panelists on Allegheny Roundtable over KDKA radio Sunday night at 7:30 p. m.

Mr. Seneca and Attorney O'Neill say that the United States has a moral obligation to live up to the treaty signed in 1795 that guaranteed the Seneca tribe domain over their lands forever or until they decided to sell to the United States.

"That treaty would be abrogated if the United States Congress appropriates money to build this $100 million dam," said Mr. O'Neill.

He added that the Senecas ask only that the Army engineers give sincere consideration to alternate plans, one of which would replace the single big dam with several smaller ones; and the other of which would channel the upper Allegheny River into Lake Erie.

"The Indian has been secure in his belief down through the generations that the treaty would not be destroyed," the Seneca president said. "We call upon the Congress to live up to the treaty as the Seneca Nation has."

[From the Pittsburgh Sun-Telegraph of] February 6, 1957]

THE WARREN DAM

In his annual report on the state of Pittsburgh Mayor Lawrence said:

"The city will continue to work with the Allegheny conference, the chamber of commerce, and our congressional delegation in urging the Federal Government to proceed with prompt construction of the Warren Dam.

"This dam will complete the flood-control program for the Allegheny watershed."

The Sun-Telegraph long has had the same attitude towards this project as that expressed by Mayor Lawrence.

We were influenced by the favorable reports of the United States Army engineers, the appropriations recommended for the project by Presidents Franklin D. Roosevelt and Eisenhower, and the support given it by civic bodies throughout the Allegheny Valley, to call for prompt construction of the dam.

Recently the Sun-Telegraph has conducted an investigation of its own of the Warren Dam project, the results of which were published in a series of articles.

Important facts and considerations were discovered which if not suppressed had been ignored or given scant attention by the Army engineers.

The Corps of Engineers has been concerned almost exclusively in its study of the project with its effect on tthe volume of water going down the Allegheny and especially its potency in flood control.

The plan stems back, of course, to Pittsburgh's St. Patrick's Day flood of 1936. The Warren Dam is one of a series of storage reservoirs recommended after that disaster to protect us from another such visitation.

An undertaking as gigantic as the construction of this $100 million reservoir necessarily would involve momentous changes in the character of the terrain directly affected. Some of them might be beneficial, others harmful.

Moreover, the project might offer an opportunity for collateral enterprises worthy of consideration.

That the reservoir would flood the Seneca Indians' reservation on the upper Allegheny and drive them from their homes is one of the undesirable features.

In looking into this situation the Sun-Telegraph discovered other facts which had escaped attention.

One fact is that the reservoir would store more water than is required for flood control. And when the water should be released—for example, to improve the Allegheny's navigability when there was an unduly low stage downstream—a large part of the reservoir area would be left as stinking mud flats.

This of course would be detrimental to the use of the reservoir for water sports and other forms of recreation.

Since the reservoir as planned would store more water than is needed, the Sun-Telegraph became interested in a plan to divert some of the Allegheny River water to Lake Erie, which would be benefited thereby.

Engineers say the character of the terrain between the upper Allegheny and Lake Erie is such that a canal connecting them could be constructed without much difficulty.

This and other considerations involving conservation, recreation and preservation of natural beauty, in addition to regulation of stream flow, have given rise to a more comprehensive project than that which the Army engineers have in mind.

It would provide an ample supply of pure water not only for domestic use but also for industrial purposes throughout the Allegheny Valley and the upper Ohio Valley.

And it would make possible the creation of a recreational area suitable for aquatic sports which would be one of the finest in the Nation.

In the light of these possibilities and opportunities a reexamination of the Warren Dam project is imperative.

A comprehensive study is demanded—a study in which the correlative benefits we have indicated should receive the attention due them.

It must of course be a Federal project.

Congress should look into it. Perhaps a commission could be established to conduct the investigation.

But the Sun-Telegraph suggests that Mayor Lawrence also give it his attention—and not only Mayor Lawrence but the organizations which he mentioned in his speech as working for prompt construction of the Warren Dam.

They are the Allegheny conference, the chamber of commerce, and our congressional delegation.

Indeed, there is not a community in the Allegheny Valley in western Pennsylvania and western New York which would not gain from the plan.

Hence the cooperation of civic and commercial bodies throughout the valley might well be enlisted.

[From the Pittsburgh Sun-Telegraph]

GAS LEASE MAY BOLSTER FIGHT ON DAM

Discovery of natural gas beneath the Allegheny Indian Reservation may add steam to Seneca Indian objections to the proposed Kinzua Dam.

Gas has been found in an area of the reservation which would be under water if the dam is constructed near Warren.

J. B. Hurley, president of Devonian Gas & Oil Co., said findings indicate gas in the affected section of the reservation is worth millions of dollars.

The gas was discovered by the Devonian Co. Its headquarters are in the Keystone Building, downtown. Devonian leased 18,000 acres from the Seneca Nation of Indians, effective December 1, 1955. Drilling began last November.

Under its lease, the Devonian Co. must pay 12 percent of the gross income to the Seneca Nation.

Gas was encountered more than a week ago at 450 feet, at 803 feet February 14 and at 1,033 feet last Sunday.

Devonian's Seneca No. 1 well is about 8 miles southwest of Salamanca, N. Y., on the reservation. Hurley estimated its production at 500,000 cubic feet a day.

If the Indians are required to give up 9,000 acres of their 30,000-acre reservation for the dam, the gas will make the surrendered land more valuable, Hurley pointed out.

Devonian will start drilling next week about 2 miles west of No. 1 well. Six more wells probably will be drilled in the direction of Salamanca, Hurely said.

Address by Governor McKeldin, of Maryland

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, February 28, 1957

Mr. BEALL. Mr. President, earlier this week I had the privilege of attending the Lincoln Day victory dinner of the Republican State Central Committee of Anne Arundel County, Md. As could have been expected from the terrific job the committee workers are doing on all their projects, the affair was excellent. One highlight of the evening was an address by Gov. Theodore R. McKeldin, of Maryland, who offered an eloquent comparison of President Eisenhower and President Lincoln. He also discussed other matters which have recently been considered in this Chamber, and I think the positive stand which he has taken will be of interest to everyone who has studied those issues. Therefore, I now ask unanimous consent that Governor McKeldin's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. THEODORE R. MCKELDIN

If I were asked as to the manner in which the present executive head of this Nation most resembles the 16th President of the United States, I would not say that Dwight Eisenhower is a great Republican, even as Abraham Lincoln was—proud as we are of that fact.

I would not note that President Eisenhower is an outstanding American in his day as President Lincoln was in his; for that goes without saying, and each generation produces outstanding, loyal, and devoted Americans in both major political parties.

I would say that the most pronounced and most consistent likeness between Lincoln and Eisenhower was and is a love for all humanity—a freedom from that destructive hatred for individuals or peoples which, down through the ages, has separated men of lesser stature from the realm of greatness.

Each could despise and wage war against a system which enslaved the bodies and souls of men.

But if Abraham Lincoln had hated—as many of his contemporaries did—the men who directed the affairs of the Southern Confederacy and the men who fought for and believed in the southern cause—then he would not have saved the Union of these States; he would have wrecked the Union beyond the hope of reconstruction.

If the seeds of his love, his decency, and his forgiveness had not been planted well and nourished generously before his untimely death at the hand of a little man of hate, they never would have taken root, and, despite the victory of Union arms, the people of the South never could have been united again in spirit with the people of the North.

When there was no alternative to war, Lincoln waged it brilliantly and vigorously, but with sorrow. It was war against human slavery and against the theory that a great, young nation could be divided arbitrarily to satisfy the whims of a group of men, but the great man grieved that men must die in its prosecution.

There were men about him, unhappily, who counseled hatred—hatred for the people of the South—hatred for the people of England and of France.

Lincoln resisted the counsel, because there was no room for hatred of men in his heart of hearts.

When victory came at last it was easily recognizable at home and abroad not as a mere victory of one group of soldiers over another but as a victory of lasting signigificance to all mankind—a long and important step in the march of human freedom.

Today that victory has a new significance as an America united—North and South, East and West—stands as freedom's bulwark against other forces of oppression.

And today Dwight Eisenhower walks the path that Lincoln trod—a path of danger.

The horizons have been widened. The evil of human oppression concerns us now—not just in a section of our land—but in farflung places of the world. The war drums' threat is heard from many directions.

The President despises oppression, but the hazards of war and the dangers of a permanently divided world are lessened by the fact that Dwight Eisenhower hates no man and no people.

He speaks sternly; he acts courageously, but he listens with his heart. He seeks the good which he believes exists somewhere in the hearts of all men.

Disagreements are normal among men and nations—even among friends and allies.

With men of the Eisenhower stamp, the exercise of discussion to resolve disagreements can strengthen the tendons of friendship.

With lesser men, disagreement can become the culture plot of anger and hatred to produce a crop of enmity.

In each area of the world, I am sure, there are some in authority who recognize the sincerity of the President, who know that he wants justice for all people, and who realize that in justice lies the way to a lasting peace.

The America of Dwight Eisenhower is strong—not with the strength of ambition for conquest, not with the strength of personal or national aggrandizement, but with the strength of love for human freedom and respect for the dignity of man.

It is from this strength, personified in Dwight Eisenhower, that justice must come for all peoples and peace for all the world.

The Republican Party of Dwight Eisenhower is strong in his leadership, with the potentialities of far greater strength if we avoid the weaknesses of a too narrow partisanship—if we look upon our strength as a means to better government and not to personal or party aggrandizement.

Hatred of members of an opposition party does not make for good government in a democracy.

Good government, to be sure, calls for the assuming of party responsibility, but that government is blind which ignores or rejects the special talents of a man or woman merely because of his or her membership in another political party.

An example of such near-sighted narrowness is found this very day in the banshee cries of a few within our party against the President's nomination of David K. Bruce, a distinguished Marylander, to be our Ambassador to West Germany.

David Bruce is one of American's best informed men on public affairs, and in the constantly changing world of today, information is one of our most valuable commodities.

He has served this Nation as Ambassador to France. He was the Under Secretary of State. He is a valued member of President Eisenhower's Board of Consultants on Foreign Intelligence Activities.

So he is not a Republican.

So all he has learned, all his knowledge and all his experience should be suspended in these trying times because he is a Democrat.

What utter nonsense is bred by narrowness.

The President isn't sending Dave Bruce to heel a German ward for some election. He is sending him to a sovereign power to carry the American message to that nation to report to the President and the State Department of the United States on conditions as they exist in that part of the world.

He is enlisting the trained ear of David Bruce and the trained voice of David Bruce to serve the United States of America and the cause of world peace. He is utilizing for the good of this country the love of country which David Bruce inherited from distinguished ancestors—a patriotism that surpasses party politics.

Thank Heaven the Republican Party is bigger in its thinking today than the carping few who, blinded by the trees of partisanship, cannot see the vast forest of world affairs.

Civil Affairs-Military Government

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 28, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding article which appeared in the February 16, 1957, issue of the Register. It is entitled "Civil Affairs-Military Government Story: Modern War Magnifies the Importance of CAMG." It was written by Maj. Gen. Charles K. Gailey, Chief of the Civil Affairs-Military Government branch of the Army, and one of our outstanding military leaders. General Gailey, a native of Conyers, Ga., and a 1920 graduate of West Point, has had a distinguished military career, in which he has served as commander of an infantry division and as a leading authority on military government. I know of no one more able to discuss the material contained in this article than General Gailey.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL AFFAIRS-MILITARY GOVERNMENT STORY—MODERN WAR MAGNIFIES THE IMPORTANCE OF CAMG

(By Maj. Gen. C. K. Gailey)

In the consideration or conduct of war, there is all too frequently a startling lack of recognition, appreciation, or familiarity with the means of dealing with a major factor of war; the civilian population. While success in battle is the end of all military training, that success can be jeopardized by the commanders' ineptitude in coping with problems arising from the presence of civilians in the combat area.

If we were to go far enough back into history we could find examples of simple combat which were little affected by civilian populations and which, as a matter of fact, had little effect upon them. Small opposing forces championing the conflicting interests of their respective countries would seek out an area suitable for combat, meet, and battle it out until a decision of arms was reached. Their weapons were designed solely to inflict damage upon the persons of their adversaries and nonparticipating spectators could actually follow the conduct of the battle with relative impunity. The outcome of the battle was considered final and the victor imposed his will upon the nation represented

by the conquered force without further opposition. In general, everybody went on living much as they did before the battle.

Unfortunately, time and technical improvements in weapons and techniques of war changed all of this. In order to insure victory, larger forces were employed and the area of combat widened correspondingly. The number, power, and range of weapons was increased and spread the effects of war still further afield. Nations involved in war soon supported their fighting forces with the full potential of their mobilized resources and industrial capability. The effects of war were no longer limited to combatant forces.

Modern war with maximum development of the destructive capabilities of weapons and complete mobility, will affect not only whole nations but international balances as well. Under conditions such as these, war must, as never before, be conducted with full recognition of its effect upon the peoples of the countries involved and their political, economic, and sociological structures if the ultimate victory is, in fact, to be won.

THE CIVIL AFFAIRS AND MILITARY GOVERNMENT MISSION

The mission of the Army is "to defeat the enemy forces in land combat and gain control of the land and its people." (Department of the Army pamphlet No. 355–21, October 1955 Officers Call, "The Army in the Atomic Age," p. 2). A better understanding of the means of effectively accomplishing this dual mission is afforded by a consideration of the mission of civil affairs-military government which is defined as follows:

1. To assist, as an integrated part of a military operation, in the successful accomplishment of the military mission.

2. To further United States policy with respect to the country concerned.

3. To assist the commander in fulfilling the obligations imposed upon him under international law and the customs of warfare, to the civilians of the country concerned.

This threefold mission indicates that civil affairs-military government is the combat commander's means of accomplishing the military objectives in such a manner as to leave the bases upon which a peace can be built and to gain the support, or at minimum, compatibility of the population with United States aims and security objectives when the fighting ends.

From the time the first wave of infantry penetrates enemy territory, the commander is an occupier under the terms of international law and he immediately affects and is affected by the civilians in his area of combat. CAMG decisions must immediately be made not only to conform to the obligations imposed by international law; not only to initiate CAMG programs that will facilitate the attainment of United States policy objectives, but as an immediate means of directly supporting and facilitating his military operations.

SUCCESS IN COMBAT

His success in combat requires that he destroy the enemy force, and such force includes not only combat elements but the resources mobilized in their support as well as the political agency that directs such force against him. This destruction is essential to the primary objective of winning a war. Reason, however, dictates that force must be applied with discrimination; that destruction must be measured, not massive, and limited to actual requirements of the hour.

The application of even such force as is required to win a war has a tremendous effect upon the civil population * * * and the affected civil population, in turn, can have a tremendous effect upon the commander's ability to continue the application of required force.

Consider for a minute, the problems of civilians in the area of combat, be they avowed patriots, or people who have been subjected to internal pressures by a government not of their choosing, or people of other nations whose interest in the war is limited to measures of self-preservation. These people, regardless of category, commonly suffer the effects of war in personal loss, injury, deprivation, and lack of the barest essentials of life. They do not even have the assistance, guidance, or control normally provided by the former local government. Continuing damage contributes to mass hysteria and soon the previously normal populace becomes an uncontrolled mob, a multitude of scared, hurt, and disrupted people who seek only to flee from further injury with whatever possessions as are intact and obtain, by any means possible, that which is necessary to remain alive.

THE EFFECT

Now from the point of view of the combat commander, what is the effect of the problems posed by these civilians on his combat operations? They clutter the roads and interfere with, or prevent, the movement of troops and supplies. Their injured ring about his medical facilities in numbers beyond their capacity to treat. They take from his supplies if for no other reason than to stay alive. Their numbers screen enemy agents and saboteurs who harass troops from the rear. They do all this and more; they all but stop the military operation in its tracks * * * unless proper action is taken to anticipate and plan in advance such CAMG controls as will effectively prevent civilian interference with military operations and meet the emergency requirements of a war-torn people. This phase of military action is required fully as much by military necessity as by customs of war and the principle of humanity.

The commander's CAMG operation, with respect to civilians, must follow certain logical procedures. The civil populace must be informed, firmly controlled, provided minimum essential requirements in housing, food, clothing, and medical care. The knowledge by civilians that we wish to help them out of harm's way and provide their basic needs will reduce the civilian tendency in combat to hysteria and flight, make them more amenable to control, and promote their eventual support of United States objectives.

Initial information is provided the civilian population through the issue of proclamations and ordinances concerning the war itself and the conduct of the inhabitants of the area among themselves and toward the occupying force.

CONTROL ATTAINED

Control is attained through the reestablishment of local police force and essential governmental offices to the extent necessary to channelize civilian movement and implement relief activities under direction of CAMG elements. Depending on the situation, civilians must either be held in place or evacuated on routes not essential to the military effort to selected areas where they can be provided housing, food, clothing, and medical care as required. All such activities, directed and supervised by CAMG elements, are conducted by civil authorities themselves in order to capitalize on their ability to instruct their own people and on their familiarity with conditions and customs. This does not necessarily mean that refugee camps must be established. In many cases, civilians can be accommodated in towns in rear of areas under actual combat. Neither does it mean that all relief supplies and services must be provided by United States forces. A major purpose of CAMG is to mobilize local resources in support of civilian requirements. Services of civilian doctors are obtained to care for the injured refugees. Necessary supplies are moved from unaffected areas to points of need and only where such supplies are inadequate are they augmented by United States supplies.

CAMG operations are not limited to civil relief. In coordination with various other agencies, civilians are screened to insure the detection of enemy agents and prevent sabotage and rear-area disorders. Local civil defense and damage-control activities are coordinated with those of United States forces. Steps are taken to enforce directives and maintain a condition of law and order. Public health and sanitation are kept under surveillance to insure the prevention of epidemic disease that might affect the fighting effectiveness of United States forces. Information media are exploited to keep the civil populace informed of the policies and purposes of United States effort and further improve relations between our forces and the people of the country in which military operations are being conducted.

CAMG operations contribute materially to the military operation. The resources of the area are mobilized in support of our forces as well as for the satisfaction of minimum essential civilian requirements. Assistance is provided the technical services in the local procurement of required supplies at a considerable saving in time, shipping space and, often, money. CAMG elements assist in the procurement of port and rail facilities, communications, storage facilities, necessary housing and utilities. CAMG elements assist in obtaining local civilian labor for essential labor that would otherwise require the diversion of combat troops. The extensive CAMG organization functioning constantly at the grassroots level constitutes an effective source of information and intelligence which is of vital importance in the pursuit of combat.

THE COMMANDER AND THE COMMUNITY

The effective management of civil affairs entails a proper respect by the military for the customs, traditions, and habits of the civil populace. By and large, there is everything to be gained by respecting prevailing folkways unless they are demonstrably at odds with military necessity. Disregarding or flaunting dearly held customs will only prompt hostility and even open resistance. In most circumstances the commander will find it not only more practicable but by far more effective in the carrying out of his mission to pursue a policy of noninterference with the normal behavior of the civilian population.

The way of life of a people should not be disrupted any more than is absolutely necessary. Their attitudes toward politics, religion, and community life and other aspects of existence cannot be expected to be similar with those of the United States. The communities' way of life should never be challenged or subjected, without urgent necessity, to adverse comment.

The establishment of satisfactory relationships with the native community is to a large extent dependent upon the ability to deal harmoniously and sympathetically with people. This faculty is desirable in the conduct of military affairs; it is indispensable in the conduct of civil affairs. It entails, moreover, considerations not present in the military sphere.

PROPER UNDERSTANDING

A proper understanding of the techniques and basic principles of civil affairs will contribute immeasurably to the successful fulfillment of the civil affairs mission. The proper exercise of civil affairs principles can lend additional effectiveness to the influence of a military unit upon a civilian community. Civilian understanding, appreciation, and acceptance of the military role can be furthered and the basis created for smoother, swifter, and more satisfactory relationships between soldier and citizen.

The commander can enhance his effectiveness and his ability to perform his mission

by acquiring the broadest possible knowledge of the people with whom he must deal, their attitudes, politics, and problems. We should understand the communities' social structure to sharpen our awareness of areas of sensitivity and importance. We should be familiar with the general pattern of the economy, so that no unwitting interference with civilian livelihood occurs. An appreciation is required of the people's general cultural, religious, ethnic, historical, and political background.

The commander finally must appreciate that the establishment of good public relations, which underlies all civil affairs, is a command responsibility. Subordinates may be charged with specific assignments, or missions but the commander himself must establish the tone of civil affairs/military government. It is a profound command responsibility at all levels of command.

Federal Government Can Be Reduced

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. ALGER. Mr. Speaker, the responsibility of every Member of Congress, it seems to me, is to evaluate the course of government in terms of basic principles. This is readily recognized at the beginning of a new term of Congress when, as at this time, the state of the Union message, the budget message, and the economic report outline the administration's program and the course recommended for study by the Congress. With these thoughts in mind, I was privileged to speak to a Lincoln Day dinner in Kingsport, Tenn., on February 23, 1957.

The following remarks comprise my views concerning the Federal Government at this time:

Mr. Chairman and fellow Republicans, it is unusual for me to be in the hills of Tennessee, but the gracious invitation of Congressman CARROLL REECE could not be refused. In fact, it's a real compliment to be wanted, and I hope you are not disappointed. My frequent feeling, as a newcomer to Washington, was that I was being carefully scrutinized and appraised. Sometimes I even felt the disappointment that I did not have two heads or some obvious abnormality to go along with being a Republican Congressman from Texas. Again, I hope you are not disappointed. However, you represent, in your Congressman, something of an outpost too, as I understand it. Possibly we have an unusual kinship between our districts. In any event I would be happy to enjoy the widespread acquaintance and friendship which your Congressman enjoys in Congress. There is much I could learn from CARROLL REECE, and, believe me, I am determined to learn. As a matter of fact, Texas has frequently benefited in the past from lessons from Tennessee. As you may know, a number of our statesmen came to Texas from Tennessee, although not all of them so revered in my family and district as is Davy Crockett. In this connection, were it not for Davy, my children would have been totally unimpressed with their father's new occupation.

Historically, men are judged after they leave us, and we see in Davy Crockett and in our revered President Abraham Lincoln a similarity of greatness which made this country what it is. Studying and remembering this remarkable man is a refreshing experience. Across the years his words are prophetic. With a background of 12 or more major defeats, including a nervous breakdown, death of a dear friend, and numerous unsuccessful political campaigns, he still said, "With God's help, I shall not fail." Of preserving our form of freedom-loving government and society as a beacon light for the entire world, Lincoln said, "We shall nobly save or meanly lose the last hope of earth * * * the fiery trial through which we pass will light us down in honor or dishonor to the last generation."

This applies to each one of us, most obviously those entrusted in government, to represent his fellow men. At this point, you who are business people might ask yourself, as did I when approached, "Why be a Congressman?" Witnessing the typical businessman's participation in civic drives and other forms of community service, I might warn you that becoming a Congressman is just a further degree of that activity. So in my district it could have happened to any one of a number of businessmen.

However, worse things than this can happen, since public service is certainly a satisfying and gratifying experience. If anything, in maturing in this job I feel a greater humility as a result of serving 827,000 people of Dallas County and running head on into the great issues of the day on which I must vote "yes" or "no." The challenge is great and so is the opportunity for achievement. One other personal note, if you will permit: My reelection—and some highly placed political figures assured me I wouldn't return—has taught me something which I fervently hoped would be the case, and that is that a Congressman can vote his convictions and be reelected without regard for politics or political expediency as the end in itself, which I am afraid some public servants consider it to be. In the hustle and bustle of Washington affairs, with always more to be done than can be done, I am amazed at times how much work actually is accomplished under the peculiar strains imposed on the Congressmen. Maybe help from the Man upstairs is responsible as we try, in too short a time for deliberation, to solve the grave issues of the day in study and debate on the House floor. I remember the story told about Comer Jones. Do you remember his experience when he was a high-school coach? I don't know how smart we are, but we must try to find the right answers.

Maybe a Congressman on occasion is not as smart as the pressure groups would like him to be, yet a Congressman is always anxious to stay in touch with his constituents and to benefit from the ideas of the representatives of the various industries and businesses which he represents. We all recognize that the businessman's "pocketbook nerve" is always exposed and is very sensitive. Regardless of pressures, I endeavor to find the right answers to the troubling problems of our day. For example, since we are all quite interested in highways and transportation, let me illustrate with my experience on the Highway Subcommittee 2 years ago when I was the lone Republican in my committee and on the floor of the House to oppose the President's highway bond-financing program. It was necessary for me to debate against all the other Republican Members, including our respected Secretary of the Treasury George Humphrey, who was representing the President's point of view. I maintained my position, believing in the pay-as-we-build principle, and it was with great delight that some months later Mr. Humphrey made it plain that he, too, believed in the pay-as-you-go plan for building the highways. He and the administration then supported the view that I had championed some time before. I learned then, if I had not known it before, that the best politics is no politics; that the answer to the great issues of our day lies in the facts and in principle and not in "political expediency," or "in order to get along you have got to go along." How interested in government are you, or better still, how interested in government should you be, for yourself, your children, and generations to come.

Certain I am that some politicians, motivated simply by the desire for reelection and political expediency, underestimate the intelligence of our citizens. However, there are those who say that the people are uninformed and uninterested in government, or to quote a Congressman during the debate recently on the new Federal budget and the terrific sums of money involved there, said rather pessimistically: "People do not seem to care any more." I wonder do you care or don't you? How much money is taken from your income for Government purposes, for programs which may not represent your philosophy of government at all? How interested are you in Government programs? You see, the Government has no money that it does not take from the people, and in the taking of the money and spending it again the Government subtracts a terrific amount for overhead—and with little accountability unless you, the people, demand Government be accountable and responsible for the money that is collected and spent allegedly in your interests.

There are four basic axioms which I follow. I shall document these briefly and then go on to make what I hope will be some positive suggestions for your further consideration. By the way, if I seem to get after you a little bit as though I were taking you to task or inferring that you should take an active part in government, let me assure you that it is the shoe pinching me that causes this approach on my part. As a businessman I neglected my civic chores, I am afraid, and now I am trying to make up for it.

You know when it comes to government, people are interested, I am sure, right up to the point where they are expected to do something themselves to make a contribution of their own time and effort toward good government, and at that point they conveniently find they are too busy with other things and too often fail to take the part they should to keep our representative form of government on course. Remember the story about the Negro preacher and his congregation. I hope you are not like this colored preacher's congregation. (At this point I shall tell a little story and end up with, "Let's not any of us be like the congregation who lost heart when confronted with the need to do something.)

Now, for the four positive suggestions as to what we should do in trying to keep our form of government on course, in order to preserve freedom and free enterprise and stem the tide toward the bureaucratic centralization of government at the Federal level, which ultimately, if unchecked, must deprive us of the freedom we hold so dear. These four points I intend to follow. First, let's stop increasing the size and functions of Federal Government; second, let's eliminate those functions of government in which the Government has no business being; third, let's decentralize the Government back as far as possible to the State and local level where the 10th amendment says it should be; and, fourth, let's rededicate ourselves to recognizing and keeping our faith in what comes from the Almighty, our basic rights and freedoms. Let's keep Government our servant, not our master. This fourth point is simply restating the Declaration of Independence and the Constitution in letter and spirit. Now to recapitulate, let's examine these four principles in the light of current events, in your business and in affairs of Government, all of which actually are your business.

If the state of the Union message did not cause you to sit up and take notice, surely the budget message and the economic report must have done so. I am talking about point No. 1, which was: "Let's stop increasing the size and functions of Federal Government." Government is already huge and swollen at the Washington level. Should we enlarge it? Of course not. The budget is twice the size of a Sears, Roebuck catalog, 6 pounds, 4 ounces, 9 by 11½ by 2½ inches, 1,521 pages, thousands of items, totaling $71.8, $3 billion more than fiscal 1957.

[In billions]

	1957	1958
Interest on public debt	$7.1	$7.4
National defense	38.5	39.5
Veterans' benefits	4.9	5.0
Foreign aid	4.9	5.0
Federal payroll	9.5	10.2
Miscellaneous subsidies, grants, etc	4.0	4.7
Total	68.9	71.8

Commendable features stress need for a sound dollar, combating inflation, balanced budget, surplus property sale, Government out of business, and natural gas bill endorsement. Self-contradictory? It's your money. Isn't this inflationary? Let's not justify any Government program by computing it to an even more questionable one, as some do of the foreign aid.

This calls to mind the three seemingly self-contradictory axioms of this administration, axioms the President early recognized and demonstrated. These were: First, Government expenditure can be decreased and national income increased. Rather than national prosperity being based on increasing Government expenditure, the reverse can be true. The Truman budget was cut $10 billion and taxes cut $7.4 billion. Second, that taxes can be reduced and the budget balanced. Third, that economic controls can be removed and economic stability maintained. Now, remember these three axioms because they prove once and for all that it is not necessary to increase further the size of Federal Government. Alright, now, let's think about the budget and economic message this year. We see the expenditures of the various Government departments are slated to go up. We see aid for new programs, like school construction; we see a new civil-rights program with a provision for unlimited new employees; we see additional public housing, public power, and other welfare measures; we see the highest peacetime budget in history. But like an iceberg, you only see part of it; you see this budget is not the whole story. It is an accounting budget and is not the cash budget. Actually the expenditures for the next fiscal year will not be $71.8 billion, as the budget shows, but rather $96 billion or more because the highway expenditures, social security, and other welfare and trust funds are not included in the budget. At the same time, income will not be $73.6 billion as it's anticipated, but actually in the neighborhood of $99 billion or more. Does this strike you as being just a little bit large? Is there any need for increasing Government further in size? Further, local and State cost of government should total $50 billion plus or minus, making a total of $150 billion for all government.

At this point I recall a conversation I had recently with Secretary of the Treasury Humphrey when we discussed at great length the current financial situation, which I well know affects you so keenly in your various business interests. The Secretary pointed out that money spent by the Federal Government is nonproductive money; that is, when money is taken from the taxpayer by the Government and spent by the Government for, let's say, defense weapons, as an obvious example, this money is not productive; whereas, if left in the pocket of the consumer, it would go to buy more goods which would mean more production, more jobs and higher standard of living.

We discussed at some length the tight money situation. Let me endeavor to pass on several of his view which strike me as good sense. First of all he put his finger, I believe, on the sore spot in the money market today and the key to the preservation of free enterprise, as opposed to bureaucratic control and inflation. He said there ought to be a flexible price for money; that interest rates must be left to change, depending on the supply and demand in the money market. This flexibility will serve as a natural governor of the cost of living and will preserve a virile economy, so that when the price of money rises it will tend to keep the demand for expansion in line with the supply of resources.

In this system, people's confidence in business is reaffirmed and the incentive to save and invest creates more and more savings; more savings means more money available for loans and for business expansion; this means more jobs and that means a higher standard of living and so on. This is the way he presented the formula to me. With the stimulus and incentive of a "natural" interest rate savings and investments are stimulated. This will make for high productivity because there will be capital available for plant expansion. Factories will expand more, machines will be put into operation because of the availability of the money. High productivity, in turn, means high wages because there can be no sensibly increased wages that are not tied to increased productivity. This is an axiom that labor and business must never forget. High wages, in turn, means the high standard of living.

On the other hand, inflation kills the entire process. Inflation can result from the arbitrary control by government of the supply of money, and by other Government controls of business economically. Government tampering as it was done prior to 1952 with the value of money, before the Federal Reserve Board was divorced from Government, resulted in watering the buying power of our dollar. The cost of living increased. There were artifically low interest rates. This, in turn, killed the incentive to save and invest. There was deficit financing, cheap money as it is known, and always inflation killing the desire to save. Today we see the earlier investments in Government bonds and life insurance have been watered because of inflation. Government dabbled in all kinds of controls—price, wage, rent, allocation of materials. Inflation naturally results when there is more money available than products to buy, people to work, and materials to use. These factors will always be out of kilter when Uncle Sam endeavors to run our intricate economy and most disastrously when without reference to the market places where supply and demand govern. Government will be in your picture; this we know. Here again it is hard to apply Lincoln's yardsticks today. President Eisenhower, dwelling on Lincoln's philosophy in 1954 said, "In all those things which deal with people, be liberal, be human. In all those things which deal with the people's money, their economy, or their form of government, be conservative." When applied to our present Federal Government, to me this becomes a succinctly-stated contradiction. Everything Government does take terrific expenditures, and this money comes from the citizens' pockets. Being liberal or conservative with one means being liberal or conservative with the other. All of which returns me to point No. 1, "We must stop increasing the size of Federal Government." Yet, the budget shows Government increasing in almost every department.

Now point No. 2: Let's eliminate government from those fields where it has no place being. As one reference, the Hoover Commission has spelled out the way this can be done and I commend it to you for such study as you can make. This may be of great interest to you. You will learn that the Defense Department is engaged in over 2,500 different business activities, many of them in direct competition with free enterprise. There are 2,000 water projects and 2,000 storage installations. Why should Uncle Sam, as TVA, manufacture fertilizer? Did you know that the last session of Congress actually passed a law that would prevent the Defense Department from getting out of business? The administration has made strides in eliminating government from many areas of business operation, but much more remains to be done, and looking at the current budget, I can suggest immediately several areas wherein the budget could be cut; where we could eliminate government and not be sacrificing any allegedly basic programs needed to preserve both our necessary services for the people and to stimulate our economy for future growth. First of all, would be the elimination of the Government from business enterprises, as the Hoover Commission outlines. In this connection, the Government is the Nation's biggest electric-power producer, the biggest power consumer, the biggest banker, the biggest employer, the biggest insurance company, biggest landlord, biggest tenant, and biggest publisher. In fact, Uncle Sam owns more wheat than the wheat farmers, more grassland than the cattlemen, and more trucks than General Motors. Our national debt is $279 billion and we have a hidden debt of $250 billion, plus or minus, and a tax rate overall of 30 cents on the dollar.

We know that wherever free enterprise can do the job, the Government should not be in business. Another example, there are 104 different lending agencies in government. We know some can be eliminated and some combined, all at a savings to the taxpayer.

Second, let's increase the sale of surplus property. Hundreds of millions of dollars in the last session of Congress were added to the Federal Treasury from the sale of such property. Much more of this can be accomplished.

Third. While there is a differing of opinions between many Congressmen, I maintain that parts of the foreign aid program can be eliminated where we have learned we cannot buy friends and where our experience shows there is waste and overlapping.

Fourth. We can eliminate many of the existing and proposed public works projects, including many of the public power developments where private industry can accomplish the task without a burden on the taxpayer.

Fifth. We should not start any new welfare or social programs, as for example, the school construction program when private initiative at the local and State level can do the job, nor the new Niagara power development nor the Frying Pan-Arkansas River project nor any of the new projects unless they are of such a nature that only the Federal Government can do them, if they must be at all.

Beyond this, all of us recognize the danger of a blank check to our Government for military and economic assistance to all the nations of the world. As evidenced in our President's inaugural address and state of the Union message, the United States has charted a new course in world affairs, namely that of unlimited responsibility for the free nations of the world, both as to their military defense and economic security. It seems to me we are going much too far for our financial ability. So much for the second point.

The third point, let us decentralize the Government wherever possible back to the State and local level. This is a belief in States rights. For example, take the current debate on the school construction program. There is no money that does not come from

the taxpayer and we get back only a fraction at the local level of what we paid to Uncle Sam. These schools can be built at the local level as they are being built—67,500 classrooms having been built in the last year. We are licking the problem without Federal aid and Federal aid means Federal control. In this, as in many other programs, let's leave it at the State level. If financial help is needed, leave 1 or 2 percent of the Federal income tax in the State. Or take the civil rights bill. It actually proposed that the State courts be bypassed and cases be taken directly to the Federal courts. Here again State facilities could be used in preference to further Federal centralization.

Point No. 4 is the most important of all in that it defines the proper role of government. Let's reaffirm our faith in the Declaration of Independence and the Constitution. Have we really outgrown these simple truths? I do not think we have, not even in this jet and atomic age. As a matter of fact, what is the role of government? It can be most simply stated in this way—government should in practice reaffirm and reestablish the confidence of the people in themselves by bolstering and strengthening the free-enterprise system rather than undermining or weakening it through top-heavy Government intervention in our affairs, economic or otherwise. Our freedoms are so closely interrelated in this country that any loss of economic freedom ultimately means loss of all freedom.

In stressing these four basic principles or yardsticks to follow in government I recognize it is difficult at best to ever get the Government to retrench. There is a self-perpetuating, if not a built-in growth factor, in government that cannot be overlooked. There's good reason for a single citizen or group of citizens to feel somewhat helpless when faced with challenging this towering bureaucracy. But there is a way that it can be done if the people want to do it. Rest assured the Government will not retrench and economize and follow the basic axioms which I have discussed tonight, either in letter or spirit, unless the people demand it. Self-discipline is lacking in the pressure groups, in Members of Congress, and in the administration. The President recognized this in his state of the Union message, and I fear demonstrated far beyond what any of us care to see that self-discipline was lacking in the budget. In my brief time in Congress I can assure you I have frequently witnessed the lack of self-discipline in the Chamber as we debated and voted on current issues of the day.

Our role in world affairs is difficult to interpret and challenging. Lincoln, and President Eisenhower in quoting him, said, "Liberty, not alone to the people of this country, but hope for the world for all time." Again, it is a matter of interpretation. Our role in history, it seems to me, is by precept and example to inspire other nations to freedom, self-determination, and economic prosperity—not for us to make each nation militarily and economically secure. This goal is too gigantic and is impractical financially. Some nations are not ready in their own level of development for our United States philosophy and social standards. It seems mighty risky to me to impose one nation's will on another, no matter how idealistic the motivation. Anyway, I'm sure the philosophy of Abe Lincoln is timeless, as are all abiding principles, and will work today as yesteryear. It's just a matter of not misinterpreting.

To correct the lack of self-discipline in domestic affairs and protect our constitutional form of government in world affairs, let me outline five constitutional amendments, which, if supported and sponsored by the people, can help to solve the grave problems facing us today, both at home and abroad.

First, the Byrd-Bridges amendment. To require annual budget balancing by limiting congressional appropriations in any fiscal year to the estimated receipts of the Government for that fiscal year, except in times of dire emergency to be determined by three-fourths vote of the Congress.

Second, the Reed-Dirksen amendment. To eliminate to a large extent the heavy progressive rate feature from our income-tax system without impairing the power of Congress to raise revenue. This amendment limits the top rate of income taxes to 25 percent, but, unlike the rigid 25-percent restriction in the amendment which has for the last 17 years been going through the State Legislatures, this amendment permits Congress to exceed the 25-percent rate by a three-fourths vote, provided that in such event the top rate of tax shall not exceed the lowest rate by more than 15 percentage points. This amendment also returns to the States, where it belongs, the right to tax inheritances and gifts.

Third, the Mundt-Coudert amendment. To reform the electoral college by choosing electors by congressional districts, and 2 at large to correspond with each State's 2 United States Senators. This amendment is designed to take away the excessive power now exercised by the larger cities in the present electoral-college system, thus removing the excessive influence of minority groups in such larger cities.

Fourth, the Reed-Walter amendment. To give to the States full power to amend the Constitution without the intervention of Congress.

Fifth, the Bricker amendment. To prevent the changing of our Constitution and our domestic law by use of the treaty power. This amendment would make our Constitution inviolate so that no executive agreements or treaties, such as the U. N. Charter or the various multilateral pacts, could abridge our Constitution and would give us a measure of safety in our foreign affairs which we do not now enjoy. This week some of us witnessed the House transferring from Congress to the President the authority to wage war and then further transferring the jurisdiction over our troops to the Security Council of the United Nations, thus completely superseding and setting aside our Constitution.

These five amendments offer a blueprint of how the people, how you, can make your voices heard so that government must trim its sails, balance the budget, reduce taxes, reduce the debt, and keep government from growing out of hand. You can and must take a part. Believers in freedom and free enterprise, you really have no choice but to do so.

Today's world events and our domestic affairs alarm me considerably. I am convinced that in national policy, just as in daily conduct, the Lord helps those who help themselves. If we, all of us, individually and collectively, pray as though it all depended on the Almighty and work as though it all depended on ourselves in matters of government, we could have the calm and comforting knowledge that "Thy will be done" would have real meaning. We will have taken our legitimate and necessary part in directing the course of our Government and our lives.

No man's effort and fight for the right is wasted. As we face our individual problems in daily life and in government, endeavoring to solve our problems and the problems of this troubled world, knowing that the solution must be found or we perish, we might remember the debt we owe those who have gone before us—men like Lincoln and our combat buddies who did not return. We might now recall President Lincoln's prophetic words—"That we here highly resolve that these dead shall not have died in vain; that this Government, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from this earth." Finally, "With God's help, we shall not fail."

Thank you.

Mr. Burwell, a Tungsten Producer, Debunks McKenna as "Mr. Tungsten"

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1957

Mr. ENGLE. Mr. Speaker, on Tuesday, February 26, when the Interior appropriations bill was under consideration in the House the distinguished chairman of the Subcommittee on Interior Appropriations, Mr. KIRWAN, referred to a series of letters written by Mr. Philip McKenna, of the Kennametal Co., urging the committee to refuse to appropriate the money authorized by Public Law 733, 84th Congress, to continue the production of tungsten and other minerals. On the basis of Mr. McKenna's statements, Mr. KIRWAN arrived at the conclusion that Mr. McKenna was an important producer of tungsten; in fact, referred to him as "Mr. Tungsten."

Those of us familiar with the matter believe that Mr. KIRWAN has been very badly misled by the statements made by Mr. McKenna. In order to clarify the record I wish to insert a statement on the subject made by Mr. Blair Burwell, of the Minerals Engineering Co., at Grand Junction, Colo. The statement, which deals with Mr. McKenna's position as a tungsten fabricator rather than a tungsten producer, is as follows:

MEMORANDUM ON TUNGSTEN

(By Blair Burwell)

It is our understanding that the House has omitted funds for purchase of tungsten and three other metals based principally on a series of letters from Mr. Philip McKenna, of Kennametal Co.

Mr. McKenna states that the tungsten stockpile is oversized for any war needs and recommends that this surplus be sold at the rate of 5 percent of the stockpile at public auction each year until it gets down to 5 years supply in order to keep Kennametal from being charged excessive prices by foreign interests.

Mr. McKenna states that a 20-year surplus exists at the present time and bases this statement on a chart and compilation of stockpile figures plus consumption to establish quantities, and upon the assumption that consumption will be reduced to a small portion of present consumption if Kennametal, a specialty variety of tool tungsten carbide is used instead of other forms of tungsten cutting steel now employed by industry.

As to the statements of Mr. McKenna relative to the quantity of tungsten now available, and which he believes should be reduced to 6 years, supply, Dr. Flemming yesterday testified that this supply would last 6 years under war needs (instead of 20 represented by Mr. McKenna), as follows:

Page 5, paragraph 14, question to Dr. Flemming by Mr. Redwine: "Can you say whether you have a 20-year supply of tungsten on hand?

"Dr. FLEMMING. Let us make the question very specific. That is a 20-year supply for dealing with a wartime emergency?

"Mr. REDWINE. Correct, sir.

"Dr. FLEMMING. The answer to that is, 'No; we do not have anything approaching that on hand.'

"Mr. REDWINE. Can you, without violating security, tell the committee approximately how many years supply you have on hand for wartime emergency?

"Dr. FLEMMING. Thinking in terms of the requirements for a wartime emergency, we have on hand enough to carry us through approximately a 6-year emergency."

Without quoting stockpile figures, which are secret, and which neither Mr. McKenna nor the writer of this letter, if he knew them, have any right to reveal, we wish to state that the compilation of stockpile data and tungsten deliveries of Mr. McKenna are grossly inaccurate and misleading.

In regard to the second factor which Mr. McKenna uses to support his contention that excessive tungsten supplies exist, it is interesting to note that Mr. McKenna represents himself to be the owner of the second largest mine in the country, a leader of the tungsten industry, and the inventor of tungsten carbide. He states that his invention, made in 1940, would make it possible to substitute 1 pound of his invented material for 60 pounds of tungsten used by industry today. He also states that he is the producer of 25 percent of tungsten carbide cutting tools. Mr. McKenna has convinced Mr. KIRWAN of these matters, and they are quoted on page 2309 of the CONGRESSIONAL RECORD of February 26, 1957.

The facts in regard to these statements are as follows:

First as to the size of the mine that is operated by Mr. McKenna. The major mines of this country are as follows:

Name of mine	Ownership	Daily tonnage produced	Monthly units produced
1. Pine Creek Mine, California	Union Carbide Co	800	8,500
2. Haile Mine, North Carolina	Tungsten Mining Co	1,000	14,000
3. Lincoln Mine, Nevada	Wah Chang	750	8,500
4. Black Rock Mine, California	do	700	6,500
5. Browns Lake, Montana	Minerals Engineering Co	800	7,000
6. Red Button, Montana	Henderson & Ferguson (leased by Minerals Engineering Co.).	300	8,000
7. Riley Mine, Nevada	Upion Carbide Co	300	3,800
8. Getchel Mine, Nevada	Getchel Co	800	7,000
9. Nevada Massachusetts	Nevada Massachusetts Co	450	4,500
10. Nevada Scheelite	Kennametal Co	350	3,500
11. Climax	Climax Molybdenum	20,000	3,500

INVENTIONS

The invention of tungsten carbide was made by a German group, assigned to Krupp prior to 1930 and the rights purchased by General Electric Co. Mr. McKenna patented a variation in composition in 1940 and has marketed it under the name of "Kennametal."

POSITION IN THE MARKET

The Kennametal Co. use 660,000 pounds of tungsten metal annually of a total of 9,600,000 used by the tungsten consuming industry. As such, he is a manufacturer speaking for 7 percent of the tungsten consumed in manufacturing. He purchases this from foreign sources at this time. The price of his tools and product shows that he sold his product for approximately the same price, or slightly more, in 1955, when he was purchasing tungsten from foreign mines at $33 per unit, as he did in 1950 when he purchased tungsten at $48.84 per unit. He is obviously interested in getting tungsten as cheaply as possible, because his profit is that much greater.

POSITION IN THE PRODUCING INDUSTRY (MINING)

Mr. McKenna purchased a mine in Nevada in 1950 when foreign tungsten was selling at $73 per unit and because he needed tungsten to supply his factory. Mr. McKenna has so informed me, at that time of this acquisition. His mine operated to supply his needs when foreign tungsten was costing more than $63 per unit. When the price of tungsten declined below $63 per unit, he sold to the General Services Administration at the rate of approximately 3,500 units per month at $63 per unit and purchased foreign ore to supply his factory.

At this time, in case purchases of tungsten are not continued under Public Law 733, there is approximately 110,000 units of tungsten which will have to be sold on the open market. The quotation for tungsten concentrates has declined to $29 per unit in recent weeks from $35 per unit 6 months ago in anticipation of the dumping on the market of this distressed tungsten.

If the bill is not passed, it is estimated that the market will decline to $20 per unit under the impact of this distressed selling.

Mr. McKenna is recommending that this distress shall occur. In the event his counsel and advice to the Congress is allowed to destroy the industry, his gain from such destruction is conservatively as follows, per month of operation.

He consumes 55,000 pounds of tungsten metal per month. He would obtain this tungsten at a price of 56 cents per pound under his present cost. This is equivalent to $30,800 per month saving.

It is hard to believe that Congress would allow one man who only consumes 7 percent of the tungsten of the United States, destroy the economy of the industry at the same time that the evidence is overwhelming that he stands to profit by such a destruction. Before this should prevail, the Congress should investigate the interests and accuracy of the statements and allow the producing industry to defend its existence. I am sure Mr. KIRWAN would see the justice of this situation. The statements made herein are the result of my close connection with the mining of tungsten and the consumption of tungsten over the period of 20 years. In this period I have had responsible charge of the production of approximately 12 times the quantity of tungsten that Mr. McKenna has had handled in his manufacturing business. I am familiar with his mine in Nevada and my statements thereon were obtained from Mr McKenna, his manager at the mine, and from Government records. They have been carefully considered and I believe them to be accurate.

The Chippewa Indians

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. O'KONSKI. Mr. Speaker, it is my pleasure to call to the attention of my colleagues a book on the Chippewa Indians which is an historical and highly readable account of the Chippewa tribes. The book is entitled "Chippewa Indians of Yesterday and Today" by Sister M. Carolissa Levi, FSPA., a Franciscan nun. The book is published by the Pageant Press of New York City.

I also wish to quote from a book review written by Sol Tax, professor of anthropology, a leading authority on the American Indian, University of Chicago. The review was published in the Natural History magazine:

> This is a lively account of a very alive people—the Chippewa Indians of Wisconsin. * * * Guided by solid sense and scholarly care, she has produced a book that is both sound and original.
>
> Sister Carolissa doesn't take account of the theoretical literature in anthropology, or on the Chippewa. But this isn't a book about social theory. It is a book about the Chippewa, and on that subject she has used the best descriptive and historical sources.
>
> Better than that, she has read newspapers and dug out documents. More important, she has talked to people and breathes life into the story she tells. * * *
>
> The 80-odd pages devoted to the present-day Indians on their six Wisconsin reservations against their historical background, constitute one of the fairest short accounts available on problems besetting Indians. * * *
>
> External trappings have changed, but Sister Carolissa did not have to engage in archealogy to learn about Chippewa customs; she could see or hear about most of them firsthand. This account of the Chippewa Indian makes fascinating reading.

Mr. Speaker, I highly recommend it as most informative and good reading for Members of Congress who must frequently act on legislation pertaining to these good people and I know that the book will help anyone who reads it to understand the Indians and their problems better.

Humane Methods in the Slaughter of Livestock

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mrs. GRIFFITHS. Mr. Speaker, on January 3, 1957, I reintroduced a bill to require the use of humane methods in the slaughter of livestock and poultry in interstate and foreign commerce. This bill (H. R. 176) is now pending before the House Committee on Agriculture.

WHY COMPULSORY HUMANE SLAUGHTER LEGISLATION IS NEEDED

Over 30 years ago there was a strong movement throughout the civilized nations of the world for the institution of humane methods of slaughter. As a result of this movement the Netherlands, Norway, Scotland, Ireland, England, and parts of France, Germany, and Austria and other foreign nations enacted compulsory humane slaughter legislation. In the United States the meat-packing industry agreed to voluntarily insti-

tute humane methods of slaughter. In 1929 the American Meat Institute, the trade, research, and educational association of the meatpacking industry set up a special committee to develop improved methods of slaughter which would—

First. Be considered more humane than present practice.

Second. Be practical and economical in regular plant operations.

The efforts of the industry as a whole throughout the years indicate little or no real effort to solve the problems of developing improved methods of humane slaughter. Only in isolated plants has real progress or substantial results been achieved.

It appears obvious that the meatpacking industry has not chosen to proceed aggressively and conscientiously to voluntarily institute humane methods of slaughter and having had over 25 years in which to do so I believe one can assume that they never will institute such methods voluntarily.

Legislation in this area is certainly long overdue. Daily, we attempt to lead nations in matters of foreign affairs, often emphasizing and stressing the fact that we are a nation guided by humane principles. Such reasoning must appear hollow to people who long ago recognized the need for compulsory humane slaughter legislation and did something about it.

ECONOMIC FACTORS—(1) REDUCTION IN ACCIDENT RATE

Besides the humaneness of the thing, a compelling reason for modernizing slaughtering methods is the fact that accidents would be drastically reduced. The various humane methods—carbon dioxide or other gas, the captive bolt pistol and others would materially reduce the hazards present in our plants.

The latest figures of the Department of Labor show that accidents occur at almost double the rate in slaughterhouses as for all industrial activity combined. The average accident rate for all manufacturing in 1955 was 12.1 per million man-hours worked. For slaughterhouses the rate was 18.9 per million man-hours worked.

Preliminary figures from the Department for 1956 show a significant increase in the accident rate in slaughterhouses. For 1956 the accident rate jumped to 19.1 (first 9 months) per million hours while the average for manufacturing was 12.1 (first 9 months).

Here is a table setting forth these statistics for quick reference:

Accident rates per million man-hours

Year	General manufacturing	Slaughterhouses (includes slaughtering and dressing only, not processing)
1953	13.4	20.0
1954	11.9	19.4
1955	12.1	18.9
1956 [1]	12.1	19.1

[1] Estimates by Department of Labor for 1st 9 months of 1956.

These safety figures should not be construed as an adverse reflection on the industry or labor unions involved. Both labor and management are credited with making a continuous strong effort to reduce accidents but it should be emphasized that present methods of slaughter are hazardous and I submit the introduction of humane methods—whereby immobile, unconscious animals are substituted for kicking, screaming animals—would materially contribute to a reduction in packinghouse accident. Lost manhours, injury, and medical expenses are of benefit to none. Humane slaughtering methods can reduce this unnecessary economic loss.

(2) REDUCTION IN BRUISED AND DAMAGED MEAT

Apart from the compelling considerations to accord humane treatment to the animals involved, the use of humane techniques in slaughtering could have important and beneficial economic consequences for the meat packing industry.

Perhaps the most important would be the reduction in bruised and damaged meat. It is presently estimated that as much as $50 million worth of meat is rendered unsalable annually because of damage coincident with the slaughtering process. This loss could be reduced substantially if humane methods were employed. An unconscious animal is easy to work with, presents no problem in the subsequent killing process, and thus the prospect of loss in dressing is reduced to an important degree.

Secondly, it should be noted that meatpacking companies would be entitled to the generous depreciation rate of the internal revenue code in charging off the cost of new installations necessary to accomplish humane slaughtering.

Under the 1954 Revenue Act this depreciation can be accomplished at twice the rate previously allowed.

Enactment of this legislation requiring new installations would not place the packing industry in any less favorable position than other industries which are subject to legislation and regulation. All public carriers, for example, are obliged to maintain safety devices called for in law. These costs are a part of doing business.

The same circumstances would obtain for the packing industry under this proposed legislation. Furthermore the legislation gives the industry a voice in the final determination of the new methods to be used. There would be no arbitrary decision involved or enforced.

HUMANE SLAUGHTERING METHODS AND COSTS

One of the most frequently voiced objections to this legislation is the statement that advocates of humane methods do not agree on a specific technique to be used. This is certainly not a valid argument. The legislation would establish in law the fact that a humane system of slaughtering shall be practiced in those humane slaughtering plants whose products move in interstate commerce. The legislation reserves to the industry and the Secretary of Agriculture the right to determine the best humane method to be employed. Different animals present different slaughtering problems, and it is proper that the law allow flexibility to meet every need.

While it is difficult to estimate the total cost of converting the packing industry to humane methods, some useful data is available.

The captive bolt pistol and the new Remington stunning instrument cost less than $200. The electric stunning equipment is relatively inexpensive.

But perhaps the most significant advance in humane slaughtering in this country was the perfection of an immobilizing unit for hogs which is now in operation at the Austin (Minn.) plant of the George A. Hormel Co. This method using carbon monoxide gas to render the hog unconscious before sticking, was pioneered by Hormel engineers and has been in successful operation 3 years on a commercial scale.

Mr. L. W. Murphy of the Hormel Co. service division spoke before the American Meat Institute in 1952 and pointed out that the above method has the complete approval of the Department of Agriculture and he made these other significant observations:

> We are sure the method can be applied to other packinghouse livestock.
>
> • • • the hog was presented to the sticker so that he could operate at arm's length, accurately, safely, unhurried, and with cleanliness to himself.

Mr. Murphy pointed out with emphasis that the Hormel Co. has effected substantial savings in operating costs and has brought about improved working conditions. Mr. Murphy concludes:

> They alone (these savings) more than compensate us the cost of our years of research.

Incidentally, it might be noted that this company has reaped immeasurable benefits in good will because of this forward step.

This installation is concrete proof that humane methods can be combined successfully with practical business considerations. Several other smaller packing concerns have also adopted humane methods in recent years. These installations would seem to demolish the contention that it cannot be done.

The idea of protecting our animals from unnecessary pain and suffering is certainly not new and unique. It is, indeed, interesting to note that man at one time sought and received statutory protection for his animals before the same protection was given to human beings. In 1866 the first anticruelty legislation was passed in the United States. This legislation made cruelty to animals—such as the man beating his horse on the street—punishable by fine and imprisonment. At this time there were no statutory laws to prevent cruelty to children. Parents and guardians in the United States had the legal right, under the common law, to treat their children as they saw fit. The only deterrent to vicious and cruel treatment of children was a moral obligation not to do so.

The Society for the Prevention of Cruelty to Animals was constantly besieged with cases of cruel treatment to children but the laws at the time provided no remedy for such actions. Then one day the case of Mary Ellen was brought to the attention of Henry Bergh, a leader in the anticruelty movement. This little girl was daily the victim of viciously cruel treatment by her guardians. They kept her chained to a bedpost, dressed only in a thin and dirty chemise, unchained her only to do house-

work, and punished her regularly with a big leather whip and with fierce prods of scissors. Mr. Bergh could stand it no longer. He went to the State legislature and got the 1866 act—an act better to prevent cruelty to animals, amended—so that in 1874 it prohibited acts of cruelty to "every living creature"—and in November of 1874 the courts declared this to include children and thereby the Mary Ellens were given statutory protection against cruel and inhumane treatment. Soon specific legislation to prevent cruelty to children was enacted, and a society to prevent cruelty to children established.

In closing let me say that progress in any field has not come easily or willingly on the part of those persons, groups, or business interests affected. But when it can be demonstrated—as indeed the weight of evidence does in humane slaughtering—that a beneficiary result will be obtained for all concerned, we cannot, in good conscience, delay this legislation any longer.

It is my earnest hope that humane slaughter legislation will be acted upon favorably during this session of Congress. I am certain that you will find an overwhelming majority of our people in agreement.

David Bruce Named to Bonn

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Richmond, Va., Times-Dispatch of February 28, concerning my distinguished friend and constituent, Hon. David K. E. Bruce, of Staunton Hill, Charlotte County, Va.

Mr. Bruce has served with distinction in many important public positions, and it is a source of gratification that he has been nominated as Ambassador to West Germany.

The editorial is as follows:

DAVID BRUCE NAMED TO BONN

The minor uproar that has arisen over President Eisenhower's nomination of David K. E. Bruce, distinguished Virginian, as Ambassador to West Germany, seems likely to quiet down in short order. The reason is that the only argument advanced against Mr. Bruce is that he contributed $1,000 to the Democratic campaign presidential fund last year.

The fact that he made such a contribution can hardly be regarded as an argument in his favor, but neither should it cause his nomination to be rejected. (At least he didn't contribute to both campaign chests, as ambassadorial hopefuls have occasionally been known to do.)

Some of the more militant Republicans are pawing the ground and muttering that such plums as the ambassadorship at Bonn ought to go to members of the GOP.

But politics should be a secondary consideration in filling a post of this kind. Ability to carry out the duties devolving upon the appointee should be the determining factor. David Bruce would seem to meet this requirement.

As a matter of fact, there appears to be less and less difference between the two parties in the field of international affairs—especially between the wing of the GOP led by President Eisenhower, and the Democrats. The Democrats are now engaged in trying to show what bunglers the Republicans are, especially in the Middle East, but the basic approach of the two groups is similar.

Mr. Bruce has served abroad under both Democratic and Republican Presidents, so he is not firmly wedded to either party. Back in 1936 he actually supported Alf Landon, Kansas Republican, for President against Franklin D. Roosevelt. Hardly anybody else did; Alf carried Maine and Vermont.

More recently, Mr. Bruce was named Ambassador to France by President Truman, after he had held several important overseas posts, and apparently acquitted himself well. He then was named by President Eisenhower as Ambassador to the European Coal and Steel Community, and is now a member of the President's Board of Consultants on Foreign Intelligence Activities.

Mr. Bruce, unfortunately, has been largely inactive in Virginia affairs for some 15 years, but he is known in the Old Dominion as a man of intelligence, generosity, and charm. We predict for him a successful and useful career in his West German post.

H. R. 5101

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. AVERY. Mr. Speaker, I have introduced H. R. 5101, which would amend the Internal Revenue Code to exempt from the manufacturers' excise tax certain automobiles furnished without charge to schools for use in driver-training programs.

This bill has the full endorsement of the National Automobile Dealers Association. Last year, the Nation's new car and new truck dealers loaned automobiles, valued at more than $20 million, to hundreds of schools where driver training and highway safety were taught as a part of the school's curriculum.

While the Federal revenue from this tax is relatively small the overall effect of the passage of this bill on the promotion of highway safety cannot be overestimated. Safety experts have continuously stressed the fact that highway accidents will best be curbed when drivers exercise greater care and caution. These experts stress the need for a stepping up of driver training as a most potent weapon against highway and traffic accidents. I am certain that a most substantial number of additional cars would be made available for behind-the-wheel training in our schools by the passage of this bill.

The following letters serve to manifest the great good which can come from the enactment into law of this measure. If it is not already obvious to Members of Congress that our highway safety can be immeasurably improved by the enactment of this bill into law, most certainly after each Member reads the following letters, he will clearly see the outstanding benefit which will result.

The loss in Federal revenue which would result is relatively small and would be more than offset by the reduction in highway accidents which, last year, killed more than 40,000, injured more than a million, and cost billions of dollars.

The first letter is from the owner of a new car motor agency in Hiawatha, Kans., Mr. Frank W. Sterns, of the Hiawatha Motor Co. The following letters are from students attending the Hiawatha High School, who were the recipients of Mr. Sterns' generosity when he contributed a car for use in their driver-education class at the high school. The letters follow:

HIAWATHA MOTOR CO.,
Hiawatha, Kans., February 26, 1957.
Congressman WILLIAM AVERY,
Washington, D. C.

HONORABLE SIR: I read last night in the Hiawatha Daily World where you have introduced a bill to exempt cars from Federal tax when used as driver-education cars. That is fine. It is something that should have been done a long time ago. We have been furnishing 1 or 2 cars every year and the dealer is the one who stands the loss. It certainly would be a great help to all the dealers who are public spirited enough to furnish cars.

Enclosed you will find a few letters from students thanking us for the use of our car. I thought you might want to read a few of them and see what the students think. The letters you need not return.

Respectfully yours,

FRANK W. STERNS.

HIAWATHA, KANS., *December 16, 1956.*

DEAR SIRS: As a student of the drivers' education class I feel it is my duty and privilege to thank you for the use of your car to promote safety and welfare among the future drivers of America.

This is the second year that you have furnished the drivers of Hiawatha High School a car to be used in our drivers' education class. I think I speak for the whole class when I say that I am very grateful for your contribution. I only wish every school in the United States had an opportunity to be as lucky as we have been.

Sincerely,

EDITH BRINKMAN.

HIAWATHA, KANS., *December 14, 1956.*
HIAWATHA MOTOR CO.,
Hiawatha, Kans.

DEAR SIR: I want to thank you for the use of your car. It has helped me and many other students to learn to drive a car safely and also learn the parts of the car better. We have learned traffic laws and how to prevent accidents. Through your cooperation and willingness many students like myself have learned to operate a car safely. There should be fewer accidents among the young drivers because of their training in drivers' education classes. I cannot thank you enough for your willingness in letting us use your car.

Sincerely yours,

MARGERY WARREN.

DEAR MR. STERNS AND MR. BAIRD: I would like to thank you for the wonderful thing you are doing by letting us use your car in our driver education class.

I appreciate it very much because I learned and will learn more about the handling and driving of a car.

There about 38,000 people killed each year and I think having driver education classes will help prevent accidents and make our highways a safer place for everyone.

Thank you again for letting us use your car in our course.

Sincerely,

JEANETTE HOAR.

HIAWATHA, KANS., *December 23, 1956.*

HIAWATHA MOTOR CO.,
Hiawatha, Kans.

DEAR SIR: On the behalf of myself, the students in drivers' education class and their parents, I wish to thank you for the use of your car.

I think every one of us realizes the importance of safe driving. The use of the car has helped us to practice safe driving and learn good driving habits. It is my opinion that you are not only helping reduce accidents by training student drivers but encouraging other motor companies to do the same. By this method we should be able to reduce accidents a great deal.

Thanking you again for the use of your car, I am

Respectfully yours,

LINDA MEYERS.

HIAWATHA, KANS., *December 13, 1956.*

DEAR MR. BAIRD AND MR. STERNS: I, as a student in the driver's education class in Hiawatha High School, wish to express my appreciation for the opportunity of learning to drive. This experience has been made most pleasant by the use of your modern car. We are sure you will be justified in knowing that you are helping to make better drivers in this community.

Sincerely,

JUDY WOLNEY.

HIAWATHA, KANS., *December 14, 1956.*

GENTLEMEN: I want to sincerely thank you for the use of the 1957 Chevrolet as a training car for driver education students.

We realize that adequate and proper training now will help to make us better, more courteous drivers in the future.

Our classroom work was important in learning the rules and regulations of driving but actually getting behind the wheel and proving to ourselves that driving is fun and must be done with care is far more important in my estimation.

With this car, young people can learn to drive correctly in order to prevent the large number of accidents which happen each year resulting in many thousands of deaths.

Sincerely,

ANN ENGSTROM.

Time To Speak Out

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial of February 21 from the Omaha Daily Journal-Stockman:

TIME TO SPEAK OUT

A midwestern stockman recently remarked that he was going to write his Congressman in Washington, protesting continued heavy spending by the Government. Judging from reports of the deluge of mail that many Congressmen are receiving in condemnation of the record high peacetime budget proposed by the administration for the next fiscal year, his inclination apparently is shared by many people.

Growing numbers of taxpayers are alarmed over the continued rise in Government spending and the swelling of the inflation tide. They are gravely concerned over what may happen to our economy if this trend continues unchecked. They worry over mammoth Federal expenditures and the increasing number of bureaucrats.

They point out that while the budget was balanced in 1956, this was achieved not by a reduction in Government spending, but by the huge tax take which, along with the continued rise in the cost of living, is gradually choking the lifelines of existence for many individuals and business firms. The administration predicts a surplus for the 1957–58 fiscal year. But the amount of it would be small, and the possibility of it is based on record "take" from the taxpayer and anticipation of proposed increases in postal rates. The latter, at least, would seem a rather shaky prop on which to base a prediction of surplus.

Reaction to this new budget proposal reveals that many still have faith in the old-fashioned philosophy of laying something aside during good times for a rainy day. Translated for application to Government, this means that during these years of prosperity the public debt should be reduced in preparation for a future period when deficit spending might actually become a necessity.

Furthermore, the taxpaying public appears to doubt the need for new social welfare programs as proposed in the new budget. From past experience, taxpayers know that while such programs often look small in the beginning, they usually mushroom with the passing years, with resultant new bureaus, more bureaucrats and the loss of more individual freedoms.

Finally, the plan to spend more on big Government just does not seem consistent with these times. The Executive asks the people to spend less and help check inflation. To the worker whose paycheck, after tax deductions, often fails to cover the necessities of life, or to the farmer, whose operations leave him with little or nothing to show for his efforts, such a suggestion is out of place. It is especially hard to take, in view of the fact that the Government plans no reduction, but, in fact, talks about the need to spend more.

The mood of the stockman who planned to write his Congressman about too much Government spending is typical of the sentiment of a growing number of people in all walks of life. If they will make their views felt in Washington and elsewhere, there is hope that the free-spenders may yet be curbed.

Cheating Our Children

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Kansas City Times, Monday, February 25, 1957, entitled "Cheating Our Children":

CHEATING OUR CHILDREN

The United States Chamber of Commerce says there is no critical schoolroom shortage, a strange head-in-the-sand attitude for businessmen who should be among the first to recognize the need for better educated generations. Certainly on another front, business has taken the leadership in generous private support of universities and colleges.

It is true, as the chamber points out, that the States and local units generally have made a valiant effort. Classroom construction has increased from 9,000 a year in the midforties to 63,000 last year. But is that sufficient?

Obviously the shortage cannot be pinpointed exactly. Opinions vary on the meaning of "inadequate" or "overcrowded." But the White House conference on education discovered "a shortage of 200,000 classrooms—about 150,000 of which represent the backlog needs and 50,000 the rooms required annually to handle increased enrollment."

So the States are able to build for the 1,250,000 additional pupils each year. But that leaves only 10,000 or so classrooms to reduce the shortage which had its inception in the depression period. It is not enough to keep pace with the rising enrollment; we must also make up for the inactivity of many years.

Ideally school construction should remain within the local province. But revenue troubles—and sometimes inertia—have precluded that possibility. And the child who can attend school for only half a day, or who shares a crowded desk, is not going to be helped by all this talk about whether a shortage exists, or whether Federal aid will mean Federal control.

The one solution is an emergency Federal program. The President suggests $1.3 billion over a 4-year period. That would eliminate the backlog. Then the Government could withdraw and leave the business of building schools to the States. Clearly this is the intention of the administration.

In Kansas City we have been particularly fortunate in meeting our school problem. But that should not blind us to the critical status of education in other sections. We can't wish it away by simply denying that there is a shortage. For here is a vital issue which affects not only our children but the future welfare of the entire Nation.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. WITHROW. Mr. Speaker, I ask unanimous consent to extend my remarks and to include therein an editorial taken from the Hillsboro Sentry-Enterprise, Hillsboro, Wis., of October 25, 1956:

FOREIGN AID

Most Americans are now resigned to the fact that aid to foreign countries is an essential part of our foreign policy. We have to help most nations because if we don't they'll fall for Soviet promises and become part of the Communist bloc. National legislators of both parties have accepted that view and most of them vote for at least some of the foreign-aid bills. However, even the most enthusiastic supporters of foreign loans, grants, or gifts generally have reservations regarding the effectiveness of American aid. Many, in fact, are disappointed in that American dollars shipped overseas often are fed into the industrial combines that compete with American factory production or become part of the personal fortunes of the ruling classes.

There is just reason for at least some of the criticism about the American program

of giveaway. Some embittered isolationist could explain his criticism this way:

The little land of Bergergartenheim has tough sledding—because of war damage or poor currency or political mismanagement. There is depression in Bergergartenheim—conditions aren't like they were in 1913. And so the news travels across the ocean and some Congressman is persuaded that it is his duty to tell the American Government how bad conditions have become in Bergergartenheim. He paints a sad picture. So heartrending is his story that soon the narrator and his fellow Congressmen are knee deep in tears. They are moved, indeed—and there follows an appropriation of a paltry few millions (it being economy day) in assistance to the deserving people of Bergergartenheim.

The money goes quickly overseas, for nothing travels faster than money these days. The poor Bergergartenheimers immediately begin removing the rust from machinery and washing the factory windows. Blueprints come out of cabinets. Newly bought steel is shaped by whirring lathes. The work goes on and on, and eventually a salesman finds a market in America for the goods produced.

Industrial products of Bergergartenheim are soon on the shelves of American shops. With the goods comes sales promotion and advertising telling how superior it is to anything that might be made in America. So convincing is this that within a matter of months thousands of Americans feel they just must buy the superior products of Bergergartenheim or they will have nothing worth looking at.

And so our picture becomes more understandable as we analyze its components. The American taxpayer has dug down into his pocketbook to help the poor people of Bergergartenheim—and, oddly enough, to build an efficient, competitive industrial machine. And as he buys the importations here he adds some more to the profit of the Bergergartenheimers while, at the same time nipping away a sale of some similar American product.

What is the net result?

1. America has saved Bergergartenheim from becoming a ghost area.

2. It has revived its industry to provide competition for American business and American labor.

3. The taxpayers have paid out to help set up an industrial plant whose sales here take more money from Americans while hurting our own industrial markets.

4. Worse still, those Americans who unwisely journey to Bergergartenheim find they are snubbed and looked at as something that is inferior to a true Bergergartenheimer.

This is the round of assistance in too many cases. And when Americans total up the whole experience, they find themselves crying over taxes and lost markets almost as strongly as they cried for the poor people of Bergergartenheim.

Smiling Passport Photos

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD I include therein an article from the New York Herald Tribune of February 27, 1957, which I am sure will be of interest to all Members of Congress:

SMILING PASSPORT PHOTOS

Whatever other useful functions they serve, passport photos have never been regarded as the epitome of art. This is said with no tinge of regret, for the truth is that most people expect very little of passport photos, least of all a good resemblance. Now, however, along comes an authentic expert on the subject, Miss Frances G. Knight, passport chief of the United States. Miss Knight has been looking through files of passport photos, a job that would try anyone's soul, and she comes up with the suggestion that travelers keep smiling.

Well, it's an idea. Of course, it raises the question that so many people ask as they travel through life: "What's there to smile about?" But surely tourists, particularly at the outset of their journeys, have every reason to don a cheerful mien. The situation might be different upon their return, when all the bills have been paid and the necessity for returning to work raises its unwelcome head. On the other hand, a passport is the closest that most of us get to appearing on a Federal document, aside from the income tax form. And in both cases a certain degree of solemnity is not altogether inappropriate.

Miss Knight deserves all possible support in her pleasant crusade and we cheerfully wish her the best of luck with it. But she has her work cut out for her. Some things in life are stern, inflexible and unyielding. And passport photos may well be one of them.

Stratton Has Right Idea

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. MICHEL. Mr. Speaker, our good Governor, William G. Stratton, in a recent speech in St. Louis discussed the problem of Federal aid as it has been proposed to alleviate the school shortage. The Governor of the great State of Illinois is in the position to know whereof he speaks.

The following editorial from the Peoria Journal-Star sums up the Governor's remarks very simply. The people of Illinois do not stand to gain a thing from Federal aid to education:

[From the Peoria Journal Star of February 26, 1957]

STRATTON HAS RIGHT IDEA

Governor Stratton has the right idea about the pending legislation for Federal aid to education—there isn't any benefit in it for the people of Illinois.

In a speech at St. Louis last week, he pointed out that both Illinois and Missouri would contribute far more to a Federal aid program than they would receive in benefits from it, thereby only intensifying the seriousness of the educational problems which exist in both States.

"In Illinois, which pays nearly 8 percent of the Federal income taxes, the Federal grant based on the need formula would be $11,125,000," the Governor declared.

"To receive that, Illinois taxpayers would contribute $23,595,000 in Federal income taxes, and would be required to match the Federal so-called gift with another $22,253,000, in Illinois tax money."

He said that the Federal aid program would take $8,417,500 from Missouri in return for a $4,885,000 grant to Missouri schools. Missouri taxpayers would have to match $6,424,000 in local money to participate in the program.

"It is inconceivable to me," the Governor asserted, "that in these times of prosperity that a State, if it sincerely desires to do so, can fail to meet its own school problems without help from the Federal Government."

Governor Stratton asserted that State aid to the schools had been achieved without extending the State's control of local school operations. It would be unlikely that a similar accomplishment would accompany added Federal aid.

As far as Illinois and Missouri, and a great many other States, are concerned the Federal aid program merely will intensify school building problems instead of solving them by draining money from these States to build schools in others and to finance the high administrative costs which go with any Federal program. Federal aid is no way of solving the school building problem in Illinois.

Not for the South Alone

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include a particularly well-reasoned editorial which appeared in the Staunton News Leader, Stauton, Va., on February 27, 1957.

I commend the editorial to all citizens, of whatever section of the United States, who are sincerely interested in the preservation of individual liberties and due process of law. It points up the urgent need for wider understanding of the tyrannical implications of so-called civil-rights legislation now under consideration in the Congress.

The editorial follows:

If the civil-rights bills are so dangerous to liberty and self-government, a fact which should be evident to anyone who reads them, why is it that opposition to their enactment comes only from the South?

Are northerners and westerners and their Congressmen indifferent to the tyranny potential of these bills and confident that because they are aimed at the South they would never be applied in their sections of the country?

Are these measures simply bald appeals for the Negro vote, or do they steam from a sincere concern for the rights of all Americans, regardless of color?

There are no clear answers to any of these questions, for there is no doubt a mixed motivation behind the civil-rights bills. Some of their advocates are sincere, some no doubt see them as politically helpful, some have given plenty of evidence of being haters of the South. Whatever the causations behind persistent efforts to enact such dangerous legislation, the cure which Congress is asked to prescribe is so much worse than what discrimination is being practiced (and it is not confined to the South) that the absence of any but southern voices in opposition is astounding.

Representative BURR P. HARRISON, of this district, reports that some of his constituents

to whom he sent a questionnaire on issues before the current session of Congress showed skepticism over his brief summary of new Federal powers which would be created by these measures. So in his column in this and other newspapers, "Your Congressman Reports," he quoted passages from text. Rather than reprinting these passages, which should be required reading for anyone presuming to take a position on the bills, we brief them again:

A Federal commission with the function of protecting the civil rights of citizens on account of race or religion would be set up, with power to investigate claims of discrimination and subpena persons and records. The Attorney General would be empowered to bring law suits for recovery of damages for discrimination, expenses of such suits to be paid by the Government (taxpayers). Sentences to prison could be pronounced without jury trial. Persons could be charged and convicted not only for committing discriminatory acts, but for mere intent to commit such acts. Defendants would have to appear and defend themselves at their own expense, wherever the commission or its agents choose to require.

Enforcement officers and complainants, under pressure from the National Association for the Advancement of Colored People, from partisanly inspired commission members, Federal officials or Members of Congress, or for blackmail, could harass any employer on trumped-up charges of discrimination and at the least put him to heavy expense for defense. Tyrannically administered, the proposed laws would be the handmaidens of a Gestapo composed of an army of enforcement agents.

Representative HARRISON showed conclusively by citing Supreme Court decisions that the powers proposed for the Federal civil-rights commission and the Attorney General could be invoked without jury trial.

Virginia's attorney general, J. Lindsay Almond, Jr., on Tuesday told the House Judiciary Subcommittee which limited its hearings on this vicious legislation to only 4 days, that the bills are "shockingly punitive in purpose and design," and "not conceived in response to demands of the national interest, but engendered in hate and motivated by political expediency." He warned that the commission which would be created should the bills be passed would grow into another permanent "tentacle to the Federal octopus" and would choke off the last vestige of States rights. They would, he said, "inflict on some individuals the same unwarranted economic pressure they are supposed to prohibit against others.

One southerner after another has pointed out to the House subcommittee the tyranny potential of the civil-rights bills. Senator THURMOND, Democrat, of South Carolina, told the subcommittee:

"In other countries tyranny has taken the forms of fascism, communism, and absolute monarchy. I do not want to see it foisted on the American people under the alias of civil rights.

"Real civil rights and so-called civil rights should not be confused. Everybody favors human rights. But it is a fraud on the American people to pretend that human rights can long endure without constitutional restraint on the power of government."

In an address yesterday to the National Association of Secondary School Principals in Washington, Virginius Dabney, editor of the Richmond Times-Dispatch, who has always been a friend of the Negro, said the civil-rights legislation "frightens and dismays the South—and should frighten and dismay the whole country."

Where are the spokesmen from other sections of the country who must see the vicious potentialities of the civil-rights bills? They are as silent as the grave, perhaps because, as Mr. Dabney said of the majority in Congress, they are "so bemused by the phrase 'civil rights' " that they are reluctant to speak out or vote "against anything that bears that label, no matter how dangerous its potentialities."

Since the House has previously passed this type of bill it may do so again. If so, it will remain for southerners in the Senate to block it by filibuster. It is unbelievable that Americans could ever be willing to create official instruments for tyranny patterned after institutions which our forefathers left Europe to escape, but that is what those outside of the South will be doing if they permit these bills to be enacted.

Trees Make a Forest

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial of February 22 from the Omaha Daily Journal-Stockman:

TREES MAKE A FOREST

Perhaps it is human nature not to be able to see the forest for the trees, as the old saying goes. But this very human failure is costing Americans their historic freedoms and opportunities—piecemeal and one by one. Absorbed in our own little words of special interest, we fail to see the forest of socialism that is engulfing our country.

The above would seem to be the message offered us by a spokesman for a group of independent farmers in Michigan, who is quoted as saying:

"Our system of government may not be perfect, but it is certainly the most perfect yet devised by man and has brought more benefits to more people than any other the world has ever known. Even so, all that we have done in the past only brings us up to the present; it gives us no assurance for the future.

"In order to seize this opportunity which lies before us," he continues, "we must never forget the difference between a free nation and a slave nation. We must never forget that in a free nation the people accept responsibility for their own future and their own welfare, while in a slave nation they turn this responsibility over to government. And it makes no difference whether this government is the autocratic rule of the dictator or the state control of communism or the planned economy of socialism.

"We must bring an end to the undeniable trend among us in recent years to seek security rather than opportunity; that is, a security provided by government rather than by our individual efforts. * * * As we consider the past and prepare for the future, let's never forget that the only real security a man can have in this world is the opportunity to do something for himself with guarantee of certain inalienable rights that cannot be taken away from him. * * *

"If we forget this and are deluded by the promise of something for nothing, if we accept the government'll-take-care-of-you philosophy, if we surrender our freedom for a mess of socialistic pottage, then we have betrayed our heritage and all our battles for freedom, from Bunker Hill to Iwo Jima, will have been nothing more than a travesty and a farce."

Something to think about, anyway, isn't it? We can't have independence, freedom of action and choice and the opportunity to progress on our own merits, all traditional American ideals, if we turn our housekeeping and the financing thereof over to a government bureaucrat.

"He who pays the piper calls the tune." Guess who does the dancing.

Address by C. D. Curtis, Commissioner, Bureau of Public Roads, United States Department of Commerce, at the Second Annual Convention of the National Crushed Limestone Institute, Inc., Hotel Statler, Washington, D. C., January 24, 1957

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am most happy to include an address by C. D. Curtiss, Commissioner, Bureau of Public Roads.

"Cap," as he is affectionately known to all of us, has made a splendid record in his field of endeavors. He is one who is honest and sincere and his advice is given freely showing results of many hours of clear thinking. He is a great public servant. I am happy to include his remarks:

Mr. President, Mr. Robertson, ladies, and gentleman, I am always happy to appear on a program with Jack Robertson regardless of which hat he is wearing. I think the last time he was just Director of Highways of the District of Columbia and we appeared before a meeting of the American Society of Civil Enginers. One other time I remember he was an official of the North Atlantic Highway Officials—that is a longer name than this institute.

I have long been a dues-paying member of the organization which he honors by being its president. In fact, over a rather extended career I have attended many conventions but I perhaps remember the first one better than many of the others. It was back in 1913 when the American Road Builders' had a convention in Detroit. I am looking forward to attending the one in Chicago. I knew I was going to get this commercial in somewhere and I know that I am going to witness a tremendous change in the exhibits.

I want to thank you, also, for the kind words you said about the Burau of Public Roads and to reciprocate by saying we consider it a privilege to cooperate with you and your associates in the Highway Department of the District of Columbia.

It is a pleasure to meet with the members of your organization and discuss some of the mutual problems to be faced in carrying on the great national highway program.

Your members produce a product that we will need in enormous quantity. As your President indicated, I entered the highway field back in the days of the slip scraper, when horsepower was really horse power or mule power, shortly after graduation from college. At that time, the principal highway materials were crushed stone, sand, gravel, asphalt, tar, and cement. They still

are, and there is every indication that they will continue to be the principal constituents of highways. No material is required in greater quantity than crushed stone.

The name of the person who first used broken stone to make a highway surface is lost in the haze of antiquity. We do know that the Romans built and used broken stone roads to extend, control, and economically develop a great empire. The network of roads that radiated from Rome had great economic as well as military significance.

Highways are even more important to us today. We need them not only for national defense but also for the support of the industrial production facilities essential to sustain the high level of economic activity needed to support the defense of the Nation and to keep our country strong and prosperous. In one respect, we will not imitate the Romans. They used people captured in war and their own soldiers to produce the broken stone for roads. I am sure that your gentlemen know of a better way.

Before discussing some matters relating particularly to your business, it may be of interest to outline the scope of the new highway program.

In 1954, President Eisenhower addressed a dramatic appeal to the conference of governors for cooperation in obtaining authorization of a greatly enlarged highway program to meet the needs of the Nation. Subsequently, specific proposals were made in a report to the President, and Congress by the President's Advisory Committee on a National Highway Program. This is the so-called Clay Committee that Mr. Robertson referred to.

Although the Congress considered legislation in 1955 to implement the President's proposals, none was enacted that year although a bill did pass the Senate. However, the extensive hearings had convinced the Congress of the magnitude and urgency of our highway needs and of widespread public support for such a program and last year the Federal-Aid Highway Act of 1956 was passed and approved by the President on June 29, 1956.

The 1956 act set the stage for the greatest roadbuilding and highway-improvement program in all history and also provided funds to cover the Federal share of the cost. This huge 13- to 15-year program for the National System of Interstate and Defense Highways will provide a 41,000-mile network of modern roads and expressways connecting all of our States and linking nearly all of our cities of more than 50,000 population. The importance to national defense which the Congress attaches to this system is indicated by the addition of the word "defense" to the name of the system, which was first authorized in the Federal-Aid Highway Act of 1944.

Twenty-five billions of Federal funds for the Interstate System are authorized for the 13-year period 1957–1969. This amount, plus State contributions will be used to construct a coast-to-coast system designed to provide for the traffic anticipated in 1975, when more than 90 million vehicles are expected. The Interstate System will carry millions of these vehicles smoothly across the countryside. Traffic will flow into and around large cities over safe, divided expressways of four to eight lanes, protected by carefully planned access, controlled access, to which Mr. Robertson referred. Some of the lightly traveled miles of this system will be two-lane roads, but the basic design and right-of-way requirements of these sections must allow for additional lanes as traffic increases.

While the long-range program for the Interstate System has been more publicized, the regular or ABC program was not neglected. In fact, the funds for this program were very materially increased by the 1956 act. For the 9 years following the close of World War II the regular program averaged $500 million per year. The 1956 act increased the authorization for fiscal year 1957 to $825 million and authorized funds for the fiscal years 1958 and 1959 in the amounts of $850 million and $875 million, respectively. These funds are divided as follows: for the primary system, 45 percent; for the secondary system, 30 percent; extensions in urban areas, 25 percent.

Both improvement of the Interstate System and of other classes of Federal-aid work are to be made according to the plan of cooperation with States established by the early legislation of 1916 and 1921 which established certain principles. These are as follows:

Cooperation with State highway departments.

Federal-aid funds to be expended in the improvement of selected systems, now totaling 755,000 miles of which 235,000 is primary and 520,000 secondary roads.

Initiative in the selection of systems, route locations, and projects for improvement rests with the States.

State highway departments to make the surveys, prepare plans, let contracts, and supervise construction, subject to approval of the Bureau of Public Roads.

States maintain at State expense highways constructed with Federal aid.

State funds are required to match Federal funds. Normal matching is 50–50, with a sliding scale in the West where there are large areas of public lands. On the Interstate System, the Federal Government will pay 90 percent of the cost.

Federal-aid funds apportioned among the States under formulas stated in the law involving the factors of area, population, and mileage of rural delivery and star mail routes. The law further provides that starting in 1960 interstate funds will be apportioned on the basis of estimated cost to complete the system. This method will permit all States to progress the work at a uniform rate.

You undoubtedly want to know what this program means to you as producers of crushed stone. Certainly, it will create the greatest demand for highway materials, supplies, and equipment ever known. Highway construction of all kinds in the 13-year period 1957–1969 will require about 50 million tons of steel, 1.5 billion barrels of cement, over 100 million tons of bituminous material, and almost a billion tons of aggregate.

We estimate that in 1955, 201 million tons of aggregate were purchased from plants such as yours for highway construction. In 1957, the demand on commercial producers should rise to 225 million tons. It is expected to increase to about 300 million tons in 1960, and remain at about that figure through 1967.

I am going to ask you a few questions but I don't expect answers right now.

How well are you prepared to meet this demand? Does your plant need modernization? Is it efficiently organized and operated? Would it pay you to increase your capacity in view of the assured increased and continuing demand? These are things to think about now. The demand for your product is not a vague, uncertain possibility of the future. It is now at hand.

Are there one or more weak spots in your processing of stone from the quarry face to the storage bin? Possibly there is and you don't know it. Is some other producer using equipment or methods that would enable you to increase output or reduce costs? We are interested in your knowing the answers to such questions. I am sure there will be some of the latest methods of stone crushing and all the tools that you use out at the show. That is a free commercial.

Back in 1918 and 1919 the Bureau of Public Roads made a detailed study of direct costs of producing broken stone at 23 selected quarries, ranging in size from small to large. We wanted to know the cost per ton for drilling, breaking boulders, delivery to crusher, crushing, all related to kind of rock and size of operation. There was a surprising spread in costs per ton for each of the detailed operations, due partly to the nature of the rock deposit and wage rates, but it was quite clear that suitability of equipment and efficiency of management played a big part. The highest total direct cost per on was six times that of the most efficient plant. In other words, it was costing six times as much in one quarry that we studied as it was in a much more efficient quarry.

We believe that our report was quite useful to quarry operators in evaluating the efficiency of each detailed operation and in reducing costs. The public eventually profited through reduced costs for its roads.

The data that we obtained are now obsolete and, with a large highway program on our hands, we are in no position to repeat the study. However, your group might wish to consider a study as an institute activity. Our early report would serve as a guide in planning the work.

Your product is an excellent highway material and has widespread use. Like other materials, however, it must meet certain specifications and these specifications must be revised from time to time if we are to obtain the greatest value from the use of the materials. As we learn more about proper mixes, more about bitumens, cement, these specifications must be revised.

The writing of these specifications is, of course, the highway engineer's problem but we feel that you, as an industry, can be of great assistance to us in making these specification revisions. You, the producers, know your material better than anyone else and, in addition, you know the economics of the production, or you should know, of the material. You, therefore, are in an excellent position to advise the highway engineer on both the improvement of the quality of the material and the economic impact of any change in material use. We, therefore, ask for the support of your industry in improving the safety, durability ,and construction economy of the highways built with your products. We are concerned, of course, about all three but above all we are concerned about the safety of the highways which we build.

In addressing a group such as this, I would be remiss if I did not also take advantage of the opportunity to point out some of the ways in which you, as individuals, can be of assistance in furthering the progress of the overall program. The aim of the program, an adequate highway system, has, of course, the support of all segments of our population. Everyone wants relief from the highway conditions that exist today. However, there are problems to be faced and opposition to certain phases that must be overcome. Our success—and when I say "our," I mean the State highway department and the Bureau of Public Roads, and the contractors, producers, everyone concerned with the program—that our success in carrying out the program on schedule, will depend in considerable measure on the support given by businessmen and civic leaders to moves made to give the State highway departments what they need to do the job.

The Federal Government has authorized a great highway program. Payment of 90 percent of the cost of the Interstate System with Federal funds is assured. The general location of the system and the standards are agreed upon. The standards for the Interstate System are adequate but not unduly high. Travel lanes are 12 feet wide, outside shoulders at least 10 feet wide and medians in rural areas at least 36 feet wide. Many States are now building expressways of

higher standards than the minimum required for the Interstate System.

In my opinion the most important and perhaps least understood standard is the one providing, as required in the 1956 act, for control of access. I think of controlled access as planned access. I certainly was pleased to learn about this movie which I think will be of tremendous help in acquainting the public with the benefits, in fact, the necessity, for controlling access on our main highways. I think of controlled access as planned access and planned access means that the State highway department in designing the highway plans the points of access and exit so that vehicles may enter and leave the main highway at certain points safely without interference with traffic in the through lanes. Experience on the mileage we have now indicates that control of access on arterial highways reduces accidents by two-thirds.

While the safety feature alone would justify control of access, it is the only way in which the traffic capacity of the highway may be preserved. Thus we must design these heavy traffic arterial highways with control of access or face the certainty of early obsolescense—which we cannot afford.

Naturally, in a program of this size there are obstacles to be overcome. There is a general shortage of engineers and technicians. In many instances highway engineers are leaving State highway employment to take better-paying jobs. This should not be allowed to continue. Even if it is stopped, however, the total available supply of engineers is still short of the requirement under present engineering methods and procedures. This fact was foreseen at least 2 years ago. The Bureau of Public Roads at that time undertook, in cooperation with State highway departments and manufacturers, to develop the use of the new electronic-computing devices in highway-engineering work. This effort has been most successful. At least 25 State highway departments and several highway consulting engineers have either installed or ordered electronic computers. The time required for earthwork computations, the first area of development, ranges from 5 to 10 percent of the time required by manual methods. Other engineering computation can be accomplished with as great or greater savings in scarce engineering time. Other new tools and new methods such as the use of photogrammetry, the use of new drafting and reproduction methods, the standardization of bridges and bridge details are also being developed. The adoption of these new tools and new methods should go far in alleviating the engineering shortage and you as substantial members of your community can do much to assist in their adoption by making your community aware of the problem and the facts as they actually exist.

Every State is in a position to match Federal funds in some degree, but some cannot match all of the funds in the years for which they are authorized and it is desirable that this be done. Congress has indicated that the Interstate System should be completed as nearly as practicable in 13 years. State highway departments are now preparing estimates for a period of years ahead for presentation to their legislatures. These needs must be met if the program is to proceed on schedule.

Additional State taxes may be necessary. There may be questions as to the equity of proposed highway-user taxes. Research is now under way that should indicate more definitely the relative tax burden of each class of vehicles. When this work is completed, any inequities found in the motor-vehicle taxation can be corrected but, in the meantime, we should proceed on the basis of present knowledge. There is already a large store of knowledge on the effect of various classes of vehicles on highways. We need the Interstate System now.

One of the biggest problems looming before the Bureau and the States is acquirement of rights-of-way with power to control access. Much of the Interstate System will be on new location. Each State must acquire parcels of land on a scale that only a few have known before. They must have the power to control access to the routes—a departure from the traditional practice of permitting landowners to enter where they will. Forty-five States have authority in some degree to control access, but not all of the governing laws are adequate. More adequate authority is needed to gear them to the expanded highway program. Steps should be taken quickly to fill gaps on State legislation.

To acquire parcels of land on the scale needed will require an organization of considerable size in State highway departments applying businesslike methods. There must be experienced appraisers, negotiators, title examiners, and people competent to prepare the numerous legal documents. They should be armed with authority to acquire land without long delay. They should have funds to acquire land well in advance of construction to avoid skyrocketing prices.

Some States are deficient as to right-of-way organization, legal authority to acquire land, and funds with which to do it. Legislative action is needed. Failure to act means delay in getting highways needed now and a substantial increase in cost, strictly in the right-of-way.

The law permits an advance of Federal funds of 90 percent of the cost of rights-of-way for interstate projects that will be placed under construction within 5 years. It is not necessary to have complete construction plans ready to take advantage of that provision in the law.

The new legislation requires each State highway department planning a major Federal-aid highway improvement going through or bypassing a city or town to hold a public hearing and consider the economic effect of a highway on the proposed location. There will be full opportunity for presentation of views of all concerned. Civic and business groups should be represented at these hearings. If you like what your highway department is doing, if you feel that they have reached the best possible solution, or even if they have reached a reasonable compromise between conflicting interests, you should appear at the hearing and give them your support. Those that favor the State proposal should use the hearing as a sounding board, as well as the objectors and the disgruntled. It is too often the experience at public hearings that only those who are opposed to something that is being proposed appear to voice their objections. The ones who are in favor of it take it as a matter of course that the project is going through, so they don't appear. You gentlemen, as individuals in your own communities, ought to help your State highway departments by appearing at these hearings and supporting, when you feel that you can, the projects which they are proposing.

Although a few States because of lack of previous planning or budgetary difficulties have not made any material progress on the interstate system, the program as a whole has made most excellent progress. Six States have obligated all of their 1957 funds and are well into their 1958 funds. A total of $742 million of Federal funds has actually been obligated since July 1, 1956, for engineering, right-of-way acquisition, and construction. I am going to interpret some figures I picked up this morning. Up to January 14, 1957, projects with a total cost of $993 million have been authorized since July 1 for interstate system improvements, including 682 bridges and 762 miles of construction. Although this is an excellent start, we are working with the slower States to speed up their program.

Excellent progress also is being made in carrying forward the Federal-aid primary, secondary, and urban programs. Authorizations for these programs totaled $700 million for the fiscal year ending June 30, 1956, and $825 million for the fiscal year 1957. Federal fund obligations totaled $751 million during the 12 months ending December 31, 1956. The authorized projects had an estimated total cost of $1.5 billion and provided for 23,030 miles of Federal-aid primary, secondary, and urban highway improvements, including 4,020 bridges.

There is no question that the people of the country want a main highway system, built to the highest modern standards. The Federal Government stands ready to take prompt action on all proposed projects and will supply 90 percent of the cost on the interstate system. Your State highway department should be properly equipped with every tool legal and financial it needs to do its job. I urge you to support them.

The Great Atomic Role of the University of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, February 27, 1957

Mr. WILEY. Mr. President, I have been pleased to note an outstanding issue—a Founder's Day issue—of the Alumnus magazine of my alma mater the University of Wisconsin. This issue, commemorating the founding of our great State university on February 5, 1849, summarizes the university's role in the atomic age.

In article after article, the activities of industrious components of the university are outlined in a wide variety of breathtaking pursuits.

The subjects range from assistance in Madison in the construction of the world's biggest atom smasher to research into solar energy, and study of other forces which, when fully and peacefully harnessed, may revolutionize for the better the life of man.

I have selected several such articles as an indication of the great work done by the university. These include excerpts of outstanding presentations by:

(a) The Honorable Earl D. Johnson, former Under Secretary of the Army, now senior vice president of the General Dynamics Corp.

(b) Prof. Farrington Daniels, recipient this coming April of American chemistry's highest award, the Priestly medal. He is represented in this instance by excerpts from a 1956 convocation address.

(c) The able editor of the Wisconsin Alumnus, George Richard.

I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

POTENTIAL UNLIMITED

(By Earl D. Johnson)

About 50 years ago the University of Wisconsin, under the leadership of a small group of brilliant men, set in motion a social

experiment which was destined to have a profound effect upon the State and eventually upon the entire Nation.

This, as you all know, was the Wisconsin idea, a product of the combined thought and effort of Charles R. Van Hise, Richard T. Ely, John R. Commons of the university and governor, later Senator Robert M. LaFollette. The Wisconsin idea expanded to encompass what amounted to a complete regeneration of a society which had long since proved itself unable to cope with the social and economic problems of the industrial revolution.

In a very brief period, the industrial revolution had built a complex, interdependent economy in a society which continued to be governed by the principles and precepts of an earlier agrarian age. Yet few individuals of that day had any comprehension of the vast social implications which were flowing from the immense productivity of the machine.

There was a notable lack of analysis and planning for the future. Even those of our grandfathers' generation, who were disturbed by the evidences of extreme social imbalance in post Civil War America—the bloody strikes, the chronic depressions, the slums, the agrarian distress—either resigned themselves to a kind of economic-fatalism or followed the lead of Herbert Spencer in borrowing and applying Darwin's evolutionary theories to justify the survival of the fittest in society.

Although there were sporadic political protests and well meaning but highly theoretical analyses of the fast accumulating problems, nothing practical was advanced until the Wisconsin idea gave birth to the progressive movement. I need not spell out in any detail the progressive program, nor attempt to enumerate its many specific accomplishments. Suffice it to say that the Wisconsin idea was not only a positive and constructive force for its times but an enduring force for the future. Indeed much, if not all, of the social and economic legislation of the 1930's had its inception in this remarkable joining of the university with government and industry.

In my opinion, the Wisconsin idea was a logical analysis of social problems, and a practical application of far-sighted remedial legislation. It was, in all respects, a systematic plan for the future.

Those of us who were privileged to be graduates of such a great university could not help but be influenced by this illustrious example of leadership. Educated as we were in such a fine liberal tradition with its belief in social and economic progress, we look again to the university for leadership and understanding as we enter another era.

For American society is again in the throes of transition brought on by another revolution—the atomic revolution—which may well have an even greater impact than the industrial revolution.

What does this mean to us as individual Americans?

And especially, what does this mean to the university whose past contributions did so much to bring order and meaning out of the chaos of the industrial revolution?

These are two very difficult questions which deal with futures and which will doubtless occupy some of our best minds in the years to come. But as an interested layman with some knowledge of nuclear energy gained from my experience in Government and industry, I should like to comment generally on various aspects of the atomic revolution. I do this merely in the interest of the common understanding, so that we may evaluate some of the more obvious social and economic changes which are bound to follow.

Only through the analysis of future problems and potentials may we prepare to counteract the imbalance, the turmoil and the waste which characterized the industrial revolution. That kind of social and economic irresponsibility we must avoid at all cost because we are dealing now with forces so powerful that they stagger the imagination.

As John Jay Hopkins has stated so eloquently, "We live in an age of unfolding marvels—and of increasing anxieties. The world is uneasily balanced between the limitless opportunities of creative atomic energy on the one hand, and the fathomless destruction of atomic weapons on the other. It behooves all of us, therefore, to think and act in the broadest possible context. Above all, we must as individual persons and as individual nations cultivate and develop a definitive sense of common understanding."

• • • • •

The destructive aspects of nuclear energy are too well-known to require any review beyond the thought that worldwide nuclear war would in all probability not only destroy our civilization but make impossible the development of any future civilization. Harrison Brown has noted that the world is now existing on resources which can be extracted from the earth only with intricate and powerful machines. If nuclear war destroys these machines or the facilities to build them, men will then be unable to reach the materials out of which a new civilization would be built. Our arms would be too short.

It is obvious, then, that only through continued maintenance of our capacity for massive nuclear deterrence may the world continue to enjoy a measure of present security and a possibility for future survival.

Moreover, the peaceful or creative side of nuclear energy is so rich and so productive that it may in time eradicate the basic causes of war, purchasing for the world that security which can't be bought by atomic or hydrogen bomb stockpiles.

If we consider nuclear energy as merely a new power source, such as coal or oil or falling water which powered the Industrial Revolution, there is abundant evidence that we are, indeed, living in a new and revolutionary age. For nuclear power, in which I include the probability within this century of controlled nuclear fusion, is virtually inexhaustible. Most land areas of the world seem amply endowed with thorium and uranium, and all the oceans are potential resources for the hydrogen-helium process.

Indeed, if the power from the fusion of hydrogen atoms to form helium can be controlled, the world will have a power source to last for a billion years. With controls of atomic fusion, a single gallon of sea water might provide the same energy as 300 gallons of gasoline, and ships—to cite only 1 example—will draw limitless propulsive power from the very oceans in which they travel.

This possibility alone may and should, I think, alter drastically the traditional economic and military concepts of national strength and wealth based on fossil fuel resources that are now dwindling under the tremendous energy demands of a world which is as yet only one-fifth industrialized. In fact, a striking paradox exists today where atomic utilization and technology is retarded in the United States simply because of our great wealth in coal and oil, fuels which are irreplaceable and which in no way approach the potentials of atomic energy.

It is not inconceivable, then, that nations which have not as yet developed industrial societies, because of nonexistent or inadequate fuel sources, and whose foreign credit balances cannot be exhausted on the luxuries of costly imported coal or oil, will leap directly into the atomic age—while America and other coal-oil rich nations are still utilizing conventional fuels for power.

Atomic energy is not, as yet, competitive throughout the United States, but it is certainly competitive with conventional fuel in many other regions of the world. Therefore, it seems the sheerest of folly to me for Americans to waste precious economic and military time in what are essentially—from a world standpoint—pennywise arguments about competitive costs of fossil and atomic fuels.

Only an extremely provincial mind would restrict its thinking to the power situation in America today. Geographically, America is only a small part of this world. Utilizing the worldwide [and, I might add, the only correct] frame of reference, atomic power, even in the present, admittedly crude state of reactor technology, is economically competitive or better than competitive with all conventional forms of power.

This cost paradox could leave the United States, now the most advanced industrial state in the world, a laggard in the atomic era at a time when its coal and oil resources are being seriously depleted.

Commercial power is, however, only one aspect of the atomic revolution. Reactor-byproducts, such as radio-isotopes or transmuted elements, have already achieved consequences of revolutionary significance in agriculture, medicine, biology, and in transportation and industry.

Perhaps the most striking advances have been made in the study of two fundamental biologic processes, photosynthesis, the hitherto mysterious method whereby plants with the aid of sunlight convert carbon dioxide (CO_2) into sugar, and what might be properly termed protein-synthesis, or the equally mysterious method whereby tiny submicroscopic living particles are formed from organic chemical compounds. The unique properties of radio-isotopes have accounted for great advancement in these areas, and in the investigation of basic cell processes.

These investigations promise to yield much in the eventual control of cancer and other cell growth disorders, as well as the ultimate synthesis of protein itself.

Manmade photosynthesis and protein synthesis, of course, could also do much to improve the world's food supplies.

Also of great significance is the employment of radiation to accelerate mutation in both plants and animals. Although most mutations are bad, or of no use, occasionally one is of great value: the progenitor of a new and improved breed. In plant breeding, more improved species have been developed by exposure to radiation in the past decade than have occurred over the past century.

In medical research, atomic radiation of tumors is fast becoming one of the most effective agents in the battle against cancer. As a measuring device, radioactive tracers are proving of immense value in the petrochemical, chemical, machine tool, and other manufacturing industries.

Nuclear energy has already proven technically feasible for marine transportation with the successful operation of the world's first nuclear-powered vessel, the U. S. S. *Nautilus*. The *Nautilus*, as you may know, has now steamed over 55,000 miles before requiring new fuel. Recent studies indicate that nuclear marine propulsion is at present economically feasible for bulk carrying of freight low in cost per unit of volume. And as marine reactor power plants become more efficient with improved designs, we may expect that atomic-powered merchant and passenger vessels will rapidly displace many oil and coal powered ships. From 1960, nuclear energy will power all United States Navy capital ships.

Air transportation, too, bids fair to being revolutionized by nuclear power. An atomic-powered plane, which General Dynamics is currently developing, will be a reality. Practically limitless range, greater power and reliability, and independence from the atmos-

phere, are the vast improvements which atomic power will bring to air transport.

To the University of Wisconsin and to other American universities must go the major credit for many of these great advances. Although many major programs have been initiated and sustained by the Government and by industry, they have been carried out by university-trained scientists and engineers and frequently in university-owned laboratories.

Moreover, the university laboratory has acted as the prototype for all Government laboratories and has been a powerful force in determining the character of our vast national research effort. While making outstanding contributions in applied research and technology, the universities also continue to carry on, oftentimes without government or industry encouragement, those basic or pure research efforts for which no immediate application is visualized, but which form the essential matrix for all future scientific and technical, and hence, social and economic progress.

The University of Wisconsin, as it always has in the past, is playing a significant role in both the education and training of scientists and engineers and in nuclear research. Twenty research groups involving 15 university departments are studying, with the aid of radioactive isotopes, chemistry, soils, plant pathology, biology, zoology, enzymes, botany, entomology, physics, and several areas of medicine.

Of particular interest and importance is the research in physics. The university has just completed an advanced electrostatic generator which will be used in high-energy research. The university's first such machine, by the way, was spirited away in the dead of night under great secrecy to Los Alamos by the AEC during the early days of the war. The new electrostatic generator was designed and built by a university group working under Dr. R. G. Herb. (See p. 26, this issue.)

Midwest Universities Research Association (MURA) composed of eight Midwestern universities, including the University of Wisconsin, is seeking to build in the Midwest a multibillion-volt atom smasher costing millions of dollars.

Dr. Farrington Daniels, chairman of the chemistry department at the university, received last year the William Gibbs award for his atomic energy work during World War II. This year, Dr. Daniels was awarded the Priestly medal of the American Chemical Society for distinguished service to chemistry.

Dr. David Bradley, a University of Wisconsin alumnus, wrote the famous book on atomic radiation effects, No Place To Hide.

Dr. Edgard Chester Creutz, noted physicist now with General Dynamics as director of research of the General Atomic Division and director of the division's John Jay laboratory for pure and applied science, obtained his bachelor of arts degree in physics and mathematics from Wisconsin in 1936. He remained at Wisconsin until 1941, for a year as a research associate and later as an instructor in physics. He played a leading role in the World War II development of the atomic bomb and until recently was head of the department of physics and director of the Nuclear Research Center of the Carnegie Institute of Technology.

No one can specify what this peaceful atomic future holds. But of one thing we can be certain, it is permeating and will change in varying degrees the most intimate facets of our lives—our social, economic, political, and spiritual lives.

We may be entering an age of energy in plenty, ushered in by the almost unbelievably concentrated and versatile power of the atom. Abundance of energy means abundance of time for man to devote to creative, artistic, and spiritual values.

In this period of transition, however, man will need guidance and education as never before, not only to evaluate the essential meaning of this new age and adjust himself to it, but also to bridge the mighty cultural gap which separates scientific and technical advance from our lagging social and economic institutions.

* * * * *

I am confident that the University of Wisconsin, together with other American universities, and in consort with farsighted men of Government and industry, will make timely analyses of the probable consequences of the atom and will formulate new approaches to a changing social environment.

* * * * *

If the University of Wisconsin is to provide this guidance and education in the same eminent and inspired fashion it has in the past, it must possess the same freedoms as are reserved for our citizens by the Constitution. In such an atmosphere it can continue to serve as a market place for new ideas and thus train men and women for the future. Only in this way will the university produce the free, analytical, imaginative minds that will lead mankind to higher and higher material and spiritual levels in this fascinating, limitless, new atomic world.

Arthur O'Shaughnessy, that poet scientist of the industrial revolution, wrote:

"We, in the ages lying in the buried past of the earth,
Built Nineveh with our sighing, and Babel itself with our mirth;
And o'erthrew them with prophesying to the old of the new world's worth;
For each age is a dream that is dying or one that is coming to birth."

For the sake our our own and the unborn generations yet to come, our university must lead the way in realizing the full potential for good which the atomic dream that is coming to birth affords.

PATHWAY TO PROGRESS

(By Farrington Daniels)

Atomic fuel comes now from uranium; later it will come from thorium, and possibly from the hydrogen of the oceans in the distant future. Its use calls for very careful and expensive precautions to prevent damage from radioactivity. Because atomic power can be used for war and because it is possible to destroy a million people in a minute, great wisdom is needed to prevent the misuse of atomic power. A realization of the destructive possibilities of atomic power is the most sobering thought of our times. It is already at the heart of much international diplomacy.

Don't blame the atom for potential racial suicide. Don't blame the scientists and engineers who make the release of nature's energy possible. The carbon atoms of gasoline can be used either to power a death dealing military plane or to run a family automobile, and the nitrogen atoms of the air can be used either for military explosions or for fertilizer. These potentials for misuse exist. Someone has said, "The world would be a wonderfully fine place if it weren't for the people that live on it." But someone else has said, "Nothing is stronger than the atomic bomb except the heart and the mind of man." Let us have faith in man.

It will take all the wisdom of our statesmen, all the international good will that we can encourage, all that the United Nations can do and all that our young potential leaders can do to avoid international destruction and to continue on the road to abundant industrial energy. Let us not think, either, that all the responsibility lies on the other side of the Iron Curtain. Men in our own country have power over life and death such as was never before imagined. It is up to us to make sure that public opinion is vigorously expressed and that no irresponsible person ever gets into a position of power over our atoms. Our present energy-rich civilization is like a new super high-powered automobile—it calls for self-control, sobriety, and consideration.

Our future progress and safety depend on finding and educating leaders in science and technology, in statesmanship and administration, and in professions and business. It depends equally on the education of all our citizens so that they will understand issues clearly and help to make decisions wisely.

And in our international affairs, on which our safety depends as never before, we must realize that conditions have changed. We now have the sources of energy and the technologies with which to give vital help to the nonindustrialized countries. We have a broader base for unselfishness—the whole world—than any other nation has ever had. Let us give this help freely and wisely. The best road to happiness for a nation, as well as for an individual, is unselfishness.

THIRTY BILLION VOLTS

(By George Richard)

It'll be the race of the century, but no one will see it, not even with the most powerful of microscopes.

Stripped of its negative electron charge, the positive proton from a hydrogen atom shoots into a magnet-sheathed accelerating tube that's nearly a third of a mile round.

High-frequency voltages hurtle the proton faster and faster around the tube in an almost perfect vacuum. Soon it is streaking at nearly the speed of light.

In 2 brief seconds the proton travels 350,000 miles, held by a fixed magnetic field on its widening course.

Simultaneously another proton is being accelerated in a similar, adjacent tube.

Now both atomic particles are moving at top speed at the outside edges of their respective racetracks.

Quickly a physicist touches a control.

The two particles collide, coming together with fantastic force.

The impact is unimaginable. More than 30 billion electron volts of proton energy are developed. Mass converts to energy. Energy converts to mass. And, in all probability, this collision-created energy produces antiprotons, mesons, and new particles never before known to science.

This is a highly simplified account of the job which will be done by a great new atom smasher—the world's biggest—now being designed in Madison, Wis., by the Midwestern Universities Research Association.

Wisconsin is one of 15 universities involved in this highly significant project that's aimed at developing the most powerful research tool which nuclear physicists can devise.

Two dozen physicists, mathematicians, and engineers are working full time on principles and plans for the huge machine under a contract with the Atomic Energy Commission. If the project proceeds on schedule, construction of the atom smasher may get under way by the middle of 1959 and be completed 5 years later.

Then the physicists will have an unparalleled opportunity of exploring the minute world of the atom. They'll learn more about the tiny particles responsible for the forces which hold an atom together. And they'll assist in determining the laws of physics which apply to high-speed high-energy particles. Newton's laws have to be revised when 2 particles enter an area and 3 or 4 come out.

The scientists planning the atom smasher have their hands full. They're now building and testing pilot models which will help determine the most efficient type of magnets; the best means of producing a vacuum in a tube 500 feet in diameter; construction methods that will permit only twenty-thousandths of an inch variance in that same 500 feet, and a practical means of cooling the

hard-working accelerator, which will generate as much heat as 10,000 electric stoves.

Assisting the 24 scientists in the MURA research headquarters, a former automobile dealer's garage, are a dozen secretaries and administrators and 16 technical people who perform a variety of tasks vital to the undertaking. They draft plans. They construct machine parts. They maintain delicate electronic equipment. They operate a complicated IBM type 704 electronic computer.

That 704 computer is a modern marvel in itself. It is being rented for about $25,000 a month • • • but it resolves in hours what lesser computing systems might take days, months, or years to unravel.

About 35 students find part-time employment at MURA headquarters.

Although development of a project as vast and intricate as this must necessarily be based on individual and organization teamwork, credit for conceiving the basic principle that puts the MURA machine ahead of existing atom smashers goes to Prof. Keith Symon, now a member of the University of Wisconsin faculty. Improvements making his design more practical have been, and are now being, worked out by scientists from the MURA institutions.

Among them is Illinois Prof. D. W. Kerst, a 1934 graduate of Wisconsin and inventor of the widely-used betatron atom smasher. Professor Kerst is now technical director of the machine-design group in Madison.

• • • • •

Like all scholars engaged in fundamental research, the nuclear physicists make no specific predictions concerning the ultimate value of this work. But similar research helped produce our present age of atomic energy, and it is effort such as this upon which progress depends.

Long before the project's completion, however, MURA scientists have demonstrated results from their intensive efforts. By the end of 1956 more than 150 technical reports on MURA progress had been distributed to interested scientific people all over the world. Much of the information in them is immediately useful to workers in related fields.

The Midwestern Universities Research Association was incorporated in 1954, after individual scientists from several institutions informally began to discuss the need for joint research facilities. Obviously, a high-energy accelerator is too expensive, considering both finances and personnel, for one institution to tackle. Early financial support for MURA's initial study group came from the National Science Foundation, the Office of Naval Research, and from the universities concerned. At Wisconsin, the Wisconsin Alumni Research Foundation financed the university's participation.

Currently MURA is spending around $110,000 a month in the planning phase of its project. Present estimates place the final cost of constructing the complex machine at $75 million to $125 million.

Where will the FFAG atom smasher be built? The location hadn't been set by mid-January. University scientists would prefer to locate the machine close by a university. Under consideration are sites near Purdue, Minn., and Wisconsin. Another possible location is the Argonne National Laboratory in Illinois.

The pioneering scientists who are pushing toward completion of the accelerator are confident that this and other questions soon will, and must, be answered. For, as they put it in an official report:

"High-energy physics is, and surely will, continue to be for a long time to come, the major land of the unknown."

Foreign Aid

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herewith a letter dated February 11 which I received from Mr. M. J. Flannigan, chairman of the board, Kennedy & Parsons Co., Omaha, Nebr.

Mr. Flannigan sets forth his views after returning from an extended trip abroad and I thought this letter should be called to the attention of my colleagues:

KENNEDY & PARSONS CO.,
Omaha, Nebr., February 11, 1957.

The Honorable GLENN CUNNINGHAM,
United States Congress,
Washington, D. C.

DEAR GLENN: I have just returned from a 3 months' trip which took me to Honolulu, Sidney, Melbourne, and Perth, Australia, Singapore, Hongkong, and Yokahama. I am writing you now to give you a couple of reactions I gained from this trip.

First, from the time we left Los Angeles until the time we returned to Vancouver, British Columbia, I never once heard or read about the imminence of war, invasion, Russian threat, or anything else along that line. It was only after I got back to the United States that I was apprised of the fact that the Russians might be attacking and overnight hitting us with thousands of bombers and submarines. I cannot help wonder where the inspiration for all this scare originates and if it is not part of a plan to keep things big by certain elements within the Government.

The second observation came from talking with many people who were passengers on our various means of transportation (one of which was 12,000 miles on a freighter, with passengers embarking and disembarking at various ports), and it seemed to be the consensus of opinion that the individual American is well liked and quite cordially received by most every country in the world today. However, there seems to be a general resentment against the policy of our State Department, particularly in regard to the way we are throwing money all around the world to gain, allegedly, power and prestige. This deep affection for the United States seems to fall into three categories. The first category is the country to whom we have not yet given money and it, therefore, feels neglected. The second category is the country who doesn't feel it needs our money but who has an enemy in another country to whom we have given money thus building up the strength of that country against the former one, and the third category is the country we have already given money to but who feels that we were stingy and gave them only about half enough. Putting the three categories together, it would seem that we have pretty well embraced most of the other countries of the world.

One other obseravtion, which to me seemed a little humorous, was that on the night flight from Honolulu to Sidney, 16 or 18 berths were available at an extra cost, and the extra cost, I might say, was considerable. While we had a full complement of passengers on our plane, the only 4 passengers who apparently felt they could afford the extra luxury of a sleeping berth were 4 members of our State Department.

Since my return I have been reading some of the copies of the World Herald that were saved for me, and I note therein your efforts in trying to hold down this ridiculous and asinine colossal spending of money by our Government, particularly in the field of foreign aid. Congratulations. I know it must be a very hard and disheartening matter because the odds seem to be against you, but I am certain that your constituents, and in all likelihood many American citizens who are not your constituents, appreciate what you are doing and are giving you their wholehearted moral support.

With best personal regards, I am,
Sincerely,

M. J. FLANNIGAN.

Max Abelman, Brooklyn's Ambassador of Good Will

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. BURNS of Hawaii. Mr. Speaker, congratulations and acknowledgments of his January birthday and his 50 years of philanthropies continue to draw attention to Max Abelman's many virtues. Mr. Abelman well merits the recognition of his many kindnesses and philanthropic accomplishments. His example is an inspiration to others, and the recognition given to him is in a sense recognition of the philanthropies of the many who do so much to further charity.

I am pleased to insert in the RECORD two letters and a newspaper article attesting to his virtues:

[From the New York World-Telegram and Sun of January 22, 1957]

FIFTY YEARS OF SERVICE: GOOD WILL ENVOY TO MARK 70TH BIRTHDAY

Max Abelman, "Brooklyn's Ambassador of Good Will," will celebrate his 70th birthday Saturday and round out 50 years of philanthropic service to the borough, the city, and the Nation.

Max, as countless Brooklynites know him, has coaxed more than $100 million out of borough residents in his 50 years of activity. The largest single amount he collected was $43.9 million, a sum he raised in 1 night when 44 Brooklyn banking institutions met at the Brooklyn Academy of Music in 1919 in a Liberty Bond drive.

BIG BROTHER ORGANIZER

But his services to his community extended far beyond the collection of money. He was one of the organizers of the Big Brother and Big Sister movement; he persuaded 2 artists to decorate 16 children's wards in the Brooklyn Jewish Hospital with gay murals and brought hundreds of celebrities to the hospital to autograph the murals. He worked constantly to better interfaith relations.

His motto was, and is, even in retirement, "Do something kind for somebody every day."

His kindness and his work have brought him many honors: a degree from the University of Manila, Philippines; the first hon-

orary membership in the Alumni Society of the Jewish Hospital of Brooklyn; an award from Brooklyn College; and dozens of testimonial dinners and hundreds of letters of commendation from civic and fraternal organizations, from city and State officials, and from the Navy Department.

BEGAN CAREER IN 1907

Mr. Abelman began his philanthropic career in 1907 when he joined the Brooklyn Federation of Jewish Charities. Two years later he began an association with the Jewish Hospital of Brooklyn which ended, but only officially, in 1954, with his retirement as director of public relations for the institution. He also managed to squeeze a 9-year banking career and a 14-year career as executive director of the Brooklyn Federation of Jewish Charities into his life.

Mr. Abelman married Bessie Schwartz on October 6, 1907, and they had one son, Alan Nathan. Mrs. Abelman died September 1955. Mr. Abelman lives at 35 Tennis Court.

WASHINGTON, D. C.

MAX ABELMAN,
Care Federation of Jewish Philanthropies:

We are both very pleased to be able at this time to send you our congratulations on the attainment of your 70th birthday and at the same time to wish you many more fruitful years. You have certainly contributed nobly and unselfishly to the welfare of others and we hope that some of the good you have done for others will be returned to you in a continuing long and prosperous life.

Congressman and Mrs. GEO. S. LONG.

JANUARY 31, 1957.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: It is hard to believe what I read in the papers, that you are going to be 70 years old. You have led a wonderfully useful life. I congratulate you heartily on the birthday and wish you many, many more to come.

Sincerely yours,

THOMAS E. DEWEY.

Statement of Jerry Voorhis, Executive Director, Cooperative League of U. S. A., Before the Joint Congressional Committee on Atomic Energy

---

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include in the Appendix a very important statement of Jerry Voorhis, executive director, Cooperative League of U. S. A., before the Joint Congressional Committee on Atomic Energy, February 28, 1957:

Mr. Chairman, and gentleman of the committee, my name is Jerry Voorhis and I am executive director of the Cooperative League of the U. S. A.

The Cooperative League is a national federation of consumer, supply, and service cooperatives. Its affiliated member organizations include in their membership approximately 13 million different families who have invested in the shares of cooperative businesses of various kinds through which they obtain farm supplies, insurance, consumer goods, electric power, savings and credit, health services housing and other needs. These people are providing the solution to their own economic problem and supplying their own economic needs without relying upon the Government or any other outside agencies. They are giving real meaning to the term "people's capitalism" for the rank and file of the American people. When a family owns one or more $5 shares in a credit union and hos opportunity to attend meetings where decisions are made about the business affairs of that credit union, it is taking responsibility of ownership and it has a part in a real "people's capitalism." When farmers invest their money in a cooperative fertilizer business or a cooperative oil business, they achieve a degree of ownership in one of these great industries, they assume the responsibilities of ownership, and they are able to help guide policies and the destinies of a part of those industries. The same can be said about the rest of the 13 million families to which I have just referred.

I appear before the committee not as an expert on technical aspects of atomic energy. I am here because of two concerns for the future of our country.

The first concern is for our position among the nations in atomic energy development.

The second concern is for the future pattern of our American economy as atomic energy development may affect it.

The material progress of mankind has been measured by his command of energy. Advances of civilization have largely been built on progress in harnessing new sources of energy. Nations and people have flourished when blessed with abundant and cheap power. They have stagnated when power and energy were expensive and scarce.

So it will be with us. The cheaper and more abundant the basic energy and power which we use to turn the wheels of industry and plow the furrows of agriculture, the stronger and more dynamic our economy will be. It has been reliably estimated that by 1980 the United States will need a 600-million-kilowatt electric generating capacity—5 times our present capacity. When we consider that farmers' use of electricity from their rural electric cooperatives has been doubling every 4 years, this estimate is not hard to accept.

If this estimate is anywhere nearly correct, we are going to have to use every resource we possess. And, certainly, major emphasis should be upon the one resource which appears to be inexhaustible—namely, atomic energy. We are also going to have to guard in every way against increases in the cost of electricity. For if it becomes more costly, we will be almost as badly off as if we suffer short supply.

Power company advertisements and Atomic Energy Commission oratory to the contrary, notwithstanding the plain facts, seem clear to show that our country is lagging seriously behind other nations in atomic power development. Whereas Russia has announced that by 1960 she expects to have over 2 million kilowatts of atomic power capacity completed, and Great Britain expects to reach 4 million by 1965, a generous estimate for the United States by the latter year, even if we include projects in the negotiation stage, is only about 1,100,000 kilowatts. Of course, one cannot foresee the future. But one can foresee the difference between progress likely to be made by nations proceeding with an eye only to progress on the one hand, and progress likely to be made by a nation proposing to wait until the very industry that has consistently blocked adequate development of power capacity finds it profitable to itself to take the admittedly great risks of atomic power development.

We have to be both rational and realistic. Our American economic system is a lot bigger than the private utility companies. There are always some difficult, costly, and yet absolutely necessary steps that must be taken in the development of any new resource which so deeply affect the general public interest that they should logically be taken by public bodies and under public responsibility. When they are, the whole of our economy and all our businesses and, above all, all our people benefit. Atomic energy is a case in point.

We did not wait for the private utility industry to find the way to release atomic energy. We found that way at public expense and by an intense national effort. The American people have an investment of over $15 billion in this, probably the greatest public resource known to history. Both from the standpoint of our country's relative position among the nations of the world and from the standpoint of potential benefits to our own economy, the people are entitled to a better record of progress in development of practical uses of this great new resource than they have had up-to-date.

We don't want Russia to take the lead over us in overwhelmingly the most important economic development of our time. If she does so, she'll come pretty close to winning the cold war. We don't want that to happen, even if we have to by-pass the private electric utilities to forge ahead—even if Congress has to require a change of policy on the part of the Atomic Energy Commission.

Let us be realistic enough to recognize that the position of the United States in atomic power development thus far is due entirely to Government research, development, construction and finance. Without Government initiation and without almost complete Government financing at Shippingport, Pa., there would be no sizable power reactor under construction in the United States today. Without the Government's submarine reactor program it would not have been possible for one of our big private companies to sell a reactor to Belgium. And so on.

This should tell us two things. First, the Government's job of research and development must be completed to its logical conclusion. Second, this must be done in such a way that the benefits and opportunities of atomic-power development will be spread broadly, evenly, and justly throughout the economy, so that monopoly does not result, and so the American people, as a whole, are not called upon to pay twice over for a great resource for which they have already paid once.

As to our domestic economy, the question is this: Will the coming of atomic energy into our economic life have the effect which, even after its emasculation in 1954, the Atomic Energy Act still requires? The act says that atomic energy shall be so developed as to strengthen the free-enterprise system and encourage competition. But the policies of the present Atomic Energy Commission and the practices and natural self-interest of the electric power industry of the country are calculated to bring about precisely the opposite result.

After Edison invented the electric light we did not adopt a national policy of waiting until the kerosene lamp companies decided it was to their special interest to develop electricity on a commercial scale. New companies sprang up to develop a new industry.

Today, our economy is showing unmistakable signs of age. This is not a pleasant nor a popular thing to say. But, it is true. Unless something is done to change the present course we will find America's economic life as monopolistic as that of Western Europe. In a recent speech before the American Management Association, Mr. T. M. Evans, president of H. K. Porter Co., said that the trend toward domination of our economy by a few giant corporations is "one of the quickest ways to socialism." He declared that unless the Government takes steps to ease the financing problems of small business,

"competition will be eliminated in the next 5 to 10 years, and we will end up with 1 or possibly 2 large companies in each of the major fields."

I will not burden the committee with a lot of detail on this point. You are, no doubt, better acquainted with the facts than am I. Suffice it to point out that only a few years ago there were 60 oil refineries in Oklahoma whereas today there are only 16, and only 6 of these are independents; that as a result of a process of mergers during the past several years, 3 large corporations control nearly all of the processing of dairy products in this country; and that the only reason there is any competition at all in the electric-power business is because some publicly owned projects and the rural electric cooperatives provide that competition to the private power companies which, however, dominate the industry with an 85 percent control.

The House Small Business Committee recently showed that our 500 biggest corporations, each with assets of over $100 million, owned 51½ percent of all manufacturing assets in 1952, but had boosted this percentage to 57 percent in 1955. From 1953 to 1955 there was a net loss of 19,000 manufacturing companies in the country. If present trends continue, the committee asserted, these 500 firms will own all the Nation's factories by 1978.

Our largest corporation has an annual turnover of business equal to one-sixth that of the Federal Government, including all our defense expenditures. There is no longer the slightest possibility of a new company gaining access to the automobile business. Profit rates for General Motors average about 30 percent a year, but one can't exactly blame General Motors for this because, while this is clearly a monopolistic profit rate, nevertheless, if General Motors slashed prices they'd probably run all their remaining competition out of business.

What we can blame is public policy that has permitted the automobile business to reach the point of no possible return to conditions of economic freedom or freedom of enterprise.

The power business is on the way to the same situation. It's a long way down that road. Once monopoly is established in the power business then we will be in for far more serious trouble than is the case with automobiles. For whoever controls a nation's power resource controls that nation's economy absolutely. And history has yet to record any monopoly that did not seek to maintain a scarcity of its product or service relative to demand and national need for it.

The American power companies have never proven an exception to this rule.

All these facts about the present alarming decline in economic freedom in the United States have got to be considered as we develop policy with respect to atomic energy.

Yet, our policy at present is to wait until the power companies get ready to develop it before we can have any real progress in peacetime uses of atomic energy. This, despite the fact that the American people have paid $15 billion of tax money for the development of atomic energy and that, beyond any shadow of doubt, they—the whole people—own basic rights to atomic energy today.

The rate of progress of our nuclear power program in the United States has been set by the private utility companies. It has been too slow a rate either for the Nation's safety or its welfare, or for justice to the people who have paid the bill.

There are only two agencies that can, at present, afford to develop, build, pay for and operate atomic powerplants on a commercially practicable scale. The last figure I have seen—and I expect it is too low a one by now—is that $60 million is the minimum amount of investment required for a commercial-scale atomic powerplant. Few companies indeed—and no small ones—can afford that kind of venture. Even the big power companies say that no one of them can do it. They ask substantial Government subsidy. They ask that the Utility Holding Company Act be amended to allow several of them to go together in building and owning atomic power. They insist that Uncle Sam foot the greater part of the insurance bill.

Among the large corporations of the country, there are a handful which have had the tremendous advantage of participating with the Government in its atomic energy projects. Add to this the fact that the compulsory licensing provisions of the original McMahon Atomic Energy Act were amended out of it in 1954 so that now private exclusive patents can be taken even on basic processes connected with atomic power development. Personally, I don't believe any special interest should be able to patent the energy of the sun.

Thus, it is clear that if present AEC policies are continued and if Congress does not take remedial action, then the best we can expect is that sometime, someday, we will begin to get atomic power from one or more of a mere handful of the mightiest corporations in the country. And they will conrtol and own both the know-how and the patent rights which will be the keys to participation in this new and revolutionary industry.

Aside from these few companies—or a combination of them—the only agency capable of pioneering the construction and operation of commercial-scale atomic powerplants is the Federal Government. If the Government does it, its findings, processes, know-how, patentable discoveries will be available on equal terms to all American business, large and small, corporate and cooperative, private and public. Under such circumstances, we could hope for rapid development of practical uses of atomic energy. Atomic power could become the means of revitalizing and rejuvenating our economic system. True costs of developing atomic power would be known for sure, by experience. They would not have to be guessed at. This may be very important in the future. The grip of monopoly would be loosened, maybe broken. There would be a chance for new companies to arise.

Power short areas of the country would be power short no longer. No more would the decentralization of industry be hampered by the need to locate in areas adjacent to natural sources of power. But, you gentlemen know far better than I the possibilities that exist if once atomic power can be produced at economically feasible costs. The big thing that has to be found out—and that can only be found out by practical operation of large scale plants—is exactly how atomic power can be so produced.

These are the basic reasons why passage of the Gore-Holifield bill—or at least a measure including its basic features—is, in my opinion, the most important single duty of the present Congress.

It may be observed that all the reactors provided for by the Gore-Holifield bill would not supply anywhere near AEC's own need for electric power, which at last reports was, I believe, about 13 percent of total national consumption. Hence, all the gains I am pleading for could be had without AEC actually selling a single kilowatt.

I have an additional reason for believing as I do. If we really want to maintain economic freedom; if we really want a true "people's capitalism"; if we want to have a minimum of governmental controls and regulations; if we also want to overcome the stultifying influences of monopoly, there is a very constructive way to accomplish all these objectives. That way is to have a portion—and it need not be such a very big portion either—of various industries owned, capitalized, and effectively controlled by the users of their services and the customers for their products. Wherever a part of an industry is owned and controlled by the same people who buy its products or use its services, you have a built-in yardstick of economic pricing, quality of service, and, above all, adequacy of production. The people who own a business that serves their own needs must pay all costs of operation, including all taxes, of course. But they won't seek to profiteer at their own expense, nor to provide themselves with inadequate service or poor quality products.

Hence, the competitive impact of cooperative business—for that is obviously what I'm talking about—is beneficial to everyone—even to their competitors. The mere fact that cooperatives, for example, carry on between 1 percent and 2 percent of various phases of the Nation's oil business led the president of an independent refinery association to remark, not long ago, that the major oil companies should be very grateful that the cooperatives are in their industry, since their very presence there proves that a degree of competition can still exist. And the presence of rural electric cooperatives in the field has caused rates charged rural consumers to decline as much as 50 percent from what they were before this consumer-owned competition was established by our farmers.

Naturally, therefore, I am deeply concerned that the rural electric cooperatives, which have contributed in such outstanding fashion to the progress and welfare of our country, should take their full rightful place in atomic-power development. I know that three cooperatives are now in preparatory stages of acquiring atomic-power plants. I hope and pray that they will turn out successfully and that they will prove economically practicable. But I confess I would feel a whole lot better about the outlook if the basic job which should have been done long since by AEC and which the Gore-Holifield bill would require it to do, had been done. I would feel a lot better if we had essential facts and data at hand from actual experience in building and operating full-scale atomic-power plants in the general public interest and with a view to national development and welfare.

The logical conclusion to the long and very expensive process of atomic-energy development which we, as a nation, have gone through is to bring atomic energy into practical use. The construction and operation by the Government of admittedly very expensive prototype reactors and powerplants in the only way to bring research and development to that logical conclusion. This is a job for the AEC—or, if it won't act—for some other public agency created by the Congress which will.

Let's finish the job. The firm base for broad development of atomic power in a free economic system has not yet been built. It won't be until we put the Nation's progress and welfare ahead of all special interests whatsoever. The Gore-Holifield bill proposes to do exactly that. It proposes to put the only logical keystone into the arch of atomic energy research and development. If that keystone is put in place, it will be no substitute for corporate and cooperative development, but rather the one sure way to bring about development by private corporate enterprise, private cooperative enterprise, and public bodies. In fact, I strongly suspect that much of the recent publicity about atomic-power projects in 1 or 2 areas of the country has been prompted by the mere discussion of the Gore-Holifield bill. If so, actual passage of the bill would, without doubt, have many times this same beneficial effect.

We live at one of the great turning points in history. No small consideration should determine our actions at such a time.

Atomic energy can be the death of man. It can be the death of economic freedom in America. But, if our policies are based on justice to all the people and to all parts of our economy, if our policies seek only the general welfare of our Nation and the relief of burdens throughout the world—then the atomic age can be one of greater hope, greater justice, and more enduring peace than past ages have dared to dream of.

Latins Feel the United States Is Neglecting Them

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. FASCELL. Mr. Speaker, under leave to extend my remarks, I include the following article by Mr. Edward Tomlinson. This article, which appeared in the Miami Herald on Sunday, February 24, 1957, points out that we are in danger of overlooking the importance of our Western Hemisphere neighbors to our foreign policy.

The Latin American countries are vitally important to the United States. Their cooperation, in political, economic, and military affairs, is far too important to be taken for granted. Mr. Tomlinson's article follows:

LATINS FEEL UNITED STATES IS NEGLECTING THEM

WASHINGTON.—There is smoldering impatience among our Latin American neighbors over what many of them feel is official Washington's indifference toward Western Hemisphere relations, or at least a lack of top-flight attention to inter-American problems.

Whether justified or not, they watch with no little envy what one outstanding South American publisher calls, "the procession of European political bigwigs and neutralist, not to say anti-Western, potentates from Asia and the Middle East that marches on the North American capital to receive red-carpet treatment and the preoccupation of United States leaders with Old World affairs."

Latin American diplomats point out that the State Department has been without an Assistant Secretary of State for inter-American affairs ever since last summer, when Henry Holland resigned. According to some Latin observers, even when there has been a permanent Secretary for that Department, he was often left to grapple alone with the problems of the 20 southern republics.

As our critics down south see it, top officials in our Nation's Capitol take time out to bother with hemisphere matters, only when a real emergency arises, say the Communist penetration of Guatemala, or upon occasion to join in some good-will gesture, such as the meeting of presidents in Panama in July of last year. This is not literally true, of course, but many responsible Latins profess to believe it.

There is no general criticism of the ability of our professional diplomats, or the efforts of both those in the Department and others who represent us in the various capitals, to iron out the difficulties and keep relations on an even keel. Thanks largely to them, there are no dangerous issues confronting us in this field at the moment.

Whatever we may think about it, our neighbors cannot understand why friendly, free nations as big, rich, and populous as Mexico or Brazil, Venezuela or Chile, should not receive at least as much high official as well as public attention as the tiny, one-man kingdoms and principalities of Africa and the Middle East. For that matter, many of our own people feel the same way.

Some of our ablest and most experienced Foreign Service men admit that while we are in no immediate danger of losing Latin American cooperation, we can no longer afford for them to feel that we take their goodwill and friendship for granted. We have too much at stake in the 20 republics.

We have more investments in them than in all other parts of the world put together, Canada excepted. We need and must get from them, both in peacetime and in war, many key raw materials.

In World War II, 75 percent of all the food products we imported—such as coffee, sugar, meats, and vegetable oils—came from the other Americas. They supplied 40 percent of the strategic minerals and metals necessary to supply our factories and foundries.

Today 34 of the critical raw materials we are stockpiling against another international emergency come from these sources. Strategically they are the last bulwark of our defenses, when all others fail.

Never before has competition for their commerce and economic resources been so great. Not only the Western European nations and Japan, but both Communist Russia and China are busy day and night negotiating trade agreements and building markets below the border.

Communist agents and propagandists are spending enormous sums of money to build up anti-United States feeling among labor unions, and to inflame students, small time politicians and particularly the extreme nationalists against us. They spare no effort to discredit United States investments and industrial enterprises from Mexico to Argentina. Both the Reds and the nationalists harp on what they call Yankee neglect of Latin America.

No matter who the assistant secretary of state may be, or how able, he still is only an assistant. No matter how skilled our ambassadors in the different countries, they still are only representatives of Washington. The Latins want to feel that the head men in our Government also have Western Hemisphere problems very much on their minds. It is not only human for them to feel this way, but it is vital to us.

A Promised Land

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Anchorage (Alaska) Daily Times of January 9, 1957.

At a time when the future of the homeless people of Hungary is bleak and foreboding and ways are being sought to extend a helping hand to them, I believe the suggestions set forth in the editorial may represent a means whereby life may be started anew for these deserving persons:

OPPORTUNITY MISSED

Alaska is missing a precious opportunity to increase its population.

The Federal Government is looking for a place for permanent settlement of thousands of refugees from Hungary. There is no known consideration being given the possibility of locating them in Alaska.

One of the greatest needs of the Territory is more people. There are opportunities here for new developments. The land and resources are capable of supporting millions but there are only 209,000 persons here.

Among the refugees are men and women skilled in all types of enterprise. Populations of entire communities in Hungary have been brought to the United States. They are not all industrial workers, although there may be a preponderance of them. There are craftsmen with special skills, professional people, farmers, and all the others who make a community.

From those thousands of refugees it appears reasonable to assume that several hundred could be selected for location in Alaska to develop the land and resources.

Several plans for settlement projects are known to have been drawn during the last 10 years. At least two of them looked toward the development of farming on the Kenai Peninsula.

A project of that sort could be made feasible for the refugees and of benefit to the Territory by proper planning.

The plan must include provisions for protecting and improving the economic status of farmers already here, as well as affording the refugees an opportunity to become stable and happy residents of the Territory.

These provisions must look into marketing facilities for farm products. Expansion and improvements in them are needed in order to lengthen the marketing seasons and widen the markets. All farmers would benefit from such developments.

The Kenai Peninsula is only one of several places where land, climate, and marketing conditions make a settlement project appear feasible.

A study by the Alaska Agricultural Experiment Station shows that Kenai development is not faring well. Fifty-nine percent of the land which has been patented or entered for homesteads was unoccupied or abandoned in 1955. Another 31 percent of it was being used solely for rural residences. On only 10 percent of this land were the owners farming or planning to farm.

Interest in farming was reported to be on the wane. In 1950 there were 80 homesteaders planning to farm. In 1955 only 27 of them were still interested. Out of 851 homesteads only 38 are being farmed on a full or part-time basis.

The reasons for the lethargy in Kenai farming point up the feasibility of a settlement project for refugees.

The experiment station report concluded that this generation is unwilling to undergo the pioneering hardships that their forefathers did. The report said:

"Today's homesteader leaves a highly mechanized, highly regimented social structure for semi-isolation in Alaska's wilds. A few settlers successfully make this transition—successful to the extent that they may depend largely on their own land for food.

"Many homestead families are considered ill-housed, ill-clothed, and rather backward members of their communities. Their neighbors usually take for granted stateside standards of housing, clothing, and services.

"It is generally not appreciated that surfaced highways, daily air and truck service, rural electrification, modern schools and many other niceties of modern farm communities are not compatible with homesteading.

"New farms fostered by current homestead legislation cannot afford these expensive services, yet without them, people can no longer be persuaded to live on the land. The burden of all these services cannot be borne by nonproductive land. Thus, for at least a

generation, these services must be provided from other sources.

"Failing in this, land will not be utilized because early utilization demands too much family sacrifice."

The refugees could be expected to place a different evaluation on the opportunities for land ownership and development. Coming from a strife-torn country where they never heard of rural electrification and many of the other refinements of life in America, they might be undeterred by the hardships that go with homesteading.

What looks difficult and forbidding to the modern generation of Americans might be viewed as "the promised land" to the refugees.

The Challenge of Tomorrow

EXTENSION OF REMARKS
OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an address recently delivered by our colleague from Florida, the Honorable WILLIAM C. CRAMER, to the graduating class of Tampa University, and an editorial from the Tampa Morning Tribune of February 9, 1957, complimenting Mr. CRAMER on his speech:

THE CHALLENGE OF TOMORROW

(Address by Hon. WILLIAM C. CRAMER, of Florida, before the graduating class, Tampa University, February 7, 1957)

I am highly honored and privileged to have this opportunity to address this group of promising young Americans who are looking forward to—and I am sure will be willing to accept—the challenge of tomorrow. You are to be congratulated for having spent many tedious and trying hours in preparing yourselves for more productive future lives through higher education. You have surmounted one of the important hurdles of life and are today being justly rewarded by receiving these degrees.

The community should be proud of the ability and tenacity which each of you has displayed in order to merit your degrees. You likewise, of course, are justifiably proud of your present successes, and I share with you in that pride and wholeheartedly compliment you.

It is fortunate that you have so equipped yourselves, for you have before you as young men and women, in my opinion, the greatest challenge of the ages. Our world today, of which the United States is a fulcrum point, is developing technologically, economically and spiritually with giant strides. The longer the stride over the shorter period being made today in the fields of science, medicine, the betterment of international relations, and industry, just as examples, indicates first how well the present generation has accepted their challenge and indicates further how greater the challenge will be to you.

What are some of these challenges? In the field of science and chemistry, you, the youth of today, will probably conquer space and answer the mysteries of outer space; you will be developing new and unheard of peaceful uses for nuclear and atomic energy. You will be thus accepting the challenge bequeathed to you by many of today's leaders. President Eisenhower has spoken to the world through the United Nations urging other free nations to join with us in the common goal of harnessing this newly discovered energy which, when fully developed, undoubtedly will mean better lives for all. Your Government last year appropriated $400 million for research in this field.

The doctors having answered the challenge already in our time presented by infantile paralysis, must now accept the challenge presented by the number one killer, heart trouble, and the second killer, cancer, and through research you will be participating in this challenge and the span of life through your efforts will be increasing even in greater measure than the some 20-year increase over the last 50 years of effort.

Yes, even military strategists, who we all pray some day will be needed only to police the peaceful nations of the world, at present and for a lengthy foreseeable future must accept the challenge of keeping America prepared and in the forefront in the development of war materiel. Recent experience has shown that we must deal from a position of greatest strength in order that our ultimate goal of world peace might be gained, and that the continuing threat of Communist aggression and oppression might be successfully met. The challenge of today and tomorrow in the field of military preparedness is the greatest in our history. This is a period of transition—transition to jet aircraft, intercontinental missiles, nuclear-powered ships, higher power through more effective rockets of every description, redeployment of troops and qeupiment to conform to this transition. Fifty-nine percent of this year's recommended budget of $71.8 billion is being spent to meet this challenge and that of national security. Your further challenge will be to see that these fabulous sums spent today for this purpose will not have been spent in vain and that this great strength shall be used by you as future leaders in the quest for permanent world peace.

The challenge to the ministers, the priests, the rabbis, is to keep all in this rapidly changing world of today in proper perspective; to keep us ever mindful when we are tempted to be preoccupied with such fast-moving events, that we must never become so self-centered as a result of our own accomplished miracles, that we forget that all of this springs from the fountainhead of Almighty God. To teach us further that if all of this is to mean anything, if our contribution is to be worthwhile in the short span of life given us, then our ultimate effort should be directed toward the permanent and peaceful brotherhood of mankind.

To the statesmen, to those of you who will participate, and I hope that each and every one of you will in some way, in what I believe to be one of the noblest professions, that of government, these swiftly moving events offer one of the greatest of all challenges. Ultimately the goal must be an orderly, lawful society where the rights of all are respected, where the duties of the collective republican form of government are fulfilled with the least individual coercion. You, as Americans, must be ever appreciative of the fact that you in your own right do the governing in our representative form of government where you choose your own leaders. It has often correctly been stated that bad government results from good people failing to participate.

Of course, the challenge is great in every other field, but I mention last but not least, the responsibility in the future of the educator whose job it is to make certain that the young men and women of all this Nation and the world seek out the truth, foresight, perseverance and training to make them, as yourselves, the future leaders in these fields; to equip you fully to be capable of accepting this challenge. This is the greatest challenge of the ages.

More and more in my short public life, particularly as a representative in the highest legislative tribunal in the world, the United States Congress, I realize how great are our responsibilities, not only to ourselves as American citizens, but to the world. Unquestionably, our Nation is in a dominant position, more so than probably at any other time in history. We are cast in the role of world leadership. I was taught in law school that every right which we enjoy under our legal scheme of things has a correlative duty. Likewise, when applied on a broader scale, our position of world leadership vests us with tremendous responsibilities. There is no doubt in my mind but that the inspirations gained by the people of Hungary, who learned of and know the freedoms we enjoy in this country, became the torch that lit one of the national revolts against communistic tyranny. The United States, and the freedom that its people enjoy, as exemplified by the torch held on high by the Statue of Liberty and seen by all who seek to gain admission to this Nation, is the light that gives hope in the hearts of the Communist-dominated peoples of the world and other freedom loving nations seeking selfdetermination. It is the hope of those, who like ourselves, seek the security of permanent peace, it is the hope of those who suffer in poverty and ill health, those who live in antiquity and discomfort. It is our responsibility to see that this torch of hope continues to burn ever bright.

In the position of world leadership, I believe the moral fiber of our country has stiffened in recent years and that America has found new courage and strength. Our country today is accepting its challenge, not only in the field of military preparedness in order that we might perform on the stage of world politics in a position of greatest strength, but we have also gained new moral stature throughout the world. Recent pronouncements from the executive and legislative bodies clearly pronounce to the world that we intend to deal firmly with those who refuse to abide by law and rightness. Doing so, in the hope of strengthening the United Nations is the greatest hope for the accomplishment of our ultimate goal. One of the most gratifying votes I have had the privilege of casting was that of confirming President Eisenhower's position on Formosa, stating to the world, as well as to Red China, that should that nation violate the territorial integrity of Nationalist China, that our answer would be swift and certain.

In that same year, the Congress of the United States, as representative of all the American people, took a significant stand on a sound moral basis condemning colonialism throughout the world. Already this session, the President's Mideast doctrine has cleared the House and undoubtedly will pass the Senate. This doctrine acknowledges fully the responsibility of this Nation, calling initially for $200 million in economic aid to the nations in this area needing such aid, and military aid to fill the power vacuum before the Communists do so. At the same time, the President, and now the House of Representatives, has importuned the United Nations with the full power of our country behind it to settle this dispute on a fair and honorable basis. Dealing from this position, with a sound moral foundation, with adequate preparedness, and dealing firmly, the goal as announced by our President in his inaugural address, it is our prayer, can be achieved; that goal is "the building of a peace with justice in a world where moral law prevails:". Thus the leaders of today are accepting the challenge. Your challenge of tomorrow will be even greater. This effort today will be history tomorrow. Tomorrow's history rests with you. Tomorrow's history is your challenge.

Just the few matters touched upon indicating the responsibilities of your government today I hope will be convincing proof that in future years it is essential, in that you are the leaders of the future, that you participate to the fullest extent in government, which is the medium through which history is made. Government work, elec-

tive, professional, or appointive, is noble work. The challenge is ever increasing as government becomes more complex and begins to accept greater responsibilities. Your government affects your everyday lives and under our system of representative government, by participating you can influence the effect that it has. What greater power over a person could an agency have than to determine whether you should be subject to service and sacrifice in time of war? What greater influence over a man's labors—over your labors, could there be than to oversee the negotiations of your working conditions with management—to deduct from your payroll taxes for the conduct of your government, social security for your future retirement? What greater control of your comforts of life than to supervise and license all public utilities and communications, to be responsible for the provision of adequate transportation facilities? These are just a few examples, but I believe just these few examples indicate the importance of your participation in the noble profession of government.

There are just a few thoughts concerning this profession and its fundamental philosophy that I would like to leave with you. I believe it essential that every American develop and cling to certain basic concepts, certain truths, that to me are self-evident in this field. Conviction with regard to these general concepts as expressed through your participation in working for those who will represent your beliefs is an essential element of our form of government. The expression of your conviction through your work is one of your greatest challenges. What are some of these convictions—these truths—that I believe to be self-evident?

The first, I believe, is that those who are governed best are those who are governed least. We must accept our responsibilities on the local level for solving the problems that are not specifically delegated to the Federal Government under our Constitution. We must reverse the trend most markedly developed in the last quarter century of looking expectantly to Washington for a solution to all of our problems. Obviously, carrying such an approach to its logical extreme will result in a concentration of power in one place, with a possible domination of one person, and eventually a socialistic state.

In connection with this, we must realize that the assumption by the Federal Government of jurisdiction over any program and the providing of Federal money to facilitate it, means at least to some degree, Federal control and if in the hands of wrong persons, could mean Federal dictation. There is, in my opinion, a very real threat being offered to these aforementioned concepts in Washington today. Perhaps the most concrete example is the proposal for Federal aid to education. We all want adequate schools but this has traditionally been accepted as a local responsibility.

I am firmly convinced that one of the major bulwarks guaranteeing future representative government is a diversity of teachings found best suited to serve not only the national but the local purpose, a finding which is presently determined in each locality. There should never be an opportunity presented for the Federal Government to control the teachings in our schools or the policies with respect to school operations. Although the President and I seem to disagree with respect to the wisdom of the school aid program, we do agree in the broader generality which he stated in his state-of-the-Union message in referring to his general concept of government: "May we know unity—without conformity." From a practical standpoint, tax money to support such a program comes from us on a local level and by the time it is returned from Washington it has been depleted by some 30 percent for administrative costs alone. This is one example of where we must accept the challenge on local responsibility. Failing to accept it undoubtedly will leave a void into which the Federal Government will asert itself and in so doing, will to some extent infringe upon our rights and privileges to control our local educational policies. I cite these concepts and the challenge offered by the effort to adhere to them in that I believe the trend towards the bigness of government in Washington and the accumulation therein of responsibility that has traditionally been State and local, has developed to alarming proportions of recent years and the necessity for reversing this trend is, in my opinion, the most imminent danger and the greatest challenge.

Though I do not intend to labor at length on these fundamental concepts, I would just like to cite 1 or 2 additional fundamental beliefs to which we must all adhere if we are to preserve the most successful form of government in the history of the world. We must at all times encourage the development of and curb encroachments on, our free enterprise competitive system, which, of course, is inimic to socialistic regimentation. Struggles concerning this are going on constantly in Washington today. Efforts are being made to get the Government out of businesses that can better be handled by private enterprise, particularly in the Defense Department. The great struggle over the question of whether the Federal Government or private enterprise should develop the great hydroelectric powerplants of the Nation continues unabated. These problems undoubtedly will be with you in the future.

The recognition of fiscal responsibility is essential in your Government as well as in private enterprise, as in the operation of your home. We should spend what we can afford to spend. We should operate on a balanced budget basis. We should accept the responsibilities of this generation to pay off our $269 billion indebtedness, that costs us $4 million daily in interest alone.

We must not solve emergency problems with permanent measures, but must recognize that such measures are temporary. They are only expedients at best, and, therefore, as soon as possible, we should relieve the American people of these emergency burdens. Some of these burdens have been relieved. Those imposed in time of war, such as price and rent controls, have been relieved. Others remain, such as excise taxes. But the real risk involved is that in the heat of a passing emergency, such as the present critical school shortage, we pass legislation of a permanent nature with which posterity will be saddled.

To sum up, and again to quote our President: "When dealing with peoples' problems, be human, be liberal. When dealing with their money, be conservative."

This is the challenge of tomorrow—this is the challenge of the ages. You will be called upon to meet this challenge. The manner in which you do this will constitute your legacy to posterity—to your children. You have, through your college education, better equipped yourselves to meet this challenge. I wish you every success and may your lives, each and every one, be happy and purposeful.

[From the Tampa Tribune of February 9, 1957]

STRAIGHT TALK FROM MR. CRAMER

Too many Southerners who shout about States' rights talk out of both sides of their mouths, as Gov. Marvin Griffin did in a recent message to the Georgia Legislature. In one breath he damned Federal intrusion upon State authority. In the next breath he boasted that Georgia led the Southeast in the amount of Federal aid funds obtained "in benefits for our people."

It is absurdly inconsistent to wave a States' rights banner with one hand and rattle a tin cup in Washington with the other. If the Federal Government takes over a State's financial responsibilities, it is inevitably going to take over more of that State's governmental powers.

This inconsistency of position has been particularly noticeable in the controversy over Federal aid to schools. Many Southern Congressmen apparently oppose a school building handout only if a desegregation string is specifically tied to it. Otherwise they'd vote for this new surrender of responsibility to Washington and brag to the voters back home how much Federal money they were bringing to the State.

We're happy to see that Congressman CRAMER, of the Tampa district, is not one of these.

In his talk to the University of Tampa graduating class, Mr. CRAMER pointed directly to the principle involved.

"We must accept our responsibilities on the local level for solving problems that are not specifically delegated to the Federal Government under our Constitution," he said. "We all want adequate schools but this traditionally has been accepted as a local responsibility. * * * It is time we reversed the trend of a last quarter century of looking expectantly to Washington for the solution of our problems."

And he pointed to a fundamental fact so often forgotten by voters and concealed by politicians: Federal aid is not "free" money. It comes right out of the pockets of local taxpayers—with the difference that a large part of it melts away in Federal administrative costs before it returns to the people from which it was collected.

The present special Federal aid to communities which, like Tampa, bear an abnormal school burden because of the presence of military installations can be justified. Here the Federal Government is helping meet a federally created problem.

But there certainly is no justification for the Federal Government to hand out money to meet normal public school needs which ought to be paid for from State and local taxes. Federal controls will follow this aid as surely as bills follow Christmas.

We commend to other Congressmen the stand taken by Congressman CRAMER. This is the kind of States' right talk which is good for both the South and the Nation.

Altoona, Pa., Now Has 3,600 More Persons Employed in New Jobs, Thanks to the Altoona Industrial Development Fund

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. VAN ZANDT. Mr. Speaker, the following editorial from the February 20, 1957 issue of the Altoona (Pa.) Mirror tells the story of the accomplishments of the Altoona Enterprises, Inc., in securing 11 new industries with 3,600 new jobs which represents a boost in Altoona's annual payroll by $12 million.

The Altoona plan which has attracted the attention of thousands of industrial groups from all over the United States brought to Altoona the following manufacturing plants: Butterick Co., Inc.; Na-

tional United States Radiator Co., Inc.; S. K. F. Industries, Inc.; Butcher & Hart Manufacturing Co.; Altoona Shoe Co.; Sydney Chairs, of Pennsylvania; Pennsylvania Shoe Co.; Veeder-Root, Inc.; Stanley Electric Manufacturing Co.; Sylvania Electric Co.; and Cross Keys Manufacturing Co. All of these industries have found Altoona an ideal place for their manufacturing efforts and recognized the great desire on the part of Altoona residents to build for the community a stronger economy, thus providing jobs for the surplus labor in that area.

It has been a pleasure as representative in Congress from the 20th District of Pennsylvania to work in close harmony with officials of the Altoona Enterprises, Inc., and to join them in taking pardonable pride in this collective effort that has been made to build a bigger and better Altoona, Pa.

The editorial follows:

IS JOB WELL DONE

Altoona now has 3,600 more persons employed in new jobs, thanks to the Altoona industrial development fund, through their effort in the past 6 years, and more jobs are on the way as announcement will soon be made of new industries being located in this area.

Altoona Enterprises, Inc., Jobs for Joes, the committee of 100 and the Altoona Chamber of Commerce are responsible for Altoona's job growth and the contributions of most loyal citizens have brought about the city's industrial expansion.

In every section of the State Altoona's achievement, in procuring new industry, is highly lauded and what Altoona, through its enterprising citizens, has accomplished is praised.

Altoonans are more and more appreciating the Altoona Enterprises, Inc., whose members have been too busy getting new plants and possibly neglecting the eduaction of every citizen in the program. Now that results are plainly shown and new jobs created, citizens are climbing aboard the bandwagon.

Of course, there are some growlers about industry, but the only complaints come from some known grouches, and some jobless, and from organizations that collect dues but have never contributed any money nor have they offered their services.

The Altoona Chamber of Commerce has just issued a brochure that pictures most emphatically Altoona's success as regards the industrial fund and the achievement through money contributed by Altoona citizens. Eleven new industries to date is the record. These firms employ 3,600 people and more than 70 percent of the employees are men. The Altoona payroll has been boosted by $12,000,000 annually. That performance needs no defending. It speaks for itself. It should silence the grossly uninformed complainers.

The brochure tells how all the contributions were used. Since 1950, contributions amounted to $813,325 with an earned interest of $34,000, bringing the available industry fund up to $847,325. To this can be added the $134,000 held in second mortgage bond sales. Necessary expenditures over the 6-year period were $260,000 for land purchases, $22,000 for advertising and $62,000 for administrative work.

The industrial fund today has $469,000 invested in 5 new industrial plants, and this sum is being paid back in rentals.

"With your support Altoona will continue to grow" is the statement contained in the brochure. It's a fact that Altoonans have come to realize, but it requires the full cooperation of every citizen, which is most certainly deserved.

The Altoona industrial progress is supported by pictures of the new plants and no one can refute such evidence. Altoona has put contributed money to work and has achieved a fine success.

Perhaps we in Altoona should "talk it up" more extensively than has been done in the past. Other cities in the State talk favorably about the Altoona plan. We Altoonans should be the most appreciative of the program. The citizens directing the industrial expansion deserve, and should receive, the greatest praise from the home folks. Congratulations, committee members, for a job accomplished through hard work, diligence, and in the true community spirit.

Nebraska's Birthday

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. MILLER of Nebraska. Mr. Speaker, tomorrow will be Nebraska's birthday. It was on March 1, 1867, 90 years ago, that President Andrew Jackson signed the proclamation making the Territory of Nebraska one of the United States of America, the 37th in the Union. Statehood was thus achieved after the first statehood bill had been vetoed by the same President.

Just this month, we have celebrated the birth anniversaries of George Washington and Abraham Lincoln. That gave us a chance to glance backward through the years to see what Nebraska looked like during the terms of office of those great Presidents.

During Washington's administration, Nebraska was but rolling prairie land, cut through by many rivers, populated mainly by the Indians. At that time, the territory belonged to Spain and the Spanish were beginning to press their claims in the upper Missouri Basin.

Long before Lincoln's day, Nebraska had become the property of the United States as a part of the Louisiana Purchase. The territory had become settled in most of the eastern part. The Oregon Trail and the Mormon Trail had crossed Nebraska and the dream of a new State was in formation.

According to the Nebraska Blue Book, the huge fossil beds and glacial deposits of Nebraska give proof that in past geologic ages, this region was the bottom of an inland sea which was later elevated above the water. At one time, a tropical climate prevailed and during a later period glaciers covered the land. Archeological explorations have uncovered considerable evidence indicating the presence of prehistoric man in the State.

It has been estimated about 40,000 Indians lived in Nebraska at the time of the earliest white settlements. Presumably they had migrated to the area several hundred years before the first explorers.

The Spanish are presumed to have been the first white men to come to Nebraska. Right now there is a minor controversy on that point where Nebraska and Kansas are both claiming to be the last point of the northward penetration of the Spanish in the summer of 1541 when the Indians dominated the area and bison roamed the prairies by the thousands.

About the year 1700 French trappers began to venture up the rivers. By 1739 they had named the Platte River and traveled nearly the entire length of the State.

Spain, France, and England had all claimed the Nebraska region at one time or another. In 1803, after establishing her rights, France sold the region to the United States.

The famed Lewis and Clarke commanded the first American expedition to reach the area in the years 1804–06. There followed then the glowing story of the courageous pioneers who carved a great State out of the prairie wilderness.

The history of Nebraska built rapidly after the first military post was established at Fort Atkinson on the present site of the village of Fort Calhoun which is few miles north of Omaha. It had a population of over 1,000 people and was the location of the first school, library, brickyard, sawmill, grist mill, and the first extensive farming by white men within this particular territory.

Missionaries came early to minister to the needs of the Indians. By 1832 covered wagons had started the parallel ruts across the prairies that later became the Oregon Trail, which for the next 40 years was the greatest wagon road this world has ever seen. Other great trails across Nebraska included the Mormon Trail from Bellevue or Omaha west to Utah; the Denver Trail from the Missouri River to Denver, and the Nebraska City cutoff up the West Blue to the Platte and on to Denver. Thousands of wagons traveled over these trails each year until the construction of the Union Pacific made them no longer practical.

The most rugged frontier conditions reigned in Nebraska during those years but out of that prairie sod the pioneers carved homes. They started to farm and villages grew. The heat of summer, the blizzard of winter, the marauding Indians, the droughts, the grasshopper plagues, the prairie fires never for a moment daunted these courageous pioneers in their bright vision of a new land they could call home under the Government of the United States.

The Nebraska region was a part of the Territory of Indiana in 1804. The following year it was made a part of the Territory of Louisiana with its capital at St. Louis. After 1812 it became a part of the Territory of Missouri but was detached in 1821 when Missouri became a State. Nebraska then became a part of the great unorganized region commonly called the Indian Country.

Nebraska got its name from a river. The Indians called the Platte River "Nebrathka," meaning "Flat Water." The State claimed title to "Nebraska" and the river reverted to the "Platte."

The first bill to organize Nebraska Territory came in 1844. The Congress turned down the bill. Similar bills failed to pass in 1848 and 1853. The fourth

effort won success and Nebraska became a Territory in 1854 during the administration of President Franklin Pierce.

The first Governor of Nebraska Territory was Francis Burt, of South Carolina. Immediately a struggle was started between Omaha and Bellevue as to which would be the capital. Omaha won. Later the capital was moved to Lincoln.

It was in 1865 that the Union Pacific started to build the railroad across the State, the rails which revolutionized transportation in the area.

Nebraska had a long, hard fight to become a State. With a sharp division of interest between free and slave territory, many delays were encountered. Many residents were opposed to the very idea of statehood.

The Congress passed an enabling act April 19, 1864, and on June 2, 1866, an election was held to climax the stirring controversy. The tabulation showed 3,938 Nebraskans in favor of statehood and 3,838 against.

The Statehood Act was vetoed by President Johnson. The veto was overridden, and on the following March 1 the State of Nebraska was created.

Succeeding years found more settlements starting in all parts of the State except the sandhills. Pioneers were beginning to move into the extreme west end of the State. New railroads were built. Waves of homesteading immigrants came.

The new homestead law proved a major boon, and people came in from the many States to the east, most to live out their lives in Nebraska.

They came in various nationalities. These individuals blended into the communities. It was a hardy lot of pioneers who grubbed a living from the soil. Disappointments were many, but these people stayed on and on, raising their families despite incredible hardships all along the frontier. Regardless of periods of drought, Nebraska's pioneer farmers faced the future unafraid.

In the western part of the State, where the rainfall is sometimes scant, farmers looked at the lazy waters of the Platte going by to waste themselves in the sea.

Men of vision organized irrigation in the North Platte Valley. Crops boomed. Irrigation spread to other parts of the State and is still spreading. It is Nebraska's guarantee of crops despite the rainfall which may or may not come. Later the same water was put to another task—production of electric power.

Industry got started in Nebraska. Many farmers expanded their agricultural pursuits to include the raising and saw a new potential. Now millions of cattle, hogs, and sheep annually go to market. Stockmen looked at the green grass which covers the sandhills and saw a new potiential. Now millions of cattle graze those hills.

Nebraska boasts of having the finest steaks in the world. Every automobile license issued in Nebraska proudly proclaims it "the Beef State."

During the wars in which the United States was engaged Nebraska's young men and women served notably. Thousands of our servicemen have died for their country on the field of battle. Always we have tried to hold our flag high among those of the other great States.

Nebraska has grown up and tomorrow we will be 90 years young. In June Omaha is going to celebrate the 100th anniversary of its incorporation. Mayor John Rosenblatt and Gov. Victor Anderson have invited President Eisenhower to be the principal speaker at the jubilee. Other cities and towns across the State are celebrating other anniversaries this year.

We have in Nebraska a people of courage and ambition who seek to be good Nebraskans and good Americans.

A portrayal of the State is contained in this description of the great seal of Nebraska, adopted by the legislature in 1867:

The eastern part of the circle to be represented by a steamboat ascending the Missouri River; the mechanic arts to be represented by a smith with hammer and anvil; in the foreground, agriculture to be represented by a settler's cabin, sheaves of wheat and stalks of growing corn; in the background a train of cars heading toward the Rocky Mountains, and on the extreme west, the Rocky Mountains to be plainly in view; around the top of this circle, to be in capital letters, the motto "Equality before the law," and the circle surrounded by the words "Great seal of the State of Nebraska."

"Equality before the law," "honesty before men," and "reverence before God," are the precepts upon which Nebraska built and is building. These are the precepts which will keep Nebraska great and enduring through the years to come.

For tomorrow's 90th anniversary, I raise my hand in salute to the great State of Nebraska.

The Dream Imperiled

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. McDONOUGH. Mr. Speaker, the following thoughtful and eloquent editorial from the Los Angeles Tidings entitled "The Dream Imperiled," tells us in stirring words that the valiant, costly, and well-intentioned efforts of these United States to make real the dream of world peace is being imperiled in spite of our contributions because of the lack of courage of some and the indifference and materialism of other of our allies.

For those interested in the position of the United States in the United Nations, I recommend the following sound advice and counsel contained in this editorial:

THE DREAM IMPERILED

"May God give us the courage to preserve the basic principles of the American faith as we see unmoral diplomacy writing, with deceptive phrases, equivocations, and quibbles, the inglorious epitaph of the United Nations."

These sobering words of David Lawrence merit calm reflection in the interval between the celebration of the birthdays of Lincoln and of Washington. At least on these days of grateful remembrance we may extol our charters of freedom and recall the lights and shadows of the American dream, without some fervent one-worlder crudgeling us as chauvinists and isolationists. On the days we honor the founder and the savior of our country, we may be uninhibited lovers of the fatherland.

Let then words of rhetoric recall the splendor of rights inalienable endowed to man by his Creator. There is need in an hour of anxiety to know again the simple spirit, to hear again the simple truth that the liberties of freemen have a bastion unassailable only when moored in the bedrock of divinity. For if our freedoms are God-given, no man, no state can take them away. Tyrants may bludgeon the body but they can never silence the soul.

These are consoling thoughts as we lick our wounds in our idealistic escapade into the thistled bypaths of collective security. There is no disguising the fact that the United Nations has failed as an instrument for safeguarding the peace, failed because of the futile babble of diplomats false to the hopes that fill the freedom-loving world. The old League, without us, came to disaster after 20 years because it refused to meet decisively the issue of aggression. The new league, with us, fumbles into futility because it too is hesitant and afraid. Its sole contribution to these days is a set of standards which our friends are forced to accept, but which our enemies reject with derision.

The parallel in both quests for peace is so strikingly similar as to be shocking. There are the same pettinesses among friends and jealousies among allies, the same selfish desire for the mean advantage. There are fears for the need of further preparedness, the freightening specter of the alternative of a world cataclysm, and the rash hope in the eventual sweet reasonableness of a dishonorable foe. Irresolution will not stay the holocaust. Rather it whets the appetite for further aggrandisement, and any further sellout anywhere makes more imminent the new Armageddon.

We cannot go it alone in the pursuit of world peace. We are willing even yet to sacrifice our men and our fortune in a sincere struggle to preserve the hard-won freedoms of man. Our Armed Forces are serving in 49 foreign nations that peace remain as a boon to earth. We are yet prepared to scatter billions to light the lamp of hope for the world's destitute and despairing.

But our first duty is to look to our own safety and preserve the sovereignty of this land of sanctuary. To do this we need allies who will forever stand resolute with us in reciprocal responsibility. There are stirrings of economic stress at home to parallel the increasing international strain. In the cause of freedom we have not found friends prepared to make sacrifices commensurate with our own. Our policy is all the more perplexing in an abandonment all the more bewildering.

Why the Budget Is So High

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. NEAL. Mr. Speaker, it is my cherished belief that Members of this Congress try with might and main to cling to their responsibility as Representatives of their constituents in operating our Federal establishment with a minimum of confusion and inefficiency.

I believe, further, that a majority of this House shares with me a belief in the statement of Abraham Lincoln that "we should do neither more nor less than we gave the people reason to believe we would do when they gave us their votes." As a blueprint for following this very sound advice, the following editorial by Mr. David Lawrence which appeared not only in the Washington Star, but in my hometown paper, the Huntington Herald-Dispatch, of Huntington, W. Va., ought to have an extremely wide distribution.

I submit to you that there is a vast difference between a father's responsibility to his family and the obligation of Government to its citizens. On the one hand the head of a family earns and dispenses his substance to his dependency as the individual and collective need dictates. On the other hand, I strongly submit that Government is no more nor less than a steward of the public income. It does not earn, as does a family head; rather, it takes directly from its constituency and acts only as financial middleman in redistributing that income for the support of orderly Government.

Since I am certain that other Members of this House share with me the belief that Government is simply a steward for the general estate, the following comment by Mr. Lawrence may be of some assistance in helping them to assess their records of achievement thus far in this 85th Congress:

WHY THE BUDGET IS SO HIGH—SIZE BLAMED ON CONGRESS' COMMITMENTS WHICH, ONCE BEGUN, CAN'T BE HALTED

(By David Lawrence)

Just why is the Federal budget so high? Is Ike becoming New Dealish and a convert to big spending?

The answer to both questions is that, once a commitment is made to a certain line of welfare expenses, the annual outlays grow bigger and bigger. Whether President Eisenhower likes it or not, he has to go along with the programs which have been initiated under previous administrations and which it is almost impossible for him or any future President, politically at least, to abandon.

That's the real story of what's back of the high budget. And the lesson to be learned is never to start any new line of commitments, such as Federal aid to school construction, unless the American people, with their eyes wide open, realize that this means a constantly increasing expenditures indefinitely and not merely, as has been represented, a temporary plan for "just a few years."

The best way to explain the nature of these older commitments and what they mean in the course of only 3 years is to examine the expenditures for the fiscal year beginning July 1, 1954, and note the increases that have been made in those same items for the fiscal year beginning July 1, 1957.

In this short interval here are some of the increases:

1. Approximately $2,774,000,000 is the result of increases for military operations and upkeep, military housing and bases, military research, maintenance of Reserve forces, including one item of an additional $124 million for pensions for retired military personnel and another increase of $463 million to develop the atom.

2. Another huge addition—$4,042,000,000—has come about primarily because of a $3,696,000,000 increase in pensions for retired workers, widows and orphans, the needy aged, the blind, and the disabled, and a series of items such as $200 million for school construction, and $132 million for medical research. There is an increase of $17 million for school lunches, which now are to cost $100 million a year, and, if anybody in Congress proposes to cut out this last sum, he will get into trouble politically back home, though everyone knows American parents aren't starving and can afford to pay a few cents a day to the school to prepare hot lunches for their children. Other welfare expenditures of different kinds add up to an increase of $347 million over what was being spent 3 years ago for the same things.

3. Now in another category—veterans' beenfits—there's a total increase of $591 million, and it's hard for Congressmen to vote to cut that down.

4. In the aid given to the farmers, the total is up $455 million over what it was 3 years ago.

5. In the international programs, diplomatic activities show an increase of $440 million, but, even figuring this in and noting that economic aid has come down by $25 million since 1954, it would appear that the net increase for foreign aid is about $415 million. This excludes an item of $500 million which the United States Government will be spending to redeem its previously given notes of that amount to the International Monetary Fund. Presumably these notes could be floated in the open market and an equal sum collected.

6. Interest on the public debt has gone up $834 million, and there is an item of $940 million increase for general management costs in Government.

7. Another group of proposed expenditures listed in the budget includes $1,086,000,000 for highways, about $623 million for housing, and $212 million to promote aviation, with a couple of items of added expense in disaster relief amounting to $61 million and $53 million for civil defense against possible atom attacks.

What it all adds up to is about $12.5 billion more than was being spent 3 years ago, and a large part of it is directly related to congressional commitments to projects and policies initiated long before the present administration came into power. The annual expense now grows because prices have risen and costs are higher than ever before. Also, as the population increases, there are more individuals retired, more who are entitled to pensions, and more children who attend schools and need free lunches, and so on all along the line.

Once Congress starts a line of Federal expenditure, each Congress is up against the question either of stopping the whole project or meeting the added expense that each year brings.

The whole trouble is that, in the New Deal and Fair Deal years, elections were won by claiming that humanitarianism demanded all these welfare programs and now the uninformed voters—in a prosperous country, with States, cities, and counties that ought to be able to take care of their own obligations in these fields of welfare—have put the major burden on the Federal Government.

The outlay is growing and growing, and there will be no tax relief till the country discovers that the Federal Government really cannot afford to keep on paying for things the local units of government ought really to be doing for their citizens. The chances are the local units would do it more economically, too, because they are closer to the picture, but, when Washington is doling out the money, every part of the country has its hand out to get its share of the giveaways.

Increase in Postal Rates on First-Class Mail

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. SMITH of Kansas. Mr. Speaker, it is seldom that we receive in our mail a letter from a constituent who asks us to increase his cost of doing business. This letter that I append hereto was written by a person who understands some of the problems of our Government and is willing to pay for the benefits that he receives.

His letter certainly has a different approach from most of the letters we receive in regard to increasing postal rates on first-class mail. I commend this letter for reading.

The letter follows:

TELLS CONGRESSMEN UNITED STATES SERVICES MUST PAY THEIR OWN WAY

(EDITOR'S NOTE.—Herman J. Tholen today mailed letters to Senators FRANK CARLSON and ANDREW SCHOEPPEL and Sixth District Representative WINT SMITH supporting the proposed increase in the postage letter rate to 5 cents. This is a copy of those letters.)

DEAR SENATOR CARLSON: I understand that the question of raising the letter rate of postage to 5 cents will be considered at this session of Congress.

I want to state at the outset that I believe all service departments of Government, on a fee or charge basis, should be self-supporting. There is no sound reason why the Post Office Department or any service department should be subsidized by the taxpayers in general. The users of the services receive the benefits and there is no good reason why the nonusers should help carry the burden for them.

I believe that not only the first-class letter rate should be raised to help wipe out the annual postal department deficit, but that all classes of postal rates should be reexamined and adjusted to equal the cost of handling each particular class.

ONE EXCEPTION

I would allow one exception, which I believe is in the general interest of very nearly 100 percent of the population; that is, the newspaper and book rates. There is good sound reasoning behind the idea that the dissemination of news and knowledge should be at a minimum expense to the public, so that even the poorest of the poor are not, by being priced out of the market, denied the advantages of keeping themselves informed.

I would not extend this exception to the slick-paper magazines if over 50 percent of their pages are devoted to paid advertising. Advertisers should pay for their advertising, including delivery to their potential customers. This, of course, applies equally to catalogs, circulars, etc.

Parcel post should be put on a cost-of-delivery basis. The Post Office Department should establish rates sufficient to cover the cost of handling parcel post, or get out of the express and freight business. The present rates possibly are high enough to cover the cost from the dispatching to the receiving post offices.

DELIVERY CHARGE

But if that is true, packages weighing over a minimum of, say, 1 pound, should be called for upon notice of receipt by the post office,

or a delivery charge added at a sufficient rate per pound to cover city and/or rural delivery.

Getting back to the letter rate, which seems to be the only rate mentioned in current dispatches, I am in favor of a 5-cent or even 6-cent rate, except for local delivery. I believe that simple justice demands that a distinction (as formerly it was) be made between local and nonlocal delivery. The present 3-cent rate for letters and the 2-cent rate for postal cards is high enough for local delivery. The card rate for nonlocal delivery I think should be raised to 3 cents.

I also believe that private cards, carrying the 2-cent local or 3-cent nonlocal rate should be limited in size, length, and width not to exceed the size of a standard large-sized envelope, about 4½ by 10 inches.

Air-mail rates, too, I am sure, should be revised upward. It doesn't make sense to grant Government subsidies to airlines, in order to make possible an air-letter rate of 6 cents. If it costs, say, 10 cents, to carry a letter by air, then, charge 10 cents.

If it is of enough importance to me to get a letter to New York in 24 hours, why should the taxpayer have to pay 4 cents of the cost to accommodate me?

As long as the Post Office Department is faced with annual deficits, it doesn't make sense to increase the deficit to give me the convenience of added speed in delivery of something that benefits me and not the public.

Sincerely yours,

H. J. THOLEN.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. WIGGLESWORTH. Mr. Speaker, having in mind the recent observance of the anniversary of the Lithuanian declaration of independence, the sympathy which all of us feel for those in Lithuania who have been forced behind the Iron Curtain, and the hope which we all entertain that a free Lithuania may one day again take its rightful place among the free nations of the world, I include, under leave to extend my remarks in the RECORD, the following resolutions adopted by the Lithuanian Americans of the town of Norwood, Mass., in connection with Lithuanian Independence Day:

RESOLUTIONS UNANIMOUSLY ADOPTED BY THE LITHUANIAN AMERICANS OF THE TOWN OF NORWOOD, AT A SPECIAL OBSERVANCE OF THE 39TH ANNIVERSARY OF THE DECLARATION OF INDEPENDENCE BY THE LITHUANIAN NATION, HELD AT ST. GEORGE'S HALL ON THE 10TH DAY OF FEBRUARY 1957

Whereas Lithuania has suffered for almost 17 years and continues to suffer under the heavy and unbearable yoke of slavery imposed upon her through the brutal and merciless occupation of the Soviet Union; and

Whereas the passage of time has clearly exposed the totalitarian motives of the Kremlin masters, motives that have horrified the world and continue to engender fear in the hearts of all peace-loving people; and

Whereas the insidious machinations of the Kremlin despots are a constant threat to the rest of the free world; and

Whereas the Soviet Union has proved to the free world that it will never tolerate man's natural right to freedom, but will quash all such efforts with a stinging and unabated fury as witnessed by the free world, in the recent tragic plight of the Hungarian people: Therefore be it

Resolved, That this great gathering of loyal Americans of Lithuanian descent of the town of Norwood genuinely appreciative of the American heritage of freedom, fully aware of the gravity of the present international situation, and mindful of the sorrowful fate of the Lithuanian nation, pledge their unquestionable loyalty and unstinted support to this great country's genuine quest for a lasting peace and justice in the world; be it further

Resolved, That we urge the Federal Government of the United States to continue to condemn the Soviet occupation of Lithuania and the other Baltic States; be it further

Resolved, That we raise our voice in behalf of our brethren in protest to the slavery into which they have been plunged by the Communist imperialists and the latest demonstration of brutality in Hungary; be it finally

Resolved, That we express our deepest gratitude and appreciation to the Federal Government and the Congress of the United States for their constant, sympathetic, and vigilant attitude toward the eventual restoration of freedom to the people of Lithuania.

LITHUANIAN ROMAN CATHOLIC FEDERATION OF AMERICA No. 10.
WILLIAM KUDIRKA, *President*.
ANDREW T. VENCKERS, *Secretary*.

So-Called Civil Rights Measures

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release:

"Force measures under the guise of protecting civil rights, but which in reality would create civil wrongs, constitute a monstrous threat to the liberties of all Americans, and could result in the sacrifice of old and basic individual rights and freedoms to possible political prosecution and persecution," United States Representative OTTO E. PASSMAN has warned congressional colleagues.

He said today, in a statement at Washington, that rights which have long been uppermost to all citizens "already seriously threatened by the Supreme Court's notorious school integration decision and the attendant activities of Federal courts in attempting to enforce that decision" now "stand in danger of being usurped" through precedents being set in Federal courts, and would be "even more seriously endangered" by passage of the civil-rights legislation being proposed by the administration and other proponents in Congress.

Representative PASSMAN, of Louisiana's Fifth Congressional District, charged that the "so-called civil-rights measures further threaten the individual's rights to be secure in person and property against individual arrest and seizure, the right of indictment by a grand jury, and trial by jury."

The proposed legislation includes establishment of an investigatory commission (with power of subpena), a civil-rights division (with injunctive authority) in the Justice Department, and "other interference" with individual and States rights, Congressman PASSMAN said. He asserted that the program, against which southern Congressmen are now waging vigorous opposition, would by-pass the need for a person to exhaust State judicial and administrative remedies before turning to the Federal courts.

His statement continued:

"It begins to look more and more as though the highly emotional and inflammatory question of 'segregation or integration' is methodically being used as a whipping boy to disguise an all-out attack upon constitutionally guaranteed freedoms of the American people.

"But there are areas, including the Southland, where the concept of civil liberties is still unclouded by the spectre of something called 'social equality.' We can see more clearly the steps to tyranny that are being taken, cloaked in a misguided sense of compassion for racial minorities.

"We must continue to hope and strive to awaken the majority of Americans to the grave threats to liberty that are being perpetrated and attempted in the name of something called 'liberalism.'

"May the majority of Americans—and consequently the majority of the Congress—realize before it is too late that liberty and liberalism are not, and never have been, one and the same."

Economic Changes in Rural America

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by John Kenneth Galbraith, professor of economics, Harvard University, before University of Wisconsin Farm and Home Week, Madison, Wis., February 5, 1957:

ECONOMIC CHANGES IN RURAL AMERICA

I feel myself very fortunate this morning. It has been a pleasure to be here in Madison and to see many old friends once more. Those who planned the program were also most generous to me. That topic, Economic Changes in Rural America, is one that gives me a great deal of latitude. I am in the happy position of a minister who preaches a sermon against sin or in favor of the Ten Commandments. He has lots of room to move around; he can get by with a minimum of scriptural knowledge. I propose this morning to make full use of the latitude you have accorded me.

I feel favored in one more respect. A few days ago I met my wise and much beloved Harvard colleague, John Gaus, and told him that I was coming out to speak to you. Professor Gaus is well known here in Madison. He was for many years a most distinguished teacher in this university. He still counts himself a member of that magic fraternity—those who say, "I am a Wisconsin man." He told me he thought the Wisconsin Farm and Home Week provided the best audience a speaker ever had. When I asked him the reason for this high praise he said, "You like to hear a man speak his mind."

There are some matters on which I have been yearning to speak my mind. I welcome this occasion.

The first requirement for good farm communities is an elementary one. It is satisfactory farm income. I have heard, as have all of you, about farming as a way of life. So it is. But to say that farming is a way of life is not enough, for it can be a poor way of life and a good way of life. In the last an-

alysis, the thing that probably makes the most difference is the pay the farmer and his family get.

I am not suggesting that happiness depends directly on income—as a people we become richer every year, but I am not so sure that our total reward from life goes up proportionately. But the income of a family does need to be reasonably certain. A sudden drop in prices for the farmer, like a sudden layoff for the city worker, is an unmistakable hardship. We also know that having reached a given standard of income and a given standard of living it is hard to go down from that level. Rightly or wrongly, we all like the things to which we have become accustomed. The costs of living, like the costs of production, become adjusted to one level of price; it is very hard to move down to another.

Here, it seems to me, is the clue to the farm problem of recent years. It is true that net income per farm is still far above the levels of 20 or 30 years ago. Those who have pointed this out are being quite honest. The hardship is in the downward trend. And the drop has been great. In comparable prices, the average net farm income was $3,314 in 1946 and $2,849 as late as 1951. Last year it averaged only about $2,300.

A reduction of this size would be hard to take under any circumstances. It can mean the difference between a good community life and a poor one and a good family life and a poor one. It can mean the difference between a son going to school and, to cite a development in so many of our farm communities, a wife having to find a job. It has meant, for many farm people, the difference between hope and frustration.

But there is another aspect of this decline which seems to me even more troublesome. In recent years, not declining but increasing income has been normal. Every quarter—four times a year—we have a communique from Washington telling us how much the gross national product—very roughly the total of everyone's income—has gone up. Each January we have an explosion of statements telling how rich we have become. The incomes of virtually all other groups in the country have been advancing. Agricultural income, we would expect, would be rising too. But instead it has been falling.

Nor are the explanations of this disparity convincing. We are told, with great regularity, that this nearly unique agricultural trend is the inevitable readjustment following "the war." (It is not always clear whether it's World War II or the Korean war.) But those who come forward with this explanation do not tell us why it is only agriculture that has to "adjust." Why has there been no downward adjustment in industry? Or in the labor market? Agriculture greatly expanded its production during World War II, they say. But industry also expanded enormously. And so did the urban labor force. And these had no similar misfortune.

The cause of agriculture's troubles obviously lies deeper. Those who explain it by talking of the inevitable readjustment are engaging not in explanation but in apology. I confess that I have been amazed at the good nature—or possibly the gullibility—with which farm people have accepted this apology. Let me say, in this connection, that as you will presently discover I am not engaging in any partisan criticism. Before I am finished, I hope to distribute the blame very widely indeed—I shall even have some unkind words for our colleges of agriculture, although I take the sensible precaution of excluding the one which is our host here today.

The problem of agriculture is not one of transition or readjustment. These phrases were also used in the 1920's and the 1930's when the farmer was in trouble. The farm problem is the result of the fundamental and continuing weakness in agricultural bargaining power. Agriculture's weakness is that of the great unorganized industry in a world of highly organized corporate industry and a highly organized labor force. It is the problem of the one major industry which does not have any effective control over the prices at which it sells its products or the supply it offers. The large corporation has a built-in bargaining position based on its size and its position in the market. As a result it is able to keep its prices in reasonable relation to its costs. Thus it can minimize its market risks. The position of the workingman was no better than that of the farmer until he changed it by organizing trade unions. These have enabled him to bargain effectively on the price of his labor. No workman in this day and age doubts the improvement that unions have brought. Where unions are not effective the Government has stepped in to legislate minimum wages by law.

Only the farmer has remained essentially unorganized. I say essentially; I do not mean he is totally unorganized. In some places and to a very limited degree the cooperative provides the farmer with some bargaining strength. In most cases, however, the co-ops are too small, too limited, and hence too weak to provide effective bargaining power. And since 1933 the Federal Government, through support prices and to a lesser extent through purchase programs, has been undertaking to reinforce the farmer's bargaining position. It has stepped in, as it has stepped into the labor market, to enforce a kind of minimum wage for the farmer. This is what we know as the farm program.

In spite of the great progress of the last 20 years, the farmer's bargaining position is still far weaker than that of other groups. In my judgment it is getting still weaker—which is one reason farm income has been falling. And unless there is a real strengthening in agricultural leadership, I frankly see no prospect of improvement. Let me analyze the situation with you for a moment.

The first fact that strikes our eye is that while the modern large corporation and the modern labor organization are taken for granted by nearly everyone, the farm program—the farmer's source of bargaining power—is still regarded by a great many people as unwise, unsound, or a politically imposed misfortune. Any farm program which amounts to anything will, directly or indirectly, have something to say about the prices at which the farmer sells his products. That is its purpose—to insure a satisfactory price and thus to help insure a satisfactory income. A farm program can no more avoid the question of prices than a collective bargaining conference can avoid the question of wage rates. Particularly, as in recent times, when demand falters or fails to keep ahead of supply it is the purpose of the farm program to keep the terms of trade from turning disastrously against the farmer. This is a hazard which, under similar circumstances, the modern corporation can avoid through its inherent control of supply and prices.

Yet the agricultural programs which provide such protection—protection that is normal with industry and labor—are still viewed with suspicion. The farmer cannot bargain by himself. He must have the help of Government. General Motors can set the price of its cars. It can keep them from going to disastrous levels. The Wisconsin farmer cannot set the price of his milk. He must have the support of Government to do what General Motors can do as a matter of course. And if he is to have a life of reasonable security he must have this help; the question is not really whether but how. The farmer cannot, in his weakness, be left to the capricious and violent treatment which he has always been accorded by the market.

This seems elementary. As I say, it is the protection industry and labor have. But it is far from being agreed. The present Secretary of Agriculture, Mr. Benson, said on taking office that price supports were useful only in the event of "undue disaster." I hope I am not being unfair when I say that there is no evidence that he has changed his mind. Only last week he cautiously expressed the hope that supports might one day be abandoned. The case for the flexible supports—which in practice are really rigid supports at a little lower level—is that they represent a step back toward the free market. The free market was never any blessing for the farmer; the ages of its rule were recurrently ones of hardship and even disaster for the man on the land. But still it remains the goal.

In disagreeing with Mr. Benson, I think it is only fair to point out that he reflects a view that is influential in agricultural leadership itself. An important segment of agricultural leadership has accepted the view that any interference with farm markets is wrong and dangerous. Much has been made of the doctrine that if farmers allow themselves to become dependent on Government price supports they will risk the loss of their basic freedoms—they will be taking the first step toward serfdom.

Our freedom does not depend on whether we support farm markets. If it had any such perilous foundation, we would have lost it long ago. Does anyone suppose farmers have less freedom today than 25 years ago? The American farmer will not become a serf because the Government helps him bargain for a fair price. There are more serious threats to liberty. For example, the man who has just come out of a sheriff's sale hasn't much freedom, and on the record of the last hundred years that remains a worse threat than Washington. American workers have repeatedly been warned in past years against surrendering their independence to their union bosses; workers have repeatedly been told that in the interests of their freedom they should defend the open shop, the right to work, and their independence from unions. Neither leaders nor rank and file have accepted these arguments. Both have probably recognized that a union involves some surrender of individual initiative. But they have also seen that the gains in stature, dignity—and therewith in other forms of independence or freedom—that are implicit in more nearly equal bargaining power much more than paid off in the end. In agriculture, I venture to suggest, we have been less wise and tough minded. Farmers have been led into a position of at least partial opposition to the idea of Government intervention on behalf of the farmer's bargaining power. As a result, the farmer's case has been badly weakened.

Farmers have also, I venture to suggest, been too willing to accept as substitutes for direct intervention on prices and supply such measures as the soil bank. The soil bank may be a useful conservation device. It may also be a legitimate form of subsidy. I don't think it at all comes to grips with the central problem of agriculture which is that of defending the farmer's bargaining power in the markets in which he sells.

The Government supports the farmer's bargaining position by helping him get a fair price—on occasion a better price than the market provides. Therefore, the man who defends price supports is on the right track. But I want to distribute my blame impartially. Not everyone on this other side of the argument has met his full responsibilities either. The man who asks a decent price must also be willing to deal with the production that price calls forth. The bargaining weakness of the agricultural industry lies in the tendency to overproduce at any decent price. (This is one of those things that shouldn't be but is.) That overproduction must be dealt with. One doesn't deal with it by proclaiming the sanctity of parity or the rightness of 90 percent of

parity. These slogans, unbacked by responsible measures, have also been damaging to the farmer.

This failure of leadership goes beyond the farm organizations and the political leaders. The colleges of agriculture have also played a part. The years since the farm program was first launched in 1933 have been years of great advance in American agriculture. As everyone agrees, we have had an enormous forward movement in farm efficiency. Yet a great many economists in the colleges of agriculture are still beguiled by the notion that the free market is the only proper norm, or goal, and the one to which we should return. There is considerable reason to think that Government intervention to increase price security has greatly aided forward planning by farmers, made possible bolder investment, and has raised all-round efficiency. Yet virtually every recommendation by economists since the war has been, in the last analysis, to get rid of price supports, to end Government interference, and get back to the free market. Four or five years ago, an impressive group of land-grant college economists turned the Searchlight on Agriculture, to cite the title of their pamphlet, and reached this conclusion. Last year another group, under the auspices of the Twentieth Century Fund came to the same solemn result. In the land-grant college system there have been almost no spokesmen for a strong and vigorous price-support program and the things that go with it. On farm matters reputations for wisdom are largely won by telling the farmer what he shouldn't have.

I am sure that, in the main, these attitudes represent honest convictions. We must defend them as such. But there may be another reason which I wouldn't defend. We cannot overlook the fact that the man who preaches the virtues of the free market and the dangers of interfering with farm prices is also the man who avoids controversy. He is sound, and these are days of economic conservatism. Anyone who argues the need for reinforcing the farmer's bargaining power is inviting sharp debate. He may even become a controversial figure, which many people think bad these days.

Well, it is not the business of the agricultural economist, or of any scholar, to avoid controversy but to speak his mind. A scholar who gets through life without being involved in an occasional row should count himself a failure. Unless he causes the president of his university at least a few troubled nights he probably isn't doing his job. Anyhow college presidents are not paid to have a tranquil time; they are meant by society to have a short life and a troubled one.

The farmer needs the support of Government in defense of his bargaining power. He has had to have it in every other advanced country—in Canada, England, France, Sweden, and Switzerland. Not one of these countries leaves the farmer to the mercies of the free market. For goodness' sake, let us recognize facts.

A few years ago it was my feeling that the farmer's effort to develop bargaining power—countervailing power—was largely won. Now I am by no means certain. He has lost the sympathy and support of the Federal Government. I think it is fair to say that the Government now defends the farm program with considerable reluctance. His own leadership is divided. He has lost the intellectual support of the colleges—or that part which is most vocal. Urban attitudes have also changed. Unless I am mistaken, most city people have also come to feel that the farmer is some kind of pampered profiteer who, in spite of everything, complains all the time. Perhaps here in the Middle West there is a better understanding by the city folk of the farmer's problems. What I say is certainly true of attitudes in my part of the country.

Finally, and most important of all, farmers are rapidly becoming a minor political force. About a hundred years ago Abraham Lincoln came here to Wisconsin and made a farm speech—as I recall, at a very early State fair. He said it was always a mystery to him why politicians said such nice things about farmers: he concluded it was because there were so many of them. This is true no longer. Farmers are no longer numerous. They comprise only about 13 percent of the population as compared with more than twice that proportion—30 percent—as late as 1920. Speechmakers still pay heed to the farmer at election time. This is partly a matter of tradition, and partly because politicians are notoriously unable to count. But the day is not far distant when farmers will have to go to town to hear the major political candidates—unless they happen to catch them talking on TV. The rural vote will be too small to worry about.

This may seem a dreary picture that I paint. But I do not believe that I exaggerate. I have had the good fortune of being able to watch and study the problems of agriculture from a position of some detachment for quite a number of years. The picture seems to me pretty dark. It may get better of its own accord. I think we would be wise, that farm folk would be wiser, to assume that it will only improve if it is made to improve.

Let me in these last few minutes suggest the lines along which improvement should proceed. What should we do?

First of all, there must be agreement that a farm program—one that deals with the essentials of farm income and farm prices—is here to stay. In this organized world it is indispensable. Farmers cannot be the only people without market power. And as long as this feeling persists that the program is wrong, that someday we will be rid of it, we won't do anything important to make it work. No farmer spends time and effort and thought fixing up a shed that he plans to tear down.

We must recognize that there is no future in the political debate over flexible and 90-percent supports. For most products there is no longer very much difference between the two. Both accumulate surpluses. Neither works for perishable products. Both have other faults in common. In short, neither is good enough.

While price and income protection is fundamental in a farm program, a farm program that doesn't deal with prices and income is like a wagon that doesn't carry anything; the present system of support is very poorly designed. We pile up our abundance instead of using it. We tend to keep feed expensive and animal products cheap. The public relations of a system that stores up large surpluses is bad. The public is much more conscious of surpluses than of the cost of the farm program. I have long felt that we could correct a lot of these defects by changing the technique of support; by allowing prices to find their own level and using production payments (and, of course, where necessary, production controls) instead of direct props. Nothing, I may say in passing, would do more to restore the competitive position of butter versus margarine than this method of support.

Production payments have been gaining support in recent years and the Eisenhower administration helped break the ice by applying them to wool. I wish, however, that the pace of such reforms might be faster. England has worked this kind of farm program in recent years with a maximum of protection to the farmer and a minimum of administrative trouble. Where farm policy is concerned we are very slow learners in the class.

Where other flaws and other faults develop we must move to correct them. Our present practice is to wait and hope that things will get better. We have learned, of late, that they can just as easily get worse.

Finally, we must strengthen the moral position of the farm program by making it serve better those who are the victims of major misfortunte. For a great many farm families misfortune is still the way of life; I have in mind the more than a million farm families whose total cash income, in these opulent days, is still less than a thousand dollars. And I have in mind the men and women whose livelihood, as we now so well know, is made insecure and even perilous by drought. Compared to these unhappy people, Wisconsin farmers are fortunate indeed. But the misfortunes of farmers in one region must now be counted the misfortunes of farmers everywhere. This is a very practical matter. I have already suggested that farmers are a dimishing political influence. If their voice is further divided by regions and by commodities, it will be negligible indeed. Henceforth they must hang together for they have no choice.

These things—acceptance of the continued need for a program, a reform of the present system of support, a will to change things when other flaws develop, a more specific succor for rural poverty and disaster—seem to me essentials. I would also suggest that these steps will appeal to the good sense and the sense of fairness of the American people.

The time is coming when farm people will have to pay close attention to essentials. And they will have to pay close attention to the effect of their programs on the public at large. Henceforth farmers will not get easily what they want. They cannot then afford the luxury of making mistakes. Goals must be simple and intensely practical. And they must also be such as will win the support of the people in town.

Near Eastern Policy

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. LANE. Mr. Speaker, will the gentleman yield?

Mr. ROOSEVELT. I yield to my colleague from Massachusetts.

Mr. LANE. Like so many of your colleagues here on the floor of the House I too wish to commend the gentleman from California for bringing this to the attention of the House today. I wish also to commend the gentleman from Illinois [Mr. BOYLE].

This debate is long overdue. Since I had an opportunity of making a statement here on the floor in reference to the same subject matter earlier today I do not desire to encroach upon the gentleman's valuable time now except to say that the gentleman is to be complimented and congratulated for his very sincere, thoughtful, and worthwhile statement here this afternoon, and I too wish to join with the other Members of Congress in vigorous opposition to the imposition of any sanctions against Israel. This is a subject matter that should be of vital interest to every citizen of the whole United States at this crucial time.

I congratulate the learned gentleman on his excellent statement and his timely

action in bringing this matter to the attention not only of the people of our country but also of all nations of the world.

Msgr. Rt. Rev. Michael J. Scanlan

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent eulogy delivered by Rt. Rev. Augustine V. Hickey, vicar general of the archdiocese of Boston, and pastor of St. Paul's Church in Cambridge, Mass., at the funeral on February 21, 1957, of Msgr. Rt. Rev. Michael J. Scanlan, pastor for 35 years of the St. Rose Church in Chelsea, Mass.

Monsignor Scanlan for many years was the director of the Catholic Charities Bureau of Boston, teacher at Boston College High, and sponsor of the drive to raise sufficient funds to start the building construction of St. Elizabeth's Hospital at Brighton, Mass. He was not only active in religious matters but took a keen interest in the civic affairs of the city of Chelsea, and served as library trustee, chairman of the rationing board, member of the chamber of commerce, and in various other community endeavors.

The eulogy follows:

We are met to join with one another and with the priest at the altar in prayerful participation in the offering of mass for the eternal happiness of an outstanding and dedicated priest. We are here to pay our tribute of admiration and gratitude to the memory of Monsignor Scanlan, whose long life in this priesthood was truly notable for high and edifying example and for lasting achievement in advancing the interests and the influence of the church in this archdiocese.

It is an inscrutable evidence of God's condescension that Our Lord entrusted the extension and application of the merits of His Incarnation and Redemption to the minds and wills and hands of men. The Catholic priesthood is thus unique in meaning, purpose, and power. Its essential efficacy does not depend on the personal qualities or virtues of the priest but the functions and duties of the priest are such that everything he thinks and says and does must make manifest and express his divine mission to men. Only one who is good and genuine and complete as a man can be a good and genuine and complete priest.

Monsignor Scanlan was just such a man. Constant in character, steadfast in honesty, contemptuous of bitterness and shame, with no consuming concern for the good things of this world, his Christian sense of values was accurate indeed. He looked at life in the light of eternity. Invariably he followed his conscience. His conclusions rested on firm conviction. It mattered not whether the outcome brought him pleasure or pain. Monsignor Scanlan's devotion to principle evoked respect and affection from all with whom he came into contact. Strong he was but always generous in his attitudes and policies. Always understanding and patient in his relations with his neighbors. There was nothing small or revengeful in his character. In the fine quality of his humanity he represented what was highest and best. He read widely and he reflected constantly on what he read. With marked natural talent and its industrious use, he developed through the years a power and skill with the spoken and written word, reflective of a richly cultivated mind. Serene, dignified, he was satisfied with his principles of speech and conduct and he welcomed every opportunity to live them to the letter.

To such a man came the invitation of our Lord and subsequent ordination to the holy life of the priesthood. The powers of the priesthood do not operate in a vacuum. From the moment Monsignor Scanlan became a priest all his superior human qualities were applied without reserve to the advancement of the work of God in this world. His character, his personality, his talents had found worthy outlet and objective. His priesthood has been marked through the years by intelligent persistent devotion and, by the grace of God, it has been productive of manifest and permanent fruit.

After 5 years of service in a suburban parish in this archdiocese, Monsignor Scanlan was assigned to the Cathedral in Boston where his special interest and training in music equipped him to maintain in the cathedral boys choir the high standard of service in the worship of God for which the choir had been noteworthy for many years. While at the cathedral his love of profitable reading and study provided an appropriate background for the commission he was given to write a short history of the archdiocese of Boston which had wide and appreciative circulation during the centenary year of 1908.

In 1911 he was appointed director of the Catholic Charitable Bureau of Boston. In this responsibility for 11 years he was exceedingly active and happy. He was a pioneer in the field of Catholic social service and he laid the foundation of what is now a widely expanded and intensely efficient agency of Christian charity in this archdiocese. He established the summer vacation house at Sunset Point for underprivileged children. He organized and led to success a diocesan drive for $200,000, a very large sum of money 40 years ago, which provided the first new building of our now great St. Elizabeth's Hospital.

In his years at the charitable bureau he became deeply concerned about the need of awakening in qualified Catholics an ambition to devote themselves to the aid of their neighbors in the field of social service. To train such people professionally and in the Christian spirit he established and devoted for several years an evening course of lectures at Boston College High School. The present graduate school of social work at Boston College represents the full fruition of Monsignor Scanlan's vision and hope. Catholic charities in Boston and Monsignor Scanlan. These words belong together. The roots he planted with such care and exertion are baring abundant fruit today.

COMES TO ST. ROSE

In 1922, Monsignor Scanlan was named parish priest of this parish of St. Rose. The love of others so characteristic of his leadership in the Catholic Charitable Bureau found new opportunity for action here. He faced the responsibilities of parish priest with enthusiasm and joy and he never changed down through the years. In the days of his prolonged and final illness he was thinking always and was so eager to talk of things to be done for the good of his people here.

Monsignor Scanlan has left within the walls of this parish church an exquisite impressive monument to his understanding of the essense of the Christian life, of the primary duty of the parish priest and of the mission everywhere of the church universal. He planned a new baptistry. He insisted that architect and artisan spare no effort to make this holy place a place of beauty. And why? Because in the baptistry we are born again, we become new creatures endowed with a new life which Our Lord brought to earth from heaven. He made this life available to us by His death on a Cross. It is the singular and sublime mission of the Church Universal, of every parish and of every priest to nourish, nurture and strengthen this life in every baptized soul.

It all begins in the baptistry but in the life of Monsignor Scanlan it did not end there. His conspicuous zeal in guiding his people to love the mass, to use the sacraments, to grow in faith and love of God by virtue of sound instruction from the pulpit was but the effect of his abiding appreciation of what happens when we are baptized. To help his people to grow in the true Christian spirit was the absorbing ambition of Monsignor Scanlan's pastorate here. He began with youth. For years to the end of his active life he spent time every week instructing, inspiring young girls of St. Rose High School to live always worthy of the Christian life into which they had been baptized. He had no patience with divided minds. The Christian life is all of life. It is the chief business of the parish to teach the truth of Christian dignity and the blessedness of progress in the Christian spirit which is holiness of life.

CITYWIDE INFLUENCE

Here in Chelsea beyond the territorial confines of St. Rose Parish, Monsignor Scanlan's influence for good was unmistakable and effective. His fellow citizens all realized the spirit of good will and service to others which dominated his life as a citizen and as a priest. Those who know little of the mystery of the Catholic priesthood learned from Monsignor Scanlan's benign personality that the mission of the priest is the mission of our Lord, whose love is never denied to any human soul.

I have known Monsignor Scanlan for 55 years. I have known his sorrows and his joys. I am thankful for his example and for his influence in my own life. My gratitude is shared by the people of this parish, by the citizens of Chelsea and by unnumbered others who have been privileged to come under his influence and his care. For 55 years Monsignor Scanlan has made manifest to all of us how steadfast, how generous, how noble a true priest can really be.

In this hour of loss we give thanks to God who gave Monsignor Scanlan to us. We must pray frequently and earnestly for the prompt face-to-face union of this distinguished priest with God whom he always served with all his heart.

Youth Wants To Know

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, a young constituent wrote to me recently, asking for certain information. Such requests, I realize, are routine but perhaps the phrasing of this letter may be of interest to my colleagues. Addressing his letter to the Chamber of Congress, Washington, D. C., he wrote a single sentence. "Please send me any free information on the United States as a hole that I may use in school."

Rev. John H. Crawford

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eulogy delivered by Rev. Albert C. Shannon, O. S. A., Ph. D., chairman of the department of social sciences, Merrimack College, at the funeral of Rev. John Crawford, at the Collegiate Church of Christ the Teacher at Merrimack College, North Andover, Mass., on February 15, 1957. Rev. John H. Crawford, O. S. A., was founder and dean of the division of engineering at the college:

May it please Your Excellency:

"Come to his assistance, you saints of God. Meet him, you angels of the Lord. Receive his soul, and present it to the Most High. May Christ who called thee, receive thee: and may the angels lead thee into the bosom of Abraham."

With these solemn words of exhortation the ordained priest of God, cloaked in a somber mantle, met Father Crawford's corpse at the door of the church. There, where first as a baby he was clothed in the white garment of innocence and admitted to the Communion of Saints as a militant Catholic, now, with the completion of his pilgrimage through life once again holy mother church receives him into her arms and leads him up the aisle to the altar of God. From the very first moment of his existence the Church has guarded his body as well as his soul, because here is the temple of the Holy Ghost, the partner of the soul for which Christ paid the last full measure.

Nothing must touch or hinder the unborn infant—through the temptations of life it must be guarded, unspotted, pure, innocent. Nor yet when the corpse lies finally at rest does the Church forget it, but bears it aloft through the high nave of God's house, amid the soft, multi-colored rays of the stained-glass windows, with burning tapers promising eternal light, the spiraling incense embalming the body and rising as our prayers before the throne of God. And here at the foot of God's altar, aye, at the throne of the Most High, he rests.

As a youth John Crawford answered the call of his Maker to dedicate his life in the fullest and most perfect way to the service of God. Following the evangelical counsels of Jesus Christ he proposed to devote himself entirely toward learning and practicing the worship of God under the direction of the Order of Hermits of Saint Augustine.

He learned that religious life consists in the internal perfection of his spiritual faculties according to the rule of Saint Augustine. His natural abilities were trained, disciplined, educated, and elevated by the regular monastic exercises. Through the slow, graduated steps of postulancy, noviceship, simple and finally solemn profession of the vows he had learned, he came to participate in the spiritual heritage of Holy Mother Church. Poverty, chastity, and obedience according to the Augustinian rule set the pattern for the young religious' spiritual odyssey.

He learned, too, that being a member of a religious community he had the obligation of preparing himself to serve God in whatever capacity his superiors might direct. It was for him to develop his abilities and temperament so as to willingly, generously, and whole-heartedly respond to the requests of his superiors.

Leading the regular life of the monastery with his Augustinian brethern he at the same time was ready at any moment to give himself fully and with enthusiasm, at the call of his provincial. Robed in the traditional habit of the Augustinian Friars he both contributed and profited from the daily horarium and found self-effacement in the anonymity of the religious life.

Having learned the religious life he was called by the bishop to the holy priesthood of which Saint John Chrysostom has written: "The priesthood is a dignity greater and more venerable than that of a king. Speak not to me of purple, nor of diadem, nor of garments decked with gold; all these things are but shadows, more fleeting than the flowers of spring. For all the glory of man, even that of a king, is as the flowers of the field. Speak not to me of these. But if you desire to see how great is the difference between a king and a priest, consider the measure of the power which is granted to each, and you will see the priest placed far above a king. Though the royal throne is an object of admiration on account of the gems which adorn it, and the gold with which it is encircled, yet to the king belongs only the administration of earthly things, nor beyond these has he any power. But the throne of priests is set in heaven, and they have power to determine heavenly things. Who has said this? The King of heaven himself. 'Whatsoever you shall bind upon earth, shall be bound also in heaven; and whatsoever you shall loose upon earth, shall be loosed also in heaven' (Matt. xviii, 18). What honor can be compared to this? Heaven receives from earth the princely power of judging. For the judge sits on earth, the Lord follows the servant, and whatsoever the latter decides here below the former confirms above. Therefore the priest stands as intermediary between God and man; bringing down to us the blessings that come from above, and bearing our prayers on high, appeasing the wrath of God against man, and rescuing us who have offended from his hands."

An Augustinian and a priest, Father Crawford was further required to bring his God-given talents to a high state of academic perfection through years of university education in order to assume the task of teaching collegians. Into this task he threw himself with a driving energy of a brilliant mind. His superiors had chosen well and he responded magnificently. For some quarter of a century he labored at the formation and training of students in the finest traditions of our Christian cultural heritage. "They that are learned shall shine as the brightness of the firmament, and they that instruct many to justice, as stars for all eternity." (Daniel 12: 3.)

It is not for us to enter upon an encomium of Father Crawford. Who can evaluate the blessings obtained for mankind in offering the holy sacrifice of the mass through 34 years? Which of us knows the consolation and peace of the numberless souls he has counseled and shriven in the sacrament of penance? Who can calculate the effect of his years of teaching? Only the great high priest can total the labors and fruits of his ministry; Christ the teacher alone can measure—and not forget—the influence of his professional instruction.

We do know that he strove to make himself an adaptable instrument readily at the behest of his superiors; they knew they could call upon him for the most exacting tasks, knowing full well he would answer the need with all the talent and enthusiasm at his command.

Thus after 25 years at Villanova University he had no hesitancy in gladly coming to a new Augustinian college to establish and direct the division of engineering; he inspired the Engineering Guild, and was moderator of the present graduating class of all Merrimack. A genial adviser, inspiring confidence with his calm judgment and priestly zeal.

His last day on earth was our Lady's Feast. By reason of his office as sub-prior he led the Augustinian community in the recitation of Mary's Corona, her litany and the Salve Regina—devotions dear to the heart of every Augustinian. His quick step was halted as he was about to enter his classroom the next morning. And so he died as he had lived in God's faith, in His church, in His service and in His love.

And let us pray. No one knows the depths of the justice of God; one can only faintly imagine the intensity of the purification necessary that a soul be admitted to communion with its God. Let us pray that if there be some tiny obstacle which might detain him on his way to paradise, let us pray that through our intercession the God of mercy might soon remove it and grant him everlasting life.

Mother of God's priests, we give him into thy keeping. Mary, Mother of Consolation, take him into thy house of gold. Mary, our life, our sweetness, and our hope, we lay him in thy bosom.

Imports and Exports of Agricultural Commodities, 1936–37 and 1955

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BOW. Mr. Speaker, there is considerable discussion among Ohio farmers concerning imports and exports of agricultural commodities in which figures for the year 1936–37 have been used as a base. In order to provide up-to-date information, I requested comparative tables for 1936–37 and 1955 which have been supplied by Assistant Secretary Earl Butz.

I believe these tables, together with the Department of Agriculture explanatory material on imports, may be of general interest. Under leave to extend, I include them with my remarks.

AGRICULTURAL IMPORTS OF THE UNITED STATES

The United States is the world's largest exporter and the world's second largest importer of agricultural products.

During the 1954–55 fiscal year, agricultural exports amounted to $3,143 million, or 21 percent of the total United States exports ($14,870 million).

During 1954–55, agricultural imports amounted to $3,787 million, or 36 percent of total United States imports ($10,422 million).

KINDS OF AGRICULTURAL IMPORTS

There are two general kinds of agricultural imports:

Sixty percent of the imports of agricultural products are commodities not produced by United States agriculture in commercial quantities. These products, such as cocoa, coffee, rubber, pepper, bananas, and cordage fiber, amounted to $2,271 million during the 1954–55 fiscal year.

Forty percent of the imports of agricultural products are commodities similar to those produced in the United States. These products, such as cotton, apparel wool, nuts, some

fruits and vegetables and their products, tobacco, hides and skins, grains, and sugar, amounted to $1,515 million in the 1954–55 year.

CAN THE UNITED STATES ELIMINATE AGRICULTURAL IMPORTS?

Sometimes the question arises as to why the United States does not eliminate agricultural imports, thereby directing more buying power to domestically produced commodities. The answer is not a simple one but contains a number of facets. There is, of course, no legislative authority for eliminating all imports of agricultural commodities that come from foreign countries.

In the case of the first group of commodities, apparently their elimination would have no appreciable effect on the home market for United States farm products. Since the United States does not produce such products as coffee, cocoa, tea, bananas, and spices, eliminating their import would merely mean that the United States public would do without them, and some lowering of the national level of living would result.

In the case of the second group of commodities, legislation has been established for those that currently are under support programs to protect the United States from interference by excessive imports. Commodities whose import currently is controlled under such legislation are wheat, cotton, dairy products, rye, flaxseed and linseed oil, peanuts and peanut oil. In 1954–55, United States imports of this group totaled $115 million, or only 3 percent of total agricultural imports.

Other commodities in the second group are necessary to supplement domestic production. Some vegetables, for instance, are imported in greatest amount during the offseason when United States growers do not produce in sufficient volume. Some cheese specialties, kid and goat skins, and various oriental tobaccos are varieties or types not produced commercially in the United States. Elimination of such imports would limit variety and quality of consumer products, and in the case of tobacco might even lead to reduced rather than increased marketing of the similar United States agricultural products. For example:

Tobacco imports are largely oriental and cigar leaf types, brought in to use with American tobaccos to produce flavor and aroma desired by smokers.

Hide and skin imports consist largely of kid and goat skins, used mainly in the making of specialty leather goods. United States hides and skins are largely cowhide variety, which do not fill the same place in the consumer market.

Apparel wool imports supply about 55 percent of United States annual requirements. These imports during 1954–55 were valued at $149 million, representing 4 percent of all United States agricultural imports. In addition, there was another $91 million of carpet wool imported; virtually none of the latter is produced in the United States.

Sugar imports come largely from neighboring Caribbean and Latin American countries and are one of the principal agricultural imports. During 1954–55, sugar comprised 10 percent of United States agricultural imports. Quotas are set by law to limit each year's sugar imports. This brings stability to the market and benefits both foreign producers and United States producers. Money spent by the United States in buying sugar from other countries is used largely by these countries in buying agricultural and industrial products from the United States.

United States agricultural exports and suppplementary imports for domestic use,[1] fiscal years 1936–37 and 1955–56

[In thousands]

Commodity	Unit	1936–37		1955–56	
		Imports	Exports	Imports	Exports
QUANTITY OF SELECTED ITEMS					
Corn, including meal [2]	Bushel	77,974	729	1,108	120,159
Wheat, including flour [2]	do	34,359	21,764	9,761	343,727
Soybeans	Pound	1,005	42	110	70,757
Vegetable oils, expr.[3]	do	1,516,805	41,604	472,074	1,274,730
Lard, including compounds	do	2,797	103,711	2	638,249
Tallow	do	57,662	1,229	1,493	1,329,687
Dry milk [2]	do	12,766	3,606	2,010	516,921
Cheese [2]	do	65,694	1,076	52,022	155,983
Meat and products	do	149,925	107,300	283,977	271,800
VALUE					
Above commodities	Dollar	222,936	62,061	266,681	1,538,618
Other commodities	do	643,839	670,413	1,316,228	1,953,990
All commodities [3]	do	866,775	732,474	1,582,909	3,492,608
Value of all commodities in 1955–56 dollars [4]	do	2,075,370	1,558,685	1,582,909	3,492,608

[1] Excludes imports in bond for reexport.
[2] Includes relief shipments.
[3] Imports include only commodities similar in use to those produced domestically (supplementary); excludes coffee, tea, and like commodities not produced commercially in the United States (complementary).
[4] This calculation makes comparisons between 1936–37 and 1955–56 more correct by eliminating the changes in value due to depreciation of the dollar.

Imports (for consumption) into the United States of specified agricultural commodities during 1955

Commodity imported	Unit	Year ended Dec. 31, 1955
Supplementary products: [1]		
Corn, grain	Bushel	1,087,929
Wheat, grain: [2]		
Unfit for human consumption.	do	5,198,631
Other dutiable wheat	do	1,052,389
Total	do	6,251,020

Minnesota Official Says North Misinformed on Negro in South

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks, heretofore granted, I am pleased to include in the CONGRESSIONAL RECORD a news article which appeared on the front page of the Tuesday, February 26, 1957, issue of the Birmingham (Ala.) News, one of the fine daily newspapers of my district. The article is an account of an interview with Mr. Milton Rosen, commissioner of public utilities in St. Paul, Minn., on the occasion of his recent visit to Birmingham. The news article follows:

MINNESOTA OFFICIAL SAYS NORTH MISINFORMED ON NEGRO IN SOUTH

(By Paul Hogan)

"A lot of misinformation is being sent our way regarding the Negro situation in the South," Milton Rosen, commissioner of public utilities in St. Paul, Minn., said here today.

"We have the impression that Negroes are badly downtrodden and in a suppressed condition down here," Rosen said.

"On this visit, I have seen the Negro schools, golf courses, swimming pools, and other utilities.

"It's a whole lot of misinformation," he said. Rosen said the Negro's status in the South is much better than the impression Northern people have gained.

"Rabble-rousers have told us that Negroes are 'terribly mistreated'," he added.

"I think it would be a good thing if the South sent responsible representatives to the North to tell us what is going on."

Rosen also pointed out that northern people have the impression that people in the Birmingham area live in shacks. He said that although he had been here, before, he had not seen the fine homes that cover Birmingham.

He said his city is participating in the urban renewal program, which is being adopted in Birmingham. He said areas near the Minnesota State capitol building are being redeveloped under the plan.

Rosen, who first took office as a St. Paul commissioner in 1930, is visiting Birmingham for a look at the United States Pipe & Foundry Co.'s facilities. His city has bought many thousands of feet of pipe from the company, and law requires that he look into the plant where the pipe is made.

He said he entered politics when he found that he coud not sell merchandise to the city himself.

As a tire dealer, he said, he found that city contracts were controlled by favored companies. He said that with the help of the FBI we cleaned out every tout in St. Paul.

Federal Assistance Is Needed To Deal With Pockets of Unemployment That Here and There Mar the Nation's General Industrial Prosperity

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. VAN ZANDT. Mr. Speaker, this date with my colleagues from Pennsylvania, Representatives CARRIGG, FENTON, and SAYLOR, I introduced a bill known as the Area Assistance Act of 1957. This bill should be known as the administration bill as it reflects the views of President Eisenhower when he said, "We must deal with pockets of chronic unemployment that here and there mar the Nation's general industrial prosperity." In other words, the bill which I introduced today provides for the basic elements of the Eisenhower program to aid distressed areas.

Mr. Speaker, over a period of years, I have sponsored legislation on this subject and frankly, it was not until the 84th Congress that interest was manifested to the extent that we could get action of this type of legislation. As many will recall, last year the Senate passed the so-called Douglas bill in the closing minutes of the 84th Congress. Regardless of the determined efforts on the part of several of us, we were unable to secure consideration of the bill by the House before adjournment.

I think it is time to face the facts concerning the distressed areas of the Nation. At the present time there is pending in the Senate the area redevelopment bill, S. 2663, which is a revised version of the so-called Douglas bill of the 84th Congress. From what I am told, S. 2663 is not acceptable to the administration.

Mr. Speaker, the bill that I have introduced today known as the Area Assistance Act of 1957 has the blessings of the administration and while it may not be acceptable to everyone, I am hopeful that it can be amended and thus serve as a basis for providing aid to the distressed areas of the Nation now badly in need of relief.

The following is an analysis of my bill to assist distressed areas:

AREA ASSISTANCE ACT OF 1957

PURPOSE

"To assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance."

BASIC PRINCIPLES

1. Communities are to retain primary initiative and responsibility in planning and financing their economic redevelopment.

2. The program should aim at lasting improvement of economic conditions, not temporary relief.

3. Federal assistance is contingent upon the active financial participation in specific projects by the State or local groups identified with the troubled community.

4. A project will receive Federal aid only if it creates new job opportunities and does not merely transfer such opportunities from one area to another.

ADMINISTRATION

An Area Assistance Administrator who would be in charge of the program would be appointed by the President with advice and consent of the Senate.

To advise the Secretary of Commerce in the performance of his functions authorized by this act, there is formed an Area Assistance Advisory Board, consisting of these members: Secretary of Commerce (chairman), Secretary of Agriculture, Secretary of Health, Education, and Welfare, Secretary of Labor, Secretary of the Treasury, Administrator of the Housing and Home Finance Agency, Administrator of the Small Business Administration, and representatives of other interested executive branch agencies.

AREAS ASSISTED UNDER PROVISIONS OF THIS ACT

Areas certified by the Secretary of Labor as areas of substantial and persistent unemployment (that is, where the unemploy-

ment rate is currently 8 percent or more, adjusted seasonally, and has been at least 8 percent for the major portion of each of the preceding 2 years).

All other areas, with particular attention to one-industry communities, low-income rural areas, and other ecoonmically underdeveloped areas.

TYPES OF ASSISTANCE TO AREAS OF SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT

Financial assistance in the form of loans for such purposes as: (a) Preparing land for industrial use; (b) constructing new factories; (c) modernizing old factories. (Total amount outstanding at any one time not to exceed $50 million.)

Grants for technical assistance, including studies evaluating the needs of, and developing potentialities for, economic growth. (Up to $1,500,000 annually.)

TYPES OF ASSISTANCE TO LOW-INCOME RURAL AREAS AND OTHER UNDERDEVELOPED AREAS

Technical assistance and direct field consultation in establishing new industries based on local resources, in expanding existing industries, and in economic diversification.

BASIC TERMS FOR FINANCIAL ASSISTANCE

1. To assure that State and local leaders join in the program, there must first be submitted by the area or community an overall program for its economic development, as well as a finding by the State that the project for which financial assistance is sought is consistent with that program. For the same reason, assistance is to be extended only to public or private persons approved by the State in which the project is located.

2. Assistance shall not be available for working capital, purchase of machinery or equipment, or to assist the relocation of establishments if this will cause unemployment in their original locations.

3. Borrowers must first exhaust the possibility of a loan on reasonable terms from private lenders or other Federal agencies before obtaining assistancec under the act.

4. Federal assistance in the form of loans may be granted up to 35 percent of project costs. These loans may be on a second-mortgage basis if necessary to assist the area. Private, State, and local sources are to provide no less than 65 percent of project costs (of which a minimum of 15 percent is to come from State or local sources). Under such authority, a first-mortgage loan from private sources representing 50 percent of the cost appears entirely feasible

USING EXISTING FEDERAL PROGRAMS

Activities authorized by this act are coordinated with existing Federal programs affecting local economic conditions in areas of substantial and persistent unemployment. The existing programs would be used on the problems of these areas so as to provide the maximum assistance from the minimum Federal expenditure.

1. The Secretary of Labor, in addition to certifying areas of chronic unemployment, is also authorized to carry out or assist in studies of capabilities of the labor force, development of its skills and assist in its training.

2. The Secretary of Health, Education; and Welfare may provide necessary assistance for vocational education services.

3. The Housing and Home Finance Administrator, under provisions of the Housing Acts of 1949, 1954, and 1955, as amended, may permit the following considerations:

(a) Priority will be given cities and similar bodies for financial assistance for needed public facilities and public works (such as water and sewerage systems).

(b) Financial assistance may be provided urban renewal projects for industrial or commercial redevelopment of land previously nonresidential in character.

(c) Planning assistance grants may be made to counties, cities, and other municipalities having a population of 25,000 or more according to the latest decennial census.

Pacific Northwest Fruit Growers Effect Long-Range Planning

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Farmers Working Together Strengthen the Entire Economy," and published in the Wenatchee Daily World of Monday, February 11, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARMERS WORKING TOGETHER STRENGTHEN ENTIRE ECONOMY

The Washington Growers Clearing House Association holds its 15th annual meeting Tuesday, providing an occasion on which to reflect on the changes which have been brought onto the orchard industry scene in those 15 years.

Back in the 1930's, influenced by a suffering national economy, the orchard industry was in bad shape. It has been estimated that each acre of our great fruit belt had an indebtedness of some $800.

One of the most depressing factors was the chaos of the market.

The fruit grower was a very little man, single handedly going against the giant of the marketplace. In a single day he could get a wide variety of price quotations for the same box of apples, ranging from 25 cents to 50 cents difference. He had no access to price and marketing information and often fell prey to sharp buyers. Often he let his apples go for prices far below their worth, far below the price he might have received elsewhere.

"Below price" fruits, entering the market, caused shakiness, making the fruit industry even sicker.

At last, with the aid of the Federal Government, certain remedies were given to this "sick patient." Among them was a proposal that growers form an organization which would provide them with marketing reports and other information affecting the price of their fruit. That brought into being the Washington Growers Clearing House Association, sponsored, financed, and directed by fruit growers through their own elected board of directors, one each from 21 districts of North Central Washington.

Today it has some 2,000 fruit-grower members or about 94 percent of our district's total number of growers. They financed the organization by an assessment of three-eighths of a cent per box of fruit produced. Every other day or so a clearinghouse bulletin goes to growers. It contains an appraisal of market prices of all fruits and grades. The result: Growers of the entire area know the true market value of their fruit at all times.

The clearinghouse is concerned not just with marketing. It has become the voice of 2,000 fruit growers in discussion of taxation, credit, research programs, and other matters affecting the fruit industry.

The fruit grower who, in the 1930's, was a little man facing the giant of the marketplace, has become strong through collective action and information.

In recent years we have seen the farmer gain similar strength through collective action here in north central Washington. We have cattlemen's associations, wheat-producer associations, the price-bargaining associations of the pear growers and peach growers, all welding individual farmers into groups big enough to survive in the highly competitive economy of modern America where bigness counts.

The clearinghouse and these other groups deserve commendation from all of us. Farmers, by working together to strengthen their own position, have very materially aided all of us in this agricultural area where everyone's welfare is based on the welfare of the man on the farm.

Sanctions Against Israel

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. HUMPHREY. Mr. President, in the midst of the recent debate on sanctions against Israel, a letter to the editor of the Washington Evening Star has come to my attention. The letter, written by Sanford H. Bolz, is in answer to an editorial which appeared in the Star on February 7. Mr. Bolz discusses with a precision of analysis which lately has been all too rare, the implications of the sanctions question. I ask unanimous consent that the text of his letter, which was published on February 12, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

"SANCTIONS AND ISRAEL"

Unless I mistake your editorial of February 7, "Sanctions and Israel," your argument comes to this: That since the United Nations failed to impose sanctions against Russia for its utterly immoral and unjustifiable action in Hungary because Russia is strong enough to be undisturbed by sanctions, it follows that because Israel is weak enough to be seriously hurt by them, the U. N. should not fail to impose sanctions against her for her thoroughly moral and justifiable action in refusing to withdraw from the Gaza and Aqaba areas without guarantees that Egypt will not resume its belligerency there. This it is plain, is the specious non sequitur on the basis of which you justify the abandonment of elementary justice and morality and principle to the hard realities and stubborn practicalities of international life—and in connection, mind you, with a proposed U. N. resolution which, as you know, is not legally binding but depends for its observance upon its moral force.

It is perhaps ungentle to remind you that, Russia aside, Egypt herself has for some 6 years now been in open and notorious defiance of a 1951 decision of the U. N. Security Council that Israeli ships should be permitted to pass through the Suez Canal; that unlike a General Assembly resolution, which is merely a recomendation backed by moral force, such a Security Council decision is legally binding; and that not only by every test of justice, morality and principle, but even by your touchstone of hard reality and practicality, Egypt would have been even more vulnerable to sanctions than

Israel during these 6 years. Yet sanctions were never imposed by the U. N. nor, to my knowledge, ever advocated by your newspaper. Nor were you moved to such advocacy, or the U. N. to such action, by further Egyptian belligerency in denying Israel navigation of the Gulf of Aqaba and in sending murderous bands across Israel's borders (established by a U. N.-negotiated armistice agreement), which it is now widely conceded constituted serious threats to the peace and provoked Israel's action of October 29 against Egypt.

Was it hard reality that led the United States and the U. N. to acquiesce without sanctions in Nasser's defiance of the Security Council by refusing Israeli ships passage through the Suez Canal? Certainly it was neither justice, morality, nor principle. Is it too much to suggest that perhaps the success of that defiance encouraged the Egyptian dictator to seize the canal last year? Certainly that would be the inexorable logic of stubborn practicality. Does not the same logic commend the Soviet action in Hungary? Does the end justify the means? For myself and for my country, I had rather stand with principle and justice. Any other course is hardly realistic.

SANFORD H. BOLZ.

Importance of Flood Control

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, February 28, 1957

Mr. MAGNUSON. Mr. President, a thought-provoking column written by Publisher Wilfred Woods, of the Wenatchee Daily World, can provide important guidance for us as we, in the 85th Congress, plan greater flood prevention for our Nation.

I ask unanimous consent to have printed in the Appendix of the RECORD the Wilfred Woods column of Monday, February 11.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TALKING IT OVER

(By Wilfred R. Woods)

Flood control is one of the activities of our Federal Government that doesn't get much publicity—except when something happens.

For instance, the Northwest has experienced only one major flood this century—in 1948.

As a result, we tend to forget flood control. We hear about power, all right. And navigation is frequently discussed in the press.

It seems that our memory is short when it comes to floods.

But there is nothing that can prevent snow from melting when the weather gets warm, nor is there any device to prevent rain from falling.

So floods will come again.

Our only protection is water storage—upstream dams, both in Canada and in our own country.

What flood control can do in other parts of the country was demonstrated just a week ago in Tennessee.

The biggest flood since 1883 would have crested at Chattanooga, Tenn., according to TVA engineers and the United States Weather Bureau.

The Tennessee River would have reached a height of 22 feet above flood stage. Much of the main business district of Chattanooga would have been under water, but for the TVA dams.

Instead of reaching 22 feet above flood stage, though, the river crested at just 2 feet above flood stage.

Damage would have totaled more than $50 million in the city limits alone, according to preliminary estimates.

That is what flood control dams prevented.

This kind of protection is not available on the Columbia River. And it gets farther away every time a large, key storage dam (such as high Hells Canyon) is replaced by lesser dams.

Civil Rights

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement recently made before a subcommittee of the House Committee on the Judiciary by the Honorable John J. Wicker, Jr., a former State senator and a distinguished attorney of Richmond, Va. This statement points out with exceptional clarity the inherent dangers and discusses with great force the unconstitutionality of the legislation currently being proposed as so-called civil rights bills. It should be read by every Member of this House.

STATEMENT BY JOHN J. WICKER, JR., ATTORNEY AT LAW, RICHMOND, VA., FORMER STATE SENATOR AND TEMPORARY CHAIRMAN OF THE 1945 CONSTITUTIONAL CONVENTION OF VIRGINIA, OPPOSING PROPOSED CIVIL-RIGHTS LEGISLATION (H. R. 1151, 2145, ETC.) BEFORE THE COMMITTEE ON THE JUDICIARY OF THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES OF AMERICA, FEBRUARY 13, 1957

INTRODUCTION

Mr. Chairman and gentlemen of the committee, my name is John J. Wicker, Jr. I am an attorney at law, and for many years I have been a member of the bar of the Supreme Court of Appeals of Virginia, of the Federal courts in Virginia, and of the Supreme Court of the United States. I reside, as I have for most of my life, in Richmond, Va.

While I am here before you today at the suggestion and request of a number of Virginia citizens and organizations, my appearance is solely in my capacity as a citizen of the Commonwealth of Virginia and the United States of America, and not in any representative capacity whatsoever. I wish it to be distinctly understood that I am not appearing here, directly or indirectly, in behalf of any of my clients or any of the various organizations with which I am affiliated. In other words, the views that I express here today are purely my own and do not necessarily reflect the views of any other individual or group whatsoever.

OPPOSED TO H. R. 1151, 2141, ETC.

As a citizen, I appear to express my opposition to H. R. 1151, H. R. 2145, and other certain so-called civil-rights bills now pending before the House Committee on the Judiciary, as follows:

NO NECESSITY SHOWN FOR PROPOSED CIVIL-RIGHTS LEGISLATION

It is my understanding that in considering proposed legislation, two questions are always highly important. First, is the proposed legislation necessary? Second, does the legislative body before which such legislation is pending have the right, as well as the power, to enact the proposed legislation?

Unless both of these questions are clearly and satisfactorily answered in the affirmative, then the proposed legislation should fail. And I conceive it to be the duty and burden of the proponents of legislation to establish both the necessity and the constitutional propriety of proposed legislation.

I believe I have read practically all of the available testimony given last year on similar proposed legislation both before the House Committee on the Judiciary and before the Senate Committee on the Judiciary. The testimony thus far this year in favor of the pending legislation is substantially similar to that given last year. Analysis of this testimony will lead, I believe, inescapably to the conclusion that the proponents of this pending legislation have failed to adduce any satisfactory evidence or proof whatever as to the necessity of these proposals; and they have also failed to prove that the Congress has any right to enact legislation which would not only still further encroach upon the jurisdiction and rights of the several States, but also would in practice and effect, deprive citizens of their fundamental right to trial by jury whenever the Attorney General, or someone acting for him, desired to do so.

ATTORNEY GENERAL'S TESTIMONY NEGATIVES NECESSITY

The best examples of the failure of proof of necessity for this proposed legislation are to be found in the testimony of the Attorney General of the United States in connection with this legislation. For example, the principal reason advanced by the Attorney General for the creation of a Federal Civil Rights Commission was a quotation from President Eisenhower's 1956 state of the Union message in which the President said:

"It is disturbing that in some localities allegations persist that Negro citizens are being deprived of their right to vote and are likewise being subjected to unwarranted economic pressures."

Now there are over a quarter million localities in these United States. Yet the principal basis for setting up a new Federal bureaucracy which would spread its powerful pressures all over the Nation—not like the creeping socialism which we have heard a lot about, but more like a form of galloping paralysis—appears to consist of mere allegations that Negro citizens are being unfairly or unlawfully treated, merely in some localities—not in any widespread area or in any considerable number of localities.

On this flimsy ground of mere allegations, the Attorney General favors saddling upon the entire Nation the mental, spiritual and financial burden of a new national Commission operating independently all over the Nation; applying its inquisitions and intimidations whenever and wherever it chose; dragging citizens away from their homes and businesses at any time and for any distance and to any place the new Commission desired, upon the compelling force of subpenas; merely to investigate whether and to what extent these allegations are well founded and to try and bring about correction of any conditions the Commission determines to be civil rights violations.

The utter lack of necessity for the creation of any such Civil Rights Commission as is contemplated in this pending legislation is shown by the testimony of the Attorney General himself.

While dealing with another portion of this legislation, the Attorney General stated that in a recent case the United States Supreme Court had denounced systematic discrimination against Negroes in the selection of jury panels in Mississippi and that the De-

partment of Justice thereupon had instituted an investigation. Although the Attorney General said that "according to the undisputed evidence in the record before it" (the Court) "systematic discrimination against Negroes in the selection of jury panels had persisted for many years past in the county where the case had been tried;" nevertheless the Attorney General admitted that the investigation by the Department of Justice "showed that, whatever the practice may have been during the earlier years with which the Supreme Court's record was concerned, in recent years there had been no discrimination against Negroes in the selection of juries in that county."

Now, if the Department of Justice can proceed, by inquiry and investigation, as it did in this case, to determine that the unfair and discriminatory condition denounced in a recent decision of the United States Supreme Court no longer exists, and can do this without any new legislation and without the setting up of any new national Civil Rights Commission, why cannot the Department of Justice institute and conduct a similar investigation to ascertain whether or not "the disturbing allegations" mentioned in the President's state of the Union message are founded upon fact, or are without foundation, or refer to conditions which may have formerly existed, but which do not actually exist any longer?

Even if conditions in the field of Negro voting were such as to indicate the need for some remedial action or investigation, why should the Congress set up a new and independent national commission, clothed with vast inquisitorial authority and vested with the power to be autocratic, intimidating and oppressive, and necessarily involving the addition of a great horde of Federal investigators, agents, examiners, etc., at great expense to the already heavily burdened taxpayers?

There are many other fields of daily life of just as much and just as vital concern to the national and individual welfare which need investigation and remedial action far more. Yet the proposed legislation does not propose setting up any national commission to operate in these other areas. The safety of persons in their ordinary daily pursuits is certainly just as important as the right to vote.

Robberies and holdups, planned and executed on an interstate basis, accompanied by violence and extreme brutalities, are taking place in ever-increasing numbers, not just in some localities but in a large number of areas, north, south, east, and west all over the United States.

Right here in the Nation's Capital all of you know it is exceedingly dangerous to use the public streets in many sections of the city at any time of night and even sometimes in board daylight. Gang warfare and teenage hoodlumism, operating across State lines, take their toll of human life and property—frequently including many innocent bystanders—in practically all of the large cities of our Nation, and in some of the smaller places, too.

The enslavement of large numbers of our young people—beginning even in their youthful public school days—by the poisonous narcotic drug traffic organized and directed nationally—constitutes a serious menace to the very foundations of our national life.

These are just a few areas in which there is far more reason to be "disturbed by allegations" than in the matter of Negro voting. Some of these matters have engaged the intelligent attention of various congressional committees from time to time, and these congressional committees—composed of duly elected representatives of the people—have accomplished much good. But here we have a proposal for the creation of a brandnew independent national Commission to investigate merely one area in which there are "allegations."

ATTORNEY GENERAL'S PRESENT AUTHORITY SUFFICIENT

The proposed legislation would give congressional approval and special authorization for the appointment of a special Assistant Attorney General to direct the activities of a Civil Rights Division in the Department of Justice, in both the criminal field and the civil field. I submit that there is no necessity whatever for this legislation.

In his statement before both the House Committee and Senate committee last year, the Attorney General frankly stated that the Department of Justice had been operating a Civil Rights Section ever since 1939, but that the "noncriminal activity of the Department in the civil-rights field is constantly increasing in importance, as well as in amount." Accordingly, the Attorney General feels that "the Department's civil-rights activities, both criminal and noncriminal" (should) "be consolidated in a single organization." And he thinks that in order to bring this about a new Assistant Attorney General should be authorized by Congress.

If it is proper for the Department of Justice to busy itself in the civil field of civil rights (as the Attorney General admitted the Department had actually done in some cases) then he can certainly reshuffle his organization and personnel and designate one of his assistants to direct the activities of the Department, both in the civil and criminal phases of civil rights.

In his testimony before the Senate committee, the Attorney General was questioned rather pointedly on this proposed new Civil Rights Division in the Department of Justice and the proposed new Assistant Attorney General to be in charge thereof. And he admitted that he already had authority to assign civil rights enforcement duties to any of the Assistant Attorneys General already authorized and serving under him. As he testified:

"The act, under which the Department of Justice is set up, does not specify any particular duties for any Assistant Attorney General."

One reason for the proposal is found in his testimony that the passage of any such legislation would be followed "almost automatically" by increased appropriations for the Department of Justice. Another reason is shown by the testimony of the Attorney General before the House Committee in which it was pointed out that the main reason for special authorization of an Assistant Attorney General in charge of Civil Rights was "to give emphasis and prestige in the enforcement of civil rights."

The Attorney General also said that if this legislation was passed, the activities of the Department of Justice would not only be greatly broadened but greatly increased in volume, as well as in scope. That was just a very euphonious way of saying that if this legislation is passed, then the Federal Department of Justice will encroach still further into the daily lives of our people in practically every State—especially the Southern States, of course—and will extinguish—by mere force and volume and power—even more of the safeguards and rights of the citizens to local government in local State affairs.

PROPOSED LEGISLATION FRAUGHT WITH DANGEROUS POSSIBILITIES

With the prestige of Congressional approval, the Department of Justice would undoubtedly "move in" in various States wherever and whenever the Attorney General thought it to be advisable from any standpoint. And he could subject the governments of those States and the governments of municipalities and counties, and the officials and citizens thereof to intimidations and powerful pressures against which there could be no redress.

In fact, the situation could be very much like that which occurs when a surging flooding river overflows its banks and breaks over or through whatever levees may be set up to contain it within its proper bounds and spreads, with devastating force and volume, over many areas which it is not supposed to invade. And even after its muddy tide has receded, great damage has already been done and cannot be undone. So it would be in this case.

If the Department of Justice under a politically minded Attorney General should be armed with Congressional authorization and sanction and blessing for this new Civil Rights Division, presided over by a new Assistant Attorney General, he could invade any State or any locality he chose at any time he chose upon any allegations, no matter from what source they came or how flimsy they were. And he could do this at such times and in such manner as to intimidate the officials and citizens of such States and localities and interfere with them, unjustly and unfairly, in the ordinary exercise of their constitutional and lawful rights.

And against this arbitrary and oppressive action—all of which would be paid for by the whole taxpayers of the United States—the victimized States and localities and officials and citizens would have no redress whatsoever. Perhaps after long and protracted litigation they might be able to drive the intruder back, but—as in the case of a receding flood—the damage would already have been done.

Please understand that I do not charge that the present Attorney General would actually and consciously exercise these powers and this new prestige in the oppressive and unfair manner indicated; but I do say that, if this legislation were to be passed, then you would be placing these powers in his hands.

And I do not believe that the record and the public expressions of the Attorney General give any indication that he would be either cautious or moderate in his approach or in his use of this power if he is vested with congressional sanction, approval, and prestige by this legislation.

PROPOSED LEGISLATION WOULD FAVOR INTERRACIAL MARRIAGES, ETC.

In its preamble, one of the most important of these so-called civil-rights bills (H. R. 2145) endorses and promises to secure "certain rights" included in the United Nations Declaration of Human Rights.

It will be surprising and shocking to the American public to learn that this pending legislation—through its endorsement of this international "declaration"—would put the Congress of the United States on record as declaring that all adult persons in the United States have a right to engage in interracial marriages (art. 16); and a right to seek and impart information "through any media and regardless of frontiers" (art. 19); and a right to have any religion they choose and and to "manifest" their "religion or belief" in "teaching, practice, worship and observance" (art. 18).

And this so-called civil-rights legislation would pledge the United States to secure these so-called rights.

From our earliest time, the right of the several States to prohibit interracial marriages within their respective borders has been fully recognized. This so-called civil-rights legislation seeks to destroy that time honored and long established State right.

Not long ago the United States Government executed the Rosenbergs for imparting information "regardless of frontiers." If this pending legislation had been in effect it would have helped to thwart and frustrate the prosecution and punishment of those traitors. If it is enacted now, it will

be in conflict with our Federal laws against espionage.

In some parts of our country, until some years ago, polygamy was recognized as a part of a religion which thousands of Americans believed in and practiced. This so-called civil-rights legislation would be derogative of our antipolygamy laws.

Moreover, even today, there are some groups of American citizens whose conscientious religious beliefs sanction voluntary bodily disfigurement and even sacrificial deaths as an important part of the observance of their religion. This so-called civil-rights legislation would endorse the so-called right of individuals to engage in such religious practices.

The foregoing is illustrative of some of the many dangers involved in this so-called civil-rights legislation.

DEPRIVING CITIZENS OF RIGHT TO JURY

We come now to some of the most dangerous and objectionable of all the proposals which would have the effect of enabling the Attorney General, through the Department of Justice, to institute and conduct civil actions and proceedings in Federal courts all over the United States in the name of the United States of America—but really for the private and personal benefit of whatever individuals the Attorney General might choose to recognize or prefer. And he could do this whenever those individuals allege that any other person has "engaged or is about to engage in any act or practice" which would deprive the complaining individual of his free and untrammeled right to vote for or against candidates of his own choice for Federal office.

These bills would also have the effect of enabling the Attorney General, in whatever location and in whatever cases apparently involving civil voting rights he chose to recognize, to deprive the defendant or defendants of the fundamental right to trial by jury. These bills would also be bypassing and practically nullifying proceedings in State courts and other State tribunals now authorized to deal with present or threatened invasion of the civil rights of individuals.

All of these effects would do serious damage to our constitutional system of government, and would place in the hands of the Federal Department of Justice the power to inflict intolerable burden and expense upon individual citizens throughout the Nation and to intimidate State and local officials.

And, in a practical even though perhaps not in a narrow technical legal sense, they would authorize judicial conviction of violation of law, or of intent to violate law, without affording the accused the fundamental right of trial by jury.

In his testimony, the Attorney General told how the Department of Justice had intervened in a civil suit in Arkansas in a school board case, which was a civil proceeding for an injunction. Likewise, as already noted, the Attorney General testified that the Department of Justice had insituted and conducted an inquiry and investigation in the voting conditions in Mississippi. No doubt the Department of Justice has busied itself in other States and other localities in various civil proceedings having to do with civil rights. All of this has been done under the present laws and without the specific sanction and approval and blessing of any such congressional enactments as the Attorney General now advocates. This further illustrates the fact that there is no real necessity for this proposed legislation.

PROPOSED CIVIL PROCEEDINGS OFFENSIVE AS CRIMINAL PROCEEDINGS

But the Attorney General insists that any activities of the Department of Justice in these matters which might lead to some criminal prosecution would inevitably "stir up such dissension and ill will in the State that it might very well" [do] "more harm than good."

The Attorney General seems to feel that State and local officials and local citizens would resent any Federal activity that might lead to criminal prosecution, but that they would not experience any similar resentment or ill will if such Federal activities were directed along the line of investigations and inquiries leading to the institution and conduct of civil proceedings and injunctions coupled with the threat of punishment by fine, or imprisonment or both, for contempt of court in the event of failure to respect such injunctions.

Such reasoning seems very queer and unrealistic to me.

In fact, I believe that the average State and local official and local citizen would much prefer that the issue of his guilt or innocence be determined, after investigation, by customary procedure where he is not only confronted by his accusers but where he has the constitutional safeguard of a trial by jury of his peers.

Instead, the Attorney General wants to have a Federal judge, sitting without benefit of a jury, determine either that defendants had been guilty of the alleged law violations in the past, or that they were about to commit these law violations in the immediate future. The humiliation and worry and trouble and expense to the defendants would be just as great, and perhaps greater, in such civil proceedings. But they would not have the protection that every accused deserves in the form of a trial by jury.

The Attorney General argues that these civil proceedings could be accomplished "without having to subject State officials to the indignity, hazards, and personal expense of a criminal prosecution in the courts of the United States.

State officials charged in a civil proceeding, either with past violations of law or with determination to violate the law in the future, and dragged into the Federal courts by the Department of Justice and subjected to long drawn out civil proceedings (in which no speedy trial is constitutionally guaranteed, and in which no jury is assured) would be subjected to just as much indignity, hazards, and personal expense as in a criminal prosecution—and perhaps even more.

CONCENTRATING ON ELECTION RIGHTS

The Attorney General argues that while the present statute (sec. 241 of title 18, U. S. C.) "makes it unlawful for two or more persons to conspire" against the exercise of civil rights by another, the statute fails to "penalize such an injury when it was committeed by a single individual."

However, in his testimony I do not believe the Attorney General referred to another statute, of equal dignity (sec. 594 of title 18, U. S. C.) which makes it a crime for any one person to intimidate or threaten or coerce, or attempt to intimidate, threaten or coerce any other person for the purpose of interfering with such other person's right to vote for or against any candidate for Federal office.

While it is true that this latter statute refers only to civil rights in connection with voting, at the same time it is also true that the Attorney General's testimony indicated very strongly that the principal interest of the Department of Justice in legislation at this time is confined practically to the matter of voting and elections. In fact, in his testimony he conceded that there is really no necessity for any sort of antilynching legislation, especially since no lynchings had occurred in the United States since 1951.

Furthermore, in response to suggestions from the House committee chairman that he might comment upon "certain other proposals relating to civil rights now pending before the committee" (involving amendments to the "two principal criminal statutes intended for the protection of civil rights") the Attorney General testified last year that "there is grave doubt as to whether it is wise to propose at the present time any further extension of the criminal law into this extraordinarily sensitive and delicate area of civil rights."

ADDITIONAL UNTOLD BURDEN ON TAXPAYERS

In the testimony of the Attorney General, no attempt has been made to estimate the size or extent of the financial burden which would necessarily be involved, if these proposals are enacted into law, by the creation of a new and enlarged division in the Department of Justice, and the authorization of the Attorney General to become the Government-paid attorney for whatever complainants he chose to recognize in the vague field of civil rights.

Anyone acquainted with government, as you gentlemen are, will recognize the fact that the burden will not be small or inconsequential. Nor would it diminish as time went on, but instead it would spread and grow with the speed and fertility of noxious weeds.

For example, when questioned by the chairman of the House committee as to the expenses of the proposed Civil Rights Commission, the Attorney General testified that supplemental appropriations to cover new expenses "would follow almost automatically, I think, if the Congress authorized it * * *. If this Commission is authorized and the new division is authorized in the Department of Justice, it would be immediately followed by an appropriation."

EMPOWERS ATTORNEY GENERAL TO "PUNISH" OFFICIALS AND CITIZENS WHO OPPOSE SCHOOL RACIAL MIXTURES

Mr. Chairman, the more I have studied this matter and the more I have thought about it, the more convinced I have become that there is a great deal more to these proposals of the Attorney General than meets either the naked eye or the legislative eye.

In my opinion, the enactment of this proposed legislation, as advocated by the Attorney General, would result in the serious evils and grave injustices to which I have alluded. It would also eventually empower the Department of Justice to harass and intimidate and burden and punish citizens who believe that the Supreme Court of the United States went beyond its own lawful powers and usurped legislative prerogatives and encroached unconstitutionally upon the reserved rights of the States when it declared that public education of Negro children and white children in separate schools was unconstitutional.

By the same sort of devious reasoning exhibited in his testimony concerning this legislation, the Attorney General, if vested with the powers and prerogatives sought in this legislation, could very well conclude that the State officials and local officials and private citizens who did anything to preserve segregation in areas where there will not be any public education without segregation, were guilty of conspiring to deprive, or attempting to deprive, Negroes in their localities of some sort of so-called civil rights.

In the public school cases decided in 1954, it was clearly pointed out in the able brief of the attorney general of Virginia and his associate counsel, that Senator Trumbull, of Illinois, the leading sponsor of the 14th amendment, and one of the leading sponsors of the Civil Rights Acts of 1866 and 1875, flatly declared: "The right to go to school is not a civil right and never was" (CONGRESSIONAL GLOBE, 42d Cong., 2d sess., at p. 3189).

It was also pointed out in the same brief that the congressional framers and sponsors of the 14th amendment and the legislatures of the States that ratified it were all agreed that public school education was

not within the purview of the amendment. Nevertheless, the Supreme Court, in its 1954 decision, blandly disregarded these cogent arguments and historical facts.

Consequently, there can be no assurance that the Supreme Court, as constituted at present, would attach any weight to the declared intentions of the sponsors of this proposed legislation. Therefore, if this legislation is enacted, and the Attorney General then chose to file proceedings against State and local officials, school board officials, officers and active members of various citizens groups, who believe that the Supreme Court's public school decision was unconstitutional and who, accordingly are unwilling to establish and maintain a mixture of races in their public schools, in all likelihood the Attorney General would be upheld by the Supreme Court. Such proceedings could result in mandatory and injunctive decrees by Federal courts followed by fine and imprisonment upon failure to comply therewith.

Some may think that these forebodings are far fetched, and that the Attorney General, if this legislation is passed, would not take such advantage of the situation and take such extreme measures. But I reply that whenever any court of last resort can completely ignore the plain provisions of the 10th amendment to the Constitution of the United States while giving to the 14th amendment a meaning completely contrary to the demonstrated intentions and opinions and belief of the Congress which proposed it and the States which ratified it, as was done by our Supreme Court in the public school decisions, then there is no fearsome consequence beyond the realm of reasonable possibility.

JEFFERSON'S PROTESTS AGAINST ENCROACHMENTS

If, perhaps, anything that I have said about the tendency of the present Supreme Court to usurp the rights of Congress and to ignore the constitutionally reserved rights of the States appears to be somewhat harsh, let me remind you of the opinions expressed over a century ago by one of the greatest Americans of all time. Commenting upon the encroachments upon States rights by the Supreme Court and as to how they might be checked, he said: "By reason and argument? * * * You might as well reason and argue with the marble columns encircling them."

Renouncing the use of force, he advocated that the States should "denounce the acts of usurpation until their accumulation shall overweigh that of separation." That was the opinion expressed by Thomas Jefferson, author of the Declaration of Independence, in his letter to Giles, December 26, 1825. (See Beveridge's Life of John Marshall, vol. 4, pp. 38-39.)

So, in my opinion of the extreme lengths to which the Supreme Court seems willing to go in violation of the constitutionally reserved rights of States, I find myself in excellent company.

Of course, it may be argued that I am seeing a lot of fanciful situations and that the Department of Justice would not go to any such extremes under any circumstances, and if it did, that the Supreme Court certainly would not fail to interfere. Unfortunately, however, the recent decisions of the Supreme Court have shaken public confidence, and in many areas destroyed public confidence in any assurance that States rights will be protected.

We often hear it said that "the decision of the Supreme Court is the supreme law of the land." I do not believe that is always true.

Suppose the Supreme Court decided that New York State lawfully elected 100 persons to the United States Senate on the ground that New York's tremendous population entitled the State more Senators than other States. Such a decision could be based upon reasoning no more unreasonable and no more illogical than that which the court used in its May 17, 1954, public school decision. In such event, I do not believe the Congressmen and Senators from the other States would regard that decision, even if unanimously rendered, as the supreme law of the land.

During the Virginia Constitutional Convention of 1788, John Marshall, in replying to Mason's argument about possible encroachment by Federal courts, replied that any such idea was absurd. Then he said:

"Has the Government of the United States power to make laws on every subject? * * * Laws affecting the mode of transferring property, or contracts, or claims between citizens of the same State? Can Congress go beyond the delegated powers? Certainly not. If they were to make a law not warranted by any of the powers enumerated, it would be considered by the national judges as an infringement of the Constitution which they are to guard. They would not consider any such law as coming under their jurisdiction. They would declare it void."

Obviously, the man who was later to become the great Chief Justic never had the slightest thought that in later years the Supreme Court would not only fail to protect the separate sovereign States from encroachment on their reserved powers, but would actually become the active executioner of those powers.

WHY HAVE THE ATTORNEY GENERAL AND THE ADMINISTRATION BECOME SUCH ACTIVE SUPPORTERS?

During the testimony of the Attorney General before the Senate Committee on the Judiciary on May 16, 1956, it was brought out that, at various times in 1955 the late Senator Kilgore, as chairman of that committee, and Senator HENNINGS, as chairman of the Senate Civil Rights Subcommittee, had repeatedly sought to obtain the cooperation of the Department of Justice in connection with several civil-rights bills covering practically the same ground as those to which I have specifically alluded. The testimony further brought out that all of the efforts of these distinguished Senators to obtain cooperation from the Attorney General or the Department of Justice in these matters were unsuccessful. It was further brought out that in connection with those bills, the distinguished Senators were unable to obtain from the Department of Justice either support or recommendation, or, in several instances, even the courtesy of a reply to their official letters.

However, in the spring of 1956, with dramatic fanfare of publicity broadcast all over the Nation, the Attorney General proclaimed that, in keeping with a White House announcement, an administration program of civil-rights legislation would soon be placed before the Congress. The Attorney General's announcement was followed by the introduction of these so-called new bills which were substantially the same as the old bills.

Significantly enough the old bills, on which no cooperation had been obtained from the Department of Justice, were introduced in 1955 when there was no big national election; while the new bills proclaimed and acclaimed by the Attorney General and the administration were introduced in 1956, just a little over 6 months prior to the national election.

No doubt, some skeptical or cynical people might possibly suspect from this that the active and fervent support given to these new civil-rights bills by the Attorney General and the administration was, and is, actuated or inspired, in some way or other, by political motives. But, of course, I would not be so unkind as to intimate any such evil thing.

I do not question nor impugn the motives or intentions of the sponsors or patrons of this proposed legislation. At the same time I must point out that the all-important thing is the possible or probable result or effect of this proposed legislation.

If a mule (or an elephant, if you please) kicks you in the face, the results and effects are mighty bad, even though he may have had the kindliest motives and have been kicking you simply as a friendly gesture.

EFFECTS SERIOUSLY DAMAGING REGARDLESS OF MOTIVES

No matter how high and noble and honest the motives and intentions of this proposed legislation's sponsors and advocates may be, the fact remains—in my opinion and in the opinion of a large number of other citizens—that the results and effects of this legislation, if enacted into law, would be seriously and irreparably damaging to the constitutional rights of the States and of their governments, and of many of their officials and citizens.

For the reasons I have already indicated, therefore, I sincerely trust that this proposed legislation will meet with the defeat that it richly deserves.

Coast and Geodetic Survey Observes 150th Anniversary

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. MAGNUSON. Mr. President, this is a relatively young Nation, as nations go, and when one of our governmental agencies can point to a century and a half of uninterrupted and valuable service, it would seem only fitting that some formal recognition be accorded it. Particularly is this so when the agency in question has never sought public acclaim, but has devoted itself wholeheartedly to the accomplishment of the duties assigned it.

The year 1957 marks the completion of 150 years of service for the Coast and Geodetic Survey, which was established by act of Congress on February 10, 1807, to survey and chart the coast of the United States and off-lying islands. Its present name was adopted in 1878. I venture to say that many millions of our people, down through the years, did not know there was such an agency of Government, its work was accomplished so quietly and so efficiently.

Our Committee on Interstate and Foreign Commerce has had particular opportunity to be cognizant of, and to appreciate, the work of this splendid organization. Most conversant with its accomplishments, also, are the various elements of our shipping and aviation industries, who depend upon the nautical and aeronautical charts, tide tables, and other information, the preparation of which is among the many highly important functions of the Coast and Geodetic Survey.

The Marine News for February 1957, pays tribute to this fine organization in a series of articles. One of these, entitled "Coast and Geodetic Survey," outlines the varied activities and responsibilities of this agency. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COAST AND GEODETIC SURVEY

All vessels navigating the coastal waters of the United States and possessions depend on Coast and Geodetic Survey nautical charts, coast pilots, tide tables, and current tables for safe navigation. Airplane pilots similarly depend on the aeronautical charts published by the Bureau. Engineers and surveyors use its many thousands of monumented stations throughout the country in all kinds of projects such as highway construction, drainage, irrigation, and power developments.

The vital tasks accomplished daily by this oldest of the surveying and mapping agencies of the Federal Government are essential in safe guarding life and property at sea and in the air. During the past century and a half this old-line bureau of applied science has been a potent factor in developing the commerce of the United States and the world. Operating today as an agency of the United States Department of Commerce, the work begun in the early days of the Republic is ever increasing in scope and importance.

The Coast and Geodetic Survey was one of the original agencies designated to comprise the Department of Commerce and Labor when it was created by the act of February 14, 1903. In accordance with a general reorganization of the functions of this department, on March 4, 1913, the Department of Commerce was separated from the labor functions which were grouped into the new Department of Labor. The Survey was among the agencies remaining with the Department of Commerce.

The history of the Survey dates from February 10, 1807, when President Thomas Jefferson was authorized by the Congress to establish an agency for surveying and charting the coast of the United States and offlying islands. Congressional action in 1871 extended responsibility of the Coast Survey to the establishment of geodetic connections between the Atlantic, Gulf, and Pacific coasts of the United States. The significance of these continental surveys was recognized in 1878 by adoption of the name Coast and Geodetic Survey.

Through the years additional functions have been delegated to the Bureau through congressional action. In 1925 the agency was charged with reporting on earthquakes, previously an activity of the Weather Bureau. Aeronautical charting was assigned to the Survey under the Air Commerce Act of 1926.

Functions of the Coast and Geodetic Survey now include: (1) Surveying and charting the coasts of the United States, its Territories and possessions, and the printing of nautical charts to insure safe navigation; (2) hydrographic and topographic surveying of some inland waters; (3) the determination of geographic positions and elevations along the coasts and in the interior of the country, to coordinate coastal surveys and to provide a framework for mapping and other engineering work; (4) the study of tides and currents in order to make annual tide and current forecasts; (5) the compilation and printing of aeronautical charts for civil aviation; (6) observations of the earth's magnetism for information essential to the mariner, aviator, land surveyor, radio engineer, and others; (7) seismological observations and investigations to supply data for designing structures resistant to earthquakes; and (8) gravity and astronomic observations to provide basic data for geodetic surveys and studies of the size and shape of the earth.

The work is carried on at the main office in Washington, at district offices and field stations throughout the country, by about 40 field survey parties, and by a fleet of 18 survey ships. The field offices are located in 9 coastal cities for the collection of data for revision of nautical charts and for cooperation with local engineers and organizations requiring specialized data; 6 offices are maintained for photogrammetric compilation, processing of hydrographic data, and computing geodetic data; and 2 offices are maintained for aeronautical chart liaison. In addition, the Survey operates 2 latitude observatories and 7 magnetic observatories.

The demands upon the Survey have grown with the national progress of the United States whose shoreline is now over 80,000 statute miles. The 150 years of dedicated service rendered the Nation by the Survey is being commemorated during the sesquicentennial year of 1957.

The organization of the Coast and Geodetic Survey is comprised of two forces—office and field. Rear Adm. H. Arnold Karo, the present Director of the Coast and Geodetic Survey, is the 15th in the long line of able heads of the organization beginning with Ferdinand R. Hassler, who served as the first superintendent until his death in 1843. As administrative head of the organization, the Director is responsible for all phases of the work, including standards of performance, efficiency of operation, fidelity of work, and the expenditure of appropriations.

The Assistant Director, Rear Adm. Robert W. Knox, serves as deputy and adviser to the Director on matters pertaining to the scientific and technical activities of the Bureau. He is directly responsible for coordinating and planning the operational functions of the eight scientific and technical divisions.

The Assistant Director for Administration, Capt. I. E. Rittenburg, is the principal adviser to the Director on all administrative matters concerning budget, finance, personnel and safety, organization and management, and administrative services. He coordinates and directs these functions to meet the requirements of the operating program of the Bureau.

The six operating divisions are: Coastal Surveys, Tides and Currents, Geophysics, Geodesy, Photogrammetry, and Charts. These divisions are directed by top-ranking commissioned officers. These operations in particular and the Bureau in general are supported by the Technical Services and Instrument Divisions.

Capt. Samuel B. Grenell, as Chief of the Coastal Surveys Division, is responsible for the planning and execution of hydrographic and planetable topographic surveys along the coast of the United States and its possessions. This Division compiles and publishes the coast pilots of the United States and is responsible for the surveying fleet, including ship personnel, construction, maintenance, and repair of vessels. Captain Grenell also directs the operation of shore-based hydrographic surveying units. Under his direction research is carried on in the design, improvement, and technical development of electronic and field equipment.

Capt. Kenneth G. Crosby supervises the Tides and Currents Division, which plans and directs tidal and related oceanographic investigations. This Division operates field parties engaged in tide and current work along the coast and inland waters of the United States and its possessions. Principal functions include: operation of a system of control tide stations, tide and current surveys, and observations of sea water density and temperature. Captain Crosby also directs the office processing of resultant data, including the prediction of tides and currents, publication of annual tide and current tables, tidal current charts, and other data. This Division makes studies of tidal and related phenomena, and improvements of equipment and methods. Captain Crosby collaborates in the operation of the seismic sea wave warning system. Special investigations and studies concerning tides and ocean currents are carried out in the interest of national defense.

Capt. E. B. Roberts, Chief of the Geophysics Division, is responsible for magnetic and seismological investigations in the United States and possessions. Magnetic operations include the determination of the value of the earth's magnetic elements, the establishment of magnetic stations, airborne magnetic surveys, the standardization of instruments, and the maintenance of national magnetic standards. This activity will be greatly accelerated by the new magnetic observatory and laboratory, recently built near Fredericksburg, Va. This station will be in full operation by the latter part of 1956.

Captain Roberts also directs the seismological work of the Bureau, which includes the collection of earthquake information, surveys of important earthquakes, vibration observations on engineering structures, and the operation of the seismic sea wave warning system in the Pacific Ocean.

Capt. Charles Pierce, Chief of the Geodesy Division, supervises the administration and technical operation of field parties operating throughout the United States and Alaska in establishing primary triangulation, traverse, and leveling. Other geodetic activities include baseline measurement; astronomic observations of latitude, longitude, and azimuth; and gravity determinations as required for surveying, engineering and research activities. Captain Pierce has supervision over variation-of-latitude observatories at Ukiah, Calif., and Gaithersburg, Md. Office activities of this division include processing and publication of field data in various forms required for use by the Bureau, other governmental agencies, and the public. Research is conducted by this Division involving the mathematics of map projections, coordinate grids, variation of latitude, size and shape of the earth, and improvements in surveying instruments and methods.

Comdr. L. W. Swanson, Chief of the Photogrammetry Division, assigns and supervises the work of field parties engaged in topographic and planimetric surveying and mapping of coastal and inland areas, as required for the support of inshore hydrographic surveys. He is also responsible for processing the resultant data for use in the production and maintenance of nautical and aeronautical charts. This Division is responsible for aerial photography, photogrammetric missions and airport surveys. Office activities of this Division include the compilation, review, drafting, and editing of topographic and planimetric maps compiled from aerial photographs by graphic or stereophotogrammetric methods as by-products of the compilation of nautical charts.

Commander Swanson directs the research and technical development of new methods and instruments for topographic mapping and photogrammetry. This Division is responsible for the dissemination of photographic data, photographs and maps to the public and other Government agencies.

Capt. Charles A. Schanck, Chief of the Chart Division, is responsible for the nautical and aeronautical charting programs of the Bureau including chart production, maintenance, and distribution. This Division reviews, verifies, and completes the hydrographic survey sheets obtained from field operations. These data are used in compiling new charts and maintaining eixsting charts through addition of new data.

Captain Schanck maintains liaison with the International Civil Aviation Organization and the Air Coordinating Committee. He directs the program of flight-checking aeronautical charts and provides for the establishment and inspection of Bureau sales agencies. This Division carries on research and engages in technical development of new compilation and reproduction techniques. Maps, charts, and related geographic data required as source material for activities are procured, evaluated and disseminated, including map information service to the public.

Intelligent Action on the Tight Money Problem

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely and thought-provoking article on one of the most important problems facing the Nation today, the problem of tight money and its disastrous effect upon small business, municipalities, and home builders throughout the country.

This constructive contribution to intelligent solution of the problem appeared in the magazine, America, issue of January 26, 1957, and was authored by the Reverend Benjamin L. Masse, S. J.

The article follows:

THE DEBATE ON TIGHT MONEY

(By Benjamin L. Masse)

St. Brendan's isn't going to build that 8-room addition to the parochial school the good monsignor planned. Two weeks ago, after looking over the plans and examining the parish financial report, chancery officials said "No." They said it tactfully and regretfully, but they still said "No." To the good monsignor they explained that the people of St. Brendan's, for all their generosity and good will, simply could not afford the new classrooms. They didn't have the cash, and they couldn't prudently borrow—not at today's stiff interest rates. Where, then, was the money to come from?

Nor are parochial schools like St. Brendan's the only ones being hurt by the highest interest rates in 24 years. Public schools are having money troubles, too.

On December 10, Arthur Levitt, New York State controller, informed a congressional committee that the interest rate on school bonds had jumped from 2.760 percent last June to 4.078 in November. He told a distressing story about certain school districts in upstate New York that planned to spend $314 million on new school construction in 1957 and 1958. Over the term of the loans, it would cost them $62,077,800 more to borrow at the November rate than at the June rate. Mr. Levitt warned that the current high cost of money was creating a very serious problem for local governments.

The plight of St. Brendan's and the New York school districts is gradually transforming what has been up till now largely a professional argument into one of the great popular domestic controversies of the day. Over the past few months the rumblings of discontent over the Federal Reserve Board's hard or tight money policy have been growing progressively stronger. In fact, for 2 days last month, during which Representative WRIGHT PATMAN'S subcommittee of the Joint Congressional Committee on the Economic Report held hearings on rising interest rates, the rumblings became so pronounced that, politically speaking, they shook walls all over Washington. With the legislators back on Capitol Hill, the political seismographs may soon be recording even bigger disturbances.

For our present purpose the roots of the tight-money debate go back to 1950 and the Korean war. With the economy roaring along under a full throttle, prices rose sharply and threatened to go still higher. The Federal Reserve Board, in pursuance of its function of keeping the economy stable and prosperous by controlling the supply and cost of money, wanted to permit interest rates to rise. The United States Treasury rebelled. Intent on managing the public debt as cheaply as possible, it insisted on freezing the interest rate on long-term Government bonds at 2.5 percent.

There was something to be said for both sides, and eventually it was all said, in caps and small caps and in every other possible way, before a special Senate committee headed by Senator PAUL DOUGLAS, of Illinois. The committee decided for the Federal Reserve. Accusing the Treasury of feeding "the fires of inflation," it wrote a new declaration of independence for the Fed. The committee concluded:

"It is the will of Congress that the primary power and responsibility for regulating the supply, availability and cost of credit in general shall be vested in the duly constituted authorities of the Federal Reserve System, and that Treasury actions relative to money, credit and transactions in the Federal debt shall be made consistent with the policies of the Federal Reserve."

For some months longer the infighting in Washington continued. Finally, in the summer of 1951, President Truman bowed to the demand of Senator Douglas' committee. He cut the leading strings on which the Treasury had held the Federal Reserve since World War II days. Since that time the Fed has been striving to maintain a stable price level by making credit easy or tight, cheap or expensive, as in its judgment economic conditions warrant.

THE FED'S POSITION

All during 1956 the Board pursued what economists call a restrictive monetary policy. It tried to retard the expansion of credit in the various ways open to it. Several times during 1956, for example, the Federal Reserve raised its discount rate—the rate of interest it charges member banks for temporary borrowings. This had the effect of making money more expensive for all borrowers, since the banks in turn, in order to make a profit, had to charge higher interest rates to their customers. Sometimes the press referred to the Fed's policy as a tight money policy, signifying that the Fed was making money scarce and expensive. Sometimes it used the tag "hard" money policy, indicating that the purpose of the policy was to assure a dollar worth at all times as near 100 cents as possible.

The Fed did not, of course, embark on its tight money policy capriciously. Last year our high-flying economy zoomed through the $400 billion barrier. The final figures are not yet in, but the dollar value of the goods and services produced in this country during 1956—the gross national product—was somewhere in the neighborhood of $412 billion. With the economy spinning along at that rate, even the Fed's critics concede that pressure on the brake pedal, rather than on the accelerator, was indicated. As it was, though the Fed did keep the brakes on, the price level advanced throughout the year. Half the dollar gain in the gross national product reflected, not a solid growth in physical production, but only higher prices.

As the Federal Reserve Board read the economic barometer, the boom was beginning to generate excesses. Business was expanding all over the place. Spending on every level of government was high. Consumer demand, fed by high wages, steady employment, and a willingness to incur debt, continued to grow apace. When the total supply of goods was placed on one side of an imaginary line and the total demand for them on the other, there was an obvious discrepancy. In certain critical areas demand exceeded supply. Unless supply and demand could be brought into better balance, the inevitable result would be price increases.

There wasn't much the Fed could do about the supply factor in the equation, but it could diminish the demand. It could do this because much of the demand was fueled by borrowed money, and a large part of the borrowed money was created by the banks. By controlling the amount of money the banks could create, and by influencing the rate of interest they charged, the Fed could regulate both the volume and cost of credit. And the volume and cost of credit affect demand.

In making life more difficult and expensive for borrowers, the Fed wasn't aiming at stopping economic growth. It wanted rather to assure that economic growth took place in a sound, orderly way. "To keep expansion of credit within the limits of the growth in resources" was the way Chairman William McChesney Martin, Jr., described the Board's goal in his testimony before Congressman PATMAN'S committee. The Fed wanted only to discourage excesses that inevitably produce higher prices and severe economic maladjustments.

One can illustrate Mr. Martin's argument in this way. At the present time there are shortages in certain types of steel. If credit is freely and cheaply available, so that all those who want these types of steel are able to bid for them, the immediate result will be, not an increase in the supply, but higher prices for the supply existing. As Mr. Martin told the committee:

"Creating more money will not create more goods. It can only intensify demands for the current supply of labor and materials. That is outright inflation."

Higher interest rates counter inflation in another way, too. In addition to discouraging investors, they encourage savers. People are induced by an attractive return on capital to postpone spending and to lend their money to others. At any rate, that is the theory. By deferring spending they not only ease the pressure on a limited supply of goods. They also help to bring the supply of capital in line with the demand for it. This makes it less necessary to finance economic growth by a dangerous expansion of the money supply, that is, by creating money.

THE FED'S OPPONENTS

No one doubts that the Fed's tight money policy has discouraged some borrowing. St. Brendan's parish isn't the only prospective borrower that has in recent months decided to defer plans for expansion. It is also likely that high interest rates have encouraged personal savings. Last year individuals saved 7½ percent of their incomes; they saved only 6 percent in 1955. The controversy begins when one asks (1) whether the Fed has turned the credit screws too tightly, and (2) whether overall credit controls are by themselves a fair and effective way to deal with inflation.

With the first question we need not delay long here. Since monetary management is not a science, no decision the money managers make will ever be greeted with unanimous approval. Such decisions involve a judgment on a bewildering variety and number of complex factors. In the nature of things these judgments can never be more than probable opinions. Thus it happened last spring that the Secretary of Commerce and the Secretary of Labor publicly dissented when the Fed gave another upward nudge to interest rates. A prominent auto executive was also critical, though, as it turned out, his fears that higher interest rates would discourage auto loans proved to be exaggerated. Differences of opinion like these are to be expected. They keep the money managers on their toes.

Much more important is the growing tendency to question the wisdom of relying on overall monetary controls as the Fed's exclusive, or chief, instrument for achieving economic stability and growth. In the Patman committee hearings this skeptical viewpoint

was strongly presented by Elliott V. Bell, editor and publisher of Business Week.

Mr. Bell made much of the uneven impact of higher interest rates. They create, he said, no serious problem for big and profitable corporations. Such companies are eligible for what is known as the prime rate, which today is 4 percent. Actually their loans don't cost that much. Since they are in the 52-percent tax brackets, and since interest payments are a tax-deductible expense, the cost of money to them is less than 2 percent. That charge would scarcely discourage big companies from borrowing as much money as they thought they needed.

On the other hand high interest rates severely pinch less affluent business borrowers as well as most nonbusiness borrowers. Among groups which have been hurt by the Fed's tight money policy Mr. Bell mentioned "home builders, small businesses, and municipalities that need to build schools and other improvements."

There is more to the story than that. The Fed's tight money program has revealed, says Mr. Bell, other weaknesses in Government monetary policy. The Fed, for instance, is able to hobble the banks; yet it cannot directly influence as such lending institutions as the life insurance companies, savings and loan associations and the Federal home loan banks. Furthermore, other Government agencies, such as the Housing and Veterans' Administrations, have their fingers in the credit pie, too, and what they do is none of the Fed's business. The fact that the Fed's rules only partially affect private nonbanking institutions and do not touch other Government agencies at all begets, said Mr. Bell, confusions, and even contradictions, in public monetary policy. To do away with these he called for a top-to-bottom reexamination of the Nation's 40-year-old monetary system.

This suggestion received powerful support on December 30 from the 27-member advisory committee of the Senate Banking Committee. It received still more powerful support when President Eisenhower, in his address on the state of the Union, asked Congress to appoint a commission of experts to undertake a broad-gaged study of the Nation's monetary and credit programs. Though some prominent Democrats were cool to the idea of turning the job over to outsiders—preferring to do the job through the appropriate congressional committees—a more or less intensive probe will very likely be approved.

One of the questions certain to come up in a study of this kind is the equity, not to mention the efficacy, of trying to promote a stable and prosperous economy through overall credit controls. In his testimony before the Patman comittee, Mr. Martin did not deny Mr. Bell's contention that the tightness of credit affected potential borrowers differently. Nevertheless he had no confidence in the alternative, namely, selective controls that would make exceptions for deserving borrowers unable to compete successfully for the limited supply of investment funds. Mr. Martin emphasized the great issue underlying this controversy:

"Experience would seem to demonstrate that allocations of credit through the market process are to be preferred to judgments—or guesses—of public authorities, however well intentioned.

In other words, the controversy raises the question of the nature and extent of the controls which are now generally conceded to be necessary to keep a private enterprise, capitalistic system on the rails. Mr. Martin would use only general monetary controls, leaving to the free forces of the market the rest of the job of allocating scarce money, materials and manpower. His opponents believe that additional controls are needed, not only to foster a sound prosperity, but also to achieve desirable social goals. They are not willing to permit the market alone to decide whether, at a time when demand exceeds supply, more auto plants and machine tools should be built rather than more schools and houses.

Those familiar with Pius XI's Quadragesimo Anno will recall the passage in which the Pope rejected a fundamental thesis of 19th-century, laissez-faire capitalism. He denied that "in free competition and open markets" economic matters possess "a principle of self direction better able to control them than any created intellect." It is a measure of the progress that has been made in this country that the issue in the debate over tight money is not whether the Government, as promoter and guardian of the common good, has a role to play in regulating the economy. It is rather the extent of that role and the means to be used in discharging it.

No Valid Reason for Delaying Hawaiian Statehood

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, February 28, 1957

Mr. MAGNUSON. Mr. President, those of us who attended the important Democratic National Committee meeting in San Francisco a few days ago heard some stirring and valid arguments for Hawaiian statehood.

They were made by Lorrin P. Thurston, of Honolulu, chairman of the Hawaii Statehood Commission, and they lay to rest, once and for all time, the lame excuse that communism threatens to dominate our vibrant and fast-growing Pacific Territory.

I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMUNISM DOES NOT, AND NEVER WILL, CONTROL HAWAII

Honorable Madam Chairman, Honorable Delegate BURNS, distinguished guests, ladies and gentlemen, if you were an enemy of Hawaiian statehood you naturally would look around to find reasons why Hawaii is not deserving of first-class American citizenship. You would study the problems involved by non-contiguity; dilution of the Senate's strength; our economic ability, our education and health, our loyalty; and then if you were like a majority, you would seize on communism. That's the best thing to use in trying to defeat statehood for Hawaii.

It is so easy to say to yourselves and to others, "No—we do not want Hawaii as a state because Communists dominate the Islands. If Hawaii were a state, they would be able to send two Senators and two Representatives directly to the Congress, providing Moscow with a direct pipeline to the greatest law-making body in the world."

My talk is directed squarely on this entire issue—communism. I have not the slightest fear that the facts, if anyone cares to base their argument on facts, cannot in any possible way substantiate the claims of our enemies. The people of Hawaii are more aware of the dangers of communism, in my humble belief, than the people of any other state. Because they have this realization, they have taken more concrete steps to combat this influence—minor as it is in our economy—than have any other citizens of the 48 States.

In no State of the Union has communism been under more constant surveillance since 1946 when the leaders of the ILWU were identified prominently with the Communist cause. Reports of the FBI and other investigating agencies at that time indicated that within the Territory of Hawain they could locate 160 Communists. Four years later, in 1950, when the House Un-American Activities Committee investigated Hawaii at the request of the people of Hawaii they came up with a figure of 90; in 1952 J. Edgar Hoover of the FBI came out with a figure of 36. The official records certainly do not bear out the charges that communism is growing in the Islands; as a matter of fact, they will bear out the fact that nowhere under the American flag can one find economic factors which are less favorable to the growth of communism than those in Hawaii.

Communism flourishes only where low living standards and desperate economic conditions prevail.

The exact opposite is the case in Hawaii where the pay of agricultural workers, from whom the ILWU leaders get their major support, are the highest anywhere in the world.

Now let's see what the people of Hawaii have done to actively combat communism. Let's see how farfetched the claims of our enemies are, that communism is going to dominate the political situation in Hawaii. There is no greater travesty on truth. I am going to present only nine points for the record that prove this statement. There are many others, but I think these will do.

1. The 1949 dock strike: For nearly 6 months the ILWU blockaded the Territory of Hawaii; no ship came in or out, no help was forthcoming from anyone. So our Governor called a special session of the legislature which passed laws permitting, among other things, the Territorial Government to seize and work the docks in order to provide our people with necessary food and merchandise.

The ILWU leaders used every means at their command to block this legislation. They were unsuccessful.

2. The 1950 constitutional convention: This convention was authorized by the Legislature of the Territory of Hawaii. Its purpose was to draft a charter for the new State of Hawaii. Sixty-three delegates were to be elected. Fourteen delegates with Communist sympathies ran for election; only two succeeded. Shortly after the Communistic affiliations of the first man were made known to the members of the convention, he resigned.

The convention refused to seat the second because of his unwillingness to answer questions about his Communist affiliations. So neither of them had a part in the convention.

The work of the convention proceeded satisfactorily producing a Constitution for the new State which brought forth universal praise of all who studied it. Under its terms the new State would be the first under the American flag to include in its charter disqualification of any Communist from holding any public office whatsoever.

3. The Korean war: At the same time that the constitutional convention was going on, America was engaged in the Korean war. The Communists everywhere did all they could to discourage America's participation, but not one of the many men from the ILWU who either enlisted or was drafted for service in this war, made a single effort to avoid serving their country. Too few people realize that the little Territory of Hawaii on a percentage basis lost 4½ times as many men killed in this war as any State in the Union, yet there was not one case of cowardice;

there was not one case of desertion; there was not one who refused repatriation. I ask you, ladies and gentlemen, if you were the mother or the father of one of the 426 boys who were killed, how would you feel when you know that in spite of your boy having given his life in the service of his country he officially remains a second-class American?

May I ask, Is that American justice?

4. You are still in 1950. The new charter above referred to was placed, before the voters for ratification.

Again, the leaders of the ILWU did everything in their power to prevent that ratification. What happened? Is was approved by the voters by a 3 to 1 majority.

Where is the Communist power in Hawaii?

5. Smith Act trial: Seven members of the ILWU were set for trial under the Smith Act, the longest trial in the history of Hawaii. The trial started in 1952, and 8 months later, on July 8, 1953, all six were found guilty as charged, by as representative a jury as could be found in Hawaii.

How do you think the citizens of Hawaii feel, when today, almost 3½ years later, no decision has been rendered by the Ninth Circuit Court of Appeals here in California?

6. The 1955 legislature: This was the first legislature to be dominated by the Democratic Party. The speaker of the house, for some reasons known only to himself, presented a gavel to Harry Bridges. Members of the house rebelled against him, 25 to 5; but because they feared that his impeachment as speaker would hurt their chances of success in future elections, they permitted him to remain on as speaker.

But then what happened? After serving in eight sessions of the house, this gentleman decided it would be best not to run for the house again, but threw his hat into the primaries seeking election as mayor of Honolulu in the 1956 election. A political newcomer beat him 6½ to 1 in the primary election. In his own precinct he received only 8 out of 423 votes.

If this does not represent repudiation by the voters, I don't know what could.

7. We are still discussing the 1955 legislative session in Hawaii. The leaders of the ILWU had two pet measures which they wanted to put across: First was the repeal of the dock seizure law enacted in 1949; second, a new law which they wanted to have enacted granting unemployment benefits for agricultural workers.

Our enemies will say that the ILWU dominated the Democratic Party at this time. Nothing could be further from the truth. The ILWU leaders did not get half-way to first base with either of their measures, though they used every means at their command to accomplish their end.

8. 1956—the ILWU's defiance of the Eastland committee: Just last December the ILWU sought to whip up public indignation against Senator EASTLAND and his committee. What right had Senator EASTLAND to investigate the Communist situation in Hawaii? Harry Bridges would show them. He would call for a 1-day protest walkout by every one of his 26,000 members.

What happened? On the day the Eastland hearing started, some 1,500 men only, gave up their day's wages, got together crude placards, and went to the palace grounds where the hearing was being held, milled around for a few minutes, then sougth shelter from a tropic rain in an auditorium where they talked to themselves and the press. What about the other 24,000 union members? They did not like the situation. While Harry Bridges and his ILWU leaders had brought them tremendous economic advantages which have improved their living conditions immeasurably, did they want any part of this insult to a United States Senate investigating committee? They certainly did not. One minor leader on the island of Hawaii even resigned in protest.

We of Hawaii do not know what the result of the Eastland hearings is going to be, but we do know that they will contribute tremendously to this record, proving beyond a shadow of doubt that the members of the ILWU will not follow their leadership along political lines or lines which do not, in their opinion, relate to their economic welfare.

9. The 1956 election: Next week the Hawaii Legislature assembles for its 1957 session. Never have the ILWU leaders suffered a greater setback from the hands of the voters than they did in the last election. Senator Abe, of the island of Hawaii, bitterly opposed by the ILWU leaders, won. Senator Miyaki, from the island of Kauai, which is known as a stronghold of the ILWU, and bitterly opposed by the ILWU, was seated. The Honorable Oren E. Long, ex-Governor of Hawaii, who is here with us this morning, a bitter opponent of communism, was opposed with all of the forces at the ILWU's command, but he led the ticket on the island of Oahu on his debut for election to public office.

Also on the island of Oahu, Senator HERBERT LEE, who for years has fought the leaders of communism in Hawaii and was also opposed in every way, was reelected.

The Honorable Senator William H. Heen, president of the Hawaii Senate, who has already spoken to you this morning, was also bitterly opposed because he has had a part in every anti-Communist movement in the Territory. He was reelected handsomely.

The House of the Hawaii Legislature will also convene this coming week, with the Honorable Vincent Esposito unanimously elected as speaker.

If there is anyone in Hawaii that the ILWU leaders hate, it is Vincent Esposito. Where, I ask, is there a shred of proof that the politics of Hawaii are, or can be, dominated by the Communist leaders?

No, ladies and gentlemen, we are not afraid of these charges of communism. We are not afraid that the people of Hawaii will ever permit subversive leaders to make progress against American ideals or institutions. There is no single fact that our opponents can turn to which, if all of the backgrounds are truthfully explored, can furnish their argument with any comfort.

Finally, may I comment briefly on the much vaunted Communist propaganda machine in Hawaii on which they are reputedly spending one-quarter of a million dollars worth of union dues per annum. Their most costly and resultless propaganda machine is the Honolulu Record, a weekly newspaper whose editor is Kosi Ariyoshi, 1 of the 7 convicted in 1953 under the Smith Act as a Communist.

Let's look at this newspaper. According to their statement filed with the post office 3,500 copies a week are printed, compared with a circulation of over 1 million copies per week sold by Honolulu's two biggest dailies. Of the 3,500 copies that must serve an ILWU membership of 26,000 and a Territorial population of over 500,000, a goodly number of these copies are purchased by anti-Communists—businessmen, Government officials, newspapermen, intelligence operatives, and others, many of whom have no interest except to be alternately offended and amused by the crude propaganda which is dished out.

Let's take the last issue, February 7, 1957. It was an 8-page tabloid containing a total of 560 column-inches of space. What advertising support did it have? Just 3 inches. Why? The businessmen have absolutely no confidence in the credibility of this—the ILWU's most expensive propaganda medium.

Now let's look at their second propaganda means—a daily radio program in English and rebroadcast in Filipino, presented each weekday afternoon just before dinner. It enjoys less listenership than the dullest soap opera on the air. The most recent Hooper survey shows that at the time this program is presented, 6:45 p. m., an average of only 9½ percent of Honolulu's 100,000 radio sets are tuned in, on nine stations. Three television stations get and hold the mass audience. The ILWU program has a rating of 0.6 percent—in other words, this broadcast is reaching at most perhaps 700 listeners, but I believe this program has done more than anything else to convince the people of Hawaii that the leaders of the ILWU were and are following along the well-established lines by which communism in other places is encouraged and fostered—and they will have none of it.

It is for the above reasons that we believe that the ILWU leaders have not been able to make one single iota of progress in the political arena and are steadily losing face and power in Hawaii.

There is one thing which the Eastland committee hearing will help so much to bring out, and that is the great need for the Congress of the United States to enact a law making it illegal for any union which has known Communists as leaders, to be recognized under the Taft-Hartley Act as bargaining agents for its union membership.

Many unthinking people, and particularly the enemies of statehood for Hawaii, point to the fact that Hawaii employers are playing "footsy" with the ILWU in union negotiations "to make a quick buck." They cannot do otherwise. Because our Government recognizes the ILWU, if our employers did not negotiate with them, they would be subject to the penalties of Federal law. It is my sincere hope that the honorable ladies and gentlemen gathered in this convention will assist the businessmen of Hawaii and the businessmen of every other State in the Union who face the same problem, with national legislation which will cut from under the Communists these grounds on which they now stand.

It is only by an act of Providence that my only son who was wounded in the Korean war 4 days after he went into battle, is not among the 426 who gave their lives for their country. My only hope, ladies and gentlemen, is that that boy of mine, with the sons of countless other families of Hawaii who have risked their all in defense of their country, will one day be accorded their American privilege of being considered first-class American citizens. Thank you for your time, and please help us where and when you can, to achieve statehood—first-class American citizenship which we have earned the right to have granted to us.

Replies to Questionnaire Sent to Citizens of the Fourth District of California

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. MAILLIARD. Mr. Speaker, the citizens of the Fourth District of California have again shown a commendable interest in their government by responding in large numbers to my most recent questionnaire. One out of every sixth voter was asked to participate and, as of this date, over 20 percent have answered.

I am greatly encouraged by the substantive thought given to some of the most important current issues. The following tabulation may be of interest to my colleagues:

	Yes	No	No opinion
	Per cent	*Per cent*	*Per cent*
1. Do you favor the tight money policy of the Federal Reserve Board currently used to check inflation, recognizing that this policy tends to restrict the availability of mortgage money?	72	24	4
2. Is it your belief that Congress should grant a high priority to the school-construction bill designed to meet emergency needs for more classrooms?	75	22	3
3. Does the administration's civil rights package, including a commission to investigate asserted violations of civil rights, creation of a Civil Rights Division in the Department of Justice, enforcement of voting rights, and preventive relief through civil courts, meet with your approval?	55	33	12
4. The Post Office Department wishes to offset its deficit by increasing postal rates. Do you approve of a boost in 1st-class charges to accomplish this?	59	39	2
5. Do you support the President's proposal that permanent residence be granted Hungarian refugees recently arrived here?	49	46	5
6. Would you favor special tax relief for small-business firms?	72	24	4
7. If the Federal budget is again balanced this year, would you favor some reduction in the national debt before taxes are lowered?	65	33	2
8. Would you support President Eisenhower's request for more authority to admit refugees from Communist countries?	35	60	5
9. Do you favor legislation that would provide statehood for both Hawaii and Alaska?	79	17	4
10. Do you favor stronger antitrust laws, including closer Government scrutiny of merger proposals of large companies?	73	22	5

Inside Egypt

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. MULTER. Mr. Speaker, in an exclusive report to the National Jewish Monthly, a correspondent reveals how some aides of Hitler, now working for Gamal Nasser, have pauperized Egypt's Jews; created Nazi propaganda apparatus in Egypt; set up five concentration camps; shot prisoners "while attempting to escape"; and imprisoned thousands. The article appeared in the February 1957 issue, as follows:

(This is the first comprehensive inside story on what is happening to the Jews in Egypt to be published. The identity of our correspondent must be concealed for reasons of personal security, but we have satisfied ourselves to the extent possible that the contents of this article are substantially correct. When a news story based on this material was released to the press prior to publication here, it created a sensation, and appeared in the leading newspapers from coast to coast. At the same time, President Philip M. Klutznick sent a copy of the article to the United States State Department, urging a complete investigation by the United Nations and the United States of the charges it contains. At press time, these charges had not been denied.—EDITOR.)

The violent actions taken by Nasser's government against British, French and stateless Jews resident in Egypt, the confiscation of their property, and their deportation on from 9 to 72 hours' notice, have provided the press with a flood of news which overshadowed the ominous fate that looms over the native Egyptian Jewish community of more than 10,000 individuals.

This ancient Jewish community is being systematically pauperized, maltreated, and interned together with common criminals in unspeakable places of detention. Together with the remainder of Egyptian Jews, they are left at the mercy of the State Security Cadre (SSC), which seems to be as precise a copy of the German Nazi Sicherheitsdienst as Egyptian inexactitude permits. This unit is the military junta's forceful arm which is responsible for Egypt's actions and policies to a far greater extent than is generally known.

The Commander in Chief of the SSC is Lt. Col. Al Nacher, formerly SS-Grossaktionsleiter Leopold Gleim, who was the Commander-in-Chief of the Nazi government's SD-Geheimgarde.

Addressing a luncheon in Cairo given in his honor by the representatives of the League for (East) German-Arab Brotherhood (Al-akhwah al-Almaniyah l'Arabiyah, i. e., Deutsch-Arabischer Bruderschaftsverband) on December 17, 1956—Gleim frankly pointed out the significance of the SSC as the "backbone of Egypt's protective apparatus against the aggressive elements of Zionism and imperialism." He thanked the League for its "vast help extended to this young State—a most significant contribution to the mutual efforts in the strengthening and stabilizing of Germano-Arabic friendship and relations."

Later on, during more intimate talks with members of the Bruderschaft—conducted in Hochdeutsch and made gemutlich by cigars, bourbon, and coffee—Gleim gave an outline of his unit's short history and structure. This outline, when pieced together with additional facts on hand and the already known procedures of the Cadre's activities, sketches a tolerably clear picture of the Egyptian version of nazism, which found in Egypt ideal conditions for its recrudescence.

The plan for the SSC was drawn up by several technical advisers of German origin, approved by the Ministry of Interior. The Cadre headquarters were set up in Cairo, and its administration handed over to the 6,249 arabized Nazis presently in Egypt (aided by perhaps 70,000 Egyptians). According to Gleim, the unit consists of the following departments:

A. THE PUBLIC RELATIONS DEPARTMENT (PR-DPT)

The executive positions in this section are entirely manned by Germans who are holding Arab passports. The PR-Dpt. is headed by SS-Gruppenleiter Moser, a Sudeten German who has now assumed the name of Hussa Nalisman. His right-hand man is SA-Gruppenleiter Buble, now arabized into Amman.

The propaganda machine operates with German precision, according to the Goebbels-Stuermer pattern. Its main target for attacks is, of course, the Jews. Egyptian youth has been responding enthusiastically to this propaganda.

The PR-Dpt. has branches in Berlin (East and West), Vienna, Stockholm, Helsinki, Rome, Milan, and Bordeaux; it commands special squads of vans with loudspeakers, which cruise throughout Egypt constantly inciting against American, British, French, Imperialistic or Zionist Jews—the adjective changing with the broadcaster's mood; and it also owns an independent broadcasting station which assiduously cultivates the entire Arab world.

A flood of anti-Semitic literature is being published and distributed in the Middle East and Europe. Egypt's recent best seller, however, was the new, popular edition of Kefahi, the Arabic translation of Hitler's Mein Kampf. This is an abridged, illustrated version which contains photo reproductions beginning with Hitler's picture as a corporal in Hindenburg's army and up to his cockposing as the Fuehrer.

The complete and unabridged version of Main Kampf was first translated into Arabic in 1951 by the Syrian journalist, author, and owner of the Beirut Printing & Publishing House, Louis al-Haj, formerly Luis Heiden, director of Die Reichsdeutsche Presseagentur, Berlin.

Vulgar, colorful posters featuring the Israeli soldier as a bearded villain who bayonets an Egyptian baby, are blooming in many Egyptian towns. These posters urge the people of Egypt to rise in Jihad—the Holy War—against the Zionist threat to Islam.

Egyptian youth is being assiduously educated for militarism. One of the outstanding examples of this campaign is the target-tent pitched opposite the SSC–HQ in Cairo's Liberty Square, where schoolboys are given an interest in usuge of arms.

The PR-Dpt. also has a very special branch: the Youth Club of the Deutsch-Arabischer Bruderschaftsverband. Twice weekly this club has a closed session, when many Egyptian youngsters are sworn in by the club's chairman, Hussa Nalisman. This requires only one more comment; Col. Abdul Nasser is the honorary president of the club, and had been sworn in as member No. 3.

B. THE ECONOMIC DEPARTMENT (EC-DPT.)

The EC-Dpt., now so strongly associated with Jewish affairs, is a close enough translation of the SS-Wirtschaftsamt, and it operates on a similar basis. This department was founded on February 2, 1954; it controls the SSC treasury, which is indepedent of the Government's exchequer. Apart from the annual allowance granted to the SSC from the general defense budget, this treasury absorbs a considerable income from products of prison workshops throughout Egypt.

The archives of the EC-Dpt. have a Jewish section with a register of all Jewish property in Egypt. It contains up-to-date information on this vital subject, which has now become a major source of revenue to the SSC treasury. Upon the expulson of thousands of foreign and stateless Jews from Egypt, the EC-Dpt. cashed in 14 million Egyptian pounds in currency, policies, and securities, and 27 million pounds of real property and assets abandoned by the Jewish deportees. It is worthwhile noting that the majority of deported Jews had been very rich; this explains why there was no mass deportation of all foreign and stateless Jews, and why individual expulsion warrants were issued. The poorer stateless Jews have been left over, to be dealt with later on—as Col. Abd-al-Qadir Hatem explained.

Colonel Hatem, of the EC-Dpt., declared that "not a single piaster or brick has been confiscated, as the Zionist lies allege. We have documentary proof that property and currency abandoned by people who had to leave Egypt were voluntarily assigned to the administration of the EC-Dpt."

Another interesting branch of the EC-Dpt. is the Public Sales Center in Cairo. Whatever remained in the residences which the Jewish deportees "voluntarily" assigned to the administration of the EC-Dept.—furniture, clothes, paintings, refrigerators, radios, entire libraries, etc.—is being auctioned off. It brings to the SS treasury weekly profits ranging from 500 to 3,000 Egyptian pounds.

C. SECRET STATE POLICE

That name rings a bell somewhere. If translated into German it would be Geheime Staats Polizei; and if abbreviated: Ge-Sta-

Po. Its duties are now carried out by Army intelligence.

The major section of this department is the center of the Egyptian Intelligence Service. Next to it is a section headed by Lt. Col. Ben Salem, former SS-Bannfuehrer Bernard Bender, who owing to his knowledge of the Yiddish language, was during the war chief of the Gestapo Special Branch for detection of Jewish underground movements in Poland and Russia, and who is now playing an important role in Egypt's "economic and political administration." He is also the liaison between the secret state police and the EC-Dpt.

Nevertheless Lt. Col. Ben Salem is a very modest man, and while entertaining some of the young East German visitors he declared "I never wear a uniform because it makes one look more important than he really is." This is a moot matter, because in addition to all his known and unknown tasks, humble Ben Salem is also chief of the interrogation center of the SSC, better known to the Egyptians and to the Egyptian Jews in particular as "The Floating Hell."

The Floating Hell is an old, 12,000-ton cargo vessel, the former Italian "Marinajo Rosso," which has been converted into a floating prison of 80 cells where, according to Ben Salem, "only cases of special interest" are being held. The sole "practical device for bringing out the truth" which he was prepared to exhibit, was the recording center in the vessel's former radio cabin, from which a network of hidden microphones reaches all the cells. Thus, every word uttered during the interrogations or at intervals, while prisoners are together, is recorded.

The recording center is operated by two men only: tight-lipped Sergei Klinikin from Odessa; and his subordinate, Alexei Morganoff, a true Moscovite with an enchanting smile, huge feet, and a Swiss watch. Both have served under Ben Salem ever since General Vlassoff changed flags. Only, that was about all one could get out of them.

The Floating Hell performed a great service for Egypt by helping the famous Jewish banker, Mr. Elie Politi, succumb there to the interrogation methods, and sign a document that he had voluntarily assigned 112,000 pounds—all he possessed. The Floating Hell was also where Lt. Col. Ben Salem had been "most delighted to be able personally to handle the affairs of an Egyptian publisher, a Jew named Mr. Salama."

(Late news dispatches indicated that their confiscated businesses have been restored to a small number of Jews in Egypt.—EDITOR.)

Early in November the first phase of Salem's "Solution of the Jewish-Zionist Problem" began to take shape:

Conducting 3,000 men of the SSC Executive Force (municipal police units, plainclothes men, and army squads), SS-Grossaktionsleiter Gleim personally supervised the combing of the Cairo and Alexandria rural districts, throughout the duration of the curfew. This action resulted in the seizure of 1,711 native Jews—men, women and children—inclusive of the 6 Jewish fellahin families of Mit Ghammar, who are the last survivors of a Jewish community believed to have lived there since 90 B. C. E.

During this action, looting, rapine, and 8 killings were reported and confirmed. The officers in charge "regretted the incident which resulted due to the refusal of the subjects to follow instructions."

These captives have been classified as "Prisoners Category Alif (A)" and concentrated in the southern wing of the famous French-built prison, Des Barrages, in Cairo. No charges were made against them, but on the way to prison, all captives (exclusive of pregnant women and mothers of children below the age of 10) were handcuffed. The northern wing of Des Barrages is packed with "potential deportees," i. e., Jews who have no Egyptian nationality.

The sanitary conditions in which those prisoners are being held should be of special interest to those members of the U. N. and of the International Red Cross who, during interviews with foreign correspondents in Cairo, denied any knowledge of such conditions or of the above-mentioned arrests.

Cells intended for 10 persons presently shelter 30; and cell No. 73 is packed with 38 male Jewish prisoners "because they have their own water-closet," as explained by the chief warden, Hadji Mustaffa Ibn-Aziz, who is very friendly but responsive to bakshish only so far as "matters of nonpolitical nature are concerned, because now-a-days politics are dangerous."

The male prisoners are not allowed out of their cells. Their sole opportunity to breathe some fresh air is while they carry out the waterbuckets—a task eagerly done every morning in rotation by a couple of prisoners—and while fetching food and water.

The daily rations consist of 500 grams of Pittah-bread and 2 liters of soup per head. Water (2 liters per head) is being distributed only once daily, in the morning, and the male prisoners must drink it all at once, because they are not permitted to keep any containers in their cells.

Women are treated better

The female prisoners are granted 20 minutes a day to walk in the prison courtyard, and mothers may, in addition to that, spend half an hour daily with their children, who have been accommodated very comfortably in the former recreation hall for prison personnel. Mothers with babies up to the age of 3 are kept in the prison dispensary and have beds to sleep on. The babies are being provided with adequate and appropriate food and with daily rations of fresh milk.

The 18,000 Alexandria Jews (among them some 6,000 natives) classified as "Category Ba (B)" suffered an attack which completely crushed their economic life. Alexandria's military governor, Colonel Husseini, imposed under security act penalties, a permanent curfew which lasts from 5 p. m. to 9 a. m., and from 11 a. m. to 3 p. m. The rest of the time is left for purchase of food which is usually bought with funds obtained through the sale of jewelry or other personal assets, because by order of the SSC. EC-Dpt., 93 percent of every Jewish bank account has been blocked "until the position of Category Ba is clarified."

Colonel Hatem elucidated this hazy statement as follows: "The Alexandria Jews are known to have strong connections with Israel; but since we cannot bring them to justice without concrete proof and simultaneously cannot let them endanger the state security by letting them carry on with their underground activities, we are forced to take some slight precautions."

These are the slight precautions:

All Arab enterprises have dismissed their Jewish employees without any compensation whatsoever—as per Government orders.

Most Jewish enterprises, including the Circurel Stores and down to small shops, were taken over and only those few Jews who have intermarried were permitted to continue, but they closed their shops voluntarily because they were picketed by the Moslem Brotherhood and their showwindows were stoned. Any customers who attempted to enter Jewish shops were assaulted.

All Jewish professionals in Alexandria (with the exception of the few dentists) have been forbidden to practice. Seven hundred and ten prominent Jewish personalities, including a relative of Mrs. Mendes-France, Mr. Guy Cicurel, former president of the Maccabi, and Mr. E. Levy, president of Egypt's Stock Exchange Board, as well as most of the Jewish doctors, have been arrested. According to rumors, they will be tried on charges of treason in a closed session of the supreme military court.

The Cairo Jewish community, however, is undergoing an even greater crisis:

All the Jewish schools have been closed, all communal activities paralyzed. The Jewish hospital has been taken over by Arab authorities and all Jewish personnel and patients, regardless of their condition, were ejected on 1 hour's notice. Relatives of some of the more serious cases applied for their admission to Arab hospitals, but met with refusal.

Five hundred Cairo Jewish men have been indefinitely interned in the English Grammar School, which was closed down and converted into a detention center with the outbreak of the Suez Canal crisis. Their wives and children, totaling 622, are held captive and 456 Jewish men, women, and children are confined in the Hadrah Prison. Eight hundred and thirty Cairo Jews are being held in the ruins of Qalat al-Qahira, outside the city. Three of these prisoners were shot while attempting to escape—the old Nazi gimmick. It was, however, not explained how they happened to be shot inside the dead-end underground passage of the ruins where six mutilated bodies of Jewish girls were also found.

"This is only the first phase"

Being literally under house-arrest, imposed on them by the curfew, the remaining Cairo Jews are subjected to frequent raids of the Moslem Brotherhood. And over all this looms Nasser's state security cadre with its iron grip. Its commander, SS-Grossaktionsleiter Gleim, smilingly declared in front of his young German visitors that this is only the first phase.

It can therefore be easily guessed that the second phase will be the completion of Ben Salem's "solution of the Jewish-Zionist problem within territories of sovereign Egypt—a work which is now being implemented through five newly established concentration camps: the Heliopolis Fortress, destined to absorb 2,000 internees; the Gizeb barracks, which served during World War II as a POW camp, able to shelter 10,000 prisoners; two former army training centers, the Mustaffa Hanun-Pasha barracks near Almaza City, originally built for 16,000 men, and the Borg al-Arab barracks near Alexandria, which once sheltered two divisions of recruits.

A grim concentration camp

The most threatening of all, however, is the fifth concentration camp: the Samarra barracks in the Suhellia region of the desert, 200 miles west of Cairo. This camp, only recently vacated by the third regiment of the Egyptian Liberation Army (the unit which, commanded by Colonel Nasser in 1948, withstood the Israeli attacks on Faluja) is now being converted at a cost of 17,000 Egyptian pounds, and patterned on photo-copies of the original plan of the infamous Nazi Medizinisches Versuchslager Mannerheime bei Dachau, otherwise known as Block 10, where hundreds of Jewish girls were sterilized. The photo-copies of the original plan of this camp were supplied to the S. S. C. by Karl Clauberg's direct superior, SS-Hauptstabsarzt Heinrich Willermann, presently "arabized" into Lt. Col. Naam Fahum, who is now in charge of converting the Samarra barracks.

The stateless and foreign Jews still in Egypt are hoping probably against hope, that the U. N. will take them under its protective wings. Should, however, the U. N. decide otherwise, they will respond to Nasser's encouragement and leave Egypt impoverished, destitute, but alive.

But not the native Jews. They have tried to leave Egypt, but Nasser's government refused most of them exit visas, and most of the foreign consulates refused entrance visas as well as racial asylum—thus leaving this ancient and once fluorishing community in

the sinister grip of Nasser's legislative paradox:

Egyptian law imposes on them all its restrictions but deprives them of any rights or protection within sovereign Egypt; thus preventing any foreign intervention on their behalf, except for the U. N., maybe?

Maybe.

Because—in spite of the Cadre's strict censorship on publication of all events in Egypt and on news leaving the country—the U. N. has ample evidence and information on what is going on there. Why, then, its reticense? Why the passive attitude toward Nasser's rutheless violation of human rights? The U. N. must release the facts and warn the world of what Nasser is up to, so that appropriate measures can be taken. Because—although economically ruined, interned, maltreated, and humiliated—it is not too late yet. Egyptian Jewry is still alive.

Homebuilding Seriously Hurt by Tight Money and High Discounts

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. McDONOUGH. Mr. Speaker, the tight money and high discount prevalent in the present money market is having serious effects on the homebuilders throughout the Nation.

These problems are not confined to the homebuilder but are reflected in the many other industries that are related to homebuilding such as lumber, home appliances, hardware, homefurnishings, and many other items in building materials.

THE SIGNIFICANCE OF HOMEBUILDING TO THE AMERICAN ECONOMY

Homebuilding is one of America's major industries, ranking second in importance perhaps only to food and food processing. The 12 million dwelling units provided since the end of World War II—an output in construction dollars alone of more than $100 billion—did much to spark and sustain the postwar economic boom. By its very nature, operating practically everywhere our people live, it affects the economic life of every community in America.

Our economic history indicates that homebuilding is a bellwether industry. What affects it, also affects eventually, practically every other sector of our economy. It is not too much to say that without a healthy homebuilding economy, geared to our people's requirements, we cannot long have a healthy overall national economy.

The value of new residential construction put in place in recent years has run close to $16 billion annually, accounting for one-fourth of new private investment. Taking into account land and other nonconstruction factors, the value of the industry's product is probably in the neighborhood of $20 billion annually.

In recent years it has provided directly approximately 2½ million jobs a year, with about half the total involved in work on the construction site. The impact of new housing is further extended by the market it provides for a multitude of products. About 3,000 different items go into every new home; thus, any change in home-construction volume is felt in thousands of factories and by thousands of suppliers all over the country, to say nothing of the thousands of builders and millions of workers employed in this industry. Residential construction uses one-third of our total lumber output, two-thirds of all brick, four-fifths of all gypsum.

Surveys indicate that the sale of a new home generates in the first year of occupancy alone about $1,500 per home in retail sales of furnishings and equipment. Homebuilding also creates additional demand for other types of construction—stores, churches, schools, utility expansions, and the like. Moreover, construction of new housing is a prerequisite to industrial expansion in many areas. Thus, apart from any sociological importance, homebuilding is a vital dollars and cents influence now and in the future in every part of our country, geographically and economically.

INFLUENCE OF TIGHT MONEY ON HOMEBUILDING

In view of the significance of homebuilding to our economy, the disadvantage at which homebuilding finds itself in the current money market is of importance to everybody. This disadvantage arises partly from the nature of home-mortgage lending; because of the relatively small dollar volume involved in any single transaction, because homebuilding is essentially a small businessman's business, it cannot compete for scarce funds on anything resembling even terms with the financing operations of major corporations.

Moreover, the nature of the mortgage instrument and the lack of satisfactory devices for mortgage financing have practically barred it from access to some of the fastest growing forms of savings such as pension and welfare funds.

It is absurd to consider our tight money policy as though it stands by itself, apart from other Government policies, particularly fiscal.

Our economy today is susceptable to management—to an extent generally unrealized—by the Government through a number of devices, primarily monetary policy—as exercised by the Federal Reserve—and fiscal tax and budget policy. While monetary policy goes off in one direction—presumably to restrain inflation—fiscal policy moves in another, furnishing large competitive advantages and incentives to industry for plant and equipment expansion through accelerated depreciation, fast tax writeoffs and a tax policy which, in effect, encourages business spending rather than saving. There has been little evidence that monetary restrictions have succeeded in restraining corporate expansion in the past year; in fact, as has been pointed out by prominent economic authorities, under current tax policy, corporate borrowing rates are actually lower than they have ever been in peacetime America.

At the end of 1956, corporate borrowings totaled $211 billion, a gain of $15 billion during the year. Between the first quarter of 1955 and the first quarter of 1957, business spending for plant and equipment soared from an annual rate of $26 billion to $38 billion, a gain of 48 percent and it is still going up.

Contrariwise, look at housing. With money tight, housing starts and builders' plans have been drastically cut. Between January 1955 and January 1957, the seasonally adjusted annual rate of private starts fell from 1,416,000 to 1,010,000—a drop of 29 percent. Housing starts began to decline in mid-1955. The decline has lasted all through the last 18 months, and 1956 volume was in total 200,000 less than the previous year.

That this result is not sheer accident is shown by a recent statement of the Vice Chairman of the Board of Governors of the Federal Reserve, that he considers housing "postponable." In essence, he has undertaken to rewrite not only public policy in the housing field, but to bypass a clear declaration of congressional intent on our national housing policy, as embodied by the Congress in the Housing Acts of 1949 and again in 1954.

The net of a monetary policy of restraint and a fiscal and tax policy of encouragement to business expansion has been what might be expected; powerful forces working unevenly on the economy. In this setting, it is inevitable that the homebuilding industry suffer the major impact and be singled out for "postponability." It is for this reason that the industry has developed proposals, not to give it any unfair advantage, but merely, to restore a competitive position barred to it by conflicting governmental policies.

Move Over, Captain Nemo

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach an editorial which appeared in the Chicago American on February 7, 1957, entitled "Move Over, Captain Nemo," relating to Rear Adm. Hyman G. Rickover, concerning whose exploits in the field of nuclear power the people of Chicago are particularly proud:

MOVE OVER, CAPTAIN NEMO

After 87 years, the United States Navy has caught up with Captain Nemo.

Jules Verne's doughty adventurer logged 20,000 Leagues Under the Sea in the fantastic novel of that title, published in 1870.

He did it in a weird underwater craft piloted by a secret and unknown force. Readers ate it up, albeit aware that it could never happen.

But it has happened. The nuclear-powered submarine *Nautilus* logged its 60,000th nautical mile (its 20,000th league) in an epic, 20-hour cruise.

Travels of the *Nautilus* to date have cost 3 pounds, or $21,000 worth, of fissionable uranium. Fuel for a conventional sub would have cost $100,000.

More nuclear subs are upcoming. And a former student at Chicago's Marshall High School started it all and gets much of the credit.

He is Rear Adm. Hyman G. Rickover, 56, who designed and developed the *Nautilus* and then trained her crew.

Chicago, then, may be permitted to join Mrs. Dwight D. Eisenhower, the revolutionary vessel's christener, in a salute right from the heart:

"Well done, Admiral! Well done, Navy!"

And by the way, have you noticed that nobody gives the sneering brushoff any more to "nutty ideas" put forth by our modern-day Jules Vernes?

Bold New Step Toward High Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, February 28, 1957

Mr. MAGNUSON. Mr. President, in what may well become an historic step to return to our citizens of the Pacific Northwest what is rightfully theirs, Attorney General John J. O'Connell, of my State of Washington, has moved for a reversal of the ill-advised Federal Power Commission decision to give away both the site and the potential of the high Federal Hells Canyon Dam on the Snake River.

Attorney General O'Connell, on behalf of himself and our newly inaugurated Democratic Gov. Albert D. Rosellini, as well as on behalf of the rank and file of Washington citizens, has intervened as amicus curiae in the action by National Hells Canyon Association to obtain a writ of certiorari in the United States Court of Appeals for the District of Columbia Circuit.

Attorney General O'Connell points out many important things in his brief. For example, he says again, what many of us have pointed out in the Senate time and time again, that the Federal Power Commission in giving the Hells Canyon site to the Idaho Power Co., has "eliminated three-quarters of the flood control and storage features of the Hells Canyon project in the comprehensive plan, while at the same time providing barely half as much power production."

I ask unanimous consent that the complete text of the brief filed by Governor Rosellini and Attorney General O'Connell be printed in the Appendix of the RECORD.

There being no objection, the text of the brief was ordered to be printed in the RECORD, as follows:

IN THE SUPREME COURT OF THE UNITED STATES, OCTOBER TERM, 1956—NATIONAL HELLS CANYON ASSOCIATION, INC., ET AL., PETITIONERS, v. FEDERAL POWER COMMISSION, RESPONDENT—ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

BRIEF OF THE STATE OF WASHINGTON AS AMICUS CURIAE IN SUPPORT OF PETITION

I. Introduction

The attorney general for the State of Washington, upon request of the Honorable Albert D. Rosellini, Governor of the State of Washington, does hereby appear in these proceedings to file a brief as amicus curiae on behalf of the State of Washington in support of the petition of the National Hells Canyon Association, Inc., and others, for a writ of certiorari.

The previous administration of the State of Washington intervened and participated in the hearings below before the Federal Power Commission in support of the license applications of Idaho Power Co. and in opposition to the high Federal Hells Canyon Dam.

Accordingly, the position of said previous administration and the testimony presented in the Commission proceeding on behalf of the Honorable Arthur B. Langlie, former Governor of the State of Washington, are hereby repudiated as being contrary to the best interests of the State of Washington.

II. Interest of the State of Washington

The immediate and long-range interests of the State of Washington involved in the decision of the Federal Power Commission and affirmed by the United States Court of Appeals are as follows:

(a) Flood control planning is a vital component of any "comprehensive plan" for the development of natural resources in the northwestern United States. It is urged to this Court that the Federal Power Commission erred in giving insufficient weight to the factor of flood control planning in granting a license to the Idaho Power Co. in the case at bar and that this error was repeated and affirmed by the Court below.

(b) The economic future of the State of Washington, as well as that of other States in the Pacific Northwest, is dependent upon the fullest possible development of the great hydroelectric potential of the Columbia River system. A recent report of the United States Department of Labor points out that "the creation of new job opportunities in the region has lagged in the last 5 years," and warns that "unless there is an accelerated development of the resources of the Pacific Northwest, the region's labor force and population will continue to grow at subnormal rates." The Columbia River is the greatest of those resources. Because of the great impact this case will have, for better or for worse, on the development of that resource, the interest of the State of Washington in its outcome is immense.

III. Argument

A. This Is a Case of First Impression

This case is a case of first impression for this Court; an authoritative adjudication by the Court is necessary to resolve the questions here at issue and to eliminate uncertainty as to the future administration of the Federal Power Act.

In a previous case before this Court the principal issue was whether or not "approval" of a comprehensive plan by Congress had the effect of removing the site in question from the licensing jurisdiction of the Federal Power Commission. *Chapman* v. *Federal Power Commission* (345 U. S. 153 (1953)). That issue is not involved here. Conversely, in the former case there was no question of compliance with the Corps of Engineers' comprehensive plan for the river basin involved, which is the primary question in the present case.

B. The Federal Power Commission Erred in Failing To Follow the Comprehensive Plan Intended by Congress for the Development of the Resources of the Columbia River Basin

The basic factor which spells the difference between full development of the Columbia River and serious underdevelopment is adequate upstream storage. Far more than most rivers, the Columbia needs storage reservoirs to even out its violently fluctuating flows, which historically have an annual maximum to minimum flow ratio of about 10 to 1.

With adequate storage as provided by the comprehensive plan of the Army engineers the rampaging flood waters of the spring melting season can be tamed and converted into year-around flows to keep spinning the turbines of hydroelectric generators which would otherwise be idle 9 months of the year. Without adequate storage the power potential of the river will be cut in half, and the unstored water will not only be lost; it will also continue to subject thousands of families in the lower Columbia Basin to the annual threat of spring floods.

It is difficult to imagine a more apt example of the principle so clearly stated by President Theodore Roosevelt in 1908 in his message transmitting to Congress the preliminary report of his Inland Waterways Commission, when he said:

"Every stream should be used to its utmost. No stream can be so used unless such use is planned in advance. When such plans are made, we shall find that, instead of interfering, one use can often be made to assist another. Each river system from its headwaters in the forest to its mouth on the coast, is a single unit and should be treated as such" (S. Doc. 325, 60th Cong., 1st sess., p. iv).

Such a plan does exist for the Columbia River; it has been largely ignored by the Federal Power Commission in licensing the three projects of the Idaho Power Co.

The Congress in 1927 authorized the preparation of the original comprehensive plan of the Army Corps of Engineers for the Columbia River and its tributaries (44 Stat. 1010). The present plan of House Document 531, 81st Congress, 2d session, is an authorized revision and expansion of that plan. The Federal Power Commission has here licensed for construction projects which eliminate three-quarters of the flood control and storage features of the Hells Canyon project in the comprehensive plan, while at the same time providing barely half as much power production.

The question thus presented is whether, under the best adapted requirement of section 10 (a), the Commission may substitute, for vital components of the official and only existing comprehensive plan for the Columbia River Basin, projects which are inconsistent with and of lesser benefit than the projects provided by that plan.

Amicus curiae submits that the action of the Commission in the present case constitutes such a substitution and that the substitution is a violation of section 10 (a) of the Federal Power Act.

C. The Commission Erred in Failing To Recommend Federal Development Under Section 7 (b) of the Federal Power Act

The problem of adequate flood-control storage capacity in the Pacific Northwest is annually becoming more difficult because of the economic growth within the potential reservoir areas. At the same time the necessity for flood control becomes increasingly important. In 1948 a major Columbia River flood resulted in property damage in excess of $100 million and the loss of 38 lives. It is estimated that such a flood today would cost in excess of $200 million in property damage in view of the economic development of the affected areas.

Private licensees will not build large and costly upstream storage reservoirs, because the feasibility of such projects depends to a great extent on the benefits they produce at downstream dams, and in these the private upstream developer has no interest. Nor has it any economic interest in adequate flood-control storage, which is quite properly a public problem.

A river once inadequately developed represents the permanent destruction of part of a perpetually renewable energy resources. As distinguished from other administrative decisions, the Commission's licensing decisions on river developments have irrevocable impact.

If the Commission is not required to interpret sections 10 (a) and 7 (b) of the act so as to obtain at the few remaining reservoir sites in the Columbia Basin the maximum feasible storage planned for those sites in the comprehensive plan, all hope of achieving adequate storage capacity will be forever lost, and the Columbia River will continue to flow unchecked to the sea in destructive and wasteful floods.

The only way to prevent such waste is for the Commission, under a correct interpretation of the act, to require as a condition of licensing, development of these storage sites to the full dimensions of the comprehensive plan—the "best adapted" requirements of section 10 (a)—or alternatively to propose Federal development under section 7 (b).

The State of Washington therefore maintains that the failure of the Commission to recommend Federal deevlopment of the Hells Canyon site to the Congress constitutes, in the circumstances of the present case, a violation of section 7 (b) of the Federal Power Act.

Conclusion

For the reasons stated above and in order to establish an authoritative interpretation of the Federal statutory law governing the Hells Canyon region, the State of Washington respectfully requests this Court to grant a writ of certiorari in accordance with the petition.

Respectfully submitted.

JOHN J. O'CONNELL,
Attorney General, State of Washington.

E. P. DONNELLY,
Assistant Attorney General, State of Washington.

Temple of Justice, Olympia, Wash.
Dated February 14, 1957.

A Reasonable Mideast Blueprint

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful editorial which appeared in the Christian Science Monitor on February 27, 1957:

A REASONABLE MIDEAST BLUEPRINT

At this writing it is understood that the American resolution for solving the Middle Eastern impasse will follow the outlines of the 4-point plan described February 26 by Foreign Secretary Pearson, of Canada, with a deadline added for Israeli troop withdrawal. We hope this is true and that the program so embodied will be accepted by the Governments of Israel and Egypt; for that type of settlement would seem to represent a maximum of fairness attainable under the circumstances.

Mr. Pearson and his Government seem to have seen clearly from the first the practical necessities of the case as well as the elementary justice to be served in it. Secretary Dulles and Secretary General Hammarskjold have placed a legally correct emphasis on Israeli withdrawal prior to any discussion of terms. But in this case more than law is involved; there is also equity.

And equity demands that the nations look somewhat back of the date last October when Israel's army drove across the Sinai frontier. Reasons for that desperate act lay in two abuses from which the United Nations never successfully shielded Israel. One was Egypt's blockade of the Suez Canal against Israeli trade the other was a continuing employment of murderous fedayeen raids, boasted of by President Nasser's Cairo radio, against inhabitants of Israel.

Just to return to that situation would not be good enough. If the Gaza strip were simply turned back to Egypt, what guaranty would there be against further harassments? And if Egypt should be free again to mount guns at the Strait of Tiran, would the Gulf of Aqaba afford an alternative route to Suez?

To the Canadian mind it seemed no perversion of justice for the U. N. to demand not only that Israel withdraw but to stipulate conditions that should follow the withdrawal. In effect, President Eisenhower and Secretary Dulles have come to a rather similar conclusion in negotiations with Prime Minister Ben-Gurion and Ambassador Eban.

Actually, what better support could there be for the right of innocent passage through the Strait of Tiran than a request for its affirmation by the U. N. General Assembly? And if the Gaza strip is to cease to endanger general peace, should it not be placed under international administration until its permanent status can be determined? If Egypt wishes Israel to forego the fruits of war, must not Egypt renounce the belligerent right to throttle Israeli commerce?

It is natural that the Arab bloc should continue to press for sanctions against Israel. But if the U. N. had enforced the Security Council request of 1951 regarding the canal and had taken effective cognizance of fedayeen aggressions, the present situation might not have arisen.

It is in character that the Soviet Union, through Deputy Foreign Minister Sobolev, should declaim against any western efforts to restore peace in the Middle East. But whatever the treatment of the Canadian-American proposals in the Assembly, and we hope it will be favorable, it is gratifying that the United States is back on a basis of cooperation with British Commonwealth countries, and through them with Britain itself, on matters of order and justice in the Middle East.

A New Route to Better ICC Enforcement

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. GAVIN. Mr. Speaker, I would like to call to the attention of the Members of the House of Representatives an article entitled "A New Route to Better ICC Enforcement," by O. D. Shipley, Director Bureau of Highway Safety, Department of Revenue, Commonwealth of Pennsylvania; and also a news release from Hon. Gerald A. Gleeson, Secretary of the Department of Revenue, Commonwealth of Pennsylvania.

A NEW ROUTE TO BETTER ICC ENFORCEMENT

This proposal begins with the story of an industry with a problem.

America's trucking industry has a grave responsibility in helping to solve the serious problem of traffic accidents—accidents which claimed the lives of over 40,000 Americans and injured over 2 million in 1956.

Probably no segment of highway users has accomplished more to promote highway safety than the organized trucking industry. Its efforts have paid dividends. Today, the "professional driver," the man who drives a truck for a living, has the best safety record on our highways. Despite sharp increase in traffic deaths on our highways during 1956, the Interstate Commerce Commission reports that accidents involving trucks showed a sharp decrease during 1956.

While trucks have fewer accidents per mile of operation than passenger cars, truck accidents get more publicity. When a truck accident occurs, because of the size of the vehicle the accident is usually more spectacular and more photogenic, and thus receives newspaper coverage often out of proportion to the importance of the event. Far too often this coverage is distorted. Accidents over which the driver of the truck had absolutely no control often are captioned "Tractor Trailer Truck in Fatal Crash." Editors and commentators rarely remember that a very small percentage of the Nation's drivers are responsible for a high percentage of our traffic accidents.

Most truck operators are responsible individuals with adequate safety programs. It is actually a very small percentage of truck operators whose vehicles cause a high percentage of accidents.

Let us see how the shortcomings of this little group of careless drivers and operators have produced a situation which may well result in forcing them to come up to standard or to get off the road.

The mountainous terrain of western Pennsylvania is laced by a network of highways heavily traveled by trucks which carry the Nation's commerce from the south and west to the eastern seaboard. A series of run-away truck accidents in this area during the past 18 months has brought into focus the need for drastic action to bring certain segments of the trucking industry up to par with the majority of the industry. These run-away accidents were not only spectacular—they killed many people and caused heavy property damage. What caused them? The writer was at the scene of all of the accidents and conducted a personal investigation of the causes. Here are my conclusions:

These accidents were caused by—
1. Underpowered equipment.
2. Inadequate maintenance.
3. Driver failure.
4. Inadequate highway signs.

Each of these factors was present in varying degrees in every one of the run-away truck accidents I investigated.

Now, all of the trucks involved in these "run-away" accidents were operating in interstate commerce and under the safety regulations of the Interstate Commerce Commission.

While most of these trucks did not bear Pennsylvania registrations, the elected officials of the Commonwealth, the Pennsylvania State Police and the organized trucking industry in Pennsylvania were severely criticized and an excited "public opinion" demanded corrective action.

PENNSYLVANIA MET THE CHALLENGE THIS WAY

1. The Pennsylvania Motor Truck Association sent its safety director to the scene of these accidents, traffic surveys were completed and in cooperation with local and State highway department officials, proper warning signs were placed, "pull-off" inspection stops were arranged and enforcement was stepped up where possible.

The truck association designed special posters which were placed in truck stops for all drivers to read. The association also designed spot maps, bulletins, and special driver warnings which were given wide interstate distribution.

2. The Pennsylvania Legislature in record time passed an industry-supported measure requiring all trucks registered in Pennsylvania after January 1, 1957, to have adequate horsepower and braking capacity, and defi-

nitely making the permitted gross weight of the vehicles dependent upon brakes and power formula.

3. But PMTA and Pennsylvania authorities couldn't do the job alone, so PMTA requested the Interstate Commerce Commission to cooperate in a series of "roadblock" spot checks of all trucks coming into the State. The trucking industry's best maintenance engineers, specialists from insurance companies, the Pennsylvania State Police, the Bureau of Highway Safety and the Public Utility Commission were formed into inspection teams, each headed by an ICC safety inspector, and the checks were started. They went on, around the clock, for 2 weeks.

There was nothing startling in the results. Many of us who had been close to the problem knew in advance what we would find—these safety checks merely served to confirm our diagnosis. But although they had agreed to use the information solely to guide future action, the Interstate Commerce Commission released statistics that while not untrue, served to distort the overall picture and to send newspapers, legislators and others off on some pretty wild proposals. These checks did, however, highlight the need for adequate enforcement of existing ICC regulations.

PUBLIC SENTIMENT AROUSED

It was easy for newspapers, legislators and industry leaders to call for better ICC enforcement, but to accomplish this end was something else again. Let your imagination try to cope with these figures:

There are approximately 170,000 carriers operating over 1,700,000 commercial motor vehicles in interstate commerce in the United States.

Up until 3 years ago the Interstate Commerce Commission had but 20 safety inspectors in their employ. Two years ago this number was increased to 45 and a year ago the number of inspectors was increased to 100 men.

One hundred safety inspectors to enforce ICC safety regulations on 1,700,000 commercial vehicles. To do this job right, thousands more inspectors would be needed—and thousands of clerical persons behind them. Manifestly, this isn't the best route to our badly needed goal of better ICC enforcement.

Perhaps another route offers a less complicated, more efficient and economical avenue to our objective.

A NEW ROUTE TO ICC ENFORCEMENT

The Commonwealth of Pennsylvania requires that every motor vehicle licensed in the Commonwealth be inspected by an authorized inspection station twice each year.

At present there are approximately 11,000 authorized inspection stations in the Commonwealth. Each of these stations must meet the requirements of the Commonwealth before securing a permit to operate. Requirements include adequate space, tools, equipment, competent mechanics, etc.

These authorized inspection stations are inspected periodically by the Pennsylvania State police. If they are found violating any provision of the regulations they lose their station permit.

Each station purchases from the Commonwealth official inspection stickers for 10 cents each. These stickers carry the date of inspection, the number of the approved station making the inspection and the date of the next inspection.

This is probably the most efficient compulsory inspection program in the United States. Many other States and foreign countries have studied this program and have copied it in whole or in part. Commercial fleets are permitted to operate their own stations under the same regulations as the privately owned station.

Admittedly, semiannual inspection of a commercial motor vehicle is no substitute for a sound maintenance program, but the results in Pennsylvania convince me that it does spur adequate maintenance and it would appear logical for the Interstate Commerce Commission to adopt a similar program on a nationwide basis.

In my opinion, the Interstate Commerce Commission, after due study of the problem, should adopt rules and regulations for the operation of such stations and set up a nationwide network of authorized ICC inspection stations, authorized to issue an official inspection sticker. ICC would require by regulation that every commercial motor vehicle engaged in interstate commerce be inspected semiannually and at all times carry an approved sticker on the vehicle. State and local police in every section of the country under this system would automatically stop any commercial motor vehicle found without a sticker and hold it until it had been inspected and approved by an official ICC inspection station.

This system would automatically provide a complete inspection, semiannually, of hundreds of thousands of commercial vehicles, which today under a completely inadequate ICC enforcement policy are receiving little or no maintenance or inspection and whose owners never see an ICC official. Many such vehicles are run until they fall apart. Some have fallen apart on the highways of Pennsylvania with disastrous results.

We also recommend to the Interstate Commerce Commission that they consider the adoption of regulation that will make adequate horsepower and adequate brakes (based on the square inches of brake surface and horsepower at governed speed delivered at the clutch) the determining factor in assigning the permissible gross weight of the vehicle. Enforcement of this provision could be accomplished simply by refusing to pass an inadequately powered or braked vehicle by one of the approved ICC inspection stations.

COMMONWEALTH OF PENNSYLVANIA, DEPARTMENT OF REVENUE, NEWS RELEASE, FEBRUARY 19, 1957

Secretary of Revenue Gerald A. Gleeson said today he has forwarded to the Interstate Commerce Commission in Washington "for its full consideration," a suggested program for required periodic inspection of commercial vehicles on a nationwide basis.

The proposal was prepared by O. D. Shipley, director of the bureau of highway safety, and Secretary Gleeson said, "The proposal blueprints one of the most effective traffic safety projects ever developed for the entire United States, and it is one that will save lives and reduce property damage."

Director Shipley's program is called a new route to better ICC enforcement. Secretary Gleeson forwarded it to Owen Clark, Chairman, Interstate Commerce Commission, and to Ernest G. Cox, Supervisor, Section of Safety, Bureau of Motor Carriers, Interstate Commerce Commission.

The program calls specifically for a nationwide network of authorized ICC inspection stations which would inspect every commercial motor vehicle engaged in interstate commerce on a semiannual basis.

Official ICC inspection stickers would be affixed to interstate vehicles. Any vehicle not having such a sticker would automatically be stopped by State or local police in every section of the Nation and would not be permitted to proceed until it had been inspected and approved by an official ICC inspection station.

Most truck operators are responsible individuals with adequate safety programs, Mr. Shipley pointed out, but there are still thousands of commercial vehicles which are receiving little or no maintenance or inspection and whose owners never see an ICC official.

The compulsory nationwide inspection program would eliminate—in great measure—unsafe equipment from the highways.

Additionally, the proposal suggests that the ICC consider the adoption of a regulation which would establish the basis for adequate horsepower and braking surface necessary for the minimum safe operation of commercial vehicles. Enforcement of this provision could be accomplished by the refusal of the approved ICC inspection station to pass an inadequately powered or braked vehicle.

Pennsylvania, Secretary Gleeson declared, requires the semiannual inspection of commercial vehicles, and also was the first State in the United States to pass a law—fully endorsed by the trucking industry—which requires adequate horepower and braking capacity for commercial vehicles registered in the commonwealth.

In outlining his proposal for ICC consideration, Mr. Shipley emphasized that today there are just 100 safety inspectors assigned to the task of enforcing ICC safety regulations on 1,700,000 commercial motor vehicles engaged in interstate commerce throughout the United States.

Mr. Shipley believes that these safety inspectors could perform their duties more effectively by the policing of authorized ICC inspection stations, as suggested in his proposal.

Secretary Gleeson said, "Mr. Shipley, through his many years in traffic safety work, with particular emphasis on the commercial vehicle phase, is extremely well qualified on the subject. He was responsible, in great measure, for the series of round-the-clock maintenance and safety checks conducted in Pennsylvania some months back following a series of runaway truck accidents that caused loss of life and heavy property damage. These tests were conducted in cooperation with the State police, ICC officials, and the trucking industry. His conclusions and constructive recommendations, as set forth in his proposal, represent many hours of actual on-the-spot surveys on the subject and merit the complete and earnest consideration of the ICC."

Resolutions Memorializing the Congress of the United States To Enact Legislation Providing for the Elimination of Pollution in the Merrimack River

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted on February 18, 1957, by the Commonwealth of Massachusetts:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION PROVIDING FOR THE ELIMINATION OF POLLUTION IN THE MERRIMACK RIVER

Whereas it is essential for the welfare of the people living in cities and towns bordering or located near the Merrimack River that said river be free from pollution; and

Whereas the Merrimack River is highly polluted; and

Whereas said pollution is detrimental to the people living in the vicinity of said river; and

Whereas the city of Lowell will require the use of said river for drinking purposes in the years to come; Therefore be it

Resolved, That the House of Representatives of the General Court of the Commonwealth of Massachusetts memorializes the Congress of the United States to enact legislation providing for the elimination of pollution in the Merrimack River under the auspices of the United States Corps of Engineers and that the Federal Government assume the full cost of such work as is necessary; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the State Secretary to the President of the United States, to the presiding officer of each branch of Congress and to the members thereof from this Commonwealth.

House of Representatives, adopted February 18, 1957.

LAWRENCE R. GROVE, *Clerk.*

A true copy.
Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Homicide by Diplomats

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BOW. Mr. Speaker, homicide by diplomats is the subject of an excellent article by George Sokolsky which I include as a part of my remarks.

A representative at the United Nations can actually kill an American citizen in the streets of New York without penalty and without even the usual financial responsibility toward the family of the deceased.

Diplomatic immunity, a device dear to the heart of diplomats, permits such things to happen.

An American serviceman stationed in any one of some 50 foreign nations does not enjoy such immunity. The diplomats have seen to it that he can be tried, imprisoned, and subjected to civil judgment for any violation of local law.

I think this is a contrast which should be borne in mind while Members read Sokolsky's article and when they consider H. J. Res. 16 which proposes to modify the status of forces agreements.

ABOVE THE LAW—YUGOSLAV AMBASSADOR NOT ARRESTED AFTER FATAL AUTO ACCIDENT

(By George Sokolsky)

Dr. Joza Brilej, Yugoslav Ambassador to the United Nations, was blithely driving his car west on 66th Street in New York. He went through a red light; he bumped into another car; he went up on the sidewalk, killed Mrs. Ruth La Bartunek who was gently minding her own business but who was pinned against a building by this Yugoslav Ambassador's car which he was driving.

NOT SUBJECT TO LAWS

Dr. Brilej was quite sorry and sent some emissaries to the La Bartunek family to ask if he could contribute to the funeral expenses. Beyond that he had no responsibility because he is entitled to diplomatic immunity by which is meant that he lives in our midst under extraterritoriality and is not subject to our laws.

It is legal for him and for a few hundred other people conected with the United Nations to go through red lights. The police cannot arrest him because he has dipolmatic immunity. He can bump into another car and damage it but nothing can be done about that; he canot even be sued for damages because he is not subject to our laws. He can kill a woman, a mother of five children, but he cannot be arrested for murder or for reckless driving; the police may not investigate whether he was drunk or sober when he lost control of his car; the police may not even inquire as to whether he had a license to drive a car. He is a big shot, an ambassador, and enjoys extraterritoriality which includes the right to kill a woman going into a grocery store.

Of course, a man may be a diplomat and a gentleman, too. That has happened. Such a person would obey the traffic regulations of the place where he happened to be stationed, because a gentleman does not take advantage of his position. But it is too much to expect of the folks who have been thrown into high position by war and revolution that they would even know the meaning of noblesse oblige. So they go through red lights. They park their cars in front of fire hydrants. They double park and triple park to the inconvenience of taxpaying Americans, and now one has actually run down and killed an American woman. He killed her on a sidewalk as she was walking into a store.

It is an easy-going, soft people that takes that sort of thing lying down. There was a time when Americans were less refined and when somebody's fist would have settled this question of diplomatic immunity. What happens to all these heroes in our Westerns which millions follow every day on television, these heroic characters who protect womanhood and virtue? Do they not inculcate a sense of obligation to stand up for what is right? Or must we let these frisky ambassadors imperil our wives and children while they break every traffic law with cars bearing DPL license plates? DPL, indeed.

The least the State Department can do is to notify the Yugoslav ambassador that the streets of New York City are closed to him. He can remain in the United Nations building as long as Tito wants to keep him there, but he has committed a homicide on New York streets, and the streets are closed to him. Of course, the State Department will do no such thing because its personnel is made up of diplomats who do not speak rudely to diplomats and who believe in extraterritoriality because when they go to other countries, they live by it.

TITO RUDE

But Tito did not always practice it, and as I recall, when our ambassador to Yugoslavia was Richard C. Patterson, Jr., Tito was rude to him and to his lovely wife, and nobody made much of a fuss about that because, I presume, it was expected that Tito would be rude. That was before Tito was kicked out of the Cominform by Stalin and turned his face Westward to get a cool $1 billion of the American taxpayers' money.

May I suggest to Senator GREEN and Representative GORDON of the Senate and House Committees dealing with foreign affairs that they might hold public hearings into the misconduct of foreign officials in New York. They would get an earful, and the public would discover that when the striped pants come off, some of these fellows are no better than they were before the revolution.

Pax Justitiae Opus

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. MORANO. Mr. Speaker, on October 23, 1956, a distinguished resident of Ridgefield, Conn., Mr. Henry R. Luce, editor in chief of Time, Life, and Fortune magazines, addressed the 81st banquet of the State Bar Association of Connecticut at the Statler Hotel, Hartford, Conn.

This address, entitled "Peace Is the Work of Justice," has recently been printed in booklet form. The basic moral philosophy espoused in Mr. Luce's talk—that peace is the work of justice, and justice is the work of law, that the United States should make use of the law in its drive for world peace, is a new concept and one which bears most serious consideration.

In order to bring it to the attention of my colleagues, I, under unanimous consent, include the entire address in the RECORD:

PEACE IS THE WORK OF JUSTICE

(By Henry R. Luce)

Your presidents, Mr. Jacobs and Mr. Robinson, have impressed on me that after 2 days of law talk, many of you will be primarily interested in getting out of here—soon. On the other hand—surely that is a good legal expression—on the other hand, I am myself so impressed by the extraordinary honor of this invitation that I desire to savor it with all its rights and privileges for the full allowable 30 minutes. What to do? I am required at the very outset to produce a judgment of Solomon. Unlike Solomon, I will not offer to cut my brain child in two. Instead I will make two speeches. The first of them takes 2 minutes—and here it is:

I am told that when that famous citizen of Hartford, Mark Twain, was asked to stipulate his full address, he answered: "My name is Samuel Clemens and I reside at 351 Farmington Street, in the city of Hartford, in the county of Hartford, in the State of Connecticut, in the United States of America, in the World, in the Solar System, in the Universe, in the Mind of God."

You will note that the first part of that stipulation is all very legal—city, county, State, Nation. But when you come to the World, there is no longer a legal ring to it. There is nothing lawful about the world: It is a lawless place. When you get past the world, all is again legal, for both scientists and theologians assure us that the universe and the mind of God manifest perfect law.

Gentlemen, the task of our generation is to make the world at last a lawful place—to make it at last a proper legal residence of man.

This is the task in which the legal profession must take the lead.

That is my 2-minute speech. My message is now delivered to this distinguished company—and you are all respectfully excused from hearing further argument.

However, for those who may feel that this banquet merits further digestion, I respectfully submit a somewhat more formal thesis:

In the decade since World War II, the Government and people of the United States have exerted themselves mightily for peace. They seem to have utilized every conceiva-

ble means to this end, both human and divine. All except one. We have not made use of the law. In the words of Professor Hocking, "Such use as we have made of the law has been timorous and unenterprising."

The neglect of law is all the more striking when we pass in review the massive efforts which the Government and people of the United States have put forth in other directions. They have prayed for peace—crowding their churches as never before. They have spent $50 billion of their national treasure to help foreign countries in the belief that economic progress would lead to peace. They have spent abroad other billions in private philanthropy. They have set up information and propanganda agencies in hundreds of cities. They have sent point 4 missionaries, dedicated people, to the remotest provinces of earth. They have developed and maintained fantastically powerful—and expensive—armaments. Si vis pacem para bellum. They have fought a bitter war in Korea, sending their sons into battle and gaining no clear victory. They have maintained the most powerful army and air force in Europe. They have built bases in far-off lands. Their fleets patrol the seven seas.

The Government and people of the United States have done all this—and more that would take the night long to recite—and they have received an abundant reward. For the United States prospers and civilization marches on. Far from having crumbled under the onslaughts of organized evil, civilization everywhere advances, and our own American civilization points to a new epoch of human power and freedom.

Nevertheless we have not achieved peace. Not in the proper meaning of the term—which is that peace should be the normative and expected state of affairs. The peace we have is precarious. It is continually subject to blackmail. It is not based on clear principle commonly accepted. Season after season we are faced by the distasteful choice between dubious war or partial surrender.

You will say perhaps that all this is in the nature of things in the 20th century. And I will agree; and in our minds there will be not only the untamed terror of the H-bomb; there are other equally explosive factors—such as democracy and old peoples becoming new nations. Reminding ourselves of the immensities of the problem, we would agree further in giving gratitude and honor to our American statesmen for their pilotage of a free America through the narrows of disaster.

Yet this is not our goal. Our goal is a peace of deeper satisfaction. My thesis is that the law is the most effective and the most necessary means for that kind of peace. This proposition is true in reason and philosophy. The wisdom of the ages supports it. Pax justitiae opus—and justice is the work of law. I shall respectfully assume that the philosophic truth of the relation of peace, justice, and law is a basic conviction of all the members of this learned profession—and I shall be mainly concerned here to illuminate that truth by some pragmatic tests and proposals.

My argument rests on the proposal that the United States should give to the promotion of law an absolutely primary position in its relations with all mankind—with all nations, races, and tribes, and ultimately with each individual soul that inhabits the globe. The phrase "peace-loving nation" is too easily used to confuse. The phrase "law-abiding nation" can be given clear, strong, and decisive meaning.

There is a distinction to be made between law within a nation and international law. But this distinction should not be exaggerated. In urging the promotion of the use of the law, I shall be referring both to the law within nations and to the law between nations.

For example, the problem of law is central to the question of so-called foreign aid. An expanding world economy is a vital interest of the United States. But how to bring it about? We are momentarily baffled. What is vulgarly called handouts, or more elegantly, donation diplomacy, has only a comparatively small role to play. From now on, the building up of economies is primarily a matter of trade and investment and reliable currencies. On this subject hear the words of President Rathbone, of Standard Oil of New Jersey. Apropos of Suez, he said: "The great issue is not whether the government has the right to nationalize property or not, but whether it has the right to abrogate contracts. * * * It is immoral and completely unethical for a government to grant a concession and then unilaterally abrogate that concession. What we need in the world today is a clear enunciation of this principle, recognition of the fact that they don't have to give these concessions, but once they do, they ought to abide by them. If we don't have that kind of a set of rules and that kind of atmosphere in the world, we are not going to have foreign investments in, or have the developments of, the natural resources of many countries."

That's plain, common sense. It is also a basic issue which the United States so far has failed to face.

In the pregnant phrase of Professor Dillard, the emphasis in international life must shift—and will shift—from torts to contracts. The ideal which must be restored to paramountcy is the ideal of the sanctity of contracts. Pacta sunt servanda.

So I speak of law in all its phases—from the smallest business transaction to the greatest negotiations at the summit of global politics.

So understood, the law will prove to be the most effective means to peace for many reasons, but notably the following three:

First, it is through the appeal to the idea of law that the United States can most effectively bind itself to other nations and peoples in mutual respect.

Second, it is by insistence on the fundamental importance of law that the United States can most effectively challenge our enemies, however contemptuous they may seem of law and justice.

Third, it is through the law that the United States can harness together our vast military might and our political and ideal purposes.

As to the first point—that law is a binder between us and other nations—let me speak first of those nations whom we consider our natural allies, our fellow members of Western civilization. What is the touchstone of this civilization? Some would argue that it is Christianity; others that it is the quest for liberty or the scientific method. But from the time of Solon in ancient Greece to the present, there is no stronger thread throughout the history of the West than its development of law. The secular history of the West is not just a series of wars and dynasties. It is also a series of great political decisions which have become the people's law. From Runnymede in 1215 to Connecticut's Charter Oak and on to Philadelphia in 1787, from the Treaty of Westphalia to the latest decisions of our Supreme Court, law is the language on all the political milestones of Western progress.

"The King is under God and the law"—so was it in royal Britain, and so it is with our own king, the sovereign people. Even liberty, the most sacred word in the American vocabulary, is known to us as liberty under law.

What then of those new and underdeveloped nations that do not share our western tradition and feel no natural allegiance to it—rather the contrary? In the rich history of the Orient, Christianity has played a minor role, and there is nothing which even faintly resembles our western quest for liberty. No Asian, until recently at any rate, ever tried to draw up a bill of rights. When oriental nations speak of freedom, they mean not personal but national freedom; and they seek economic advance, seen largely in terms of social justice. Justice is the operative word among these new nations. It is the word which strikes today a common chord throughout their world. But so does it in ours.

In politics, the greatest common denominator of human feeling and passion is the sense of injustice, which is the obverse of the desire for justice. It is our sense of justice, therefore, which will make Americans most at home with other peoples. And whoever speaks of justice must inevitably think of law. Once the sense of injustice transcends a brute desire for vengeance, it inevitably comes face to face with the oldest problems of law.

It is true that our western legal systems are fundamentally different from those of Asia. Our western legal systems have an objectivity and precision which are not in harmony with oriental tradition. Yet it should be noted that today many Asian countries are acquiring, and feel the need of, more objectivity in their law. The basic point is that no people, no tribe, however backward, is ignorant of law. Every nation under the sun, whatever its culture or ideology, has law of some sort. If, therefore, we wish to promote the rule of law in the world, we should first inquire of every nation: Tell us, what is your law? Such an inquiry, if launched by the President of the United States and other leading statesmen, could generate throughout the globe a marvelous concern for law and bestow on it in the minds of men the central role it actually occupies in our own society.

President Eisenhower electrified the world by his proposal for air inspection of armaments. What I am suggesting is that there should be initiated and continued forever an inspection of the law of each and every nation by each and every other nation. Thus we shall have made most vivid to all mankind the differences which exist between us all, and we shall discover the points where we can, and most need to, grow together in a common respect for law. And thus we shall undertake the glorious enterprise of building a lawful world through a tradition which becomes increasingly the common law of the world.

My second argument is that it is by a persistent appeal to law that we can most effectively confound our enemies. The most sensational event of 1956, until the revolts in Poland and Hungary this past weekend, was the 3-hour speech by Khrushchev at the 20th Soviet Congress. Anyone who read the full text of that speech must have been struck by the fact that fully one-half of it was directed to law. More than anything else, Khrushchev was determined to show that Stalin had violated Soviet law, and that, on the contrary, he, Khrushchev, would respect the law. Even a tyranny requires law. However shameless a tyranny may be, it cannot long afford to be ashamed of its own law.

The Soviet Empire today is full of troubles. Essentially the Kremlin problem is to base its rule to a greater degree on the consent of the governed—both within Russia and throughout the Soviet colonial empire. How to do this and yet retain their immoral and arbitrary power? That is their dilemma. Note, as a major example, their playing down of the secret police and the police state. They seek to give the appearance of the rule of law. And in politics, appearance is a large part of reality. If rulers feel that they must appear to be lawful, then to an extent they must be lawful. I do not wish to oversimplify, but there is a causal connection between the Khrushchev speech on law and the revolts in Poland and Hungary, which he ruled illegally.

My argument, then, is not merely that a great global inquiry into law would expose

the evils of the Soviet system; my argument is that a general concern for law would further incite concern for law within the Soviet Empire, that this would tend to more humane and rational law—and once that process began, we could expect in consequence either the last reactionary convulsion of tyranny or a gradual but profound transformation of the Soviet system. Either way, the challenge to be lawful confounds the evil in our enemies. The challenge to be lawful is the mose effective challenge at the bar of world opinion; it is also the most effective challenge inside the Communist empire.

My third argument for giving the highest priority to law in world affairs is that it is through international law that we can harness our vast military might to the service of our political and ideal purposes.

Whenever the subject of world peace is seriously discussed, we encounter some such sweeping dictum as that the world will be ruled either by the law of force or the force of law. Such a choice is unreal. You will always have force in the world—now more than ever before. And you will always have law in the world—we hope more and better. The problem is to get force and law together. What we really mean is that we seek the rule of law backed by force. As Justice Pollock said: "The sheriff and his posse lurk in the background of every rule of law."

Ultimately a vision of global peace requires a picture of world government, a government making world law and backing it by a monopoly of organized force. You will not, I think, deem me so naive as to be inviting your attention to world government, which is not the business of our generation and which none of us is likely to see. I invite your passing attention to world government only for the sake of ultimate logic. The business of this American generation is not to establish world government. Our business is to establish, through an ever larger part of the world, a rule of law enforceable within that area and defensible against any barbarians who may choose to remain outside. That, as I see it, is our task during the next 20 years. We have barely started. Yet I believe the time has come when we must and will launch this enterprise on a global scale.

One of my reasons for being, at last, optimistic, is the Suez Canal crisis. This crisis has done two things. It has put law—international law—into the headlines. It has had statesmen scratching their heads and wagging their tongues and generally fussing and fuming about international law as they have not fussed and fumed in a generation. The Suez crisis has had that blessed consequence—God be praised. And it has had another consequence—it has shown up glaringly how uncertain and inadequate international law is.

Anyone who was not in London and Paris soon after Nasser grabbed the canal cannot possibly know how strong were the emotions of the British and French. They were outraged. They wished to use force—the sooner the better. Their leaders and their editorial writers spoke in most outraged terms of violation of law. Yet, so far as I can learn, in those first weeks not 1 statesman nor even 1 editorial writer drew up what any lawyer could consider a serious legal indictment of Nasser. The statesmen of Britain and France, although they threw around phrases about international law, based their case instead on vital interests and had recourse to angry denunciations of Nasser as another Hitler. Emotion, national interest, and name calling took the place of solemn appeal to law.

However human this may be, this is not the West at its best. And this is not the way in which the West will achieve either unity at home within itself or the respect and trust of Asia and Africa—nations once described by Rudyard Kipling, that great poet of Pax Britannica, as "lesser breeds without the law."

My interpretation of the great role played in the Suez crisis by Secretary of State John Foster Dulles is as follows:

Secretary Dulles himself was doubtful about the legal case against Nasser, and anyway he saw that the other powers were not resting their case on international law. Therefore, first of all, he discouraged the use of force in the service of national interests, and he proceeded with speed and skill to work toward a new international agreement which would be free of ambiguities, and which would provide legal and moral sanction for enforcement by economic or military means or both.

Two months later, when the powers brought their case to the United Nations, it was noteworthy that they were all making their case far more insistently in law. They did this for various reasons, sincere or insincere. But at least one reason was because Secretary Dulles' proposals pointed to a future where the legitimate interests of all nations could be sustained by international action under clear and solemn contract. Meanwhile, you will have noted that Nasser himself has repeatedly said: "I believe in international law"—and to prove it, he has conducted himself with considerable circumspection.

President Nasser is a devout Mohammedan. So there is surely written in his heart the famous words of the prophet: "One jurist is more powerful against Satan than a thousand unlearned men with their prayers." It is in that spirit that we can appeal to him, to the whole Moslem world and even to the whole of mankind.

However you look at it, the Suez crisis makes clear that there is imminent necessity for more and more international agreements clearly made and clearly enforceable. This is one reason why I believe that at last we shall embark on the surest road to peace, the road which requires ceaseless concern for justice in and between all nations, a concern recorded and registered, step by step in law.

I believe that President Eisenhower's second term will be characterized by a tremendous emphasis on the development of the law of nations in the 20th century. The greatest speech Dwight Eisenhower ever made was his address to the American Bar Association last year, on the 200th anniversary of Chief Justice John Marshall. Therein he testified to the supreme importance which he gives to the law in the life of the United States and to justice as the guide of foreign policy. I quote a few key sentences:

1. The President said: "Our Nation is ranged with those who seek attainment of human goals through a government of laws. Those laws are rooted in moral law, reflecting a religious faith that man is created in the image of God."

2. "Eagerness to avoid war can produce * * * agreement that injustices and wrongs of the present shall be perpetuated in the future. We must not participate in any false agreement."

3. "We must be tolerant but not complacent. We must be quick to understand another's viewpoint. But we must never agree to injustice * * * well knowing that if we accept destruction of the principles of justice for all we cannot longer claim justice for ourselves."

A valid criticism of Americans in their attitude to world affairs runs like this: We Americans are much too idealistic and moralistic in our approach to world problems. Then, when idealism or moralism does not produce quick results, we fall back on reliance on armaments and all-out war. We oscillate between reliance on "H" for H-bombs and "I" for idealism.

An emphasis on law can give stability both to our emotions and to our policy. We ought not to spend $35 billion a year just to prepare for world war III; that gigantic force should also be felt as a force behind the promotion of and the defense of law—every day, from season to season, year after year. The law is the indispensable vehicle of both idealism and national interest.

Once again to quote Hocking: We must achieve a vision of the law as that which "transforms the impact of naked power from common threat to common resource." But not even the President of the United States will be able to raise the banner of the law for all to see and to follow—unless the lawyers of America are wholeheartedly with him in this cause. It is extraordinary that in the United States of America, which owed its founding so much to lawyers, and which has been so largely ruled by lawyers—it is extraordinary that in this crisis decade, the legal profession as a profession has played so small a part in the great effort for peace.

Now, however, it seems clear that in the last few years the lawyers of America and of other nations have become aroused to the cosmic demands upon their vocation. A most dramatic instance of this awakening was the meeting in Athens a year ago when jurists from 49 countries produced the Act of Athens. (You have it in front of you tonight.) What a ringing declaration it is. And how profoundly encouraging it is that jurists from 49 countries can speak the same precious language of liberty under law. The Chief Justice of the United States referred to the Act of Athens in his powerful statement asserting the vital relation of law and peace. And then you saw him this summer make a tour of India—which I would say is symbolically the most important act of international relations that one man could perform in this stage of the world crisis.

More happened in 1956. Throughout this country, bar associations held special seminars on international law. An important guest of many of these meetings was Leonard C. Meeker, of the Department of State. With cautious optimism he asserted that our present era may prove to be an era of creative development in international law "as exciting and dramatic as the era when the law of England was emerging in the later Middle Ages or in the time when American law was emerging in the early days of the frontier."

That, I think, is true. That is our great hope. Indeed, I believe that the next 10 years will see the greatest development of law in the history of human society.

When the President of the United States faces anew the immense problems of human life on earth, and when he finds, as I believe he will and must, that the essence of the challenge is to build a lawful world, then I think he will also find that the lawyers of America are ready to put their skills, their intellect, and, above all, their hearts into this task. Thus, it will be demonstrated once again that the learned profession of the law is worthy of honor and gratitude.

I come to you as a layman urging this mission upon you. If you will give us the lead, we will follow.

The legal profession is far more than an occupation. It is, in the religious sense, a vocation. The legal profession is far more even than a pillar of society. In our tradition, lawyers are the architects of society, building and rebuilding on the shifting sands of time the temple of the dignity of man.

Case and Industries Plan for Nuclear Research

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MINSHALL. Mr. Speaker, the amount of planning being carried on by private industry into the potential uses, for civilians, of nuclear energy is impressive. We of the Congress ought to do what we can to encourage such planning, for the question of Federal versus private control of the facilities for serving civilians in the future is an important one in our political system.

In this connection, I am proud to note that studies to determine the feasibility of establishing a nuclear research and development center in Cleveland are underway at the Case Institute of Technology with the cooperation of several northern Ohio industrial companies.

This noted institute, and the companies, all of which are well-known in Ohio, and in fact throughout the Nation, are to be congratulated on this forward step. We wish them every success in their planning.

I should like to include an article from the Clevelander with reference to the above:

CASE AND INDUSTRIES PLAN FOR NUCLEAR RESEARCH

Studies to determine the feasibility of establishing a nuclear research and development center in Cleveland now are underway at Case Institute of Technology, with the cooperation of several northern Ohio industrial firms.

The intention is to plan a center to serve the special needs of both Case and northern Ohio industry. It would be used to train nuclear engineers and scientists as well as for industrial research, development, and testing.

Firms participating in the study phase of the project include Republic Steel Corp., Thompson Products, Inc., Cleveland Electric Illuminating Co., the Austin Co., and Standard Oil Company of Ohio, according to Dr. T. Keith Glennan, president of Case Institute.

Dr. Glennan, who was a member of the Atomic Energy Commission in 1950 and 1951, said other Ohio firms interested in utilizing atomic energy or its by-products and techniques in their industrial operations, are expected to take an interest in the nuclear center project.

These include firms in the fields of public utilities, mining, steel, aluminum, cement, chemical, oil, paint, automotive, aviation, electronic, rubber, instrument and general manufacturing industries, which are all heavily represented in the northern Ohio area.

Facilities at the nuclear center would include a reactor of approximately 10 megawatt capacity. Supporting facilities would include hot laboratories, hot caves, a counting room, gamma irradiation equipment, a neutron spectrometer, isotope preparation equipment and other laboratory and office space.

Director of the Case nuclear study group is W. W. Steel, who came to Case from Pasadena, Calif., where he directed the research and development work of the Pasadena, Calif., laboratory of the United States Naval Ordnance Test Station.

He previously had been manager of Douglas Enterprises, Inc., in Arizona and an instructor in marine engineering at the United States Naval Academy at Annapolis, Md. A native of Cleveland and a 1940 graduate of Case, Mr. Steel also received a master's degree at Case and also did graduate work in industrial management at Massachusetts Institute of Technology.

ISOTOPES IN USE

Mr. Steel says that industry already has made effective use of radioactive isotopes in hundreds of instances involving tracer techniques, irradiation of materials and use of isotopes in control mechanisms, thickness gages, and static neutralizers.

Cleveland companies, in addition to Republic Steel Corp. and Thompson Products, Inc., already using isotopes or radiation techniques in research or production, according to the Atomic Energy Commission, include: Atomic Energy for Industry, Inc., Clevite, Joseph Harsch Foundry, Harshaw Chemical, James H. Herron, Warner & Swasey, Bailey Meter, Designers for Industry, Dial Service & Manufacturing, Victoreen Instrument, Cleveland Industrial Research, Diamond Alkali, General Electric, Harris-Seybold, Horizons, Inc., and National Carbon.

The present and anticipated dimensions of peacetime nuclear industry, Mr. Steel believes, are so great that almost every segment of industry can expect some impact from this new technology.

Facilities for training as well as for nuclear research, development, and test are very expensive—so expensive, in fact, that very few industrial companies or privately endowed universities are able to afford them for their own exclusive use.

Preliminary studies on the nuclear center project were initiated by members of the Case faculty and an industry advisory group composed of men with extensive nuclear experience from various northern Ohio firms. This group included: Harry L. Browne, manager of nuclear projects, Thompson Products, chairman; Dr. C. E. Larson, vice president-research, National Carbon Co. division, Union Carbide & Carbon Co. and formerly Director of the Oak Ridge National Laboratory; Dr. R. G. Bauman, B. F. Goodrich Co., Neil J. Carothers, assistant to the president; the Albert M. Higley Co., Dr. Robert P. Petersen, director of Nuclear Research, Republic Steel Corp., and Clarence A. Dauber, director of civil and mechanical engineering, Cleveland Electric Illuminating Co.

The nuclear study group and others who have been engaged on the project have concentrated on determining the kind of reactor and laboratory facilities needed, location of a satisfactory site, the corporate structure, and means of financing.

They have been working with and getting advice and information from individuals at AEC owned and operated facilities, reactor designers, and fabricators, nuclear research laboratories, universities and colleges, northern Ohio industrialists, and the Case staff.

The Case staff over the years already had been active in the nuclear field in a variety of ways, including:

The research program in nuclear physics which had centered around a betatron built with Case funds and subsequently partially supported by an AEC contract.

The graduate program in nuclear physics in which more than 50 advanced degrees have been awarded since 1949.

Courses of instruction in nuclear engineering and nuclear chemistry in the mechanical engineering and chemistry departments.

The service of the Case staff in many positions of responsibility such as: Dr. Glennan, Prof. R. S. Shankland, who served as technical director of the material testing reactor during the summer of 1955; and Dean Elmer Hutchisson, who was a member of the Committee on Industrial Information of the AEC.

Israel Will Strengthen Rather Than Weaken Her Position by Withdrawing Her Troops

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of February 22, 1957:

RISKS BEFORE ISRAEL

Israel's refusal to heed the appeals for withdrawal of her troops is profoundly disappointing to her friends and damaging to her world position. Whether or not she finally complies with the United Nations resolution, her further delay is a very risky business. The fact that Prime Minister Ben-Gurion has dispatched Ambassador Eban back to Washington for new discussions indicates at least that the Government has taken President Eisenhower's plea seriously. But there is little room or time for bargaining. Sympathy for Israel will rapidly evaporate if she deliberately invites U. N. condemnation.

Mr. Eisenhower, in fact, made an extraordinary appeal which took a good deal of courage after the expressions in Congress against sanctions. He did not mention sanctions, but he did make clear his belief that the U. N. must be upheld in spite of its failures elsewhere. Any other course would pave the way for disintegration.

Moral condemnation itself could be very injurious, as the Russians have found in the pariah status which they occupy. Israeli and Russian defiance are not to be compared, but Israel, which is a child of the United Nations, has a special responsibility to be an exemplar. Even short of governmental action, a shift of opinion among Americans could quickly dry up many of the private funds upon which the Israeli economy is so dependent.

Yet Mr. Eisenhower also reiterated the American assurances to Israel about as positively as they could be put. He restated the promise about freedom of navigation in the Gulf of Aqaba. He reasserted the intent to insure that the U. N. emergency force insulates the Gaza Strip against hostilities. He added that the United States would press for United Nations participation in administration of Gaza—a step that would complement Israeli offers to resettle some of the Arab refugees within Israel. For the first time, he placed the United States on record as insisting that any discrimination by Egypt against Israeli shipping in the Suez Canal after the waterway is reopened "be dealt with firmly by the society of nations."

The President also went a long way to recognize that the world community has been at fault for not paying attention to the considerations of justice that must accompany efforts to stabilize peace in the Near East. He gave welcome assurance to Britain and France that the world has a heavy obligation to see to it that they do not suffer as a result of their compliance with the U. N.—something that is threatened by the Israeli intransigeance.

Some Israeli misgivings over the role of the United States are understandable in light of the indifference and pussyfooting of the past about issues in the Near East. But Mr. Eisenhower's speech—indeed, the position of the administration generally in the current crisis—displayed the kind of positive leadership in foreign policy that sometimes has

been so lamentably absent. Even political opponents acknowledge that the administration's efforts in this situation have shown statesmanship of a high order.

This country has given what amounts to a solemn pledge that it will undertake to see that Israeli rights are protected in the United Nations and elsewhere. Israel cannot expect more, and if she cannot rely on the good faith of the United States, then she has no outside reliance of any kind. Surely the Ben-Gurion government cannot have become so insular and military minded as fatalistically to ignore the warnings (some from its own representatives) that a stand against the world can bring Israel only isolation and dismay.

Censorship Curtain Lowered

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. MULTER. Mr. Speaker, it is my belief that the American people have a right to know the facts behind peace treaties as well as international covenants and conventions. In that connection, I commend to the attention of our colleagues the following article by Thomas L. Stokes which appeared in the Washington Evening Star of February 14, 1957:

CENSORSHIP CURTAIN LOWERED
(By Thomas L. Stokes)

The ideal of "open covenants of peace, openly arrived at" was expressed by Woodrow Wilson during the first month of the Conference of Versailles that met outside of Paris after the First World War to arrange the peace.

That was a splendid objective—to let the people of the world know what the diplomats were up to. He was frustrated in that, even as he was frustrated later by the United States Senate when that body defeated the League of Nations embodied in the Treaty of Versailles. For we learned gradually in the years following Versailles about all sorts of secret treaties among our allies, Britain, France, and Italy, rearranging the map of Europe.

During the interlude between the First and Second World Wars, idealists in our country started sporadic movements to let the people know about foreign policy. Once again we heard open covenants, openly arrived at as the Wilson injunction came to be boiled down.

Then came the Second World War, and with it various conferences among us and our allies, some of them during the war, as at Quebec and Cairo and Teheran and Yalta, and some after the war. Again the curtain was discreetly lowered and we have been learning in the years since about this and that secret agreement.

Then came the cold war with Russia. The screen of secrecy not only was drawn over many of our dealings with our allies, in order that Soviet Russia should not know what we were up to; but Russia pulled down across Middle Europe what Winston Churchill called the Iron Curtain between herself and the west, so that as little as possible could get in or out.

Meanwhile there was another development about which the greatest secrecy was kept, both on our side of the Iron Curtain and on Russia's—the atom bomb and its successors, including the hydrogen bomb.

Because of the potency of this awful weapon and because everything about it must be kept secret, only a few people in the world—a veritable handful wielding executive power—control it and make the decisions about it. Never was the fate of so many millions in the hands of so few.

All other secrecy in the history of the world pales beside that, and so does all other power ever entrusted to rulers over their people.

We can't think too much about that because there's nothing much we can do about it. We are mute prisoners of our own scientific brains. Against that mysterious and awesome background, however, the quarrels among nations, which sometimes seem so puny and petty, still go on, such as in the newest area of tense controversy, the Middle East.

Again we observe something that is not new, but it bursts upon you afresh every now and then.

This is the realization, all over again, of how we are kept in the dark, even people of a great democracy such as ours. It impresses the newspaper reporter in a very simple way in his routine work. It is symbolized in the single word, "deleted."

For example, as we thumb through the volume containing the recent testimony about President Eisenhower's Middle East doctrine before the Senate Foreign Relations Committee we come upon that which was in executive, or secret, session. That is now made public.

But it is all tracked up with the trail of the censor. Forty-one times in the 2 days of testimony in executive session by Secretary of State Dulles, you come upon the word "deleted" to indicate something that was censored. In the testimony of Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, you find the word "deleted" 68 times.

What did they reveal to the Senators? Was it something the American people ought to know? From the context you can infer the subjects—Russian activity in the Middle East, the amount of money we are spending there now, and the amount that is likely to be spent, and so on.

But beyond that we'll probably never know. All that we do know for sure is that we are called upon to place great trust in the President and Secretary Dulles and our Senators.

We are in time 38 years away from that January 8, 1919, when Woodrow Wilson spoke of "open covenants of peace, openly arrived at," and we should be moving forward. But, instead, we are really way back beyond that and seemingly still going backward, back toward the Dark Ages, when rulers told people nothing.

Catholic Press Month

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. KEATING. Mr. Speaker, as February draws to a close, I am happy to note that this month has been celebrated all across the country as Catholic Press Month.

As a regular reader of the Catholic Courier-Journal, the diocesan publication printed in Rochester, N. Y., I can testify at first hand to the fine work being done by our Catholic press. The Courier-Journal, which ranks high among newspapers of this type, consistently supplies complete, accurate, and readable news of particular interest to the Catholic reader. Its editor, Msg. John S. Randall, deserves praise for the way in which he has put into practice high standards of morality and journalism.

Mr. Speaker, the Catholic publications in this country are filling a vital need for an important segment of our population. I am delighted to have this opportunity to salute this significant branch of America's fourth estate, and to voice my confidence that the Catholic press of this Nation will continue to dispense its high caliber journalism.

The Best Guide to the Road of the Future Is the Knowledge of the Road of the Past

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Chester D. Tripp in Economic Trend Line Studies:

THE BEST GUIDE TO THE ROAD OF THE FUTURE IS THE KNOWLEDGE OF THE ROAD OF THE PAST
(By Chester D. Tripp)

If one will use the annals of history, one cannot help but be impressed by the great amount of human misery that has always existed and still exists and, at the same time, the occasional spurts in social organization that have developed relatively great, efficent, and constructive empires, empires which without exception have risen to spectacular heights and then disappeared. This is really a rather strange phenomenon. It would seem at first thought as though progress should be more accumulative, that it would be fairly easy to pass on from one generation to the next the accumulated culture, legal systems, and so on, that certain men at certain times have been able to develop.

One conspicuous example of this is to trace the decline and fall of the Roman Empire. It started from next to nothing 250 years B. C., and was cracking at the seams 250 A. D. During this period it devised a legal system that still has the respect of the world, a transportation system the remains of which still mark the known world of that time, a sanitary system that was far more complete and represented better engineering than present-day systems even in the same area and, above all, it developed a sense of human dignity and justice which has at least contributed much to the same categories at the present time.

The question comes up, Why this burst of accomplishment that lasted three times longer than the present history of the United States and then was engulfed by that great period of the Dark Ages that lasted at least equally as long?

You can only come to one outstanding conclusion and that is that the stupidity, selfishness, and ignorance of the population and its rulers brought on the collapse. So complete was the destruction that by the time the Dark Ages came to an end even the intellectuals of Europe hardly knew

there had been a Roman Empire and its accomplishments had to be picked up and reconstructed again. War, pestilence, misguided efforts toward defense, unbearable taxation, and national extravagance, in broad strokes, tells the whole story. Literally, the Roman Empire tore itself to pieces through the unwarranted demands of the population, the weakness and demagoguery of its rulers and the enormous burden of expense in defense programs against the so-called barbarians of what is now Far Eastern Europe, a location that is somewhat reminiscent of the present day.

The empire was slowly forced, or at least it thought it was forced, into a defense effort that by degrees developed a veteran class of such proportions that they became a political block who could not be gainsaid. To support this effort, taxation was raised to such a point that at least in the colonies, the areas like North Africa and Asia Minor which were the breadbaskets of the empire, simply disintegrated and an agricultural relief problem presented itself which again was of such proportions that its political influence was enormous. Then, in order to stem the tide of manmade difficulties, a soak-the-rich policy was developed which paid for a few years but, in the long run, increased the devastation and subsequently eliminated the middle classes which had been so important in creating the empire.

The late Dr. Rustovtzeff some years before his death wrote on the economics of the Roman empire and his conclusion was pretty much to the effect that, between the unruly masses and demagogic politicians and the elimination of real statesmen, the whole structure with all its accomplishments simply fell apart.

The world today thinks its only solution is a stupendous defense program. The brass in every country clamors for bigger and better weapons and contending politicians add their efforts. At the same time, another political block is gravely concerned about the housing situation. All of this has been subsidized for years but they would like to give it more subsidy. This effort is supported by groups of contractors and builders who, in my opinion, are trying to get their share of the pie regardless of the broad social consequences. Group after group would like handouts or concessions or benefits often expressing the view that, other groups are getting theirs, why shouldn't they try it. We are in a period today when, if you have the political backing and the proper number of votes, you can demand almost anything and have a fair chance of getting it.

This is well illustrated by the wage spiral that we have been facing. No one labor leader is sure of his job unless he can equal or outdo the accomplishments and promises of the others in his group and then the irony of the situation is that some of these leaders call for a congressional investigation as to high prices and the threat of inflation, while everybody should know, or does know, that something over 80 percent of all wage increases finally merges into the cost of production.

At just this juncture, there are a few things that should be seriously pondered unless we are perfectly willing to go into an inflation that might terminate our own social experiment in government. We might mention a few of them.

We have enjoyed quite a boom that has taken advantage of the shortages produced by two wars and, by unbelievable extravagances, is trying to avoid a third. The result of this intense activity has reduced the liquidity of American industry to a point comparable with 1932, and still the pressure is on for bigger undertakings and bigger expenditures.

Of course, we could use more housing and a comprehensive road system would be a good thing. There is much poverty that might be alleviated and there are many adjustments that, at first thought, money could fix. But this was all true in the days of ancient Rome, and will probably be true hundreds of years from now. The thing to keep in mind is that the dislocation produced, by such expectations, could now generate another Dark Age in which good roads disappeared from the face of the earth, where no houses were built except of mud, and where the only stone quarries that were worked were actually from the destruction of the ancient palaces of the day that had disappeared.

Secretary Humphreys was dead right in his recent remark that, if we did not stop this spending, we could generate a depression which would curl our hair. What we need is a slight letdown in business that would reduce the debt of the individual and the country and, after we get our breaths, slowly go ahead to better things. It is certainly a truism that the miseries that humanity has always faced are largely the result of its own foolishness, and there is nothing in the natural law that will change this situation. Unless we can handle our affairs by some sound intellectual processes, extravagances whether in defense or housing can cause a collapse on the inside that could be a most unexpected divergent from the objectives that we had in mind.

One interesting fallacy of the day I hear in many quarters is; namely, that we are the victims of a tight-money policy engineered by the Federal Reserve bank. Nothing could be further from the facts. We are experiencing money congestion not on account of any bank but as a result of the activities of 168 million people.

How Long Can They Stand It?

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1957

Mr. ANDERSON of Montana. Mr. Speaker, how long can the farmers of America stand the assault of economic pressure which is being used against them? A few days ago in the House I challenged the policies of the Secretary of Agriculture, whose claim is that the farm prices were 5 percent higher than a year ago.

PRICES DOWN, COSTS UP

It was announced by the United States Department of Agriculture, as of February 28, that prices received by farmers for crops and livestock fell another 2 percent for the month ended February 15, while, meanwhile, the cost of production and living supplies purchased by farmers rose nearly 1 percent during the month.

Agriculture now is taking a large share of the brunt of this perilous course of action which day by day is getting worse. How long can these 22 million people on American farms keep going? We need a courageous course of action by the policymaking people in the administration, not the slow whittling-down plan which could lead to the serfdom of our rural people. I stress again that a change in policy direction be made, and made soon. The United States Department of Labor only 1 week ago announced living costs for the fifth consecutive month had scored another record high.

Mr. Speaker, how long can the rest of America survive this?

Addresses of Hon. Clinton P. Anderson, of New Mexico, and Hon. Chet Holifield, of California, Before AFL–CIO Conference on Atomic Radiation Hazards

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD, two addresses made yesterday by two of my distinguished colleagues on the Joint Committee on Atomic Energy, as delivered before the AFL–CIO Conference on Atomic Radiation Hazards, held here in Washington, D. C. This has been a very important and worthwhile AFL–CIO conference, and I believe that both of these addresses were also significant, both in their content and their thoughtfulness.

The first of these addresses was by the distinguished vice chairman of the joint committee, Senator CLINTON P. ANDERSON, of New Mexico. In his address, Senator ANDERSON discussed the problems in atomic-energy development, both in terms of domestic events and the international market.

The second address was by my distinguished colleague from California, Mr. HOLIFIELD, who has ably served his country both as a member of the Joint Committee on Atomic Energy and also as chairman of the Subcommittee on Military Applications of the House Committee on Government Operations. In this address, Representative HOLIFIELD discussed the civil-defense problems facing our country in these perilous days of uneasy world tensions, the guided missile, and the atomic and hydrogen bombs.

I believe that both these addresses are worthy of study and reflection by every Member of Congress, as well as by the American people:

PROBLEMS IN ATOMIC ENERGY DEVELOPMENT

(Address of Senator CLINTON P. ANDERSON, Vice Chairman, Joint Committe on Atomic Energy, before the AFL–CIO Conference on Atomic Radiation Hazards, Washington, D. C.)

The topic assigned to me this noon is: "Problems in Atomic Energy Development." If I did a full-scale job, you would have to invoke cloture on me—and let's hope your chairman's gavel would work better than Senate rule 22—because, believe me, there are plenty of problems in the development of the peaceful uses of atomic energy in this country. In fact, the Joint Committee on Atomic Energy is near the end of 2 weeks of public hearings designed to explore current problems in atomic-energy development. The committe has heard from many well-qualified witnesses, including an excellent statement by my long-time friend, Andy Biemiller, of the AFL–CIO.

I will discuss problems in atomic-energy development on several levels. Each can have little more than a lick and a promise, but the levels are: First, some special problems in the AEC reactor licensing program because that subject is closely tied up with the subject of your conference, "Atomic Radiation Hazards"; second, some technical and other problems appearing in our domestic atomic-power program; third, the development of reactors for uses other than generating electric power; fourth, the international market for reactors; fifth, a legislative program to help overcome some of these problems; and sixth, a few words about labor's stake in the atomic-energy program as an introduction to the program for tomorrow noon.

SPECIAL PROBLEMS IN THE AEC REACTOR LICENSING PROGRAM

As you know, the 1954 act was intended to open the doors to facilitate rapid development of the atom by allowing private industry, for the first time, to possess nuclear fuels and to build privately owned nuclear reactors. However, the act also required that in order to obtain these materials or to construct and operate a reactor, one must obtain a construction permit or a license from the AEC.

This system of requiring licenses before permitting possession of nuclear fuels or construction of nuclear facilities was enacted by the Congress because of two main reasons:

First, in the interest of national defense and security, the Government has retained title to the nuclear fuel, in order to facilitate accounting and control—since the nuclear material may be used for weapons as well as for peaceful purposes. We need to know who has it and where it is.

Second, because of the radioactive hazards involved, the Government, in the interests of protecting the public health and safety, must carefully consider each application to possess nuclear fuel or build a reactor, and the AEC must make the determinations required by the act concerning safety before granting the construction permit or license.

Thus under the present procedures the entire atomic-energy industry in this country must grow up under this AEC licensing system—since one needs a license or a construction permit to go ahead.

Now for a brief glance at the problems that developed under this AEC reactor licensing procedure.

As the AEC began the program, in 1955 and 1956, it followed uniformly the procedure of granting the construction permit or license without any prior notice to the public or without holding a public hearing. Thus the AEC granted construction permits for three large power reactors near New York, Chicago, and Detroit, without giving any advance information to the public as to the health and safety factors involved, or the AEC's hazard analysis of the proposed reactor.

In one case, for construction of the fast breeder power reactor near Monroe, Mich., there had been an unfavorable report by the Advisory Committee on Reactor Safeguards which the AEC did not make public. In that case, there was no valid reason to protect the people from the truth, and so, as many of you know, after the AEC issued the construction permit, three labor unions and other parties intervened, and requested a public hearing. I stated then, and I repeat now, that the AFL–CIO unions in obtaining a public hearing on this construction permit are rendering a valuable public service.

This public hearing—the first ever held by the AEC on an application for a reactor license—is now in progress and is a very significant event. Because of the important health and safety questions involved in the development and construction of new reactor designs, it is advisable that the public obtain full information in this field and that the AEC make maximum information on proposed reactors available to the public. These purposes can perhaps best be accomplished by means of a full and open public hearing.

The method in which AEC issues its reactor licenses, and the amount of information it makes public, are important because they are two of the keys to the safe and orderly development of atomic energy in this country.

Prior to the requests for public hearing in the Monroe, Mich., reactor case, I had directed the staff of the Joint Committee on Atomic Energy to undertake an investigation and study of AEC reactor licensing and construction permit procedures. On August 9, 1956, I wrote the chairman of the AEC, informing him that I was directing the staff of the joint committee to study three suggestions of fields in which the joint committee might wish to take corrective action by legislation to amend the Atomic Energy Act.

First, to require public hearings on all applications for construction permits or for facility licenses.

Second, to require that the AEC make public reports on the safety of all proposed reactors before issuing a construction permit or facility license.

Third, to separate the licensing and regulatory functions of the AEC from its other functions.

Accordingly the staff of the Joint Committee on Atomic Energy therefore undertook a detailed study of AEC licensing procedures and organization and also a study of the procedures and organizations of certain other Federal agencies in order to obtain comparative ideas. This staff study has now been underway for about 6 months and the report is due soon. It will be made public.

While the staff study was in process the AEC changed its procedures significantly. In late December 1956 for the first time it announced ahead of time that it was intending to issue a construction permit for a small research reactor unless a request for a hearing should be received within 15 days. At the same time it made public a fairly detailed memorandum discussing the reactor in technical terms, including an extensive section as to reactor hazard analysis, even though this was a small research reactor of proven design. In addition to these changes concerning procedures and safety reports, the AEC has also indicated that it is considering some form of internal reorganization to separate its licensing functions from other functions of the AEC.

I have looked over a preliminary draft of the staff study on the questions of required public hearings, required public reports on reactor safety, and the separation of the licensing and regulatory functions of the AEC. I intend to discuss the whole subject with my colleagues on the Joint Committee on Atomic Energy. I hope we will have some legislative proposals in this field.

So much for the problems in the AEC reactor licensing program.

I turn now to the second major group of problems which I would like to discuss: the technical and other problems in the development of domestic atomic power reactors in this country.

TECHNICAL PROBLEMS

Now, as to the domestic situation and the technical aspects of the development of atomic power in this country, I should say right away that some progress is being made.

Out at the Argonne National Laboratory earlier this month, members of the Joint Committee had the pleasure of attending the official opening of the EBWR—the Experimental Boiling Water Reactor. This was a memorable occasion because the EBWR is the first real atomic powerplant in this country. Although the AEC first generated "juice" back in 1951, the new EBWR plant is the first atomic reactor designed specifically for the generation of electricity. It is the heart of a powerplant designed to produce 20,000 kilowatts of heat and 5,000 kilowatts of electricity, and represents a significant stride forward.

Next fall the 60,000 kilowatt Pressurized Water Reactor now under construction at Shippingport, Pa., is scheduled to become critical—and this will be the first full-scale civilian power reactor in the United States.

Meanwhile the General Electric Co. has been making good progress with construction of its 5,000-kilowatt boiling-water reactor at Vallecitos, Calif., and that reactor also is scheduled to commence operation next fall.

On the bright side of the picture also should be mentioned the career of the *Nautilus* which has just gone into drydock for refueling after completing over 60,000 miles—its 20,000 leagues under the sea—on its first core without refueling.

Another bright star in our atomic progress has been the tremendous growth in the beneficial uses found for radioactive isotopes.

Originally considered a byproduct in our atomic program, radioisotopes have progressed to the point where they can now be accurately heralded as our "first peaceful dividend from United States atomic investment"—the phrase used by the AEC in the testimony submitted last week to our congressional committee.

Radioisotopes have brought huge dollar savings to industry in thickness and density gaging, industrial radiography, and research, and applied industrial tracing. By developing new techniques and new products, radioisotopes are saving our United States industrial concerns close to $400 million annually—and last Monday Dr. Libby said that in 1958 or 1959 that figure would reach $1 billion each year.

Radioisotopes have brought additional blessings, in the extension of human life and the relief of suffering, and in plant treatment. These applications in medicine and agriculture cannot be measured in dollars.

These are truly satisfying advancements, all made realities by help from man's newest—and smallest—ally: the atom. These are a few of the bright spots in the overall program to seek economic nuclear power in this country. Let us now look at the other side of the coin and scan the many problems that beset those working in this field.

Practically all of the projects now actually under construction are encountering unforseen engineering and technical problems which are slowing schedules and raising cost estimates. Let us run through the list of just a few of the projects—public and private—which are running into tough sledding.

First, the Oak Ridge homogeneous reactor work received a setback last fall when chloride contamination was discovered in the leak-detector system. Although the defect was nonnuclear in nature, it was necessary to stop all pre-operational testing, and the startup of that reactor has been indefinitely postponed. (As an aside, it is interesting to note that many of the technical problems causing delay—in fact almost all of them—involve construction of nonnuclear components, as compared with nuclear components.)

In addition to the Oak Ridge work, experiments on homogeneous reactors were also being conducted at Los Alamos, but these encountered repeated heat exchanger leaks.

Similarly the North American Aviation Co. has run into constant delays and increased costs in the sodium reactor experiment work at Santa Suzanna, Calif.

At Argonne the EBR–2 schedule has dropped behind the original plans and expectations.

And, of course, there is the celebrated case of the second atomic submarine, the *Sea*

Wolf, which developed leaks in its sodium superheater system. These leaks were potentially hazardous because the reactor utilizes liquid sodium as a coolant, and sodium reacts violently if it comes into contact with water.

In addition to the setbacks in the Government program, private and semiprivate reactor construction groups are finding unwanted technical problems which give the tasks a two-way stretch—the completion date will be later and the cost will be higher. Thus the Yankee Atomic Electric Group, the Consolidated Edison, and the Consumers Public Power Group of Nebraska, and possibly others, have run into increased costs and difficult technical problems as development and design become more concrete, even though major construction work has not yet even begun on those reactors. In some cases it appears the costs will be increased as much as 30 to 40 percent above the original estimates.

Another significant straw in the wind is the recently published result of the atomic industrial forum's poll of persons and companies active in atomic-energy development, asking them to name problems slowing progress. The No. 1 obstacle was listed as "lack of economic incentive."

Also a whole morning session of the recent American Management Association meeting on atomic energy was devoted to the problem of economic incentive. This problem also has been mentioned time and time again in the current section 202 hearings before our committee.

Just last week the joint committee received two very significant letters.

One letter described increased costs at the Shippingport project. Total estimated costs are now increased from $37,500,000 to $55 million, and still not definitely fixed, of course. As Commissioner Murray said in his testimony before our committee last week, it takes a bold man to estimate the cost of electricity from Shippingport—our first full-scale atomic power plant—in mills per kilowatt hour.

The other letter we received last week described the preliminary work being done by the Consolidated Edison Co. on its reactor to be constructed at Indian Point, N. Y. This letter concluded by saying that the estimated total cost had now been revised upward from $55 million to $70 million.

The Consolidated Edison Co. is sincerely interested in building the atomic power plant it has undertaken. The letter indicates it intends to shoulder its increased burden, and do so cheerfully. I would praise the company and its officers. But the realities of increased costs are there. They cannot be ignored.

Let me emphasize one point: These plants are pioneers. They are the first of a handful of full-scale atomic powerplants. More will follow. In time costs will go down.

As surely as we have mass-produced automobiles, machine tools, and TV sets—and as surely as we have doubled our electrical generating capacities every 10 years in this country—someday we surely shall produce atomic-power reactors and components in volume. Of that I am sure. American industry and labor, working together, will achieve for us that goal. Someday we shall have safe, cheap, and abundant atomic power.

The only question is: When?

These are all difficult technical and economic problems. Perhaps the AEC move in proposing larger subsidies and making them retroactive under the third-round power-demonstration program is in recognition of these problems.

There are two ways to look at this. One way would be to point out that Members of Congress have worried about these problems and sought ways to accelerate the reactor program while optimistic words and sweet promises dropped from some official lips. It would be easy to say "I told you so." A wiser course might be to say that these problems were to be anticipated and to make the best of it. A little later I shall say a few words about how to make the best of it by looking toward other reactor applications, and the international market, as well as the Government-supported accelerated reactor program.

MANPOWER PROBLEMS

Besides the difficult technical problems, certain other problems have arisen in atomic energy development. There is a shortage of scientific and technical manpower. The AEC has made commendable efforts to overcome this shortage by the use of fellowships, grants, and aids to educational institutions, and by Commission-run schools to train nuclear scientists. My colleagues on the Joint Committee, Representative MEL PRICE and Senator JOHN O. PASTORE, have recently introduced bills to provide scholarships for high-school students to enable them to pursue mathematical studies in college. This is a more long-range approach to the problem, but it should bear fruit at some day in the future.

Another way of solving the manpower shortage, in my opinion, is to make better use of our existing labor force. Possibly there are jobs which have been labeled "graduate engineer" which a competent and trained nongraduate could well perform if given a chance. I urge, therefore, that the Atomic Energy Commission and companies doing work in atomic energy development, carefully consider their job-classification methods and make an effort to utilize our existing personnel to better effect.

INDEMNITY PROBLEM

Another significant problem in atomic energy development has been the indemnity insurance problem. The Joint Committee on Atomic Energy studied this problem last year, and arranged a symposium discussion group and two sets of public hearings on the many legal, technical, and policy considerations involved. I have introduced legislation again this year and it is my hope that this roadblock can be substantially removed by appropriate congressional action during this session of the Congress. But the insurance companies will still have to do their part by providing insurance at rates which will not be impossible for this struggling embryo industry. We have just received proposed rates on some reactors and hope to analyze them during the current hearings.

INFORMATION PROBLEMS

Still another problem has been that of "secrecy and information." The recent AEC declassification announcement, if followed up by rigorous and effective AEC action, should go a long way toward solving this problem. Private industrial reactor development should receive a much-needed "shot in the arm" with the rapid declassification of all—and I mean all—of the reactor information not necessary to our national defense.

Thus, some of the problems in domestic atomic power development appear comparatively near to solution; others will be more difficult. Let us now look at areas other than domestic power development which hold promise for the future—namely, reactors for uses other than generating electricity, and the international market.

OTHER APPLICATIONS FOR LARGE REACTORS

Certain other applications for large reactors are receiving more attention recently—and probably should receive still more attention. Thus, reactors can be utilized for making process steam and the steam can be put to work in many industrial applications. Or the heat from atomic reactors can be used for space heating, to heat large factories or office buildings. Out in Hanford, Wash., the Columbia River has been used for many years to cool the large plutonium-producing reactors there. And the Columbia River does a good job, draining millions and millions of B. t. u.'s away from these reactors each day. In one of the newer Hanford reactors this heat instead of being drained away has been utilized to heat the building. Perhaps this approach could be used in large suburban housing areas.

Reactors for making processed steam or for space heating can operate at lower pressures and temperatures and have less troublesome materials requirements than power reactors. Perhaps many of the technical breakthroughs and economic applications can first be found in those applications.

Atomic reactors will be used to drive ships. Besides the Navy program, economic merchant marine application would not seem to be far distant. Last year Congress authorized construction of the first nuclear-powered merchant ship. The AEC and the Maritime Administration are now going ahead with plans for this ship, and the type that they have chosen is a combination dry-cargo passenger vessel.

In my opinion, the type of ship which holds the most promise for future development is a nuclear-powered oil tanker. An oil tanker combines long trade routes and fast loading time with national defense requirements and a growing commercial market. Many other countries are exploring the possibilities of atomic-powered oil tankers, and I hope that we shall maintain aggressive efforts along these lines because here again the economic market may soon create valuable purchase orders for American industry and our working force.

Thus, although problems develop in the domestic atomic power field, economic applications may soon be found in other fields.

INTERNATIONAL MARKET FOR ATOMIC REACTORS

Now let us take a look at the international market for atomic reactors and see whether our American industry can receive a shot in the arm by receiving orders from other countries.

We have recently had a visit here in Washington by three distinguished European industrial leaders who are called the "Three Wise Men." One is an Italian, one a Frenchman, and one a German, but they speak of themselves as Europeans and they are working together in laying plans for EURATOM, which is a six-nation European plan for the development of atomic energy. These six nations—Germany, France, Italy, Netherlands, Belgium, and Luxembourg—have set for themselves an ambitious program. They are currently importing, at high prices, 25 percent of their fuels. The coal figure is 100 million tons per year and they are willing to increase this to 160 million tons but they hope to hold it at that figure. To do this they hope to have an installed capacity of three million kilowatts of atomic power by 1963, and to increase this amount by three million annually for each of the succeeding 4 years to produce a total installed atomic capacity of 15 million kilowatts by 1967.

These are indeed ambitious plans. In fact, they are much more ambitious than those which private industry is willing to undertake in this country. It means building 30 reactors the size of the proposed Detroit Edison reactor by 1963, and an additional 120 reactors of this size (100,000 kilowatts) by 1967. We should offer full cooperation—and I will explain what I mean by the word "cooperation" in a few minutes—to these European countries. Historically our economy and our ties of friendship have always been closely linked with the nations of western Europe, and it is to our enlightened self-interest to help promote their prosperity.

I hope that we will be able to persuade them to build a substantial proportion of the same general types of reactors that we are building in order to pool information on technological developments. In addition, we should be willing to assist in developing types of reactors, such as natural uranium reactors, in which they may be more inter-

ested than we. These "poor men's" reactors may prove more economical in the long run. If their urgency is greater than ours, perhaps many of the breakthroughs and developments will first come in western Europe.

By the word "cooperation" I mean "two-way street." I think that we should be liberal in making our information and our uranium available, but we are entitled to expect something in return. I believe that we should get firm commitments as to receiving complete information on technological developments which we can antiticpate will be achieved by our western European friends.

Now let us look for a moment to England where the Calder Hall plant for the generation of 45,000 kilowatts was brought into operation last October and an additional 45,000 kilowatts is coming in shortly. From the point of view of kilowatts of "juice" on the line, the British are ahead of the United States and appear also to have ambitious plans for the future.

The AEC has executed an agreement with the British to give to them all the U. S. A. information on the design and operation of the *Nautilus* and other military reactors. Will we get valuable information from the British in return? I hope so.

We are now interested in developing gas-cooled reactors—along with other types already in our program. Will the British give us full and complete information—all the details—on their Calder Hall reactors, which are gas cooled? I hope so.

I realize that during the war the British made a real contribution to our atomic program, but I am concerned with the present situation, and I hope that there will be a quid pro quo, and that we will get something back from the British. I hope that our British friends will be completely open with us in giving us information concerning technological advances made by their reactor manufacturers using the gas-cooled approach. If we are going to assist other countries in their development and defense, I think we are entitled to something in return.

Looking to other international areas, we find that Japan is sincerely interested in both research and power reactors and I hope that we will be able to develop some mutually beneficial cooperation with that country. Also several American manufacturers have already arranged for export of research reactors to South American countries and other Asian and Africán countries also offer valuable potential markets for American atomic equipment manufacturers.

Speaking of Japan, and of Britain, I would like to quote briefly from a report the joint committee received last week. This report was made by a Japanese task force of nuclear scientists and engineers who visited both our country and Britain, to see whether they should build United States of America or British-type reactors. The joint committee received a copy of the report by the Japanese task force, and here is part of it:

"While taking future developments in the United States, and so forth, into full consideration, it is advisable that the first step to be taken by our country should be to introduce a British-type power reactor, a large prototype of which has been completed and for which the technical and economic problems involved therein can easily be explained."

In other words, the Japanese team recommended the British approach because they were further along than we.

Also on the international front you will watch with interest the developments leading to the creation of the International Atomic Energy Agency. This should be a step along the difficult path toward a more peaceful and stabilized world.

Thus far I have dwelt mainly on the economic realities—domestic and international—in the atomic-energy field. There are also political realities. Whether we like it or not—and I do—atomic energy has become a part of our foreign policy. We are committed on "atoms for peace" and we must make it work, not only in industrially advanced countries but also in the so-called underdeveloped nations. These nations see in atomic energy a means of bridging the gap between a backward colonial economy and a modern indusrial economy. Obviously the immediate introduction of atomic power in such countries will not be economic, in terms of having an economy and industry entirely ready to receive it. But politically they are more than ready. Moreover, we have the stern alternative: if we do not help, the Russians will.

Hence, we find ourselves with a domestic atomic equipment industry which is not making any money, and whose domestic prospects look more gloomy because of greater technical problems than its promoters would have had us believe. Moreover, we have only one operating pilot plant in operation, and one full-scale plant scheduled to commence operation next fall. In spite of this situation, it appears that Europe and the underdeveloped countries will require a great number of reactors.

Facing that situation, what are we to do about it? If we are to develop a healthy and profitable atomic industry, it appears obvious that we should attempt to capture a portion of this greatly expanding foreign market. This market can't be captured at the rate we are going. We just celebrated our first 5,000-kilowatt atomic plant 3 years behind the Russians. We hope to celebrate our first full-scale atomic power plant at Shippingport next fall, 1 year behind the British.

From then until 1960 or 1961, the United States will experience a long hiatus when no additional full-scale plants will be completed and operated, whereas the British and the Russians each have over 2 million kilowatts scheduled for operation by 1959 or 1960. Since the American plants are being constructed primarily at private risk and with private money, we have no guaranty that they will not be further postponed or abandoned entirely.

In order to capture the international market, we must have operating reactors. This conclusion is supported by a recent survey of world opinion on atomic power development by the authoritative magazine, Nucleonics. The survey indicated that although a majority of people interviewed believe that the United States is ahead in technology, a majority of foreign industrialists believe that Great Britain is ahead of the United States in industrial applications of atomic power. It is these industrialists who will be setting the policies and actually buying the reactors.

Therefore, although there are problems in the international picture which require careful and intelligent handling, the international market for atomic reactors offers great promise to the American manufacturer. Moreover, if two-way cooperation is successfully worked out, this country should receive benefits from crash programs being pushed by our friends in other countries.

A LEGISLATIVE PROGRAM

In order to solve the difficult, increasing engineering and technical problems affecting current reactor construction plans, and in order to get additional American reactors on the line, I believe that a legislative program along the following lines would be of great help:

1. There should be more funds authorized and appropriated for research and development, especially in the field of power reactor technology and construction.

2. There should be an accelerated power reactor program along the lines of the committee bill introduced in the Senate in the last session of Congress by Senators GORE, JACKSON, PASTORE, and me, and by Representative HOLIFIELD in the House.

3. There should be legislation providing Government indemnity to protect the growing atomic power industry and the public, together with certain procedural requirements to assure maximum safety in the AEC reactor licensing program.

LABOR'S STAKE IN THE ATOMIC ENERGY PROGRAM

Tomorrow you will hear about labor's stake in the atomic energy program, but let me have a few words of introduction to that subject.

First, labor has a legitimate interest in plant and employee safety standards, protective devices and records kept by employers and Government concerning safety of employees working in our atomic energy industry. In this connection the Joint Committee on Atomic Energy has been studying for some time the problems of radiation hazards, and hopes to have hearings on this vitally important subject sometime this spring.

Second, labor also has an interest in reactor design and construction, and safety features affecting the general public.

Third, labor, working together with industry, has a stake in helping our country achieve its proper place of leadership in the expanding market for atomic power reactors throughout the world.

Fourth, and most important, labor has, as all of us as citizens, a stake in helping develop an atomic energy industry which will be expanding and prosperous and yet will not endanger the public health and safety.

Labor, industry and Government, working together, can achieve for our country continuing world leadership in the development of the peaceful uses of the atom. As our other fuel resources dwindle, we shall have this great new force, sent to us as if from Providence, to keep our country, and our people, prosperous and at peace.

RADIATION HAZARDS AND THE PUBLIC INTEREST

(Remarks by Congressman CHET HOLIFIELD of California, at the AFL–CIO conference for affiliated unions on atomic radiation hazards, Mayflower Hotel, Washintgon, D. C, February 27, 1957)

"Radiation hazards and the public interest" is a timely and appropriate subject for discussion by this conference of organized labor. It is timely and appropriate for at least three reasons.

1. The Nation stands on the threshold of a great, new atomic industry. Organized labor has a great stake in this enterprise. Many of its members now are engaged in atomic occupations, and many more will become so engaged in the future.

This is the dangerous environment of reactor technology, with its complicated shielding apparatus, radiation measuring devices, protective clothing, and sanitation measures. New work habits must be learned, new industrial disciplines observed.

2. This Nation and several other nations of the world are building and testing nuclear weapons. Bomb explosions of the nuclear kind spread radioactive dust far and wide and contaminate the atmosphere with this deadly material. Weapons testing, if carried on at an increased rate and by more nations, will generate persistent radiation hazards affecting the health of all the inhabitants of this earth.

3. This Nation and the free world must reckon with the danger of the all-out enemy attack. We hope and pray that nuclear warfare, with its sinister portent of destruction of civilized society, will never come to the world. The search for world peace must go on unendingly. And yet, in the final analysis, Americans must learn the basic lessons of survival in the nuclear age.

These lessons which, for want of a better term, we call civil defense, will not be wasted in peace. In learning about the dangers of radiation to human beings and about the

necessary measures of control, we will know better how to preserve the health and safety of the people in advancing our atomic technology.

The public interest in protection from radiation hazards associated with peacetime development of atomic energy was recognized in the Atomic Energy Act of 1954. The congressional findings set forth in that act make frequent reference to the need "to protect the health and safety of the public."

The jurisdiction of the Atomic Energy Commission over the operation of atomic facilities by private industry is grounded in part on the potential danger of interstate damage from such operation. In the congressional findings, the possibility of interstate damage "places the operation of those (atomic) facilities in interstate commerce."

How effectively the Atomic Energy Commission will exercise its regulatory authority to protect the health and safety of the American people is a matter of great interest and concern to the Joint Congressional Committee on Atomic Energy. I say this as one who has been privileged to serve on that committee since it was established by law, more than a decade ago.

Speaking as a member of the joint committee, I was happy to see the labor-union challenge to the construction of an atomic plant at Lagoona Beach, Mich.; the Atomic Energy Commission's proposed licensing arrangement did not give sufficient assurance that the safety problems were fully resolved. This challenge will have a healthy effect in testing Atomic Energy Commission procedures under its new regulatory authority and in bringing greater public awareness of the safety requirements in atomic-reactor construction.

The semiannual report of the Atomic Energy Commission for July–December 1956 devotes considerable space to detailing the "radiation safety" activities of that agency. It says, among other things, that "the total record of radiation safety in atomic-energy operations is believed to be without parallel in industrial history."

While this statement may be accepted as true on its face, the industrial history of atomic energy in its peacetime applications is just beginning. As atomic technology comes out from under the wraps of official secrecy and special military applications, we can anticipate that atomic installations will no longer be relatively few in numbers and confined to secluded sites.

In the years ahead, atomic powerplants will be located throughout the country, in or near large population centers. Radiation safety measures must contend not only with the protection of laboratory and plant technicians and workers but with protection of the public against explosions or other accidents which could contaminate large areas with radioactivity.

The Atomic Energy Commission tells us in its report that for 9 years or more of operation, 99.4 percent of nearly 200,000 workers of the Commission's 32 principal contractors have averaged an exposure of less than one-third the amount of radiation allowed by strict safety standards. The Commission seems to be saying that it is 99.44 percent pure.

But the frequency of these accidents or injuries, however minor they may appear in relation to the members exposed, cannot be lightly dismissed. Mishaps occurred despite the fact that the Atomic Energy Commission, with no lack of funds or scientific and technical brains, presumably took every precaution within reason to protect its workers and to insure the success of its operations.

As the Government relaxes its hold on atomic energy development and transfers an increasing burden of responsibility to private enterprise, will it be able to enforce the high safety standards in industry that it boasts for Government-sponsored operations? Certainly this is a question for which the labor unions can help to find the right answers.

And not only the labor unions, but State and local agencies of Government concerned with the health, safety, and welfare of their people will be increasingly drawn into this new area of atomic enterprise. Labor standards, community zoning ordinances, workmen's compensation laws, indeed a wide range of governmental powers over the daily life and work of America will have to be adjusted to this new industrial art which contains within it always the deadly menace of radiation.

This menace is the more deadly because it defies the senses. It cannot be seen, heard, smelled, or tasted. It attacks the body cells and the reproduction organs. Its harmful effects may not show up for years nor always be precisely associated with the cause. And the bodily impact of radiation, whether from the natural environment, medical X-ray and fluoroscope treatment, or bomb bursts, is cumulative in nature.

I foresee the time, not too distant, when every man, woman, and child in America will carry a radiation "bankbook" in which is entered the measurable doses of radiation received. When the entries add up to a certain quantity, the "account" becomes overdrawn in terms of personal bodily health. Workers exposed to radiation hazards in atomic occupations already have their "bankbooks."

In the course of atomic energy operations for the past 13 years, 69 Americans have overdrawn their accounts. Two died; the others suffered greater or lesser injuries. Of these 28 were military personnel overexposed to fallout in the testing of nuclear weapons.

The injuries in weapons testing occurred at the Eniwetok proving ground in March 1954. According to the Atomic Energy Commission, unexpected weather conditions caused heavy radioactive fallout on 4 Pacific islands. In this same test, 23 men on a Japanese fishing boat, the *Fortunate Dragon*, were caught in the open sea by the fallout. On 3 of the island atolls, 239 Marshall Islanders were exposed.

The American military personnel, who were stationed on Rongerik Island, received 78 roentgens, the Marshall Islanders varying amounts ranging from 14 to 175 roentgens. No data are given in the Atomic Energy Commission report for the dosages received by the Japanese fishermen.

The Atomic Energy Commission, in its above-mentioned report (p. 112), comes to this optimistic conclusion: "After 2 years, residual findings were minimal for all of these exposed to this fallout accident except for four cases which showed various amounts of skin damage." This statement, like so many others of the Commission, which play down the radiation danger, conveys the impression to the lay reader that all is now well, that the victims of this fallout exposure in the Pacific proving ground are now fully recovered, except for a few cases of skin damage.

Medical science has a great deal yet to learn about radiation injury, but on one fact all seem to agree: No amount of radiation is good for the human body, and radiation effects, as I have said before, are cumulatively harmful. In that sense there is never any recovery from substantial doses of radiation.

The radioactive material which fell on the luckless inhabitants of the island atolls caused skin lesions, whole body radiation injury, and bodily intake of certain radioactive materials. I have here a study of the Marshall Islanders by a medical team of the Department of Defense and the Atomic Energy Commission. The colored pictures of skin lesions following page 32 of the study are not pretty to observe.

And while these lesions may be healed in most cases, while those who lost their hair may now have it back, we really know very little about the long-term effects of these injuries. Whether they predispose the unfortunate islanders to cancer, or cause gene mutations, cataracts, lower fertility, slower growth, or shortened life span, are possibilities upon which the medical experts can only conjecture or await future studies.

One of the significant points in the report of the medical team on the Marshall Islanders was the finding that persons who received 175 Roentgens showed more serious effects than were expected in laboratory ratings. These effects indicated that people would begin to die at a dosage of about 225 Roentgens, and that half of the exposed persons would die at 350 Roentgens.

The dosage resulting in 50 percent fatalities heretofore has been put at 450 Roentgens. The medical observers see in their data a strong argument for lowering, or at least not raising, the 450 Roentgen estimate of 50 percent mortality used in current civil-defense planning.

The report on the Marshall Islanders, while it describes the fallout pattern in the proving grounds and gives considerable detail about the consequent radiation injuries to exposed persons, does not reveal any facts about the present state of radioactivity on the islands. Persistent radiation is an important factor in civil-defense planning. I have asked Chairman Strauss of the Atomic Energy Commission to supply the data on Roentgen measurements on the islands as of January 1, 1957.

The first official release of the Atomic Energy Commission on the March 1954 weapons test and resultant fallout conditions was issued in February 1955, almost a year after the event. And this release, too, was couched in language which did not begin to convey to the average reader the enormity of the threat of high-yield nuclear weapons. No mention was made of persistent radioactivity, an omission which Dr. Willard F. Libby later acknowledged before my Subcommittee on Military Operations as inadvertent. The potential genetic damage from radiation was dismissed with the casual comment that "There is a rather wide range of admissible opinion this subject".

Radiostrontium, the bone-seeking, cancer-producing radioactive substance which can linger for years, gets brief notice in the 1955 release of the Atomic Energy Commission, but the public is almost told that the dangers are so remote as to be negligible. The public is further advised that the 1950 handbook, The Effects of Atomic Weapons, is being revised and brought up to date, but we are still awaiting its publication.

Although the Atomic Energy Commission has released a considerable body of technical data, scattered in speeches of commissioners and in scientific journals, it has been grossly tardy and negligent in educating the American public in the harsh realities of nuclear weapon effects.

This tardiness and negligence is characteristic, too, of the Federal Civil Defense Administration, which has not even begun to discharge its responsibility in any meaningful sense for the protection of the American people against nuclear attack.

As my time is limited I will refer to two bills, introduced in this Congress, which deal with atomic problems. Both of these bills have been endorsed by the AFL–CIO, I am happy to say.

The first bill is H. R. 2154, the Gore-Holifield reactor development bill. This bill advocates Government construction, without further delay, of 3 or 4 large power reactors in safe areas (away from heavily populated centers). Its purpose is to maintain United States leadership in the international race to harness the atom.

Cheap energy is the basis for an increased standard of living. If we can offer the key to cheap energy to the have not nations of

the world, we will have the advantage over Communist economic penetration. It's just as simple as that. If the Soviets beat us in this race, they will be able to penetrate the so-called neutral nations first on an economic base and then on a political base.

Our fight on this bill is against a stubborn administrative position backed by the huge, privately owned utilities and machinery manufacturers, who see in this new promise of cheap energy, only the opportunity for private profit and monopoly control of our future.

The second bill is H. R. 2125, a bill to authorize an effective civil defense in the United States. The administration has refused to face the problem of protecting our people from the horror of a possible nuclear war—a war in which deadly radiation would destroy many more millions than those destroyed by the immediate bomb hits.

The key to this effective civil defense is an underground shelter system which might cost 15 to 20 billion dollars.

I say this one-time-cost is small when compared with an annual military budget of 35 to 40 billion dollars.

If a nuclear war comes and we do not have these shelters, it is estimated that 75 to 100 million people could be destroyed. We should start now to prevent the possibility of such a catastrophe.

In closing, I ask of you continued alertness—continued support of the legislation which your organizations have endorsed.

Address of Hon. Charles H. Silver

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1957

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues an address delivered by the Honorable Charles H. Silver upon the occasion of the commencement exercises of Brooklyn Technical High School on January 31, 1957.

Dr. Silver is the distinguished president of the board of education of New York City. His address follows:

ADDRESS BY HON. CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT COMMENCEMENT EXERCISES OF BROOKLYN TECHNICAL HIGH SCHOOL, JANUARY 31, 1957

There is a certain program that some of you may have seen on television. It starts by showing a news commentator seated at a desk and turning a calendar back to a celebrated date in history. Then he says: "What kind of a day was it? It was a day like any other day. And you are there." The scene changes and the past unfolds, reliving a great moment in history. There is a great deal to be learned from the past. But this is the present. This is January 31, 1957.

What kind of a day is it? It is a day unlike any other day in the last 4 years you have spent at Brooklyn Tech, and you are here, about to graduate. Now, your scene will soon change as your future unfolds.

Many who are called to speak on occasions like this will counsel you to "face the future." They will urge you to face the future fearlessly and with a smile, and that is probably very fine advice. Yet, in a deeper sense, you cannot really face the future at all, because very few of us can possibly know anything about it. That is why I feel particularly fortunate and privileged that you have honored me with your invitation to be a part of your commencement exercises. Standing where I am, I need only turn to face you, the members of the graduating class, and I and all who are in this vast audience can look upon the future, for you are the future.

This is a strange and wonderful turning point in your lives. You are shutting a door forever on a great adventure which you have shared with 5,000 other students in one of the largest and most respected high schools in the world. More than that, you are opening another door upon an even greater adventure in which will come opportunities for further study for starting upon a useful career and for coming to grips with the trials of everyday living.

You could not be better equipped for the tasks ahead. Your high-school diploma is a precious symbol of preparation for life. Hold it as a torch to light your way ahead. Hold it with pride as a mark of achievement, on this unforgettable day when you carry forth into the world all that you have gained from the great tradition of Brooklyn Tech, from its remarkable faculty and that most gifted of men, your principal, William Pabst.

Even in the short while I have been among you, I have already felt a stirring awareness of the special atmosphere of this very special school. You could not have enjoyed a 4-year stay at Brooklyn Tech without absorbing something of its greatness. This school has a soul—and it will always be part of your own souls wherever the patterns of your destiny may take you.

When I say that your school has a soul, I do not mean just the heritage of its glorious history. Brooklyn Tech is more than history, more than stone and steel. Most of all, it is the people who work within its walls. They give it life and meaning—the teachers and the students. And just as this school will always be a part of you, you will always be a part of Brooklyn Tech.

The splendid record of this graduating class will be woven into the golden tapestry of your school's glorious achievements. I know how many of you have made outstanding progress in your studies. I know your fine records in winning merit scholarships, in the Westinghouse Science Talent Search, and in qualifying as future scientists of America.

Education, in our time, is taking on many new jobs. It has broken into our daily headlines and is breaking through narrow and outworn concepts. It stands as our first line of defense against mankind's oldest enemies, ignorance, want, disease and disunity among men and nations. We have learned that the wars and hatreds of the future can be eliminated here and now, not at diplomatic conference tables or by bloody revolution, but in the classrooms, the libraries, the research laboratories. We have come to know that civilization's greatest victories can be won and will be won in the schools.

We often hear that the fearful weapons, which science has developed, may lead ultimately to the destruction of our earth as we know it. But, in this school, and in others like it, scientific instruction is blended with the time-honored teaching of the humanities. We do not merely produce good young people of science; we produce young people of good sense. And we are helping to cultivate in them the high principles of character, integrity, moral, and spiritual awareness on which to build the road to preservation—this is our strongest hope of survival. This is how you will build a better world.

So tremendous have been the advances of science, that in the next days, or even hours, the world may face a final choice between unimagined chaos or unprecedented peace and progress. The elemental forces of the unknown have been harnessed to the will of men. But has man the strength and rightness of purpose to put these forces to their proper use?

You may shrug your shoulders, as too many of us do about too many important problems, and say: "Time will tell." But, ladies and gentlemen, I speak to you who are parents eager to pass on the abundance of life to our children. I tell you, there is no time. The time is now.

There will be no warning. There will be no battlefields, only buttons to push. But those buttons may never be pushed because a light is burning all night in the study hall of some solitary Einstein or a Compton bending over his books.

You will observe that I have described our scientist as solitary. That is the tragedy, for we live in a day when his name should be legion. We live in an hour when the Soviet Union, an avowed enemy of our way of life, is turning out 10 scientists, 10 engineers, 10 chemists, to our 1. That is the overwhelming tide we are struggling to stem with men like you in a school like this.

You are the doers, dreamers, and teachers who must pioneer in new dimensions of thought and distance and discovery. You are the ones who will control the atom and protect our tomorrow. Man's vision has leaped beyond the orbit of our earth to pierce the veils of superstition and fear, just as his rockets soon will pierce outer space. It will all be in your capable hands.

In this turbulent hour of tremendous decision, we who love learning and prize our hard-won freedom, rejoice that you have been prepared to meet the challenge of the future—to live triumphantly, in peace and happiness, among other men of good will in the greater world which science will help to build.

At this point, let me pause and pay tribute to a master builder of the future. It is sometimes your lot to meet a person whose excellence of character and abundance of ability are such that your own life is enriched by the time you have spent with him. Such a person, in my opinion, is your principal. I count it one of my great blessings in my work on the board of education to have had the privilege of knowing this great man of education. It is men with minds like his who will spin the world of the future to greater heights. I do not know of any administrative job in the field of education that he could not hold with skill and distinction. In fighting his way back to health, in fighting to keep Brooklyn Tech first among the schools of our city, he has inspired all of us who feel that only the best is good enough for the young people of New York. And you have known the best in knowing him. If there is one thing for which I envy you, it is the opportunity to have worked and studied and known his friendship for 4 years—years you will not forget because you spent them with Bill Pabst.

On behalf of the board of education, I congratulate the graduating class of Brooklyn Technical High School. I think it is quite proper that I congratulate your parents and your teachers, and your principal. They all have reason to share the pride we feel in the work you have done to reach this hour of reward.

And I would like to look ahead to another hour, to a far-off day when some all-seeing commentator may say: "It is January 31, 1977. What kind of a day is it? It is a day better than other days. It is a richer, brighter, greater tomorrow. It is a better world, because you are there."

Young men of the graduating class, go forth with our blessing. We give you to tomorrow. We give tomorrow to you.

Jews, Arabs, and Morality

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Midstream, by James T. Farrell:

JEWS, ARABS, AND MORALITY
(By James T. Farrell)

I was discussing Israel with a sensitive and intelligent Jewish writer. He was well informed about the country, much better than I. My impressions were not original to him. But he was interested in what I thought of Israel in a different sense—in the moral one. What was my moral attitude toward Israel, toward its handling of the Arab question? And most specifically, what did I think of the position which the state has taken concerning the problem of the Arab refugees?

This conversation was but one of a number I have had about Israel in which I have become convinced that sensitive Jews are perturbed about Israel. The existence of a Jewish State has produced many agitated thoughts and feelings among Jews, even among some who deny this. I had the experience of listening to one writer who stressed that he is an American. Israel is another country, not his own, he insisted, even though he is not unsympathetic to Israel. However, the unevenness of his emotions as he spoke, his bursts of sarcasm, his tone of self-defense, and his reiterated protestations of his Americanism, convinced me that the subject is actively troubling to him. He is an American, but he does not regard Israel as he would any other foreign state. And the reason for this is that he is a Jew. In most instances the agitation, the scrupulous overconcern about ethical matters, and the readiness to be critical do not become fixed in a fear of dual loyalties. Many Jews who are pro-Israel do not have this fear of divided loyalties. Others who appear indifferent to Israel are likewise untroubled. There is not one standard Jewish attitude toward Israel, nor are there two, pro-Zionist and anti-Zionist. There are various attitudes, but more than differences of attitudes there is the rich, irrational variety of feelings, emotions, guilts, and prides.

The Jew is not the only minority group in America. Almost all of use have felt the pangs of inferiority and the loneliness of alienation. Each new group coming to American shores has faced the barriers of snobbery, prejudice and intolerance. However, in the case of the Jew, as well as of the Negro, the prejudice, exclusion and contempt have been such as to warrant the assertion that here we have a qualitative difference. Because of this, the sense of being a Jewish American or of beingn Negro is undoubtedly stronger than is that which I feel at being an Irish-American. It is easier for me to forget the "Irishness" of my background than it is for Jews to forget their Jewishness. The Republic of Eire causes no moral doubts in my mind. I wish it well, but the follies of its censorship and the bigotry of some of its citizens do not hit any of my personal veins of moral feeling. The passions of the partition question do not enter my spirit and cause me personal anguish. The fact that Ireland is not completely secularized does not cause me personal moral worry. Some years ago, an Irishman just off the boat visited me. He was not in my home more than 5 minutes before he was accusing me of being a bad Irishman because I supported the Marshall plan. To him, the Marshall plan was solely a means of aiding perfidious Albion in its invasion of Ireland. He was thinking, of course, of partition. And he regards the partition of Ireland as an invasion. Aid to Great Britain was, therefore, support of imperialism. Ergo, I was deserting my own and supporting the invading Saxon. He was as charming as he was impassioned, but give me no clean bill of Irish health. He only amused me. My feelings about Ireland are warm, even when sardonic. But Ireland causes me no moral torment. One reason for this is that the alienation of my people, and the alienation and sense of difference I felt as an Irish boy in Chicago, lacked the intensity with which a Jew so often feels similar emotions. This, of course, is not due to the Jew himself, but to Christian society, which has all to frequently placed the stamp of exclusion on him.

Today, though, we have the State of Israel. What is to be thought of it? The courage and self-sacrifice of the earlier Palestinian settlers have been widely recognized and admired. It was the men and women of the first and second Aliyot who created the basis for the modern State of Israel. But Israel was born in struggle and war. It must still fight for its very existence. This fact was dramatically revealed to the world in the Israeli attack on Egypt.

The question of the morality of the action taken by the Israeli Government became a world issue. Israel, with its population of about 1,800,000 was condemned by most of the nations of the world. It is still condemned by some delegates in the United Nations. Many Americans feel antipathetic to Israel because of this action, though the process of second thoughts in America has already resulted in many revisions and alterations of the original reactions of anger and disapproval. But in judging Israel we should apply to it the same type of criteria which we would use in considering any sovereign state. We have no right to demand of it, a small new state, more than we demand of ourselves or other states.

Arguments concerning Israel's right to be a state can be pro or con, depending upon how far back one goes in time. The Jewish claim is well known—that the Jews were dispersed and driven from their homeland, and now after centuries of this dispersion the exiles have returned to their homeland. The Arab spokesmen who refuse to recognize Israel insist that Palestinian Arabs were driven from their homes by the Jews. They blame modern Zionism for this, and further, many of them look upon Israel as an aggressive, alien nation which would conquer them. Had the Arab States recognized Israel and accepted the United Nations resolution of 1947, partitioning Palestine into Jewish and Arab States, there would be little argument and debate today on this issue. But there was war, caused by the attack which the Arab States launched jointly in May 1948. The end of the war resulted in the uneasy armistice which has existed since, with a succession of infiltrations, retaliations, and finally the Israel attack on Egypt last October. Having sanctioned the establishment of Israel, the United Nations has been unable or unwilling to guarantee its security. The United Nations observers have largely served as bookkeepers who kept a debit and credit account of raids, infiltrations, retaliations, and the number of bullets and mortar shells which have gone in either direction across the frontier. Israel has had to maintain a state of armed alert because its very existence is at stake, and failure to maintain such an alert may lead to its citizens being butchered in Nazi fashion. That these claims are not fantasy is obvious to persons with even a meager knowledge of the Arab-Israel conflict.

I cite here familiar facts because they warrant an important conclusion. Israel exists in a situation which is extreme rather than normal. Because this is so, one is justified in asking: is a state existing in an extreme situation and faced with the danger of total extinction to be judged in the same manner as another state whose relations with its neighbors are normal and whose existence is secure? The answer given to this question is of fundamental importance because it bears on the question of means and ends.

These considerations, to my mind at least, help to establish a framework within which moral judgments can be passed on the actions and policies of the Israel Government. They provide a basis so that judgments, whether of approval or disapproval, will not be mere out-of-hand or quick off-the-cuff conclusions.

When one thinks of the problem of the Arab refugees, one's pity and sympathy are immediately aroused. Here is an almost overwhelming human tragedy. I have been in two refugee camps and interviewed some of the refugees, either directly or through an interpreter. I found squalor and misery—and hatred. They have lived this way for some years now. A return to a normal existence would unquestionably require rehabilitation in order for many of them to live a normal life once again; and these hatreds, carefully nurtured by Arab leaders, have been festering for years. I asked the leader of a Moslem camp what he would do if he returned to Palestine.

"We'll have to kill the old Jews," he answered without hesitation.

Other refugees said they will go back, by war if necessary, and that they will accept rations only until they can afford to get revolvers. I was told by a Moslem camp leader that in every hut there is a printed motto which reads: "Remember who drove you out of Palestine."

This motto is presented as a lesson to the children.

But the Palestine of 1948 no longer exists. If all the refugees were to be repatriated, they would not be returning to the Palestine from which they fled. If they were repatriated while the extreme situation of near-war exists, and Israel's existence is not recognized by its Arab neighbors, then it is easy to predict the consequences that would follow. The danger of new explosions and war would be greatly aggravated and not lessened.

Other considerations must be weighed before advocating repatriation and maintaining that a refusal to repatriate is immoral. Could the economy of Israel survive the influx, especially if Israel remained blockaded and boycotted by the Arab States? Could schools be built for the children, especially when one realizes that about 50 percent of the refugees are under 16? Could doctors be found for their medical care? In other words, how could repatriation be practically handled and financed?

The question of responsibility for the wise of the refugee problem is presented differently by both sides in the Arab-Israel conflict. The Arabs claim that the Jews are responsible. The Jews hold the Arabs responsible. This is a question of fact and not of opinion, and even many of the facts reasonably establish the conclusion that the original responsibility for this situation is not attributable to the Jews, or at least not wholly so. There was fighting prior to the departure of the British from Palestine on May 15, 1948. But when the British left, ending the mandatory period, the Arabs marched. Palestine was invaded by Arab armies, superior to the Jews both in numbers and equipment. Arab leaders proclaimed a virtual jehad. Some of them made bloodthirsty claims. Prior to the Arab invasion, the great majority of the leaders of the

Palestinian Arabs had already fled. This left the mass of the Arabs leaderless, frightened, and bewildered. The Arab leaders urged them to flee, to get out of the road of the invading armies, and they were told that they would be able to return in a short period, a week, 2 weeks, 15 days.

The Arab leaders did not want peace. They were convinced that they would win the war in a hurry, and they attacked. Their moral case, then, should rest on a justification of their right to attack, and not on their later contentions. These later claims, to my mind, constitute political arguments and not moral ones which I accept. Furthermore, the Arab nations refused to accept the United Nations resolution on partition. Today when Arab leaders demand that Israel now abide by this resolution, they are asking and demanding that Israel do what they and their predecessors refused to do in 1948. They have not accepted the resolutions and will of the United Nations Security Council on various issues, specifically the 1947 partition resolution and two Security Council resolutions which called on Egypt to end its blockade of Israel shipping through the Suez Canal. The United Nations itself is open to criticism, or at least to the charge of inconsistency. When the Arab nations marched into Palestine in 1948, the United Nations did not act as it did when Israel swept into Sinai and Gaza in October 1956. It did not mobilize the moral sentiment of the world against the Arab nations. It passed its resolution but failed to set up workable machinery by which this resolution could be peacefully implemented.

The Palestinian Arab refugees are victims. They, and especially the children among them, deserve more from life than they are getting. Their plight can and should rend the heart and quicken the sympathies of every civilized person. The refugee problem is one which cries out for solution, and it does this simply in terms of humanity. But before we use the refugees' plights to condemn Israel, let us consider the policies of other governments who now seek to don the cloak of morality on refugee questions. The Soviet Union refused to admit Jewish refugees when the Nazis were bent on a policy of total extermination. The United States has on its books some heartless and discriminatory immigration laws. These situations are, of course, different from that prevailing in the Middle East. I cite them only to stress that other governments do not ignore practical considerations and always act out of sentiments of humanity when refugees are knocking pitifully at their gates. They exercise their rights of national sovereignty.

Neither morally nor historically can I see grounds to justify demands that the Israelis should bear sole responsibility for the Arab refugee problem or that they should repatriate all the refugees. Besides the factors which I have already mentioned, I would add that you do not achieve right by compounding wrongs. There can be no peace in the Middle East until the refugee problem is settled. But it cannot be settled by one side alone. In the relationships between nations and also within nations the great human problems are solved or left unsolved on the plane of politics. As long as there is dangerous and explosive politics at the core of the Arab-Israel conflicts, the refugee problem cannot be solved on the plane of a humanitarianism which is completely divorced from political solutions of the conflict.

The refugees are not primarily responsible for their plight, and the miseries, the frustrations, the squalor of their lives should be neither underestimated nor played with and used politically. But to keep simmering a hatred which has already been festering for so long only permits a political manipulation, and political use, of misery. To put war in the hearts and minds of the refugees is not to create the ground for a better future, for the refugees, for the Arabs, for the Jews, or for any of us.

I would assert that the moral issue concerning the refugee problem cannot be treated separately from the other issues that are crucial in the Arab-Israel conflict. The moral issue is not a matter solely of principles and of intentions. A moral solution will have political economic and psychological consequences. The 8 years of Israel's existence as a state cannot be undone or washed into historical forgetfulness. A solution is meaningless unless it is economically implemented. A solution also calls for consideration of the rights, the aims and the future of Israel and its citizens.

Parallel considerations are all relevant to the problems involved in the treatment of the 180,000 or so Arabs who are Israel citizens. Economically, the Israel Arabs are relatively well off—better off than they have ever been. There are tractor stations in the rural districts and the small Arab farmers can get the use of these on easy terms. Also, they can avail themselves of opportunities for cooperative marketing and, inasmuch as Israel needs to keep increasing its agricultural production, the Arabs are encouraged to produce and they find a ready market for what they grow. Health standards for the Arabs have been and continue to be improved. To many Americans, the Bedouins have been picturesque and romantic figures. Actually, conditions among them were very poor and these are being steadily improved. There is a mobile health unit in the Negev which cares for the Bedouins. Efforts are constantly made to educate them in terms of modern health methods, preventive medicine, diet, and child care. Clinics are being built in Arab villages. I saw one which had been but recently opened in a village near the Jordanian border in the area known as the Triangle. It was clean and modern. The doctor serving it was Jewish. He was only interested in medicine and I could not, despite a persistent effort, draw him into political discussion. There are Arab nurses at the clinic. It has beds for children and a maternity ward. I saw two children, one a recent entry who was merely skin and bones. The child was a severe malnutrition case. Another who had been brought in before was healthy, active, practically cured, and ready to be sent back to his parents.

Arab husbands at first objected to their wives bearing children at the clinic; most of all, they objected to a male doctor attending the birth. The Jewish doctor agreed that the local Arab midwife should attend the birth, but he also brought in a trained Jewish midwife who could teach her Arab colleague methods of sanitation. He also agreed to stay out of the delivery room unless there was a grave emeregncy. I saw the first two Arab women who had borne children in this new clinic, but when I attempted to ask them questions through an interpreter, they asked me to get out. But as the saying goes, they and their children were doing well. Plans are underfoot to use this clinic also as a cultural center and to show movies on its roof once a week.

After experimenting with separate Arab labor organizations, the Histadrut established an Arab department which is headed by an Iraqi Jew who has been many years in Israel and is an experienced, well-informed and modern progressive trade unionist. There are about 11,000 Arabs in the Histadrut. Arabs who own more than 25 dunams of land are ineligible to join but they can join cooperatives. This is a general Histadrut rule. In Histadrut, the Arabs receive all advantages but do not bear full responsibilities. They can vote for officials in their own union but not for national officials. Histadrut leaders claim this is necessary, not solely on grounds of the general danger which grows out of the Arab-Israel conflict, but also because the Arabs are not yet generally responsive to the idea of trade-union organization. They state that one of their great difficulties is conceptual, the difficulty of inculcating a consciousness of trade unions and trade unionism. The Histadrut seeks to gain the same wage levels and conditions of work for Arab workers as it does for all its other members. It has greater difficulty with Arab than with Jewish employers in negotiating. The Arab employers are not as experienced in these matters or, as a Histadrut official said, not as "educated" about unions. One of the Histadrut's problems is that of raising substandard wage levels of Arab workers employed by fellow Arabs. At the same time, the Histadrut has already an impressive record in gaining increased wages and better working conditions for Arab workers.

Steady efforts have been made to improve educational facilities for Arabs. Following the establishment of the state, there was a serious shortage of Arab teachers. Most of the Arab teachers had fled with the other Arabs who became refugees. Teachers with substandard qualifications an Iraqi Jews who spoke Arabic were used in the Arab schools. I spoke with Arab teachers in two villages on the Jordanian border and also with an Arab who teaches Hebrew in a private school in Haifa. The latter was rather disgruntled, and seemed to favor methods of teaching employed in the mandate period, when there was recourse to corporal punishment. A young Arab man and a young woman teacher in the Triangle area spoke enthusiastically of the more progressive methods of teaching introduced since the establishment of Israel. The man said he believed that instruction in Arab schools was as good as in Hebrew ones where there were qualified teachers. There has been an increased breadth in subjects taught and a relaxation from stricter methods. He claimed the children were learning better. He knew of John Dewey. The young Arab woman, who comes from a progressive and well-to-do family said that there is no comparison between teaching now and in the mandatory period when she was a child. Then girls did not attend school. Now, she said with a rush of enthusiasm, the children learn not only from books; they see, they feel, they learn.

A major source of Arab resentment about education relates to the Jews only incidentally. Many, especially in the villages do not want the girls educated, or at least not after the girls reach the age of 10. In many instances there are large families and the girls are needed at home to do housework and to take care of the younger children. Moreover a girl is considered by most Arabs to have reached the "dangerous" age at 10, and they believe that she should be kept isolated from boys. The Cadi of Acre, an Egyptian-born religious leader, discussed education with me frankly for an hour or so. He objects to the present system. During the period of the mandate boys could be punished. That, he asserted, made better citizens of them. Also he complained that with present methods of education and opportunities in Israel, there was not a sufficient future for Arabs. The Haifa teacher, whom I have mentioned above, shared this view. He was the interpreter in my discussion with the Cadi. A group of Arab business leaders of Acre and members of the local chamber of commerce shared his view. All of them were opposed to coeducation for girls after 10. One said in English: "We Arabs are fastidious about our ladies."

The Cadi, however, did add that he approved of intelligent Arab girls attending a coeducational college.

The Acre Arabs were critical, almost bitter, concerning the Hebrew University. The complaint was that Arab students were at a disadvantage because the entrance examinations are all in Hebrew. It was pointed out that many Jewish students were at a similar disadvantage since Hebrew was not their

first language either. Furthermore, Hebrew is a second language in the Arab schools in Israel and the Israelis hope that in the future, Arab students seeking to matriculate will have learned Hebrew well. The Cadi would not accept these arguments. He said that in Jewish homes, the children speak Hebrew; the Arab children, even when they learn Hebrew, do not speak the language at home. There are 21 Arab students at the Hebrew University. One of them is a girl. At the Technion in Haifa an effort is being made to get more Arab students. A decline in educational standards for Arabs following the flight of many teachers in 1948, as well as economic factors, have some connection with the number of Arab students in higher education. Most of the Arabs are poor or small farmers living in the villages. The villages are backward and only gradually is the standard of life improving in them.

The Arabs vote and there are Arab members in the Knesset. There are even Arabs who are Communist or pro-Communist. In Acre I saw an election poster which had been put on a wall by the General Zionist Party. It showed a picture of an Arab behind barbed wire. An Arab translated the slogan on the poster for me. It asked for Arab votes and called for an end to military government. In the Arab-inhabited areas, they also elect their own local officials. The mayor of Nazareth, for instance, is a Christian Arab; Arab villages are likewise governed by Arabs.

But there is military government in three areas. Arabs in a district where there is military government cannot leave the area without a pass or permit. To get a permit, they must give a legitimate reason. Except for suspect Arabs, it is usually easy to get such a pass. Those who work outside the district in which they live, for instance, usually get a yearly pass.

Is this policy justified? Is it an antidemocratic and discriminatory practice which is to be condemned as immoral? No clear cut answer satisfying to all can be given to this question. Here, too, the conclusion one reaches depends on the answer to the two basic questions posed which should guide our judgment about these issues. Does Israel have the right to exist? Is the situation in Israel normal or extreme?

It is a well-known fact that ever since its founding Israel has suffered from infiltrators. They have continually come over borders to steal and to kill. In every frontier area of Israel that I visited, and this means more than half of the frontiers, there were "incidents," shortly before my visit or not long after. The long frontiers cannot be continually patrolled and guarded. Infiltrators can come over, hide with relatives or disaffected Arabs and steal or kill. Israelis have evidence that this has happened, and this is the principal explanation and justification Israel officials offer when you question them about military governments.

Although it is true that many Jews and Arabs were friends during the mandatory period, relationships are now strained. Most Jews are not sure as to what the Arabs are thinking. It is difficult and often impossible to know. The Cadi of Acre, who like all Arabs was most hospitable, did tell me his views. They were, needless to say, not what Israelis would consider disloyal. But he and his friends spoke frankly about education, in the presence of some Israel Jewish women, one of whom worked for the government. Quite obviously, the Arabs of Acre were not terrorized. They felt no need to praise falsely. They complained openly. But on many questions, Israelis, including Histadrut officials, do not know what the Arabs are thinking.

There are reasons for this, and some of them are humanly understandable. When the boundary lines were established by the armistice agreements, families were separated. There are, of course, some contacts because the Arabs can go rather easily back and forth, although this involves risk. But contact, other than subrosa, as I have indicated, is strictly forbidden. There is smuggling. Disaffection rises and wanes with political tensions. The Israel Arabs can daily hear the Egyptian radio, with its ceaseless attacks on Israel and Zionism. This leaves them in many quandaries and dilemmas. Do they want war? Do they want peace? Numerous Arabs looked down upon the Jews or did not take them seriously. Palestinian Arab refugees in Lebanese camps told me that before the war the Jews had seemed to them like sheep and donkeys. Because many of them did not take the Jews more seriously in the past, their pride was all the more wrenched when the Jews won the war.

The Jews are using western methods, and this creates friction and resentment. I have already indicated how this happened in matters of education. With change and westernization, there are even signs of a stirring among Arab women. Some of the Arab girls are beginning to refuse to accept the men their fathers choose as husbands for them. Custom and habit are cracking, and this, too, leads to tension and resentment.

Daily the Arab sees Jewish boys and girls in army uniforms. Israel must have an army to defend itself. But against whom will these Jewish soldiers fight in war? Only Arabs, their brothers across the frontier. In Galilee, there was not the same Arab exodus as in other areas of Palestine. The fighting came there last. The chances of Arab victory were gone. But how many Galilean Arabs might have wanted to fight or flee? The Israelis cannot know. And should there be a war, who will win? Despite what the Arabs say, their defeat wounded their pride and frightened many of them. The recent Sinai campaign could only have produced new wounds and added fear. The quandary here is deep and real.

But from the standpoint of the Israelis, the danger is grave and pressing. Most Israelis are convinced that if attacked they will have to fight with their backs to the sea; fight or be driven into the sea—these are the only alternatives facing them as long as the present situation continues. They see the Arab minority as one which is wide open to dangerous disaffection.

The Government policy toward the Arabs is not one of terror. To the contrary, Israel goes out of its way to encourage integration and the development of sentiments of loyalty. It makes a considerable effort to aid Arabs economically and materially. It seeks to avoid any situations which may strain the loyalties of the Arabs and deepen the dilemma in which they find themselves. This is one reason why Arabs are not drafted into the army.

But the Israelis do not trust the Arab minority, and they feel that they have genuine reasons for such an attitude. The situation is clearly extreme and different from other situations. India and Pakistan, for instance, have relationships despite their sharp differences. A Hindu writer can go to Karachi, move about freely, associate with the Pakistanis. The Arab States don't talk to Israel.

The recent Israel attack on Egypt is fresh in everyone's memory. The considerations shaping moral judgments which I have already stated apply to this Israel action. From the Israel standpoint the attack was an attack of self-defense, and there are many facts to give weight to the Israel view. Arab leaders have proclaimed often enough that they will make war when they are ready. If one believes that Israel has the right to exist, then the Sinai attack can be viewed in the perspective which I have already outlined and described.

Prior to the 1948 war the Jewish settlers did not move into Palestine and expropriate the Arabs. They purchased the land, often buying the same land more than once. Eliezer Kroll, an old watchman and a kibbutznik, tells how one marsh in Galilee was bought three times. The Jews went into a desert. They went into malaria-infested marshes. They pioneered and fought bravely in their self-defense. They have gone far toward reclaiming a desert and building a democratic society. In Israel, Zionism does not mean what it does in America, where there are bitter polemics between Zionist and anti-Zionist Jews. The sabras do not argue about Zionism. Israel is their home. The State of Israel is a fact, not a theory. At least, this is the way it appeared to me, a non-Jewish visitor.

I do not believe that it is for me to pass abstract moral judgment from afar. The right to existence which Israel has gallantly earned is the fundamental point of issue at stake. Once this is accepted, the other issues fall into perspective, and there could then be the beginning of hope that these issues could be resolved. While these issues involve politics and economics, they are also moral and human. This is especially so concerning the Arab refugees. These victims of war deserve a new start. Their children do. Many of them live outside the surrounding Arab society in a world of squalor which they never made. If this problem is not solved, it will become a poison which can kill the nerves of progress all through the Middle East. The continuance of this problem hurts and damages not only the Jews. It is a growing threat to Arab society. It can poison the Arab future also.

But I cannot see how the refugee problem can be solved singly and apart from the other problems which divide Israel and the Arab States. These cannot be solved by polemics of hatred. They cannot be solved by Americans hacking away at each other over these issues. They can only be solved when there are direct negotiations between Israel and the Arab countries. The sound position to take here is, as I see it, to accept the fact that Israel is here to stay, and that peace by direct negotiations is the aim to be espoused.

Finally, it is important to stress and to repeat the truism that the polemics of hate only lead us away from facts. The crux of the issue is that of peace or war, existence or annihilation. Peace means cooperation and a willed effort to further progress in the future rather than to live on in the wounds and the festering hatreds of the past. There can be a new bloom over the desert of hate and division in the Middle East—if there is a courageous will to find peace.

Los Angeles Businessmen Propose Help for Physically Handicapped

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. McDONOUGH. Mr. Speaker, a group of thoughtful and enterprising citizens of Los Angeles have taken positive steps to effectively assist the physically handicapped by providing them with a profitable use of their talents and a means of independence and a livelihood.

The Los Angeles Committee to Formulate a Specially Designed Industrial Plant for the Employable Physically Handicapped has proposed to organize an industrial plant which will be de-

signed so that the physically handicapped can employ their skills and abilities. The proposal is to formulate a nonprofit corporation which will employ none but the physically handicapped. There is no intention of making it a charitable institution. Every man or woman employed with have to earn their pay.

Such a unique venture deserves wide community support of the great help it will render to the physically handicapped, many of whom possess excellent talents and skills in the trades, arts, and sciences.

I am submitting herewith a resolution adopted recently in Los Angeles by the committee which originated this splendid plan:

RESOLUTION PASSED BY THE COMMITTEE TO FORMULATE A SPECIALLY DESIGNED INDUSTRIAL PLANT FOR THE EMPLOYABLE PHYSICALLY HANDICAPPED

Members of the committee to formulate a specially designed industrial plant for the employable physically handicapped, met today, February 14, 1957, at a luncheon at the Ambassador Hotel, presided over by Lt. Gov. Harold J. Powers. Representatives of major industries, officialdom of various city and county offices, and prominent civic personages attended, to discuss ways and means for the development of an industrial center especially designed to utilize the employable physically handicapped manpower.

The author of the proposed plan, Marshall S. Johnson, organized this committee for the sole purpose of creating an industrial center for the employable physically handicapped.

It was resolved and passed that the following informative data be embodied in a resolution to be presented to the President of the United States and the honorable Members of Congress and that the committee here and now sets forth this data:

"Whereas it is to be clearly understood that this industrial project is not to be construed as a charitable gesture nor is it to be considered as a competitive enterprise with smaller organizations having similar interests;

"Whereas its sole purpose is for industry to grasp the opportunity at hand to absorb this great manpower of employable physically handicapped, and by so doing, restore these groups to their God-given right to be useful human beings;

"Whereas it is understood and appreciated that if a properly designed industrial center could be erected on an industrial cooperative basis, it would serve as an important contribution and asset to the southern California industrial empire;

"Whereas it is a known fact that the physically handicapped have proven themselves diligent and efficient in various occupations in industrial and commercial fields, and have set an outstanding record of nonabsenteeism; that in the event of a national emergency, such a trained group would become, immediately, a safety valve to hold industrial output at necessary levels;

"Whereas a great majority of the ever-increasing population of the physically handicapped are products of war as well as victims of crippling diseases and also disabled by industrial accidents;

"Whereas their employment in vital industries would remove them from the rolls of charity and establish them as self-supporting citizens; that their desire to be independent and self-supporting should receive greater recognition whereby their services can be utilized by all fields of industry and commerce;

"Whereas an invitation is being extended to all industries and labor organizations to join forces for the establishment of such an industrial center;

"Whereas it may be visualized that many industries may join forces in creating specially designed facilities to be operated by the employable physically handicapped which would produce satisfactory results for both employer and employee;

"Whereas it is proposed that immediate constructive action be taken to assist this group in becoming a useful part of industry thereby helping them to meet this 20th century challenge of existence;

"Whereas it is the earnest desire of this committee to bring this matter to the attention of the President of the United States and to the honorable body of Congress with the hope and prayer that the Chief Executive of the United States and the legislative bodies of the United States may extend to this committee their goodwill and cooperation in some manner in assisting this plan to become a reality: Now, therefore, be it

"*Resolved*, That the committee to formulate a specially designed industrial plant for the employable physically handicapped submits this resolution as an informative document to the President of the United States and to the legislative bodies, with the request that it be read to both Houses and that it be engrossed as a matter of record in both the congressional journals; be it further

"*Resolved*, That we, as members of the committee to formulate a specially designed industrial plant for the employable physically handicapped, herewith respectfully place our signatures on this document, on this 14th day of February 1957."

Marshall S. Johnson, Gilbert W. Lindsay, Sanford Sill, Donald A. Davis, R. R. Sill, Harold J. Powers, R. A. Hearst, Robert A. Doyle, Margaret L. Larson.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

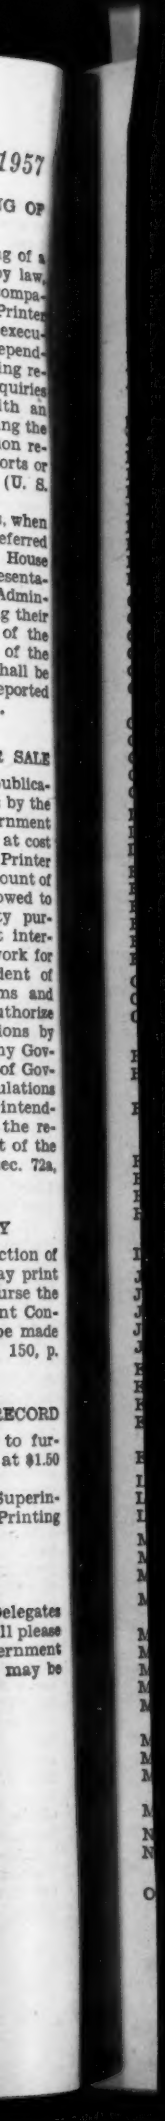
PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.



Appendix

Health and Hospitals—the National Picture

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most timely, informative, and excellent address delivered by Dr. W. Palmer Dearing, Deputy Surgeon General of the United States Public Health Service, before the Alabama Hospital Association, at its annual convention in Montgomery, Ala., on January 24, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HEALTH AND HOSPITALS—THE NATIONAL PICTURE

(By W. Palmer Dearing, M. D., Deputy Surgeon General, United States Public Health Service)

A few months ago an issue of the American Scholar carried an article by the renowned astronomer, Dr. Harlow Shapley, entitled "Man's Fourth Adjustment." The subject is man's relationship to the world and the universe. Dr. Shapley points out that man's first major adjustment came when he discovered that the world was not centered on him alone. Next he learned that the sun, not the earth, is the center of our solar system. Then he discovered that the solar system is not the center of the universe, but a part of one galaxy in a universe of millions of galaxies. Now, says Dr. Shapley, we may soon have to adjust our ideas to include the possibility science fiction writers have been suggesting for years—that there may be more highly developed and more intelligent forms of life in existence than our own.

I wouldn't want to be responsible for precipitating a panic in the medical and hospital professions, but I rather feel that I ought to warn you that an equally drastic revolution in the art and science of medical care has been sneaking up on us for several years.

Dr. George Packer Berry, dean of Harvard Medical School, speaking as president of the Association of American Medical Colleges, expressed it as well as anyone when he said, "Freedom of opportunity for good health is a basic human right. That this opportunity for good health should be provided for all is an insistent and growing demand. It is a major social and political fact today," says Dr. Berry. "The sooner we come to recognize this social phenomenon—that the people believe they are entitled to good health and are demanding it—the sooner we shall be able to convert the vast energies of our culture into more creative medical programs."[1]

[1] The Future of Medical Education and Administration, address by Dr. George Packer Berry at Union College, Schenectady, N. Y., 1950.

For centuries we have been concerned mostly with what we call curative medicine. The development of sanitation and vaccination gave us a start toward preventive medicine. But we think of this preventive medicine, even today, in terms of the health officer, the sanitary engineer, and the public health nurse—of preventing the spread of malaria, typhoid, or tuberculosis. We have made progress in the practice of preventive medicine from the days when I was here in Montgomery, but our ideas of preventive medicine are still due for a revolutionary change.

Recently, Surgeon General Burney said that he believes it is the special privilege of the physician today to impart to his patients the concept of health maintenance. "Upon the premise of this concept," he said, "I believe the physician, for the first time in the history of all medicine will find his true fulfillment as guardian of the health of man, as architect of his well-being, as partner to his success and enjoyment of life."

As this concept of health maintenance advances from the realm of an idea toward a reality, it will inevitably bring about sweeping changes in the function and therefore in the organization and design of our hospitals.

Obviously, the pace at which the change comes upon us will be determined by the imagination and energy we devote to the organizing and financing of health services through insurance and other means, as well as by the pace of the progress of medical research, for example, in the areas of heart disease and cancer. Unfortunately, we can't expect these diseases to yield their secrets as readily as others, such as cholera, smallpox, typhus, and the other infectious diseases, where we were dealing with specific micro-organisms, vulnerable to specific drugs, medications or antibodies that can stop their growth or slow them down.

We are using all the drugs available that are known to bring down high blood pressure, but patients continue to die of hypertensive cardiovascular disease. On the other hand, cardiac surgery has developed to such an amazing degree that techniques once considered spectacular have become commonplace. We are even beginning to overcome that greatest of all limitations on heart surgery, the need for maintaining circulation of blood to the vital organs while the operation is going on. It won't be long until arificial kidneys and heart-lung machines will be standard equipment of the large general hospital. And more delicate heart surgery will be made possible through hypo-thermic anesthesia methods and drugs that will slow down the metabolic processes throughout the body.

The progress against cancer moves ahead slowly, with a small gain here and another there. But we still don't know what causes or how to block the wild, relentless growth of malignant cancer cells, so tough and viable they continue to grow even when transplanted from one body to another. Our techniques of early diagnosis are being refined every day. As we learn more, we will increase our ability at both diagnosis and the treatment of cancer.

Today, it seems quite possible that we may be able to virtually wipe out infectious diseases like tuberculosis, diphtheria, penumonia, and venereal disease with improved diagnosis and the use of antibiotics, vaccines, and other techniques. Even mental illness may begin to succumb to atack through drug therapy and blood chemistry.

As these and other advances are made in medicine, they will have both direct and indirect effects upon the hospital.

Perhaps the most apparent result of the technical changes that have come about so far is evident in the pattern of ambulation for the patient. For the past 10 years or so, there has been more and more attention in the medical and hospital professions to keeping patients out of bed, and to getting them on their feet faster when they go to the hospital. Before that time, it was conceded generally that a patient who was ill had better be carted off to the hospital as fast as possible if he was to benefit by the blessings of modern medical care. But the perfection of aspetic surgery, the development of the antibotics and improvements in diagnostic techniques are largely responsible for the growth of the idea that a patient doesn't always have to be bundled into bed before he can get well.

Today, hospitals are finding that the expansion of their outpatient departments has a number of virtues. First, a well-staffed and well-equipped outpatient department can be used to work up a comprehensive diagnosis before the patient is brought into hospital for treatment. Second, patients who do not need bed care can be served by the outpatient department, thus cutting down the constant demand for beds. Third, outpatient departments, by reducing the duration of hospitalization for patients, can help to reduce the cost of care.

Another extension of the same basic principle of health maintenance is evident in the development of home-service programs, where the services of the hospital are carried directly into the home of the patient.

Recently, Secretary Folsom took note of the changing concepts of hospital care when he set up a committee of leaders in the field to study the creation of different facilities specifically related to the degree of illness of the patient and his capabilities for looking after himself.

The committee is confining its present consideration to the needs of three specific groups of patients; those convalescing from acute illness, patients convalescing from chronic illness, and patients who require only diagnostic services and facilities. They will encourage hospitals to develop pilot studies which will produce practical recommendations for the establishment of facilities for patients who do not need the full range of services provided by the average general hospital.

Still another example is the ascendency of the health center. Alabama has pioneered in the development of the health center. The Alabama State Health Department, under the direction of my good friend Dr. D. G. Gill, deserves a lot of credit for its foresight. I had the very great pleasure of participating in the dedication of the Jefferson County Health Center in Birmingham in 1949. It was the first center in the Nation to be completed with the aid of funds provided under the Hill-Burton Act. Our friend, Senator LISTER HILL, also spoke on that occasion.

We in the Public Health Service have a very special regard for your senior Senator. As chairman of both our legislative and appropriations committees, his leadership in supporting better health services will go

down in history as one of the truly great contributions to the welfare of our people. The legislation he has sponsored and promoted will benefit the lives of Americans for generations to come.

The phenomenal growth of voluntary insurance is yet another factor which is helping to revolutionize hospitals as institutions. Hospitals and insurance organizations can wield tremendous influence toward the goal of health maintenance by experimenting with and demonstrating broader and better integrated facilities and services financed by insurance.

Under the Hill-Burton program, as you know, funds are now available for the construction of nursing homes and rehabilitation centers. Previously, there has been little association between such facilities and hospitals in the same communities. But, today, we find that nursing homes and rehabilitation centers are beginning to seek the cooperation of hospitals in providing medical supervision and hospitalization, and some Blue Cross plans are experimenting with insurance for these coordinated services. This kind of coordination of services will surely improve both the quality and quantity of care available to patients.

Dr. Howard Rusk has even suggested that it is necessary to sell health services. The health insurance program in New York provides a good example of what he means. Ever since the program has been in operation they have found that one of their major problems is to get people to make use of the services they have paid for through prepayment. It seems to be quite a problem to convince their members that it is to their benefit to have an annual health examination and to come back to the clinic for such things as diagnostic X-rays or additional tests.

It seems to me that the trend toward coordination of health and medical services, the increase in outpatient services, and the growing interest in home care programs, are only the first small signs of the benevolent revolution in hospital service that lies ahead of us. The time has come for us to accept the principle laid down by Dr. Berry, to accept it as a working principle upon which we base our plans for the future. Although there is still a vast, uncharted expanse ahead of us in the cure of illness, we must begin now to think and work with dedication toward the promotion and maintenance of health. Even though people are beginning now to ask for this kind of service, and to expect it, there is still so much that they need to know and understand about it. The blessings of preventive medicine are like the blessings of automation. They are not automatic. We must work for them.

The two most important media for educating the public about health are obviously the physician and the hospital. First, the physician must communicate to the patient the importance of making a specific, intelligent effort to promote his own health and to make the most of his natural endowments. But the amount of time any physician can spend with a patient is limited. Therefore, we must take a lesson from our years of public-health education. We must help the physician to instill into the patient the desire to cooperate in preserving his health, in building up his health resources. Then we must take the next step and begin to develop a whole new structure of attitudes toward health and hospital services within the community. In a very real sense it is much like the challenge of the fight against pellagara, polio, cholera, and the host of other diseases against which we have fought successful campaigns. Except, in this case, the battle is not so dramatic. It is not so much a battle against the attack of disease as it is a battle to create a better way of life. Therefore, all of us—the physician, the hospital administrator and his staff, the hospital association, the medical society, the health department, the community, and the patient himself—all of us must cooperate in the effort. But the initial leadership, the inspiration and direction, must come from the physician and the hospital.

Take, for example, the coordination of rehabilitative service. The rehabilitation team may include the family physician, nurse, physical therapist, occupational counselor, religious leader, the patient's family, and employer. The hospital and the health department should work side by side to provide the necessary personnel and to coordinate the services of other agencies. Every physician should understand the need for the wide range of services in rehabilitation and the benefits they can bring to his patient. The hospital can take the leadership and responsibility for bringing together this variety of rehabilitation elements and help them develop a sound working relationship. The hospital can provide the same kind of help to all patients who need services of other agencies, and thereby widen the orbit of its own influence on the improvement of individual and community health.

The challenge of the times extends also to State and Federal health agencies, including the United States Public Health Service. As the Surgeon General has said, our major responsibilities are leadership, research, assistance, and training. But in the final analysis, this new concept of health which includes expanding outpatient services, shortening the stay of the patient in the hospital, encouraging coordination of services with nursing homes, rehabilitation centers, and other community health services, and promoting the importance of health maintenance, must be established as a way of life by the physician and the hospital.

It might be said that they are like the solo instruments in the performance of a great concerto. Together and separately they work to develop the basic theme. Through this unity of effort, between the solo instruments and the instruments that make up the orchestra, the theme of the composition is revealed to us.

With similar unity of purpose and endeavor, we can bring to the people of this Nation far greater benefits from the health services now available. We can bring new understanding of the great range of services in store for them and enlist their support in the pursuit of these services. We can establish freedom of opportunity for good health as a basic human right for all.

A Poignant Editorial

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1957

Mr. H. CARL ANDERSEN. Mr. Speaker, the weekly newspaper is a great institution in the Midwest. In those areas of small towns and great distances, it is the little weekly that binds the people together and tells the Smiths what happened last week with the Swensons.

Faced with rising newsprint prices, increased production costs, competition from other advertising media, it is one of the little miracles of our time that the weekly still goes to press. We owe all this to the men and women who are the editors and publishers, for surely they are motivated by greater interests than monetary gain.

In the traditions of the great William Allen White, the country editor takes his pen in hand and boldly speaks his mind on events of current moment. Such an editor of the Clara City Herald in southwestern Minnesota wrote one of the best editorials on President Abraham Lincoln that I have read. I am including in the RECORD this editorial by my good friend, Mr. Emil Swanson, so that others may enjoy its reading as have the good people in his community:

"OLD ABE"

Brother was sworn to kill brother. Reason had been abandoned and a people's sins were about to be bathed away in blood. The experiment that had been called the last best hope of mankind seemed destined to fail. It was in these troubled times that a gaunt prairie lawyer came to the White House.

His face was already lined with care. Failure, disappointment and sorrow were no strangers to him, and they were not likely to become strangers. He knew this as surely as he knew that the Union must be preserved.

The fingers, gnarled from the years of grasping an ax, held a pen. Every time he signed his name, armies moved and men died. He wrote words that gave voice to the spirit of his times—words so carefully chosen, so perfectly sculptured to the message he wanted to communicate that they would be quoted as long as men could read.

Men around him lost faith. The people sometimes seemed ready to concede defeat; the price for victory seemed so high. The tired man in the White House grew lonelier, older. Yet he never wavered; the Union was worth whatever price was asked.

And as the end of the struggle approached and it became apparent that his people would remain one people, he turned his thoughts to rebuilding—to binding up the wounds, to healing the terrible scars. His critics became more bitter; those who had wavered now were loudest in their demands for a vengeful triumph.

Only when he was dead did the love the people felt for him become so apparent, even to the people. They had called him "Old Abe" from the time he was 30. And now "Old Abe" was dead, and the people bid him farewell as they would a patriarch. He had come from the "dirt poor," and his life had been a reminder that clay was made noble when it was infused with the Divine breath.

Small Business

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared pertaining to my cosponsorship of S. 808.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JENNER

The growing seriousness of the need for small business consideration in the midst of this record high economy we boast of has

prompted me to join with my colleague from Indiana, the Senator from Delaware and the Senator from Florida, in sponsoring S. 808.

I am sure that if the other Senators who are interested in the strengthening of the backbone of America's economy—small business—will study the problems that category of business faces, they, too, will see the need for full study of the effects of S. 808.

My personal investigation of the facts involved in the need for correction of the Western Hemisphere Trade Corporation Act reveals that serious discrimination exists today in the tax benefits afforded by the act between big business and small business.

Since a Treasury Department interpretation of the act several years ago, large corporations have been enjoying the 14-point tax benefits on exports to Western Hemisphere countries, whereas, small business has found it next to impossible to comply with the requirements of the Treasury Department's interpretation.

The record shows that at the time of passage of the act it was not the intention of Congress to create such a discrimination. On the contrary, the Senate Finance Committee report at that time made it quite clear that the act was designed to make it possible for all United States businesses, engaged in export business to Western Hemisphere countries, to compete on a fair basis with low labor-cost countries for Western Hemisphere business.

The Senate committee report said, in part: "American companies trading in foreign countries within the Western Hemisphere are placed at a considerable competitive disadvantage with foreign corporations under the tax rates provided by the bill [Internal Revenue Code]. To alleviate this competitive inequality, the committee bill relieves such corporations from surtax liability."

It was never the intention of the Senate or the Congress that the Senate amendment should relieve only a portion of our companies, thereby correcting an inequality by creating another inequality.

Nevertheless, several years ago someone in the Treasury Department held that the "source of revenue" theory required that any company doing business under the provisions of the Western Hemisphere Trade Corporation Act must change title to goods outside Continental United States in order to quality for the tax benefits.

Changing title outside the United States is no problem for big business with its agencies and warehouses in practically every country of the Western Hemisphere.

But it has been historical with small business in the United States that the title to export goods changes hands at the banks where the purchasers hold lines of credit.

This bill, S. 808, would establish by law what Congress originally intended—that all who wished to compete for Western Hemisphere business would have equal opportunity. The Small Business Administration has formally stated that this bill would be an important step toward helping small business in its present strange position of having a tough time of it in the midst of great prosperity.

In fact, a recent publication by the Small Business Administration cited a correction of this act as one of several steps which would give small business an overall program of help.

We have talked long and loud about helping small business to maintain its important position in this country's economy, but we have permitted this inequality of tax benefits to continue on the basis of misinterpretation of congressional intent.

By spelling out that intent by the passage of S. 808 and its companion bill in the House, which was introduced by Congressman THOMAS B. CURTIS, a member of the Ways and Means Committee, we would only be giving small business its rightful chance to enjoy the benefits that have been enjoyed for years by big corporations.

This bill would eliminate the change-of-title requirement established by the Treasury Department interpretation and yet safeguard our revenue interests from nondeserving operations. It would also insure the ultimate end use of the products exported.

I hope the Senate Finance Committee can work out some arrangement with the House Ways and Means Committee to assure consideration of this bill and to hold hearings. Those hearings, I am sure, will produce interesting evidence of the inequality which now exists.

National Advisory Committee for Aeronautics—Address by Dr. J. H. Doolittle

---

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important speech which was delivered in this city on February 21, by Dr. J. H. Doolittle, Chairman of the National Advisory Committee for Aeronautics, at the Aviation Writers Association luncheon.

Dr. J. H. Doolittle is more popularly known as Jimmy Doolittle. It was he who led the first bombing raid in World War II over Japan. His remarks to the luncheon have great bearing upon the capacity, the size, and the ability of the American Air Force, and I think his statement is worthy of consideration by all Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY DR. J. H. DOOLITTLE, CHAIRMAN, NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS, AT THE AVIATION WRITERS ASSOCIATION LUNCHEON, WASHINGTON, D. C., FEBRUARY 21, 1957

Before turning to the subject that I will presently discuss, I wish to voice a word of tribute to a man who has long been my mentor, colleague, and valued friend. For nearly a half-century he has devoted his large talents to the advancement of aeronautics. He established America's first courses of aeronautical engineering; he has had a long and distinguished career as a teacher at MIT. During World War I he participated in the design of the United States Navy's airplanes; notably the NC-4. He was in the forefront of lighter-than-air development.

Significant as were these contributions, I believe his greatest service to his country is the leadership he has given the NACA. In 1922–23, by virtue of his duties with the Navy, he was a member of the Committee—the NACA's board of directors. In 1938, because of his recognized stature as an aeronautical scientist, he was reappointed to the Committee by the President. In the summer of 1941, only months before Pearl Harbor, he was elected chairman of the NACA by his fellow Committee members.

The outstanding wartime work of the NACA and since then, its continued successful probing of the aeronautical frontiers reflects the wisdom and vigor of his leadership. The fact that today we enjoy a position of leadership in the air is due, in no small way, to Dr. Jerome C. "Jerry" Hunsaker.

Twelve years ago, I was privileged to testify before the Committee on Military Affairs of the Senate. "America is tired of war," I said. "Our people don't want to think of another war. The thought is unpleasant and we incline to put unpleasant things out of mind. In spite of this, the fact remains: The only way we can avoid war is to be prepared for war." I am as convinced today as I was 12 years ago that peace lies in strength and furthermore that both military and economic strength—over the long haul—lie in greater scientific knowledge and superior technology.

At that time I also said, "In future wars it is quite likely that the initial air action may be decisive and the side having lost the air war may well see fit to capitulate." Today I am even surer of this.

Since then we have had the grim business of Korea. We have seen our onetime allies, the Soviets, take one step after another in their attempt to gain domination over more and more of the world's people, area and resources.

At the same time, the revolution in military technology has been accelerated. We have not only learned how to build nuclear weapons that can erase vast areas. We have also learned how to compress these nuclear weapons into packages so small they can be transported readily by both today's jet airplane and tomorrow's intercontinental ballistic missile.

By word and deed the Soviets are challenging us in aviation. They are building more aircraft than we. They are training more aeronautical engineers and scientists than we. Perhaps most significant, there are incontestable indications that they are overcoming our greatest advantage and are closing the technological gap. Vigorous research and development programs are the key to technological supremacy. We must redouble our efforts to maintain our technological lead.

I was much impressed earlier this year by a statement by the man who has been called "the father of the H-bomb," Dr. Edward Teller. He said, "The period in which the decision is made as to who wins the (next) war * * * will be long, such as 10 years preceding the time of the war. The actual fighting will be, I think, a matter of days or weeks."

We will never start a war. I am convinced that the Soviets will not start a premeditated all-out war until they are satisfied they have established technological superiority and believe they can win.

What we do now will determine our deterrent power tomorrow. Every dollar spent on fundamental research and development to gain leadership in weapons technology today will, in the long run, save many more dollars and possibly many lives.

These conditions, among others, led me last October to accept the opportunity of serving as chairman of NACA.

For one vital element in deciding whether we remain ready or not is how effectively the NACA administers the responsibility it got from the Congress almost 42 years ago, to supervise and direct the scientific study of the problems of flight, with a view to their practical solution. In thinking about what we in the NACA need to do, now and in the future, it becomes apparent that we must increase our reserve of aeronautical knowledge, by developing and using the radical new research tools so essential for study of the complex problems demanding early solution, and even more important, by obtaining, training, and retaining the added numbers of talented young men competent to work in the scientific disciplines that are involved.

Perhaps the best way to make clear the urgency of what we in NACA must do is

to discuss briefly some problems for which answers are needed now.

For example: The mare's nest of problems that have to be solved, every one of them, before the ICBM can become a practical weapon system. Structural problems, configuration problems, propulsion problems, guidance problems, aerodynamic heating problems.

Take propulsion for example, in relation to guidance. As you know, the guidance we can give a missile following a ballistic trajectory has got to be applied during the brief period, early in the flight program, when the rocket motor is still burning. Making sure that the missile is directionally on its proper course is only part of the problem; in addition you have to make sure that the missile is traveling at precisely the right speed when your rocket motor burns out. Otherwise, of course, you will overshoot or undershoot your target.

The rocket motor of the V–2 burned for about 70 seconds. Purely for illustration, let's say the burning time of one concept of an ICBM might be about 3 times that, some 200 seconds. During that time—3⅓ minutes—the fuel and oxident might be pumped into the combustion chamber at the rate of about a ton a second.

Now the scientists have calculated that if the missile is going to destroy a priority target—say a dispersed airfield—the rocket motor must operate so efficiently that when it shuts off, the velocity that the ICBM will have reached will be accurate to within 1 part in 20,000. Likewise if 1 percent of the propellant isn't used, your miss may be measured in hundreds of miles. That means the whole burning process must be combustion perfect, and also that it must come to its end within a very small fraction of a second of the programed time.

Fuel surging and boiling, combustion buzzing and destructive screech, the design of bearings and seals, the development of pump lubrication systems operable at temperatures as low as boiling hydrogen—424° below zero Fahrenheit—these are some of the specific problems.

There is nothing romantic about research on this kind of problem; there aren't likely to be many dramatic breakthroughs. What we have to do is make step by step progress so that total solutions will be found by the time they are needed. The time factor in the development of components, of subsystems, and of the weapon system is of vital importance.

The record shows that, in the last analysis, the V–2 was a failure because of this time factor. Considering the stage of the war at the time it was ready we must conclude that the cost of the V–2 in technical and production manpower, money, materials; the total national effort that went into the project, was greater than the overall damage it caused. Had this same effort been put into German armed bombers, or even fighters, at that time our problem would have been made much more difficult and our victory much more costly.

And yet no less an authority than President Dwight D. Eisenhower, in his book, Crusade in Europe, has said that if the V–2 had been launched against Great Britain only 6 months sooner than was the case, the Normandy landings would have been, and I quote, "difficult if not impossible."

Wernher von Braun began his studies that led to development of the V–2 in 1930. By 1937 he was installed at Peenemunde. The first V–2, the prototype, was fired in the spring of 1942; the first V–2 to be aimed at England was fired in September 1944.

Von Braun has said that until the success of the V–2 had been proved, "there was much hot and cold blowing * * * we had great difficulties, and Hitler himself was greatly opposed to the idea * * * later on, after we had demonstrated it worked, we were swamped with so much priority that it hurt more than it helped."

So we must say: The V–2 was a failure because it wasn't ready in time. I repeat, we must do the necessary research and develop our new weapons systems in time.

In considering rocket development we should never forget that one of the foremost men in this field was an American. Dr. Robert H. Goddard was born in 1882. He started speculating on rocket propulsion in 1899. He began active experimentation in 1914 and continued his experimental work for 31 years until he died in 1945.

Under the auspices of the Army in World War I, the Smithsonian Institution and Clark University from 1919 through 1928, the Guggenheim Foundation, 1929 through 1941, and the United States Navy through World War II, he experimented with solid and liquid propellants and with stabilizing and guiding devices. He designed the forerunner of the bazooka in World War I. He fired the first liquid propelled rocket in 1926.

With meager resources he solved many of the basic problems of rocket flight long before they were put into practice by the Germans.

In the current budget now before the Congress we of the NACA are asking for $41,500,000 to build new research tools. Of that amount, roughly half is for facilities useful in hypersonic research—in the speed range from that of the V–2 to that of the ICBM. It will take anywhere from 2 to 3½ years to complete these new tools, starting from the day we get the green light.

The obvious question is: If there is such a terrible time urgency, and there is, then why hasn't the NACA gone long before this to the Congress and gotten the money it needs?

Research must be orderly and continuous. We can always use more money than we can obtain. We have presented our requirements forcibly and have been reasonably successful in getting what we required. Actually, until recently we haven't known how to design and build the equipment in which we can approach, in the laboratory, the extremely high speeds, temperatures and all other conditions of this future flight. We have spent a lot of effort on these problems. Now we think we know enough to build the small, pilot models with which to demonstrate the practicability of constructing the radical new tools so necessary for the rapid expansion of our knowledge.

For example, we are asking for a hypersonic physics test setup that will cost just under $2 million. So far, we have learned how to duplicate, on a piecemeal basis in the laboratory, some of the conditions of missile flight—conditions corresponding to Mach numbers of 20 (13,200 miles per hour) or more in a shock tube facility, temperatures of 10,000 degrees Fahrenheit or so in a rocket exhaust stream.

But now we need to develop devices capable of producing in the laboratory—all together, at one time—the conditions of speed, temperature, and gas chemistry for as long a time as a missile might experience in actual flight. This hypersonic test facility, let me repeat, will let us prove—to ourselves as much as to anyone—that our ideas are sound. I am sure we shall have troubles; I am sure we shall encounter difficulties we haven't anticipated. I am sure also that we shall succeed.

So far, I have been stressing the difficulties—the magnitude and the complexity of the problems faced, the size of the job of building the tools we need to study the problems.

The picture is not all black, not by any means. We are making progress steadily. It is truly impressive how much can be done by a small number of first-rate, dedicated people working with relatively simple equipment. Many of you here today are familiar with the kind of work we have been doing at Wallops Island, near Chincoteague, on the Virginia coast. Last fall, at the inspection of the Langley Laboratory, the disclosure was made that one of the little rocket-powered research models we use had been fired to a Mach number of 10.4 (6,800 miles per hour). At the same time we described a new technique whereby we shoot multistage rockets, programing the firing so that the model is heading back to earth before the final rockets are triggered. By this technique we attain maximum speed on the way down in the lower altitude where the air is dense, and thus duplicate aerodynamic heating where it will be most critical—during the ICBM's reentry into the atmosphere as it plunges toward the target.

We have since attained somewhat higher speeds. I won't say more about this program except that our people—very properly—are gratified with the progress they are making.

In connection with Wallops, perhaps I should add that not everything is happiness and light over there. The basic equipment, the instrumentation, they are using is 11 years old. Already it is incapable of obtaining all the desired data. We are taking steps to bring the instrumentation up to the capabilities of the models we propose to use in the days ahead. Here the situation is different from, for example, the hypersonic test facility. Here we know what we need and how to build it. We have asked for the money.

So far I have talked mainly in terms of problems affecting missiles. This is only one of the areas where there is urgent need for more basic information. We need comprehensive information of the kind that will help the development people and the manufacturer build greater performance—speed, range, altitude—into tomorrow's fighters and bombers and transports.

You might think that the very great interest in missiles would bring a corresponding lessening in the demand for aerodynamic and structures data useful in the design of man-carrying aircraft. Our experience is just the opposite. We have learned to fly supersonically; now we have to learn how to fly—supersonically and efficiently—economically.

Boundary layer control at subsonic speeds provides reduced drag or/and increased lift. The effect of boundary layer control at supersonic speeds should and will be studied.

In the propulsion field the array of problems needing attention is increasing: The problems involved in exploiting the gains implicit in the use of high-energy chemical compounds; the problems presented by man's determination to obtain the almost limitless range capabilities offered by an engine utilizing nuclear energy; or, more immediately, the problems of our new turbojet and other air-breathing engines that will produce quantities of thrust and operate at speeds which only yesterday would have been considered fantastic.

It is gratifying to recall that, some years after application of new information in a military design, the same information invariably has become useful in commercial designs. Most of you here today, I am confident, will live to fly in supersonic transports. And if progress in geriatrics keeps pace with that in aeronautics, I won't be surprised if some of you are around long enough, if not to do it yourself then to greet your children or grandchildren on their return from a transcontinental or transoceanic rocket trip.

There is also need for continued research on the problems of low and slow flight. Over the past 20 years or so the helicopter has shown great utility in many areas; there is, however, much more to be learned about the problems peculiar to the rotary-wing type of aircraft before we can realize its potential as fully as we would like.

The possibilities of aircraft with very short take off and landing capabilities also are attractive for both military and commercial use. Again, we find many problems requiring solution before short take off and landing and vertical take off and landing aircraft can achieve their maximum usefulness. Progress is being made in these areas.

Of one thing we can be sure. The NACA doesn't need to worry about solving all the problems and thus going out of business.

Now let me turn to what is the most critical need of the NACA—the ability to recruit and to hold the additional talented people we need to do our research job.

In describing our need, I can find no better words than those used last fall by Jerry Hunsaker. What is needed, he said, "is a realistic approach to the pay problem. The attractiveness of public service has been critically depreciated by private industry offering salaries and 'fringe benefits' far greater than the NACA is allowed by law to pay. We do not quarrel with the salaries paid by industry. We must, however, not only provide additional fringe benefits, but also offer rates of compensation sufficient to recruit, and to hold, the scientists and engineers necessary to perform the fundamental research that governs progress."

In 1956, we made some progress to reverse the trend—the widening of the gap between what industry, in a tight technical man-power market, is paying, and what we are permitted by law to pay. At the year end, in a message to the 8,000 loyal and capable men and women who make up the NACA staff, Hugh Dryden—our very talented director and chief executive—joined me in thanking them and, with respect to the pay situation, pledging that "we are determined to obtain the necessary further improvement in the coming year." That statement stands. We haven't succeeded yet in accomplishing all, or even most, of what must be done, but we are trying hard and are in the right direction.

In that connection, let me say to you in the hope that you will want to pass it along as widely as you can: If you know of any first rate young people in technical school who, upon graduation, want to devote their best energies helping to solve the problems of tomorrow's flight; tell them about the NACA. Tell them they'll be proud to be a part of a team with a proud record of large accomplishment, and with a future where the challenge is greater still.

Ladies and gentlemen, let me sum up my thoughts in a single sentence. We must anticipate the future; we must profit from the past; we must do our best—our very best—now.

Progress in Heart Disease Research

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. HILL. Mr. President, there appeared in the Washington Post and Times Herald of February 26 an excellent editorial and in the issue of February 17 an article by Nate Haseltine with reference to heart research and the progress being made against our No. 1 national-health problem, heart disease. The progress reported in the editorial and news story is most encouraging, and I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the editorial and news story were ordered to be printed in the RECORD, as follows:

[From the Washington Post of February 26, 1957]

HEART RESEARCH PAYS

Last year a big frontal attack, costing around $15 million, was made on this Nation's No. 1 killer, heart disease. The amount allocated for heart research through public and private sources was more than six times that spent in 1949. Naturally Americans ask: Has it paid off?

Dividends from these 8 years of research, as recently reviewed in this newspaper, by Nate Haseltine, are remarkable. Half a dozen major developments in heart surgery have saved the lives and increased the capacity for living of countless children, young people, and adults. Medical advances have made possible prevention of recurrent sieges of rheumatic fever, the second most common cause of death by disease in the 20–24 age group, and the leading cause of death, except for accidents, among school-age children. Through new drugs, high blood pressure can now be better controlled; blood clotting in persons who have had heart attacks prevented; and the heart's workload in those having coronary disease relieved.

The three organizations that sponsored this research—the American Heart Association, the National Heart Institute, and the Medical Life Insurance Research Fund—are furnishing eloquent proof that money wisely expended can purchase longer and fuller lives for many persons who otherwise would fall victim to heart disease.

[From the Washington Post and Times Herald of February 17, 1957]

HEART DISEASE FIGHT REVIEWED

(By Nate Haseltine)

A convincing correlation between increased spending on heart research and the dramatic advances made against heart disease in the past 8 years now bears recording.

The purpose of this article is to summarize the medical advances, mostly in heart surgery, made since 1948, when the Federal Government, the Nation's life-insurance companies, and the American public began to most liberally support heart research.

That was the year the National Heart Institute, in Bethesda, came into being. It was the year that the American Heart Association changed its character from a purely professional, scientific organization to a national voluntary health agency.

FIGURES TELL THE TALE

Statistics are essential to this story, so here they are, as briefly as possible:

For fiscal 1949, the American Heart Association allocated only $91,088 for heart research. For fiscal 1956, the organization allocated a record $1,858,917.

For fiscal 1949, the National Heart Institute, now one of the biggest of the seven National Institutes of Health, put up $1,676,076 for heart research. For fiscal year 1956 its heart research budget was allocated $12,544,848.

Finally, the Life Insurance Medical Research Fund, a pioneering financial backer of heart research preceding general public awareness of heart disease as a national problem, contributed $640,505 for the 1949 fight against heart disease. For the current year, the fund put up $960,340.

Here are advances this money helped buy:

Congenital defect heart surgery: The most common congenital (inborn) defect of the heart is the ventricular septal defect.

This is an opening, where none should be, through the septum, or wall that separates the two largest lower chambers of the heart. The defect is the chief challenge to heart surgeons today because of its frequency and of the number of children who die because of it.

Now, with the development of a variety of heart-lung machines, the so-called artificial hearts, surgeons can correct ventricular septal defects.

Dr. C. Walton Lillehei and his associates at the University of Minnesota devised the extracorporeal cardiac pump, or, in plainer words, an outside-the-body pump that would take over the duties of the heart while surgeons repaired holes and other internal heart defects.

Since that development in 1953, between 200 and 300 children in the United States have been operated on successfully to close ventricular septal defects.

Auricular septal defects: Operations to close unnatural holes in the wall between the heart's two smaller upper chambers date from the year of upsurging heart research interest, 1948.

Many such upper heart defects have been repaired without cutting the heart open. This has been done in a number of ingenious ways, ways which became outdated almost by the time they were tried. The advent of hypothermia, begun in this country in 1953, gave surgeons their first chance to cut into the upper heart, repair the holes, and close up their access incisions without harming the patient's brain.

Hypothermia, or purposeful chilling of the body, gave the doctors 7 or 8 minutes in which they could safely cut off blood flow to the body while they repaired the heart holes.

Even hypothermia, like the operating techniques it outdated, is on the way out. The cardiac pumps have succeeded in meeting almost all heart surgery needs.

Surgery for auricular septal defects is now classed in the readily operable list for successful closure, with a mortality rate at about 5 percent.

Isolated pulmonary stenosis: Successful surgery to correct this narrowing of the pulmonary valve within the heart dates back to 1948 too. About 2,000 of these operations have been performed in this country since then.

Again, the doctors now await more, and more perfect, cardiac pumps as the ideal instrument to make these operations easier and safer.

Mitral stenosis: The year 1948, too, marked the first successful surgical assault on mitral stenosis, the narrowing of the mitral valve between the heart's two left chambers.

It is now the most frequent heart operation, its beneficiaries already numbering more than 10,000 in the United States. The defect results from rheumatic fever.

A special dividend of these operations is that they can be safely performed for women of childbearing age among whom pregnancy could only be undertaken at great risk to their lives.

Free aortic regurgitation: This is the condition in which the descending aortic valve widens, and blood pours backward into the left side of the heart to eventually cause heart failure. Usually caused by rheumatic heart fever, and sometimes syphilis, it occurs most usually in adulthood.

Dr. Charles A. Hufnagel, of Georgetown University Medical Center here, devised an artificial valve to correct the abnormality.

The Hufnagel plastic heart valve, surgically inserted in the thumb-thick aorta (artery) after its emergence from the heart, was first successfully installed in 1952.

Aortic stenosis: Surgery to correct the unnatural narrowing, rather than widening, of the aortic valve was begun in earnest in 1950. Since then about 1,000 American adults have obtained fairly successful results with surgical correction of the condition.

Another major development in open heart surgery is the use of the "potassium chloride cocktail," a heart poison which stops all

heart movement while surgeons work inside the vital organ. At the operation's completion, the poison is flushed out and the heart resumes a healthy beat.

ADVANCES IN MEDICINE

Though heart surgery has held the spotlight since the advent of increased spending, medical advances have also occurred.

During the past 8 years, heart specialists have proved to their own satisfaction and to the health and safety of countless children that recurrent sieges of rheumatic fever can be prevented. Rheumatic fever is the second commonest cause of death by disease in the 20–24 years age group. It is the leading cause of death, excepting accidents, among schoolchildren.

Now the doctors prevent the more heart-damaging second and subsequent attacks of rheumatic fever by prescribing daily, infection-preventing doses of penicillin or other antibiotics after a child recovers from his or her first bout with rheumatic fever.

High, too, on the list of medical advances has been the advent in recent years of new and better drugs to control hypertension, or high blood pressure.

CLOT PREVENTIVES

Also noteworthy has been the development of drugs that prevent blood clotting in persons who have suffered heart attack.

Finally, and largely unpublicized so far has been the use of radioactive iodine in the treatment of patients suffering coronary disease. In this city about half a dozen laboratories provide the one-dose treatment, according to officials of the Washington Heart Association.

The invisible ray-emitting iodine attacks the thyroid gland, selectively, making it less active. This decreased activity of the gland benefits the heart patients by reducing the body's oxygen needs, thereby relieving the heart's workload.

WASHINGTON ACHIEVEMENT

The Washington area's share in promoting and financing research in heart disease has been growing since 1948.

That year, neither the American Heart Association nor its local affiliate, the Washington Heart Association, had any local research program. In fiscal 1956, the Washington Heart Association was pending $45,000 and the AHA had channeled another $30,653 here.

In Federal funds, the National Heart Institute had budgeted $25,085 for heart research in this area in fiscal 1949. For fiscal 1956, the local budget of the institute was $285,565.

The Life Insurance Medical Research Fund spent $2,000 in this area in fiscal 1949. Its local fiscal 1956 budget to support area heart research was $15,400.

Facts and Fiction on Weather Modification (Cloud Seeding)

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. CASE of South Dakota. Mr. President, under permission granted by the Senate yesterday, I submit for the RECORD a very illuminating and significant address by Capt. Howard T. Orville, Chairman of the Presidential Advisory Committee on Weather Control.

This address relates to what is being done and what has been determined by this Committee, which was created by an act of Congress, and the address deserves wide reading. It was delivered at a meeting of the New York State Horticultural Society in Kingston, N. Y., on February 1, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FACTS AND FICTION ON WEATHER MODIFICATION (CLOUD SEEDING)

(Address by Howard T. Orville, Chairman, Advisory Committee on Weather Control, and consultant to Friez instrument division, Bendix Aviation Corp., given at a meeting of the New York State Historical Society in Kingston, N. Y., February 1, 1957)

INTRODUCTION

Recent reports received from the United States Department of Agriculture tell us that we are now experiencing one of the worst drought conditions in history.

Nearly 29 million acres of land in the Great Plains States alone are "in condition to blow" which means that a vast area of the country is so devoid of protective plant cover that winter and spring winds can tear the topsoil loose and whip it into the air in choking dust storms.

In 15 States the serious water shortage has directed attention to the urgent need for supplementing present sources of water by every possible method known to man. One method which has been given wide publicity over the last 10 years is known as weather modification or cloud seeding.

BEGINNING OF CLOUD SEEDING

About 10 years ago two scientists, Dr. Irving Langmuir, a Nobel prize winner, and his assistant, Dr. Vincent Schaefer, succeded in creating a snow storm by dropping dry ice pellets from an aircraft into a supercooled cumulus cloud (a cloud having the appearance of a pack of wool and drifting along in temperatures well below freezing).

This successful flight was the culmination of some 5 or 6 years of exhaustive research at Mount Washington, N. H., and at the General Electric Laboratories at Schenectady.

This historic flight probably represents the first time that man successfully modified the weather using accepted scientific methods and created additional precipitation although the amount was very small. However, the results of these experiments were so dramatic and aroused such widespread interest that it was not long before commercial cloud-seeding companies, World War II pilots, and many others were exploiting these initial successful experiments.

During the next 4 years, 1946–50, there were many newspaper accounts of almost phenomenal increases in rain or snowfall caused by artificial seeding of the clouds with dry ice or silver iodide, a chemical which has essentially the same crystalline structure as ice particles. Dr. Vonnegut, an associate of Dr. Langmuir and Dr. Schaefer, is credited with discovering that silver iodide may be used to "milk" the clouds of their moisture.

Unfortunately these fantastic claims did not produce the water which was needed so badly in many of the Western States, and the farmers soon became very, very critical of any "rain maker" who offered to seed the clouds and produce more rain over his farm.

This is understandable, because in 1951–52 almost 15 percent of the total area of the United States was a target area for rain increasing operations.

Many of these operations were being conducted by people who had little or no knowledge of the scientific aspects of weather modification and who were endeavoring to make a quick fortune out of the poor farmers and fruit growers who were struggling to survive under terrific handicaps.

CONGRESSIONAL INTEREST IN CLOUD SEEDING

It is not surprising that Members of Congress became alarmed when their constituents from the farmlands and other areas experiencing water shortages informed them that the new methods of rain increasing were not producing the results claimed by the cloud-seeding companies. Others reported flood damage which they attributed to cloud-seeding operations.

THE ADVISORY COMMITTEE ON WEATHER CONTROL

This situation led Congress to start a series of investigations. Several bills were introduced in both the Senate and the House of Representatives.

Exhaustive hearings were held in which a large number of persons from every walk of life were asked to appear before the congressional committees to give his opinion as to the effectiveness of cloud-seeding experiments.

After more than 2 years of hearings a bipartisan bill was passed. This bill was originated by Senator Francis Case, of South Dakota, and sponsored by Senator Clinton Anderson, of New Mexico; Senator Warren Magnuson, of Washington; Senator Arthur Watkins, of Utah; and Senator Guy Cordon, of Oregon.

President Eisenhower signed the bill on August 13, 1953. This became Public Law 256, which created the Advisory Committee on Weather Control, an 11-man committee consisting of 5 members from private life of recognized standing in business, science, and agriculture; and 6 Cabinet members (or their designees), of interested Government departments.

This committee held its first meeting 9 days after the appointment by the President of the 5 members from private life. At its first meeting the committee adopted 4 guiding principles which are quoted below:

"First, the Committee will base its conclusions on facts obtained and interpreted and not any preconceived notions. Experiments to date have suggested that weather control may eventually provide benefits to agriculture, industry, and Government. Without such a hint of substantial benefits, the Congress would most likely not have created this Committee. However, the Committee will not now proceed under the assumption that weather control, including rain-making, does 'work' or does not 'work.' It will aim to examine all of the evidence with scholarly care and scientific impartiality.

"Second, the Committee recognizes the need for additional basic research dealing with processes related to rain, snow, and cloud phenomena. There is also the need to develop ways and means of providing methods for reliable evaluation of weather control activities. The Committee will encourage such research in industry, at our universities and throughout Government.

"Third, the Committee will welcome, and will solicit, the information possessed by and the opinions held by all individuals and groups having an interest in the field of weather control. It will carefully consider all facts and opinions pertinent to its study.

"Fourth, the Committee will not act in any way prejudicial to responsible individuals and concerns attempting to modify the weather."

The Committee has endeavored to carry out an impartial evaluation of commercial cloud seeding operations in spite of technical and political prejudices and many sinister influences which have attempted to contaminate the findings to suit their own personal interests.

THE EVALUATION PROGRAM

During the 3 years that the Committee has been in existence it has held 14 meetings, has traveled over 150,000 miles throughout the United States, Puerto Rico, and the Hawaiian Islands visiting field operations and talking to cloud seeders and their clients, consulted with or sought the advice of more than 100 prominent scientists familiar with one aspect or another of cloud physics or weather modification. It has reviewed innumerable technical documents covering the results of domestic or foreign cloud seeding experiments.

By January 1955 the Committee has assembled a technical staff. This staff developed a two-phased evaluation program.

One phase dealt with the rainfall data and a statistical treatment to determine by well known statistical methods whether the rainfall data measured over areas which had been seeded could detect any increase over that which would have occurred from natural causes.

The other phase consisted of a physical evaluation program to determine whether the field methods used by the commercial cloud seeding companies were valid. This overall evaluation program has been developed extensively in the past 2 years and one interim report has been submitted to President Eisenhower.

THE FIRST INTERIM REPORT

This report shows that, in spite of many difficulties, including defective instruments, great scarcity of or total lack of rainfall data and many other obstacles too numerous to mention, it was possible for the Committee's technical staff to develop a methodology which, when applied to 6 west coast projects, produced average increases of 9 percent to 17 percent over the expected precipitation in these States.

Mountainous areas favor the forced ascent of cloud-seeding material into the deep cool moist storms characteristic of the late winter and early spring months. Of these 6 projects that have been operating continuously for a period of 3 to 5 years, 5 of them produced the increases quoted above, the sixth project was inconclusive.

In its report the Committee emphasized that the results obtained in California, Oregon, and Washington could not be extrapolated to other States or other areas. There are 24 of the 48 States which have mountainous areas that favor positive results.

The other States comprise those States in the Mississippi Valley, the gulf region, and the Great Plains and have shown inconclusive results for one reason or another, or they have not yet been evaluated. This does not mean that cloud seeding is ineffective in these other areas. To determine the facts is the task which the Committee will tackle during the next 2 years of its existence, to July 30, 1958.

POSSIBLE ECONOMIC BENEFITS

It is of interest to note the economic benefits which might accrue to many areas receiving additional rain during the growing season. Senator CASE of South Dakota reported on January 12, 1956, "When Congress first considered making appropriations to get this work under way, I told one of the committees of the Senate that:

"If the Advisory Committee finds that weather modification experiments cannot produce important results, it will so report and thus deter farmers and ranchers from spending their money unwisely. This will, if such a report has to be made, save the public millions of dollars.

"If the Advisory Committee finds that weather modification activities work only in certain circumstances, it will find out what those circumstances are and thus encourage feasible projects and discourage those which are not feasible.

"If the Advisory Committee finds out it can confirm the results claimed by the reports it has so far received from reputable and scientifically competent operators—increases of from 7 to 50 percent and more—then the dollar benefits to agriculture, industry, and Government will be so great as to be incalculable.

"In other words, I said at that time, whatever the Committee reported, this would produce tangible and real economic benefits to the water users of this Nation."

And in the same remarks, "I can reasonably and conservatively estimate that precipitation increases of the magnitude indicated (9 percent to 17 percent by the Committee) could produce average annual benefits of $20 million and quite possibly up to $50 million in these States."

In quoting further, Senator CASE has stated, "I hope that farmers, ranchers, and other water users will continue to sponsor cloud-seeding projects, keeping in mind the uncertainty of results in some areas but also the importance of the benefits compared to the relatively small cost if the seeding succeeds. They should probably insist on more careful scientific design of these projects and should probably introduce greater permanency in the projects so as to make evaluation feasible."

CLOUD SEEDING IN OTHER COUNTRIES

The committee is watching closely extensive cloud-seeding projects which are being carried out in foreign countries, especially Australia, Japan, France, Switzerland, Spain, Israel, and Pakistan. At least 40 other countries have recently or are presently conducting some form of research using the scientific methods first proposed by Drs. Langmuir and Schaefer.

HAIL AND LIGHTNING SUPPRESSION

Another phase of the weather-modification program which is of interest to those of you who are from the fruit-growing States is the possibility of hail abatement.

As many of you well know, hailstorms cause extensive damage to crops, especially wheat and corn acreage in Kansas, Nebraska, Montana, and Iowa. Fruit, especially apples, peaches, apricots, grapes, and plums, is easily damaged by hailstorms. Because of its broad leaves tobacco is particularly susceptible to hail damage. It has been reported that North Carolina has annual hail losses to its tobacco crop exceeding $3 million.

Destructive hailstorms have caused great damage in the Midwestern States. In 1951, hail damage amounted to $31,300,000 in the State of Kansas alone. The other Midwest States have also experienced some very destructive hailstorms.

The largest hailstone ever officially recorded fell on Potter, Nebr., in 1928. Some of these hailstones measured 4½ inches to 5½ inches in diameter and the largest was 17 inches in circumference and weighed 24 ounces or 1½ pounds. In Lubbock, Tex., in 1930 a farmer was caught in an unprotected field and was pounded to death by these stones. However, this was an exceptional case.

Scientists have informed the committee that cloud-seeding techniques may very well be used to suppress hail. They tell us that by seeding potential hail-producing thunderstorms early enough it may cause the rain to start much earlier in many small drops and that the storm will dissipate before it ever reaches hail-producing proportions.

Last summer the committee was watching closely attempts to suppress hail in Scottsbluff, Nebr.; Hudson Valley, N. Y.; Wenatchee, Wash.; and 1 or 2 other fruitgrowing areas in Oregon and California. The reports of the success or failure of these projects have not yet been received in committee headquarters.

Hail-suppression cloud-seeding operations require the use of a great number of silver iodide generators which are placed around and upwind of the target area. When reports of impending thunderstorms are received the generators are automatically turned on and operate continuously until the threat of hail has passed.

In some cases airplanes are also used to supplement the ground generators. In a few cases radar, the magic eye of electronics, is used to observe the effects of cloud seeding.

The committee has also been informed that the same techniques for suppressing hail should reduce the frequency of lightning strikes. If this is true then it is of utmost importance to reduce fire losses caused by lightning strikes in our national forests.

Last spring damaging forest fires were experienced in Arizona and New Mexico. The United States Forest Service reported that 85 percent of these fires were caused by lightning strikes. Seventy-five percent of all forest fires in the Western States are caused by lightning. The cost of fighting forest fires exceeds $100 million annually.

QUESTIONS FREQUENTLY ASKED THE COMMITTEE

As a result of initial success in cloud-seeding efforts there have been many inquiries covering a wide variety of problems, some of them are mentioned briefly below.

Many unscrupulous individuals and outright quacks have attempted to sell cartridges and rockets supposedly filled with silver iodide or dry ice. Other charlatans have attempted to sell farmers electrical devices of various types which they claim will bring on rainfall. All of these methods are fraudulent and persons known to be selling such products should be prosecuted. The American Meteorological Society, the county agriculture agent, or the Better Business Bureau can advise farmers whether or not a commercial cloud-seeding company uses scientific methods.

The question of "robbing Peter to pay Paul" has been asked repeatedly. Some individuals in Midwestern States believe that cloud seeding on the west coast has robbed them of precipitation which they would otherwise get were it not for the seeding. Others maintain that seeding clouds upwind a few miles will rob them of rain which they would normally get.

The best scientific opinion today indicates that present cloud-seeding techniques will remove not more than 5 percent of the potential amount of moisture in a cloud and that even including the rain which would fall naturally probably more than 90 percent of the total moisture in a cloud moves on downwind. So there appears to be little likelihood that in the overall picture cloud seeding takes moisture away from farmers downwind from the target area.

Since cloud-seeding operations cost only 2 to 18 cents an acre, depending upon the type of crop and soil, the cost-benefit ratio is so great, 1 to 20 or better especially during the growing season, many farmers have told the committee that the risk is well worth the money it costs to employ cloud-seeding companies. Others have indicated that many of the calculated risks that they take daily are much greater than those experienced with cloud seeding. Current estimates today are that the annual gross income from cloud seeding is $3 million to $5 million.

OUR PRESENT KNOWLEDGE OF CLOUD SEEDING

Cloud seeding to increase precipitation or for hail or lightning suppression is in its infancy. Much remains to be learned about the precipitation processes. Rain, snow, hail, and lightning occur under natural processes which are imperfectly understood today by our best informed scientists.

Our ignorance level of the precipitation processes is extremely high.

This means that our efforts should be devoted to conducting field experiments under controlled conditions with highly qualified scientists supervising the cloud-seeding operations.

Farmers should seek advice from their respective water resources agencies, State universities, or agricultural agents before entering into any contract with commercial cloud-seeding companies.

There are a few very reliable companies, but there are also many individuals who are quacks and who are attempting to capitalize on the small knowledge which has been gained recently by scientific cloud-seeding experiments.

EVIDENCE THAT CLOUD SEEDING WORKS

It is of interest to summarize the results of the committee's evaluation program to date. It has found:

1. That supercooled stratified clouds can be dissipated by aircraft seeding with dry ice or silver iodide.

2. That precipitation can be initiated by seeding warm cumulus clouds with water.

3. That dry ice and silver iodide seeding of cumulus clouds extending to 5,000 feet or more above the freezing line and with a temperature at the top of the cloud of −10° C. will induce precipitation.

4. That ground generator seeding with silver iodide in the three Pacific Coast States has produced average increases of 9 to 17 percent under the conditions mentioned in an earlier paragraph.

5. That an intensive study of hail prevention and the possibility of reducing lightning seems well justified. Many destructive forest fires in the Western States are started by lightning strikes. It is believed that cloud seeding will start the precipitation process earlier and will prevent the storms from building up to hail and lightning-producing proportions. Much more study of this problem must be made before any final conclusions can be drawn.

6. That Federal regulation of rain-increasing operations is not justified at this time.

7. That continued controlled experimentation holds promise of developing new techniques which may be of greatest economic importance to the farmer.

Can We Mold the World in Our Own Image?

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Harold B. Wess, professor of business administration and marketing, School of Business Administration, the American University, Washington, D. C., under the title "Can We Mold the World in Our Own Image?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN WE MOLD THE WORLD IN OUR OWN IMAGE?

(By Harold B. Wess)

Are we unwittingly trying to mold the rest of the world in our own image? Can we? Should we? Even if we could and should mold the world in our own image, do we really have a clear image of ourselves? Do we have a beautifully wrapped product to sell the rest of the world? Do we know ourselves as a way of life, and do we understand our way of life?

I suggest that we do not. I suggest that throughout our entire educational system, from the lower schools through college, we fail badly in explaining to our young people what we really are as a nation and as a people. It is a pity, too, that our political campaigns are not pitched to a level high enough to help in this much needed educational process.

We talk glibly about the American way of life, a free society, and free enterprise, but to most of our own people they are pious words. At the same time we hear much talk about the individual being an economic entity. We seldom hear much said about the individual's craving for understanding, for dignity, for self-expression, and for recognition. We rarely hear much said about the spiritual needs of the individual. We talk and behave as rank materialists and yet deep down in our hearts, we know that we are not rank materialists. As a matter of fact, as a people, we are really less materialistic than almost any other nation on earth, and yet we manage somehow to give the rest of the world the wrong impression. The rest of the world will not and cannot accept anything approximating our way of life on the basis of the picture we paint for it.

In this country we have found that we cannot buy loyalty through money and material benefits alone. Only through the recognition and understanding of the dignity of the individual can we earn loyalty and cooperation. Why, then, should we expect the impossible in the area of international relations?

The Communists are the real materialists in the world today. Under the mask of an idealism, brutal as it is false, they may be able to bring technology and materialism to the rest of the world, but with it they will bring slavery. On the other hand, we can bring technology and management know-how and with it an awareness of the spiritual values and a deep sense of the innate dignity of man—which the Godless religion of the Communists will never achieve. The Communists submerge the dignity of the individual into a mechanistic system, while we are dedicated to build a society where the dignity of the individual is all important.

That we are a long way from reaching this utopia will be readily granted, but some intellectuals and reformers do our society a great disservice when, in their zeal for perfection, they find flaws or even ills which they want to correct at all costs and in the shortest possible time. First of all, they forget that a social system is composed of individuals and that at best it cannot be any better than the individuals composing it. What is more, they find a particular evil in our social system and believe that a single change in the system will correct the evil. Actually, this one change may or may not cure the evil, but one thing is certain: it will start a chain of cause and effect most of which is unpredictable. Prohibition as a cure for chronic alcoholism not only did not eliminate the evil of alcoholism, but brought in its wake gangsterism and corrupt politics.

What all this adds up to is that if we want to preserve democracy, free enterprise, and the freedom of the individual to grow and develop to his fullest potential, we must be willing to put up with factors not to our liking or run the risk of starting a chain reaction that will ultimately bring about the loss of what we cherish the most.

On my recent trip to Europe, when questioned about some of our unresolved problems, I did not feel the need for apologizing for our way of life. I simply asked my questioner what was his alternative cure, and invariably the cure was worse than the illness. The cure would, through a chain reaction, surely lose for us our freedom as individuals and lose for us our dynamism as a strong and virile nation.

The reason so many theorists end up with political solutions or isms in trying to resolve human and social problems is that they prefer to indulge in large abstractions instead of thinking and dealing with individuals. It is far easier to embrace causes than to embrace people. The cause of liberty, freedom, democracy, free enterprise, and all such causes can become abstract, making them useful tools in the hands of the unscrupulous. The test of sincerity in the final analysis is, How do you behave toward Tom, Dick, and Harry? And how about the Toms, Dicks, and Harrys throughout the world, whatever they may be called in their own land?

Leaders in business, government, and education have in recent years done much soul searching, research, and study in the field of human relations. Much has been learned and there is a great deal more to learn and to do in the practice of the skills in dealing with the individual. No two individuals are exactly alike, just as no two leaves on a tree are precisely alike. This means that both at home and abroad we must stop talking at people and instead talk with them and listen to them as individuals. We must avoid treating and communicating en masse and try to understand and communicate with the individual.

We have drifted into a policy of lecturing the world rather than understanding the individuals who populate that world. The battle of words on the international front gives some ego satisfaction to the speaker and at most is used to influence the people of his own country. Notice that the Communists, despite their well-organized propaganda machine, still rely on individual indoctrination and on operations in small groups.

The individual cannot express his individuality in isolation. Since the individual is many, many people in one, he must become a part of many social groups and teams at home, in clubs in church, and in the place where he works. He plays a different role in each of them. Further, the level of these roles may be very different. He may be the leader of a small social group where he works although his position in the formal organization, as such, may be a humble one.

If we want loyalty and cooperation to the larger whole, be it the factory, the office, or even the State and the Nation, we must understand and respect and be aware of these informal groups that draw individuals together. This awareness has been constructively useful to administrators and should be equally important in the work on the international scene. In the Bible, God was willing to spare a city if one righteous man could be found. In all human affairs, whether national or international, we must realize—as the Almighty did—the importance of even one individual.

How do we communicate with the individual? How do we get ourselves across or inside, so to speak, of the individual? First of all, we must know as a certainty that there can be no communication without understanding. You must try to understand the individual rather than insist that the individual understand you. You must be loyal and interested in him, even under difficult circumstances. Above all, you must listen. You must listen to what he wants to say; to what he does not want to say and, above all, help him to say what he is reluctant to say.

At best words are an inadequate vehicle for communication, especially since they involve feelings, sentiments, and a particular emotional meaning to the individual. Logic in human relations is therefore not enough. It is useless to try to change human sentiments through logic. If you want a dramatic example of this, go to Hyde Park, London, any evening and listen to the discussions which take place. Nobody convinces anybody. All they succeed in doing is to blow off steam, and that is all to the good.

Once we leave the field of science where words can be tested and verified on the out-

side, or the limited field of language where words refer to verifiable evidence on the outside such as table, apple, bridge, etc., words begin to have different meanings to different people. Even in our own country where we have a common language, words like "liberty," "freedom," "democracy," "free-enterprise," "capitalism," etc., have different meanings to different individuals. How much more is this true when we deal with languages other than our own, and with individuals whose nationalities, cultures, and religions are different from our own.

We cannot separate the sentiments expressed by the individual from the individual expressing them and from the situation in which they are expressed. Such words as "loyalty," "integrity," "solidarity," and "cooperation" for example, cannot be understood or expressed as a behavior pattern apart from the feelings and sentiments of the individual. We have found this true in our own work situations and in our social system. How much more acutely true is this when we deal with individuals whose sentiments are determined by biological, psychological, and social backgrounds so different from our own.

Dr. Eugene Carlson Blake, president of the National Council of Churches in the United States, related this story in a recent radio interview. When he was in Budapest recently a Hungarian churchman asked how we in the United States can claim the separation of Church and State when the Council of Churches has a committee on Politics and War. Dr. Blake was puzzled until it was pointed out to him that the National Council of Churches has a committee on Policy and Strategy. To the Hungarian, "policy" meant only one thing—"politics" and "strategy" of course meant "war."

Let us be certain that in talking to Tom, Dick, and Harry abroad, we do not make the fatal mistake of assuming that they understand us any more than do Tom, Dick, and Harry at home. Let us stop assuming that words are constants. They are variables at home and much, much more variable abroad. Words have different meanings under different conditions and situations at home and the difference in meaning to individuals abroad is even greater.

Is it not naive to be disturbed by the fact that the rest of the world does not think or act as we do? Should we not try to find a better way to communicate the heart of America to the individuals in other countries and fire their vision and energies to build a better life through their own efforts? Shouldn't there be an even greater emphasis on financing programs that help the people in other countries to help themselves? It is my belief that most of the people of the world would like to follow the spirit of America but expressed in their own way, even including many people now under the heel of the Communists and other dictators.

If we bear in mind human history, we can give guidance to those who in their inner hearts and minds want to follow the lead of America. Because we are what we are as a people, we can enhance human dignity abroad instead of degrading it as the Communists do. But we must find a better way of communicating to the individuals of the world the heart of America instead of boasting about our material achievements. We must not mistake comfort for civilization.

We have found in our own work situations that our attitude is of utmost importance. Not only does our attitude color our interpretation of events, but the way we, as administrators, think about a situation and our resulting behavior makes a strong impact on people's reactions to us. We actually communicate a great deal more by our actions than we do by words. Therefore, how we act at home and abroad is more telling than all the pious words we use.

At another level of action, we must make the most of individual contacts abroad, individual to individual. The Communists are deathly afraid of this and that is why they guard so zealously against it. Even when they seem to make a show of individual contacts, it is usually under the watchful eye of a guide or interpreter.

American business abroad is representative of the American way of life. According to the Foreign Trade Council there are about 2,500 United States companies abroad selling through 7,000 branches of subsidiary company operations. The opportunities for vital individual contacts are there. These individuals can and do act as business statesmen backing up United States diplomats. Those in our country who for political purposes try to discredit American business at home are not only doing a great disservice to our country, but make the constructive work which these business statesmen can do abroad, difficult if not impossible. The maligners of American business would discover, if they cared to, how much moral leadership, individual development, and management assistance these companies give to nationals abroad. Let us by all means encourage and use constructively these opportunities of individual contacts.

We seemingly rely too much on the battle of words and speeches to cement good relations between ourselves and other countries. We also fail to take full advantage of the 3,000 Foreign Service officers abroad who can on an individual, day-to-day basis do the work, the real constructive work.

I was shocked to discover in a recent article in the New York Times how stingy Congress has been in allotting entertainment funds to these Foreign Service officers. I quote, "In post after post it is not unusual to find men with the Foreign Service spending $2 of their own money for every dollar allotted to them. Why? A craftsman's pride in doing his job well, and a sense of personal embarrassment at seeing the country poorly represented. * * * Hence this experienced, devoted public servant, serving in one of the free world's most sensitive outposts, is handicapped in the performance of his duties."

This shortsighted policy on the part of Congress can only stem from a lack of appreciation of the vital importance of individual impact. Let us hope that Congress will remedy this situation and rely more and more on these career diplomats to help cement the world toward understanding and peace.

I can best sum up what I am trying to say by quoting LeComte du Nouy from his book, Human Destiny:

"The only goal of a man should be the attainment of human dignity with all its implications. In other words, all his intellectual acquisitions, all the facilities which society puts at his disposal—schools, universities, libraries, laboratories; all those offered by religion; all the occasions given him to develop his own aptitudes, his work, his leasure, must be considered by him as tools destined to improve his personality, his moral self, and to make it progress."

This is as true abroad as it is at home. Let us begin to practice in international relations the human relations we are now preaching—in the office, the factory, the school, the home, and in foreign policy.

Herve J. L'Heureux

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. COTTON. Mr. President, Mr. Herve J. L'Heureux, of Manchester, N. H., is well known to many Senators as United States Minister and Consul General at Montreal, Canada, and for his previous service as head of the Visa Division of the Department of State.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Montreal Gazette of February 23, 1957, paying a fine tribute to Mr. L'Heureux, and also the text of a speech he delivered at the 30th annual fellowship dinner in Montreal on February 20.

There being no objection, the editorial and the address were ordered to be printed in the RECORD, as follows:

[From the Montreal Gazette of February 23, 1957]

MINDFUL OF THE DEEPER THINGS

It is easy enough in a harsh age to speak harshly and, amidst a clash of interests, to speak cynically. But in his message in Brotherhood Week, Mr. Herve J. L'Heureux, the United States Minister and Consul General in Montreal, has spoken of the foundations needed, if free nations wish to survive. And their foundations must rest upon the strength of their faith.

It is a good time, he urges, to keep before the mind the words of the psalmist—words that are at one and the same time a promise and a warning: "Unless the Lord build the house, they labor in vain that build it."

It is by its defiance of this truth that communism, with all its material power, will be written off as a failure, and it is only in recognition of this truth that the free world may claim the right to survive.

In bringing out this message for Brotherhood Week, Mr. L'Heureux was only speaking out of his own philosophy of living. He has been the originator of the prayers-for-peace movement. It was in 1948 that he proposed to an American Legion group in Manchester, N. H., that the members pause for 1 minute at noon each day to pray for peace.

The resolution was adopted and the movement has spread. There are now millions of these Minute Men of Prayer in all parts of the world.

And the movement has spread in just the way that Mr. L'Heureux would wish it to spread. It has no organizational head. It calls for no financial subscriptions. It has no set forms of prayer. It depends entirely upon the spontaneous and voluntary efforts of individuals who wish to pray for peace, not only with faith in the power of prayer, but because they come to know that prayer is a reminder of the things that really belong to our peace.

Such men as Mr. L'Heureux, busy with the duties of their offices, who yet use their influence to keep alive an awareness of the deeper things in life, are rare indeed, and much to be valued.

NORTH AMERICA AND THE FREE WORLD

(Remarks of Hon. Hervé J. L'Heureux, United States Minister and Consul General at Montreal, on the occasion of the 30th annual fellowship dinner between Catholics, Jews, and Protestants, February 20, 1957, at Temple Emanu-El House, Montreal, Quebec)

We are met here tonight to observe and contemplate that beautiful concept of brotherhood which is being so effectively fostered by the National Conference of Christians and Jews. We are here not only to rejoice at the progress that has been made on this continent in the fundamentally common concepts of charity, mutual respect, and love toward our neighbor, but also for the purpose of stocktaking and soul searching, in order to enable us to rededicate our allegiance to the principle of free government and to the fundamental tenets common to our respective religious faiths.

Our theme tonight is North America and the Free World. Since the other speaker is

expected to stress the Canadian aspects, my observations in this discussion will relate essentially to the commitment of the United States to this political faith.

The interdependence of peoples is too great today for absolute national sovereignty to sway its full power without endangering world peace. This fact does not render the virtue of patriotism or the existence of nations obsolete. For the unity of mankind is better served through a plurality of State structures and a multicolored pattern of cultures than through drab uniformity. The interdependence of peoples, rooted from the beginning in the very nature of man and only made apparent by startling discoveries and modern means of communication, does however, give the lie to the classical concept of absolute national power which coined the jingoistic phrase: "My country right or wrong."

Though national welfare still remains the purpose of good government, it can, therefore, no longer be its sole purpose. Taxes, for instance, are increasing as national multibillion budgets are considered with an eye on and a genuine concern for the international as well as the national situation. The echo of elections held in one country might reverberate far and wide throughout other countries. Domestic policies tie in more and more with foreign policies and foreign policies closer and closer with international policies.

This idea of interdependence finds its military expression in pacts such as NATO and SEATO; its economic expression in the point 4 program; its international expression in the United Nations and in the Pan American Union, or the Organization of American States; its political expression in the Eisenhower doctrine, which is a far cry from the Monroe Doctrine. Isolation is a political anachronism. As a struggle develops in the hearts and minds of men between two divergent conceptions of life, it leads logically and inevitably to two divergent policies.

President Eisenhower, in conscious continuity with our Founding Fathers, gave forthright and impressive testimony to the contemporary affirmation of the public philosophy of America when he said in his second inaugural address:

"This is our home—yet this is not the whole of our world. For our world is where our full destiny lies—with men, of all peoples and all nations, who are or would be free. And, for them—and so for us—this is no time of ease or rest."

It is no time of ease or rest because these two conflicting concepts of life stem ultimately from two conflicting ideas regarding the nature and destiny of man. As these questions are basically religious—the denial or acceptance of God—the conflict is also basic. They are essentially incompatible. Either the one or the other will ultimately triumph. The two cannot live in the same world indefinitely. It was Mr. Khrushchev, I believe, who made that point crystal clear: he sent New Year greetings to us in the Western World and, in the same breath, he said that he would bury us all. That, he will have to do, for the people of America, with their freedom-loving allies, will put up quite a scrap, you may be sure. He will have to liquidate us first.

The irreligious and materialistic ideology of communism considers the Communist Manifesto, according to Friedrich Engels and Karl Marx, as its revelation. Because of the worldwide impact, and the fact that it has dominated innumerable minds, it has been made a part of the Great Book Series inaugurated by the University of Chicago. The Communist Manifesto is not a long document; it is a relatively short one, considering the ground it covers.

Written and published in the midst of the social and political turmoil, which immediately preceded the revolution of 1848 in France, Prussia, Austria, Hungary, Greece, Italy, the work reveals the goals of every social revolution to come in our days: abolition of private property, of family, of fatherland, all of which is based on the denial of spiritual values and the acceptance of economic determinism manifested in the class struggle. The Communist Manifesto is a fierce book. It is a call to arms and to the dispersion of the enemy, the bourgeois capitalists. All means of destroying them and their power are legitimate. Marxism preaches hatred and greed and violence in order to achieve a spurious social order.

It derives its force from a childish simplification of the enormously complicated social phenomenon. The manifesto is right when it asserts that, throughout history, there has been caste struggle. But there is no valid reason for its declaration that caste struggle is the cause of everything that happens in human society. It ignores the fact that, in addition to our positions and antagonisms there is also, among men, evidence of much solidarity and cooperation such as we see today in the Western World, or in the new nations of Asia, and right here, at this meeting, between people of diverse background, interests, and religious faiths. We are a very negation of class struggle.

The manifesto is right when it charges that the laboring class was receiving only subsistence wages, for such was approximately the situation in England of the 18th century. But it is wrong when it asserts that, in a bourgeois society, to use its phraseology, labor cannot receive but subsistence wages. Today, essentially, Marx would have to write another book of the laboring class in the United States and Canada, where a wider distribution of wealth and property has occurred, and high standards of living have been achieved by the laborers through freedom to unionize. All of these improvements have been made possible by a greater conscience of social justice on the part of the employers, by a reasonable attitude by the laborers, and by a better understanding of the lawmakers and the governmental agencies concerned. The growth of the middle class has not only brought about a better distribution of wealth, it has eliminated causes of social unrest. Accordingly, the United States is not torn by the seriously basic class struggles that still prevail in many parts of the world.

The manifesto was right when it attacked oppressive social conditions, but it is wrong when it takes for granted that economic equality and collectivity would bring, automatically, serene happiness. Economic conditions were excellent in the Garden of Eden before the fall of man. Adam and Eve didn't even have to buy clothes—but there is no Garden of Eden today, and modern Eve would be very unhappy with no clothes to buy.

The manifesto was right when it criticized the use of religion by some professed believers in God only when the behavior of the proletariat alarmed them, and when its sole use was to preserve the injustices of a political and economic setup, and rob the oppressed of the will to free himself and throw off his chains. For, throughout the centuries, the Bible has become the familiar book of the West and familiarity has bred indifference and even contempt. But the manifesto is wrong when it says that religion is the opium of the people and takes man away from what is human, for it is rather the salt that gives taste and vigor to our human activities. Religion is neither a childish superstition nor a myth invented in unscientific days to comfort the proletariat. On the contrary, it prevents man from handing himself over body and soul to despotism and tyranny.

Three-quarters of a century before the manifesto was written, the Thirteen American Colonies, which comprised the Thirteen Original States of the Union, declared their independence in a document even briefer than the Communist manifesto, but of much greater influence because of its truth.

The opening paragraph of this great document takes the high ground of asserting that the American people are ready "to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them." This is in direct contrast to the Communist manifesto. Then, follows this majestic declaration:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Let us, briefly, ponder the phrase "We hold these truths to be self-evident." Today the self-evidence of these truths and God's complete jurisdiction over man's affairs is questioned by the secularists. There is dissent from this declaration of principles. One thing, however, is sure: the Founding Fathers asserted that these were self-evident truths and held them as such.

The Founding Fathers were asserting the American proposition which has become the American way of life, namely, that the political and social life of man does not ultimately rest upon a philosophy of pragmatism, or a "social contract," as Rousseau envisaged it, or on a certain ideological projection of economic interests as the Marxists would have it. On the contrary, the life of man in society under government is founded on truth, on certain objective truths, definable and defensible.

Among these truths, one emerges. It is the truth that lies beyond politics and imparts to politics, as to every other activity of man, a fundamental meaning, namely, the sovereignty of God over nations as well as over all individuals. In contrast to Marxism, the first article of American political faith is that the political community is a form of free and ordered human life which looks to the rule of God as the first principle of its organization. Religion for America is not the opium of the people, nor is it at best a purely private concern, a matter of personal devotion, quite irrelevant to public affairs, a Sunday school lesson which goes in one ear and out of the other. The very first paragraph lodges the colonists' case for independence on their rights under the laws of nature and of nature's God.

The United States has had, and still has, its share of secularists, agnostics, and unbelievers, but their manner of thought, when applied to American political and social ideas and institutions, is altogether alien to the authentic American tradition. Ours is unmistakably a nation under God and under law. Strike out God and His sovereignty over society, as well as over every single human life, and the very logic of the Declaration of Independence collapses. And, hence, its very dynamism vanishes.

Only in virtue of this inner principle can our institutions be rightly called free—institutions that make for freedom. If this inner principle is ever lost, if the American people are ever alienated from it, then the institutions themselves will eventually crumble, or be changed by demagogues or adventurers into monstrous and tyrannical forms. Indeed, the whole democratic process itself will make for the worst of all tyrannies, the tyranny which is ushered in as the rule of the masses, and is always, shortly thereafter, stabilized as ruthless dictatorship over everyone.

Our respective countries have spared no effort in giving material aid to advance and sustain the cause of free government everywhere. I believe our record in this respect

is one of generosity and honest purpose. But now, a new cooperative effort, on a higher level, is urgently needed toward a renewal of a political philosophy that alone can offer to the peoples of the world the stable hope of a common temporal salvation, under God and under law.

In putting forth this effort, we shall be paying an international debt, for our American public philosophy came to us as a heritage. We owe its leading principles to the British constitutional tradition. But we also owe them to the philosophers of Athens, to the jurists of Italy, to the doomsmen of the Germanic tribes, to the great thinkers of Paris and Salamanca, and especially to the sacred writers and prophets of the Bible.

The tradition of the Founding Fathers has been continuously and appropriately preserved and honored in America as a sacred trust. It has been publicly and officially affirmed on many occasions. President Lincoln, on May 30, 1863, echoed this tradition when he said:

"Whereas the Senate of the United States, devoutly recognizing the supreme authority and just government of Almighty God in all affairs of men and nations, has by a resolution requested the President to designate and set apart a day of national prayer and humiliation; and whereas it is the duty of nations as well as of men to owe their dependence upon the overruling power of God, to confess their sins and trespasses in humble sorrow, yet with the assured hope that genuine repentance will lead to mercy and pardon."

The authentic voice of America rings out in those words. President Eisenhower in June 1952, quoted them in a proclamation of similar intent. He again emphasized this basic American doctrine, in his historical, inspiring second inaugural address on January 21, 1957, when he stated:

"I, too, am a witness, today testifying in your name to the principles and purposes to which we, as a people, are pledged.

"Before all else, we seek, upon our common labor as a Nation, the favor of Almighty God. And the hopes in our hearts fashion the deepest prayers of our people."

The American affirmation still prevails and is expressed in the motto "In God we trust," not only engraved on American coins but also printed on American postage so that the whole world might know where we find our strength and courage, and where we stand. At this critical stage in history we are prepared to pay our debt to those from whom we received our philosophy by striving to make this philosophy the basic bond of the union with all those people who, like us, love freedom and justice.

On January 5, 1957, in discussing factors that transcend the material, the President of the United States said that the Middle East is the birthplace of three great religions—Moslem, Christian, and Hebrew. He added that "it would be intolerable if the holy places of the Middle East should be subjected to a rule that glorifies atheistic materialism. Mecca and Jerusalem are more than places on the map. They symbolize religions which teach that the spirit has supremacy over matter and that the individual has a dignity and rights of which no despotic government can rightfully deprive him."

With further reference to North America and the free world, President Eisenhower, in his state of the Union message to the Congress, January 10, 1957, made the following statements:

"The existence of a strongly armed imperialistic dictatorship poses a continuing threat to the free world's, and thus to our own Nation's, security and peace. * * * America alone and isolated cannot assure even its own security. We must be joined by the capability and resolution of nations that have proved themselves dependable defenders of freedom. Isolation from them invites war."

And, with further reference to American principles, the President asserted, in the same message to the Congress:

"The world has so shrunk that all free nations are our neighbors. Without cooperative neighbors, the United States cannot maintain its own security and welfare, because, first, America's vital interests are worldwide, embracing both hemispheres and every continent; second, we have community of interest with every nation in the free world; third, interdependence of interests requires a decent respect for the rights and peace of all peoples.

"These principles motivate our actions within the United Nations. There, before all the world, by our loyalty to them, by our practices of them, we strive to set a standard to which all who seek justice and who hunger for peace can rally."

The rallying cause for democracy and freedom—what we love and treasure—derives its meaning from a Judeo-Christian concept of life. The lines of the pre-Christian psalmist are taken up again, "Unless the Lord build the house, they labor in vain that build it." Such is the truth that will save us, and that is why communism will be written off by history as a failure.

The United States of America is a great power. It has been accused of being a capitalistic, materialistic nation. This is a moot question; it depends entirely on how one looks upon the use made of these attributes. We are regarded by many as a luxurious living people. We do enjoy a relatively high standard of living. We have even been accused, by the Communists, of being warmongers. Essentially, I am convinced, we are a God-loving, God-fearing people, who ardently desire, and abidingly seek, peace.

We wish others to share our comfortable, decent standard of living, and our complete freedom. We do not confuse or equate liberty and plenty, but we regard a decent standard of living as an economic guarantee of freedom. We are opposed to a state of economic well-being which also entails slavery. We are prepared to share our freedom and economic way of life with others; we are prepared to make tremendous sacrifices to achieve this; and we are quite prepared to fight, if need be, to preserve our way of life.

I believe the United States has grown to a position of world leadership not merely because of its military and economic might, but rather, because of its moral fiber, because of its spiritual foundations and because of the righteousness of its chartered course and of its destiny. As it increases in leadership and responsibility, it is only natural that it will become more and more vulnerable to criticism and attack.

Individual Americans, including their leaders, are naturally fallible. But, the United States value and contribution to the free world should be evaluated and respected in the light of the total efforts of the Nation, as expressed and exemplified by the official acts of its executive, legislative, and judicial branches. It is my humble opinion that thus far the United States has been faithful to its heritage. I leave its judgment to God and posterity.

Soviet Domination of Estonia

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received by me from Gaston O. Randvee, president of the Connecticut Estonian Society, Inc., and a declaration of that society.

There being no objection, the letter and declaration were ordered to be printed in the RECORD, as follows:

THE CONNECTICUT
ESTONIAN SOCIETY, INC.,
Willimantic, Conn., February 26, 1957.

Senator PRESCOTT BUSH,
Senate Office Building,
Washington, D. C.

DEAR SIR: People of Estonian descent in the State of Connecticut observed the 39th anniversary of their country's independence on February 24 in Willimantic. The gathering was sponsored by the Connecticut Estonian Society. More than 250 attended and accepted a declaration which is to be presented to the United States Senators and Congressmen of Connecticut. This declaration and a booklet entitled "Soviet Crimes Against Estonia" are enclosed herewith.

Very truly yours,

GASTON O. RANDVEE,
President.

DECLARATION

The U. S. S. R. has committed multiple crimes against the rights of the Estonian nation and against liberties, properties, and lives of Estonians. The perpetration of these crimes continues in violation of percepts of international law and solemn commitments of the U. S. S. R.

The same pattern of crimes is being practiced over other Soviet dominated countries, and preparation for new aggressions and other crimes is under way on a worldwide scale. Millions are suffering under Soviet imposed terror and misery. No people in the world have accepted voluntarily the Soviet system. All are longing for the opportunity to overthrow the Communist regime.

Throughout history Estonians have been fighting against the foreign invaders until they regained their independence after the liberation war against the Soviet Union. The same spirit prevails at present. Only overwhelming Soviet forces stationed in Estonia prevent the people from driving out the enemy.

In their tragic situation they are looking for support from the free world. Sporadic declarations about law, liberty, and rights of subjected nations are not sufficient if they are not implemented.

We declare that for achievement of international peace and justice it is necessary that the free world condemn Soviet acts of aggression as international crimes, exercise pressures for the termination of these crimes, and as a first step demand the withdrawal of all Soviet forces and administration from Estonia and the other occupied countries. This should be the primary condition in any dealings with the U. S. S. R.

Rain in Texas—But Water Problems Remain

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. JOHNSON of Texas. Mr. President, many sections of Texas have ex-

perienced substantial rainfall within recent days. The rains have not been general enough or heavy enough to justify a statement that the long, hard drought is broken; but they give a basis for hoping that happy development will come before long.

Mr. President, one happy development in that connection could be the taking of final action on the deficiency appropriation bill which passed this body some time ago. I hope the distinguished President pro tempore will be able to have a conference held on the bill at an early date; and I express the hope that the House will agree to the Senate amendments, particularly the one with reference to the drought area and the feeds which will be used there, so that the provisions of the bill can be made effective during the cruel winter months.

Even when the drought is finally broken, however, the water problems of Texas will remain to be solved. That point is stressed in a very able editorial appearing in the San Antonio News of February 19. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELCOME RAIN WON'T SOLVE CHRONIC WATER PROBLEMS

Welcome indeed are the soil-soaking rains which have fallen over most of the State in recent days, especially those in drought-plagued west and south Texas. Hopeful, too, are increasing signs that this region is heading into a wet-weather cycle which will restore its crippled farm-and-ranch industry.

But even the most optimistic weather prospects must be balanced against other hard and adverse facts. No matter how favorable a long-range turn weather may take, it will require years to rebuild drought-damaged soil, restock ranges, and restore agricultural working capital which the disaster has all but exhausted. Whenever it may break, this worst drought in local history will leave its mark on the Texas economy for years to come.

Furthermore, there is a very real danger that complacency toward this State's acute and chronic water problems may be generated by optimistic weather reports. That would indeed be foolishly shortsighted. Rain must not be allowed to ease the popular demand and political pressure for development of a comprehensive, grand-scale State water-resources program.

Politicians involved in the complex and costly water question are prone to be like the Southern farmer of folklore, who couldn't fix his roof while it was raining and decided it didn't need fixing when the weather was fair. That tendency is so strong that we have heard the half-serious opinion expressed that it might be better for the State not to enjoy a general rain until after the 55th Texas Legislature could complete action on the recommendations of the Texas Water Resources Commission.

The fact is, however, that no amount of rain—at least no amount likely to fall in the Southwestern region—can solve Texas' intensifying water problems. Rain is valuable only to the degree it is captured and utilized. No bounty from the heavens will solve our distribution problem.

Even with normal rainfall or more over a period of years, Texas' demand for water will continue to outrun usable supply, especially for domestic and industrial purposes in the burgeoning metropolitan areas, unless multi-million-dollar conservation plans are carried out.

And finally we must remember: Where drought has struck once it will strike again. The increased prosperity which a wet-weather cycle would generate should be greeted for its aid in financing the programs and projects necessary to sustain our economy through the next dry cycle.

Retirement of Harold Rogers of the Washington Star

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. BIBLE. Mr. President, in yesterday's issue of the Washington Star there appears an article entitled "Harold Rogers, Reporter on Star 35 Years, Retires." I ask unanimous consent that this interesting and informative article be printed in the Appendix of the RECORD. Mr. Rogers has had long and distinguished service as an active newspaperman and is well known for his fairness and ability. I have personally come into contact with him in connection with my duties on the Committee on the District of Columbia, and I have always found him to be eminently fair and accurate.

Along with his many friends, I wish him every happiness in his well-deserved retirement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAROLD ROGERS, REPORTER ON STAR 35 YEARS, RETIRES

Harold B. Rogers, 65, retires today after 35 years as a reporter for the Star.

A perennially youthful man in spirit and appearance, Mr. Rogers has chronicled much of the District's growth to its present bustling state. He handled, at various times, reports out of the Justice and Treasury Departments and covered the planning and construction of the Federal triangle.

In recent years, his byline has headed accounts of proceedings on Capitol Hill, when the subject was the District, from home rule to the budget, from proposed bridges to pleas to move the Capital elsewhere.

VARIED ASSIGNMENTS

Since coming to the Star on March 4, 1922, Mr. Rogers' assignments brought him in contact with every phase of District life. His coverage of the ticklish restraint-of-trade suit against the American Medical Association and the District Medical Society won the respect of the city's physicians.

And the late Andrew Mellon once told Mr. Rogers, in private, he was not aware of rumors that held he was soon to build an art gallery for Washington. Some time after the conversation, plans to build such a gallery were announced.

Mr. Rogers was born in Pendleton, Ind., where he was educated in its public schools. He tasted the flavor of newspaper work during his college days when he edited a magazine at Earlham College, in Richmond, Ind.

He was graduated in 1914 and began work as a reporter for the Anderson (Ind.) Herald. He later attended the Columbia School of Journalism and then worked for a brief time on the Danbury (Conn.) News. After service with the Army during World War I, he joined the Associated Press in Washington, and later, the Star.

HONORED AT DINNER

At a dinner in his honor last night at the National Press Club, Mr. Rogers was described by close friends as a man who somehow has managed to come through 65 years without saying anything unpleasant about anybody or anything—even the weather.

Herbert P. Corn, managing editor of the Star, said Mr. Rogers always has had easy access to almost anyone in public life because of a reputation of never betraying a confidence.

B. M. McKelvey, editor of the Star, suggested the only upsetting quality in the man was that "no one can get mad at him."

For his years ahead, away from budgets and rambling hearings on the Hill, Mr. Rogers was given a hi-fi set.

He and his wife plan to relax at their home, 3620 T Street NW. They have been married 35 years.

They have 2 sons, Thomas, 24, of Salt Lake City, Utah, and Richard, 32, of Norman, Okla., both geologists.

No Boom Lasts Forever

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "No Boom Lasts Forever." The article was written by Henry Hazlitt and was published in Newsweek magazine of March 4, 1957. I wish to emphasize the quotation in the article from a book entitled "Commonsense Economics":

The propensity to work, and not the propensity to spend, is the foundation of national income and wealth.

That not only is commonsense economics, but it is the essence of the system of private enterprise that we inherited from the Jews of Old Testament days. In the Old Testament are many references to property rights and principles of thrift. To those who may question Henry Hazlitt's view that no boom lasts forever and inflation is a swindle, I commend the words of the prophet Nehemiah—Nehemiah 4: 6—who said:

So built we the wall; and all the wall was joined together unto the half thereof: for the people had a mind to work.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO BOOM LASTS FOREVER
(By Henry Hazlitt)

The English-language edition has just appeared here of an important and illuminating book, Commonsense Economics by L. Albert Hahn. In addition to being a brilliant refutation of some of the chief fallacies of Keynesian economics, it includes one of the most persuasive discussions of the business cycle, as well as the shewdest theoretical analysis of price formation on the stock markets, that I have ever read.

But the reader should be warned that the book is not, as its author seems to imagine, a simple introductory text—"a sort of minimum economics for the businessman." For an introductory work Hahn's exposition is much too technical, condensed, and abstract. And though Hahn's style is studded with incisive epigrams, his book is not on the whole easy to read, because his sentences are often involved and Germanic.

Yet readers who come to the book with an adequate theoretical background will value it highly. Its correctives are particularly needed at the present time, when nearly ever government in the world, most notably including our own, is looking at events through Keynes-colored glasses, and assuming that the present inflationary boom can be continued forever, provided only that the Government will continue to spend and spend, inflate and inflate.

PROPENSITY TO WORK

Hahn shows what is wrong with this theory and policy. "The propensity to work," he insists, "and not the propensity to spend, is the foundation of national income and wealth." No inflation, he points out, can be continued forever. The stimulus of any dose of inflation, no matter how large must ultimately exhaust itself.

The Government is then faced with a dilemma—or rather a trilemma. If it tries to deflate the money and credit supply back to where it was, it will bring on price collapse, unemployment, bankruptcies, and perhaps prolonged depression. Even if it decides merely to prevent the inflation from going further, it may find itself in trouble. For during any prolonged inflation more and more people begin to act on the assumption that the inflation will continue. Many security prices and commodity prices, many wage rates, many ambitious building and other capital-investment projects, are based not merely on the existing inflation but on the belief in a still further inflation. When it is clear that an inflation has been stopped, these anticipatory prices fall. Overambitious investment plans are scaled down or abandoned. This creates what European economists call the stabilization crisis.

INFLATION A SWINDLE

If, unwilling to take the risk even of a stabilization crisis, the Government continues to inflate (by cheap-money policies, housing, subsidies, mortgage guaranties, farm subsidies, and even bigger spending), the boom may indeed be kept going longer. But it can be kept going only at an ever-increasing risk, not merely of a greater economic crisis at the end, but of a collapse of the Nation's currency and credit.

And there is no assurance, even so, that continued inflation can keep a boom going up to this point, much less than it can guarantee continued full employment. It can keep prices rising, but it cannot assure continuance of volume prosperity. The supposed magic of inflation, in fact, consists entirely in the maintenance of the money illusion. Once that is seen through by all major groups, the boom collapses. Inflation is essentially a swindle and cannot be openly planned. Creditors increase the interest rates they demand to compensate for the expected further depreciation of the currency. Labor unions demand wage increases that outrun both price and productivity increases. Inflation can work only as long as prices keep ahead of costs and maintain profit margins. The moment costs run ahead of prices, the joys of the spree are over, and only the headache remains.

And the sad part is that the whole binge is seen to have been unnecessary. Reasonably full employment could have been maintained all along, without inflation, by a sufficiently free and fluid adjustment of wage rates to prices and of prices to each other.

The Civil Service and the Spoils System

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, March 1, 1957

Mr. JOHNSTON of South Carolina. Mr. President, in the early days of the first Eisenhower term of office, a secret plan was developed in the White House for the filling of many top civil-service jobs on an outright spoils-system basis. The plan emerged under the label of the Willis order. The effectiveness of this plan was greatly diminished when it was exposed to public view.

Now that a second term is starting, it seems we are again faced with another patronage raid on career jobs, which the administration hopes will meet with greater success than the Willis order in taking care of party loyals. This time the plan is more cleverly designed, but is no less objectionable. It emerged only a few days ago in a letter from the White House over the signature of Philip Young to the heads of all departments and agencies. The plan was exposed for what it is in yesterday's press.

Mr. President, I send to the desk an article from yesterday's Washington Evening Star over the byline of Joseph Young which I wish to have printed in the Appendix of the RECORD. This article explains the plan, and indicates to some extent how it is designed to operate. Let me make it clear here and now that I do not propose to stand idly by and watch the merit system be torn apart by the administration to satisfy its appetite for patronage jobs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOVE ON TO PUT MORE TOP JOBS UNDER POLITICS—WHITE HOUSE ACTS TO TAKE KEY POSTS FROM CIVIL SERVICE

(By Joseph Young)

The White House has asked Government department and agency heads to submit lists of all career executive jobs that they feel should be removed from civil service and placed under the political schedules. The Star learned today.

The White House also asked the agencies to list their needs for new noncareer executive jobs.

Outgoing CSC Chairman Philip Young, who in his capacity as personnel adviser to President Eisenhower signed the letter sent to the various agencies, denies that the intent is to raid top civil service career jobs.

RECOMMENDATIONS CITED

Mr. Young said the move is merely one to implement the recommendation of the Hoover Commission and is so designated. The Hoover group proposed that a clear line of demarcation be drawn between career and political jobs so that career officials can be kept out of political controversies and relieved of the responsibilities for the advocacy or defense of policies and programs.

It also proposed that additional noncareer jobs be provided where needed and that such appointees not be placed in the line of command below career administrations.

The White House letter instructs the agencies to submit, within 90 days, their lists of career jobs that should be included in the noncareer (political) category. Also, the agencies were asked to list any need for new executive jobs to be placed outside of civil service.

This information, together with a policy statement from each agency explaining why their particular situation requires or does not require additional jobs, will be sent to the CSC's executive director. In turn, the information to be sent to a special committee composed of representatives of the President's Personnel Liaison Office in the White House, the Budget Bureau and the CSC.

TO STUDY REQUESTS

The White House letter said this committee would study the requests and then make known to the agencies its decision on the job requests. The letter said that the committee's approval of such a job request list does not constitute requests for additional political schedule C jobs and their final approval would still have to come from the Civil Service Commission.

However, many career officials feel that any such job requests approved by the President's special committee would almost certainly lead to approval by the CSC.

In the letter to the agencies, the White House noted that the heads of Federal agencies recently stated that additional political executives are not needed now because legislation was secured by this administration for additional assistant secretaries in several departments. The letter added:

"Nevertheless, if a current review indicates a further need, the necessary legislative or administrative requests will be initiated at the earliest possible date."

TEXT OF WHITE HOUSE LETTER ON NEW POLITICAL JOBS

Some time ago the President wrote to me regarding the Hoover Commission personnel recommendations which cover relationships between the noncareer political executives and the career administrators in the Federal service. After indicating his general approval of these recommendations, the President stated:

"I request that you develop—a program of action which takes these suggestions into account."

In this connection, President Eisenhower stated:

"One of the most important reports submitted by the Hoover Commission deals with personnel with civil service. * * * The commission points out very effectively the degree to which better direction of the affairs of Government and improvement in the general level of its services to our people depend upon improved Federal personnel management. * * *"

The Commission emphasizes the vital need of strengthening our political executive group and offers many valuable sugestions for meeting this problem. * * * The Commission also emphasizes the need to strengthen the career service. * * * It is increasingly essential to our democratic system that our career personnel be competent, well trained, and nonpartisan.

CRITERIA DEVELOPED

The Commission points to the dangers of permitting career servants in the course of their work to become identified with partisan policies, and thus subject to personal attack. The Commission addressed itself to this difficult and long-standing problem and developed criteria for designating the tasks which are appropriate for political appointees as distinguished from those which should be assigned to career employees.

The Commission points out very properly that its suggested criteria must be applied with some degree of flexibility. I believe

that these criteria are basically sound and that they provide a useful guide for a practical division of responsibility between these two groups of public servants.

Accordingly, it is the desire of the President that positive action be taken to improve personnel management by strengthening both the political executive and career administrator groups in Government.

RECOMMENDATIONS

The first three recommendations of the Hoover Commission on personnel and civil service seek to accomplish this objective. In brief, they provide:

1. (a) That career administrators, as rapidly as possible, be relieved of responsibility for the advocacy or defense of policies and programs, and that they be kept out of political controversies.

1. (b) That, to the extent needed, additional noncareer executives be provided at the departmental level; and that noncareer appointees not be placed in line of command below career administrators.

2. That the President designate the positions which should be in the noncareer category in accordance with the criteria specified in the report, but with some flexibility.

To carry out recommendation No. 1 (a), the heads of departments and independent establishments will prepare and promulgate to their personnel a policy statement which fits their particular situation, but definitely carries out the desires of the President and the Hoover Commission recommendations to keep career administrators out of political controversies.

Two copies of this policy statement should be submitted to the executive director, United States Civil Service Commission, within 30 days from the date of this letter. Practically all agencies agreed to this recommendation at the time comments were submitted to the Bureau of the Budget in reply to Budget Bulletin No. 55–5.

TO REVIEW NEEDS

To implement recommendation No. 1 (b), the heads of departments and independent establishments will review their need for additional noncareer executives. In submitting comments in reply to the Budget Bulletin No. 55–5, the heads of most agencies stated that additional political executives are not needed now because legislation was secured by this administration for additional assistant secretaries in several departments. Nevertheless, if a current review indicates a further need, the necessary legislative or administrative requests will be initiated at the earliest possible date.

To implement recommendation No. 2, the heads of departments and independent establishments will compile a list of the positions in their agency which, in their opinion, should be included in the noncareer executive group, with the following exceptions:

1. The positions filled by Presidential appointment, with or without confirmation by the Senate, need not be listed. However, each agency will report on the above-mentioned list, the total number of such positions, as of December 31, 1956.

TO REPORT TOTAL

2. The positions in the noncareer executive group which are now excepted as schedule C positions need not be listed because information regarding these positions is already available. However, each agency will report on the above-mentioned list, the total number of such positions, as of December 31, 1956. (Note: Do not include the positions of a personal and confidential nature, such as junior personal aides, confidential secretaries, and personal chauffeurs because they are not executives.)

All other positions, which the head of each agency wishes to include in the noncareer executive group, will be placed on this list by (a) title of the position, (b) organizational location, and (c) grade.

For each position on this list, submit, in addition, (a) an organization chart showing the location of the position in the agency, (b) a copy of the official position description, and (c) a statement which sets forth the characteristics and reasons for including the position in the noncareer executive group.

The criteria in paragraphs (b) an (c) of Recommendation No. 2 of the Hoover Commission Report on Personnel and Civil Service, with such flexibility as may be required, shall be used in the preparation of this list.

NINETY-DAY LIMIT SET

Kindly submit the list with accompanying material in quadruplicate within 90 days from the date of this letter to the Executive Director, United States Civil Service Commission.

Upon receipt of these lists, representatives of the President's adviser on personnel management, of the Director of the Bureau of the Budget, and of the Civil Service Commission will review them to assure reasonable compliance with the criteria. The results of this joint review will be communicated to the heads of agencies, following which steps will be taken by the agencies and these representatives to resolve any differences.

The finally approved and authenticated list will be sent to each agency head. These lists do not constitute requests for additional schedule C positions. The practice now followed of securing Civil Service Commission approval of schedule C cases is not changed by these instructions. The above-mentioned review is to assure compliance with criteria and to give one committee the overall picture on the total noncareer executive group.

By direction of the President:

PHILIP YOUNG.

Lower Price Supports

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the editor which recently appeared in the Washington Star. This letter is in reply to a Washington Star editorial of February 11.

The letter deserves the thoughtful attention of every Member of Congress. Its author is Mr. Robert G. Lewis, of the National Farmers Union, Washington, D. C. Mr. Lewis is an outstanding agricultural journalist and an able student of agricultural economics.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LOWER PRICE SUPPORTS

Your editorial of February 11 is very disappointing in a newspaper that usually exhibits outstanding integrity and good sense.

In the first place, you should hold yourselves above indulging in the propagandistic euphemisms which are, perhaps necessarily, the usual tongue of the working politicians. Your editorial notes that the new support price for eight farm commodities has been set below presently prevailing market prices, then remarks approvingly that "it is an opportune moment for the Department of Agriculture to move toward its goal of farm production for consumption instead of storage in Government warehouses." This somewhat embellishes even Secretary Benson's sloganized terminology for his goal as "price supports which will not accumulate surpluses."

By what right do you call the device you are discussing here a price support? If the so-called support is to be collapsed opportunely so as to keep it below the market price, it is a travesty to go on using an honest word in a way that falsely suggests the device under consideration will be or is intended in some way to support the market price.

In the context of Government farm price and income programs, it is not possible to support prices of farm commodities without either accumulating surplus stocks for disposal or use or in Government storage, or otherwise administering artificial scarcity in the market supply thereof. The Eisenhower administration aims in the long run to avoid completely the obligation to do anything to support farm prices; it is repeatedly and explicitly on record to that effect.

The administration would not have needed to lose three times as much on farm price supports in 4 years as previous administrations lost in 20 years if it had, for one thing, enlarged the authority of farmers to regulate their production to cover additional commodities.

Farmers time after time have voted by 9 to 1 margins to concur in such voluntary regulation of their marketings, which is the almost universal practice (by private means) of other industries to maintain their prices at chosen levels. In fact, higher supports would have helped, in conjunction with a more extensive program of adjusting production and marketings, to encourage participation by farmers and so to keep losses down. But instead, the administration made no effort whatsoever to take timely steps to adjust to the supply-demand imbalance as it developed, neither by strengthening the means for controlling production, nor by supporting measures to increase consumption.

The strangest sophistry of all is your contention that those who oppose this reduction in support prices are crying before the farmer is hurt. This is so, you say, because the new support price has been cut below present market prices for the eight commodities concerned.

Well, give the rabbit credit for squealing ahead of the closing jaws of the wolf; for 4 years now, farmers have watched Secretary Benson deflate the price supports for these commodities by 25 percent and more, as market prices sagged lower and lower. Next year, by your reasoning, Mr. Benson should collapse the support even lower to avoid any risk that the downward spiral of farm prices might catch up.

ROBERT G. LEWIS,
National Farmers Union.

WASHINGTON.

The Tungsten-Buying Program

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial entitled "Until Christmas," which appeared in today's Washington Daily News, in which one of the important beneficiaries of the Government's tungsten-buying program calls it a $300 million boondoggle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNTIL CHRISTMAS

One of the important beneficiaries of the Government's tungsten-buying program calls it a $300 million boondoggle.

Philip M. McKenna, president of a company which in the last 4 years has received about $10 million for subsidy-priced tungsten, wrote to 3 Senators that there is 20 years' supply of tungsten—used in making steel—stockpiled now. The Government, he says, should sell instead of buy, to get the tungsten stockpile down to a 5-year supply, "which is plenty for any war emergency."

"Are we determined," he asked, "to spend our country into bankruptcy, as Communists wish?"

The Government subsidy price is $55 a ton. Mr. McKenna says the London market recently was $21.40 and he thinks tungsten may be bought soon for as little as $18.

Pending in Congress are appropriation bills amounting to $70 million, mainly to continue the tungsten subsidy.

The House has turned them down. The Senate wants to spend the money. The argument will be settled in conference and Representative MICHAEL J. KIRWAN, Democrat, of Ohio, heads the House group in the conference.

Representative KIRWAN says he is "ready to sit tight until Christmas" to save the money. We hope he sits until spring, if necessary.

The Rights of the Consumer

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, March 1, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Rights of the Consumer," written by Clarence E. Bonnett, and published in U. S. A., an American magazine of fact and opinion.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RIGHTS OF THE CONSUMER

(By Clarence E. Bonnett, Tulane University School of Business Administration)

In discussion of closed-shop agreements and right-to-work laws, the issues are usually stated in terms of the rights of a worker versus the rights of the union, rarely in terms of the rights of the consumer.

Yet, since all of us are consumers, our rights should be preeminent in all questions involving public policy and laws pertaining thereto. A résumé of these arguments pro and con will serve to show the neglect of the consumer's viewpoint:

ARGUMENT FOR FREEDOM

It is argued that the worker has the right to join or not to join a union without compulsion from any source. He has the right to work for any employer who desires to hire him and on such terms as are mutually satisfactory. He should not be forced to join a union and pay dues to it when he dislikes the union officials and the manner in which they operate the union. He may have worked for that employer for many years; he may be one of a few or many workers who are unwilling to join the union so as to establish the closed shop.

For instance, the oft-cited Danbury Hatters case arose because D. E. Loewe refused to discharge a few of his oldest workers who would not join the hatters' union which then in combination with the hat manufacturers' association had formed an almost complete monopoly of making hats.

More recently, the head of a concern in Cleveland, Ohio, appeased the union by signing a closed-shop agreement when none of his employees otherwise could be induced to join the union. He thus avoided a polecat strike and stranger picketing by professional goons. The noted Shinner case involved a polecat strike which was sustained by our highest Court.

ARGUMENT FOR MONOPOLY

Unionists argue that the closed shop is essential to the security of the union. No worker is entitled to work in a shop and enjoy the higher wages and better conditions obtained by the union without being subject to union discipline and paying the union dues which are necessary for its effective maintenance.

A closed shop, unionists argue, allows union officials to devote their time to giving members the most for their money in handling grievances and the like, and not in carrying on organization campaigns with highly individualistic workers. A closed shop protects the union from undercutting by an unscrupulous employer and from raids by rival unions. No worker has the right to undermine his class. Democracy in industry requires that the majority should determine the conditions for the entire group, for "what's good for America is good for the unions."

EFFECTIVE REBUTTAL

In rebuttal, it is claimed that no worker should be compelled to pay union dues to hold a job, any more than that everybody in a community should support a certain church, chamber of commerce, any other organization which contributes to a community's good.

In America, opinion is strongly against a government-established church with unwilling members. How can we logically favor a government-sponsored union with the closed shop and compulsory membership? Moreover, a union which cannot exist without captive (unwilling) members deserves to fail. A union is not a branch of government empowered to levy taxes upon everyone within a shop or factory not owned by the union.

PREJUDICED REJOINDER

In rejoinder, union officials contend that when industry is dominated by giant corporations, the individual actually has no rights as a worker that the employer needs to respect and, accordingly, the right to be nonunion does not exist.

TRIPLE CONSPIRACY

Even assuming that all workers in an industry wanted the closed shop and that all employers were willing to grant such a shop, should they be allowed to reach a collective agreement for the closed shop?

This is a question where the consumer's rights should have the fullest consideration. That situation lends itself to a collusion for fixing prices—a double or even triple conspiracy against consumers, potential workers, and potential employers, often with the tacit, if not corrupt, sanction of public officials who fail to enforce the law.

However, the law can be evaded or avoided under interpretations of the amended Sherman Antitrust Act by the Supreme Court of the United States, as in the Apex Hosiery case, since the union was exempted from that act in conducting a polecat sitdown strike to unionize Apex, with every indication of trying to stop its cut-throat competition.

For years the union of photoengravers actually fixed the price at which the photoengraver charged his customers. In the Brims case, it was the activities of the material dealers and contractors, reinforced by those of the union, that made the combination an unlawful conspiracy against dealers outside Chicago. Under closed-shop agreements, material dealers and contractors can avoid the law by allowing the union to do all the restraining of trade.

In the clothing industry today, unions police the industry to prevent cut-throat competition, and an examiner of the Federal Trade Commission gave an opinion that the Government had no case against such policing.

Conference proceedings of the coal operators' and miners' union tell a story of how the union was given the closed shop with the checkoff so as to have funds to organize nonunion mines and stop the competition of the West Virginia coal-mine operators.

FOR WHOSE WELFARE?

Today, a special committee of the Senate of the United States is investigating union racketeering, and undoubtedly has the power to look into the operation of the closed shop in fostering a conspiracy against the consumer.

Union grafting on welfare funds probably hurts the union member as much if not more than the consumer; it hurts the consumer if employers charge higher prices to meet the levy on them for the fund. But the charge would probably be the same whether the union officials were honest or corrupt. Nor should Congress overlook the fact that a welfare fund administered in fact by union officials fortified by the closed shop gives them enormous power over union members, and that that power can be exercised to the great detriment of the consumer.

President Eisenhower has urged industrialists and union officials to refrain from increasing prices and wages which are adding to the spiral of inflation. The history of labor-management relations in the United States, however, is replete with instances where the closed-shop unionists and industrialists did not exercise such restraint, and priced themselves out of the market.

Through it all, the consumer was made to pay dearly for such conspiracies. We cannot trust either some industrialists or some unionists, as unrestrained separate groups, to give due consideration to the consumer; how much less can we expect of them when they are in a closed-shop combination. Too often, such a combination desires a strike to force up prices.

It is high time to consider the consumer before we have a spontaneous or planned buyers' strike with its inevitable depression and deflation.

Joyce Kilmer's Son Pays Tribute to St. David

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. O'HARA of Illinois. Mr. Speaker, tomorrow is St. David's Day, and in honor of this day I am extending my remarks to include an article written at my request by Kenton Kilmer, of the History and Government Division of the Library of Congress. Mr. Kilmer is the son of the late Joyce Kilmer, the poet who was killed in action in World War I, and in his tribute to the patron saint of Wales will be detected the touch of poetic

beauty that made the poems of his celebrated father an imperishable part of American literature.

The article follows:

ST. DAVID'S DAY, MARCH 1, 1957

March 1 is a day that never passes unnoticed by any man with even a drop of Welsh blood. On this day we honor St. David, archbishop of Caerleon, and patron saint of Wales—and in honoring this great saint we join, all over the world, in loving tribute to the land of strength and beauty, of rugged coasts and craggy mountains, of deep green valleys and steep hillside pastures. Out of the depth and strength of the heart of Wales come the poetry and song, the wisdom and stubborn courage, that are the Welsh contribution to America. Today we give thanks to Wales for these qualities, and to St. David, the patron saint of Wales, and to God, whom St. David served with Welsh determination and single-mindedness throughout his long and fruitful life.

Giraldus Cambrensis, the great Welsh historian to whom we owe much of our knowledge of early Britain, writing almost 700 years after St. David's time, splendidly sums up what the life of the saint meant to his contemporaries and to those who came after him. Giraldus calls St. David "a mirror and pattern to all, instructing both by word and example, excellent in his preaching, but still more so in his works. He was," Giraldus continues, "a doctrine to all, a guide to the religious, a life to the poor, a support to orphans, a protection to widows, a father to the fatherless, a rule to monks, and a model to teachers; becoming all to all, that so he might gain all to God."

The story of St. David, as we read it today, is cluttered with the legendary accretions of the centuries. A pedigree places the saint as 18th in lineal descent from the Virgin Mary herself. A pious tale accounts for the warmth and health-giving properties of the hot chalybeate springs at the town of Bath, in Somerset, by recounting how an angel gave the springs these properties to help the saint to rest and relax after a hard preaching tour. Whenever St. David preached, a white dove perched on his shoulder, and the ground under his feet humped itself up into a hill so that he could be the more easily seen and heard.

These are foolish stories, such as accumulate around the reputation of a great man, attracted by the dynamism of his character as dust flies to an electrically charged object. Brush them off, and even after 15 centuries the character of the historical St. David shines forth clearly—a man of force and wisdom and kindness, builder of churches, founder of monasteries and convents, organizer of the church in Wales, a man loved and admired by his contemporaries and successors. He was a fighter for the faith, and it was not entirely an error that a later age, the age of chivalry, made of him a hero of knightly romance, one of the seven champions of Christendom. In sober fact, he wore no armor and swung no sword, except that, following St. Paul's advice, he put on the whole armor of God, and took up the shield of faith, and the helmet of salvation, and the sword of the spirit, which is the word of God. In this warfare St. David is still our leader, and his influence, through the Welsh, is strong for good in today's America.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 161. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

The Progressive Spirit in an Age of Conformity—Address by Senator Douglas

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Saturday, March 2, 1957

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the distinguished senior Senator from Illinois [Mr. DOUGLAS] on Thursday night at the National Roosevelt Day dinner of Americans for Democratic Action, at the Hotel Commodore, in New York City. Our colleague spoke on the Progressive Spirit in an Age of Conformity. I have found his address to be an unusually clear statement of the liberal view, and I think his remarks will be of interest to all who read the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PROGRESSIVE SPIRIT IN AN AGE OF CONFORMITY

(By Senator PAUL H. DOUGLAS, before the Roosevelt Day dinner, New York, A. D. A., Hotel Commodore, February 28, 1957)

I

We are all familiar with the two opposing qualities in a society, namely the progressive and the conforming. The progressives are the innovators—those who seek for new and better ways of doing things and whose aim is a more abundant life for all. The conformists are the conservatives who seek to guard the established order and who resist innovation.

History is in large part the struggle between these two groups as they compete for the support of the intermediate group or those who are neither completely conservative nor completely progressive, and whose judgment determines the victory.

Both groups, of course, are necessary for a sound society. But there is also little doubt that we advance through the efforts of the progressives. Without new ideas, society would become stagnant and changeless. A half century ago, a little known anthropologist, William Jones, pointed out that not only the development but even the survival of a society depended upon its ability to meet the requirements of a surrounding world and an environment which itself was not static, but always changing.

Recently, Arnold Toynbee has taken up the same theme and finds in stimulus an effective response the key to progress.

As to what makes some men and women progressives, or as we loosely say, liberals, we have a wide variety of explanations. Some, like the inimitable W. S. Gilbert, make it a matter of pure heredity or the arrangement of the genes as he did in these lines:

"I often think it's comical
That Nature always does contrive
That every boy and every gal
That's born into the world alive
Is either a little Liberal
Or else a little Conservative."

The physiologist accounts for the differences by the normal transition from conforming childhood through rebellious adolescence to settled middle age as the result of changes in metabolism and of nerve response. The psychiatrist will explain that each group is reacting against the opposites in their respective parents, conformists rebelling against their progressive parents and progressives in turn revolting against conservative fathers and authoritarians. Libertarians like John Stuart Mill are in this view the result of the authoritarian practices of their parents and authoritarians like Hitler the product of undisciplined fathers.

The economic interpreters of history, however, turn from forces inside to those outside of man. Some say that progress comes as the external conditions of life become less harsh and men have the leisure for inventions. Others, like Hugh Cecil, say that conservatism is the child of enjoyment and that a contented people will always like the familiar and distrust the unknown and hence be conservative and conforming. The business-cycle interpreters follow this lead. Conservatism and conformity, they declare, are the characteristics of prosperity. When all is apparently going well, when incomes are rising and employment relatively full, the mass of people are complacent with things as they are. It is only when a severe recession or a depression sets in that society in desperation is willing to innovate.

All of these theories are partially true. But they leave the answer as to whether one is a conformist or a progressive to forces outside human choice and to be determined for us by fatalistic forces which the individual cannot control.

Man, however, is not a mere puppet. He can make rational choices and that is the justification for adult education, journals of opinion, political parties and such meetings as that which we are having tonight.

I take it that there is little doubt as to which side we of the A. D. A. are on and under which banner we want to range ourselves. It is the standard of the progressives. We recognize that progress, as I have said, comes from the innovators. If mankind had always held to the existing and the familiar and had never dared to launch into the unknown, we would still be naked savages, huddled in caves and living off berries and small game. The whole complex which we call civilization would not exist.

This is true even though the conservatives also perform a valuable function. For they furnish the inertia against which a good idea must test itself. They help to save society from too many mistakes. They provide the stability which prevents the rate of change from being so catastrophically fast as to imperil both the mental health of individuals and the cohesion of society.

And yet when all is said and done, there is seldom any real danger that there will be too few conservatives. Man is indeed so conditioned by the familiar that the danger is all the other way. It is the ranks of the progressives which tend at best to be thin and against whom the heavy pressure of the here and now operates with powerful effect.

If we could, we would like to be the Akhenatons, the Michelangelos, the Beethovens, the Jeffersons, the Darwins, and the Einsteins. Instinctively, we recognize these as beings superior to the uniformity of the traditionalists and conformists.

Yet such innovators as these possess qualities with which few of us are endowed. Are we then to be condemned to mere passivity? By no means. For if we cannot be pathfinders ourselves, we can nevertheless admire those who are and encourage them on their way. Moreover, we can at least be part of the wagon train of humanity as it moves westward toward the horizon into new country and can have the fellowship of shared adventure.

We are all of course aware of the qualifications which we should make. Innovation should not be blind or haphazard. If it is, the results are likely to be disastrous. Innovation should deal with real problems and the proposed answers should be based on accumulated knowledge and experience. Columbus was not a reckless adventurer but instead based his venture upon a variety of observations and much evidence. But probably the innovator or the progressive, like Columbus, does need to be sustained by an inner faith.

In this connection it is well to remember Santayana's sonnet:

"Columbus found a world and had no chart,
Save that which faith deciphered in the skies.
To trust the soul's invincible surmise
Was all his science and his only art."

The innovator must believe that at its heart the universe is friendly and the unknown is as an exciting challenge and not a fearsome adversary. He must believe that we do not know all the secrets of life and that there is much more of truth yet to be discovered and revealed. With this realization go modesty and an absence of cocksureness.

II

It is sometimes said that America has been progressive in the applied arts but conservative in politics and human affairs. The first is true as our unparalleled material progress abundantly demonstrates. But the second is at best only partially true.

The founding of our country was in itself an innovation, so great a one that John Winthrop, the first governor of the Massachusetts Bay Colony wrote in his diary (as he sailed toward the New World), "We are as a city on a hill. The eyes of all men are upon us." And the new Republic which was established after 160 years of experiment, was a noble venture into the future. Inspired no doubt by the great English and French writers of the period, it was nevertheless, the first time that satesmen declared that government was designed to promote the innate rights of men to "life, liberty, and the pursuit of happiness," and that its just powers came from the people. This was not merely the pale faith of summer soldiers and of sunshire patriots—it was backed up with blood, in the snow of Valley Forge and the stifling heat of Cowpens. From out of the success of the American Revolution came the great extension over the Western World not merely of political but also of social democracy. Jefferson and his great collaborator, Madison, and sturdy George Mason, together with a host of others helped to release upon the world the liberating influences of freedom.

And this yeast still moves upon the waters and in the spirit of man in far off Africa and Asia.

Three-quarters of a century later the North and the West took up arms not merely to preserve the American Union as a physical entity but also to free the slaves and permit the democratic experiment to go on. In the bloodiest war of modern times, this faith was then affirmed.

There followed 40 years of reaction in which the American spirit wandered through the deserts of materialistic conformity. But the seeds sown during this period by the populists and the muckrakers began to take root and to flower in the progressive movement from 1910 to 1916. Reform was in the air—the legal protection of women and children, the development of popular government and more equitable taxation and a myriad of other causes were being vigorously advocated. Under a liberal President, beginnings were made on many of these innovations.

But then came the war, which absorbed all the energies of the Nation. And after it, as after the Civil War, came reaction and materialism. The progressive spirit seemed to be dead and such revolt as there was, was channeled against the prohibitory amendment and along the supposed paths of Sigmund Freud. Articulate America was too much absorbed in getting rich via the stock market to give much thought to the future of our country.

With the economic collapse came an awakening. Under the magnetic and inspired leadership of Franklin D. Roosevelt a host of measures were passed in the 5 years between 1933 and 1938.

Since then in internal affairs a legislative stalemate has set in. A bipartisan coalition of conservative Democrats and Republicans has dominated Congress. Moreover, just as the new Toryism in Great Britain has ceased its open opposition to social reform and no longer seeks to repeal the welfare measures of the past, so has the self-styled modern Republicanism. Quiet alministrative sabotage is of course practiced but no open frontal attack is being made. The progressive forces in politics find themselves therefore forced to engage in a whole series of defensive actions on apparently minor issues which because they are complicated do not stir the blood or awaken the support of the people.

We are indeed in a period like the late twenties. The enthusiasm of an earlier period has subsided, people are much better off, the stock market has been booming, there is a rush to the suburbs and to the conforming type of life which the suburbs generally encourage, there is a big demand for tranquilizers so that we can be drugged into a happy state of euphoria, the daily and weekly press of the country is steadily becoming more and more the organ of big business and the purveyor of mental-happiness pills. Big corporations are more and more dominating the scene and imposing their own standards of behavior and opinion not only upon their executives, both junior and senior, but also upon all who aspire to admission into those classes.

In politics there has been such a rush toward the middle of the road that a terrific traffic jam has been created there. The distinguishing mark of a good Senator is said to be "accommodation" and a willingness to bow to the will of the inner club. All this has led to what an observer has termed "the bland leading the bland."

Moreover, with many of the old immediate goals apparently obtained conformists are proclaiming and erstwhile progressives are questioning whether progressivism has not shot its bolt. Is there need, people ask, for any more crusades? Will not our great industrial machine pour out increasing riches for us all without effort or pain—and are we not moving into the best of all possible worlds where we can abandon public effort for private enjoyment?

This is a good question but I hope you will forgive me if I do not give a popular answer. The men and women of my generation have heard all this before. For this is precisely what was being proclaimed and believed in the 1920's and was proved to be terribly false in a few short years.

While I am no such prophet of gloom and doom as Herbert Hoover and George Humphrey, I think I know enough both of history and of the present to believe that no social order, including our own, is perfect, that great improvements can and should be made, and that change and recurring crises, economic, social and military, sweep upon the world and that there are really no happy islands of secure contentment left. The question is whether we progressives should try to perfect our civilization and to prepare for these crises or join the lotus-eating conformists in a thoughtless acceptance of the carefully cultivated mood of the times. There can, I think, be only one answer which forward-minded men and women can make. And that is forward.

III

But in what direction shall we move? Here I would like to suggest the following lines for needed action which certainly should call for our best thought and most courageous action:

1. The first is the necessary job of guarding the social gains we now have from erosion and making further improvements in them. Here I would emphasize the protection of consumers from the exactions of the big oil and gas combines, the protection of trade and service employees, far better care for our migratory farm laborers and the unfortunate children who follow in their wake, the development of our water resources and of atomic energy, the reform of our taxing system, the adequate development of education to give all a decent chance and to enable the gifted to make especial progress; a relentless war upon the slums and the provision of decent housing for those in the lower and middle income groups.

2. The improvement of race relations and the eradication of racial and religious discrimination as rapidly as possible. Here is something that men and women can work for with all their heart and soul. Legislation in this direction is important but even more important is the development and demonstration of this spirit in the lives of individuals and groups. The Boy Scout slogan of doing a good deed every day is a worthy one. But if each of us would do some concrete act of friendliness toward men and women of other groups only every week, it would sweeten the whole spirit of American life. And from it would flow greater fellowship and friendship within our society and strengthen collective efforts to remove present abuses, as by civil rights legislation that is so long overdue.

3. I would further urge that a concentration of business and power is neither desirable nor inevitable and that what we should seek instead is a broader distribution of property and of power to the end that all may have enough to be secure but not so much as to menace others.

This is the underlying economic and social problem of our times. If the present trend toward bigness continues, then society will become divided between a relatively small group of managers and large groups of petty officials and workers. I am convinced that the economic efficiency of the modern business Goliaths is probably exaggerated and that their advantages are primarily financial and marketing. Their increase threatens indeed to replace democracy with a plutocracy administered by a managerial class. Moreover, as White has pointed out, the type of organization man which develops under this system is not the self-reliant American whom we prize.

European Socialists are content to let these giants become ever larger, believing that ultimately the state will then collectivize them. But even if this did occur, it would not be desirable. For power and control would be within even fewer hands. If the state controls the vast proportion of economic activity and a political party controls the state, how much freedom would there be for opponents? Few political leaders are deeply tolerant by nature. They have to be taught tolerance by the balance of political and economic power within the state. Let that balance become overwhelming or put almost complete power in their hands, then they will almost certainly use that power to coerce opposition. Russia should have taught us the lesson that complete collectivism is ultimately destructive of freedom.

The founders of American progressivism, Jefferson, Jackson, and Lincoln in former times, and La Follette, Norris, and Brandeis in our generation had a sounder vision. They wanted to distribute power more broadly so that initiative would be stimulated and so that men could be more free.

I submit that even in the financial canyons of New York, the great steel mills of Pittsburgh and Gary and the automobile factories of Detroit, this philosophy is still true. We should try to protect small and moderate-size business and the family farm. We should try to democratize the great corporations by developing more stockholders like Lewis Gilbert and promoting minority representation upon boards of directors, as we practice in my home State of Illinois.

At the same time we should seek the further democratization of the big unions which big industry has called into being. In some fields government has a distinct function to perform but our overall goal, I submit, should be distributivism rather than collectivism.

4. Finally, I should like to suggest that our frontiers have long since passed the Pacific and are now worldwide. Although we have only 6 percent of the world's population, we are the most powerful nation on the globe. Are we to go the way of Babylon and Egypt, Greece, and Rome, and the other great empires which have risen and fallen? If we are as selfish as they were, we will. But if we can devote a fraction of our energies into making this a better world for the teeming populations of the earth, we may not only survive but lead the way to a new development of mankind. And it was for such a development that our Founding Fathers believed they had pointed the way. They believed that their principles had universal and not merely national significance. With sober effort on our part we can help to realize their wider aim.

Summary of the Kelley Bill and Other Proposed School Legislation

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, March 2, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary which Mrs. Neuberger and I have prepared for our monthly newsletter for February 1957, describing the major proposals with reference to Federal aid to education now before Congress. These proposals are found in the so-called Kelley bill, which I am sponsoring in the Senate, and in the administration's program in this field.

It seems to me that the analysis which we have prepared, with the able assistance of school organizations such as the

National Education Association and others, demonstrates quite conclusively that the Kelley bill is not only far more adequate, but is also more fair and equitable to States which have made the greatest individual effort in proportion to their income, in order to provide adequate education for their children.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

THE NO. 1 CHALLENGE TO THE 85TH CONGRESS

The annual rate of Federal spending for armaments has been running about $40 billion. Yet we have been unable to pass legislation to help pay for building even 200,000 new classrooms a year, the bare minimum needed to provide adequate facilities for the training of the next generation of citizens. Since schools are the lanterns which light the way to progress and understanding, passage of a Federal school-aid bill is the No. 1 challenge to this session of Congress.

Congressional action on school aid centers on two different proposals, one offered by the Eisenhower administration and another developed under the leadership of Representative AUGUSTINE B. KELLEY, of Pennsylvania. I am sponsoring in the Senate a bill identical to the Kelley bill, so that the Senate can work on the proposed legislation simultaneously with its progress in the House.

Differences in the two bills are particularly important to Oregon taxpayers, and parents of Oregon schoolchildren should know of the contrasting provisions. In the first place, the State of Oregon would receive 86 percent more annually in Federal school construction aid through the Kelley bill than by terms of the Eisenhower proposal. The administration plan would allocate $325 million a year for each of the next 4 years—a grand total of $1,300,000,000—under a formula predicated largely on need. The Kelley bill would allocate $600 million a year for each of the next 5 years—a total of $3 billion—under a formula mainly based on school population.

Thus, under the Eisenhower program Oregon would receive $3,099,000 annually and Oregon would be required to contribute $3,368,000 annually in matching funds in order to qualify for the Federal grant. On the other hand, Oregon would receive $5,839,000 annually under the Kelley bill and would be required to contribute only the identical sum in matching funds.

The Kelley bill is far better for Oregon and far more fair to Oregon. Oregon is a State where the people have made a heroic and sacrificial effort to provide good schools and sound education. Our State has high local property taxes. Many farmers and homeowners can barely finance these payments. Furthermore, Oregon today carries the heaviest State income tax in the Nation. The bulk of the tax burden goes to finance education.

Yet Oregon, which pays these burdensome taxes, has not kept pace with national prosperity during recent years. In 1952 per capita incomes in Oregon were running at a rate of $97 above the national average; today they are $10 below the national average. Oregon is not a wealthy State; yet the administration proposal calls for Oregon to put up more in matching funds than it would receive in Federal aid.

The formula for distribution of funds under the administration plan would reward the South, where school financial funds have been dissipated through the dual system of separate schools for white and colored students. The Eisenhower formula would send south of the Mason and Dixon's line a disproportionate amount of Federal aid funds. For example, Oregon would receive $8.63 per census child under the administration plan. But Arkansas and South Carolina each would receive $13.51 per child, and Mississippi would receive $12.95.

The basic question is not State wealth but schoolchildren. The problem is to equalize availability of Federal funds with the stresses of school population in the various States. This can best be achieved through the Federal taxing power. There already is a great amount of equalization in the bill which Congressman KELLEY and I are sponsoring. For example, New York State pays 19 percent of Federal taxes but has only 10 percent of school population. These figures show the Kelley bill formula is far better than the proposal that each State be permitted to retain for school-building purposes a percentage of Federal income taxes collected with its boundaries.

Our legislation assures that the country's wealthiest States contribute far more to the Federal-aid fund than they receive in aid. The administration plan goes far beyond this, awarding the South a disproportionate segment of benefits. For instance, oil-rich Texas, already a beneficiary of tideland oil revenues, would get more money than any other State if the Eisenhower school bill is enacted.

In 1952 the Republican platform renounced Federal aid. Now the President himself has endorsed such support. Although his program is not yet adequate, it represents an encouraging reversal. Perhaps this change in viewpoint will help to pass a Federal-aid program; I hope it will be based on the Kelley bill.

State of the Nations

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Saturday, March 2, 1957

Mr. MANSFIELD. Mr. President, under the heading "State of the Nations" there is an article in the Christian Science Monitor, by Joseph C. Harsch, which relates to the remarkable comeback and recovery of the Republic of Austria in the period since the Second World War. As Senators well know, Austria was both a liberated and an occupied country. For a long time, her territory was occupied by armed forces of four great powers, France, the United States, Great Britain, and Russia. At the present time she is, of course, a free nation, projecting like a wedge into the area known as the Iron Curtain area.

Mr. Harsch has done a remarkable job in writing on the progress which Austria is achieving and what she can contribute in the way of a better understanding of things European at this time. Austria, her people, and her government, are to be commended for the fine work which has been done in that Republic since 1945.

I know that we wish the Austrian Republic and its courageous people well in the years ahead. They have been able to do a great deal with very little in the way of natural resources, but they have accomplished much which could serve as an example to other countries in Western Europe.

Mr. President, I ask unanimous consent that the article entitled "State of the Nations," relating to the Austrian Republic, written by Joseph C. Harsch, and published in the Christian Science Monitor of February 21, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE OF THE NATIONS

(By Joseph C. Harsch)

WASHINGTON.—There is a tiny factory near Innsbruck, Austria, which turns out toys and trinkets. Some 95 percent of its product goes to the United States in return for hard dollars.

Last summer brought a wonderful flood of more hard dollars into Austria from tourists who flocked there to see the opera, to enjoy the scenery, to take advantage of good life in a country which has escaped from the power struggle between East and West without falling into the other pitfall of inflation.

Austria is something special and unusual in this world. It has cut loose on a road of its own. Its industrialists and diplomats are studying the past and present of Switzerland with special care as providing the best guidepost to the course they have set for themselves—a course of attempted neutrality.

But there is more to it than that. Vienna was, until 1918, the capital of one of the world's great empires. That empire was torn apart by the Versailles settlement. From 1918 to 1945 Austria lived on the mental assumption that it was hobbled and able to live only on the subsidy of some great state. It accepted the anschluss with Germany partly because most of its citizens were persuaded that it could not survive by itself.

The greatest single achievement of postwar Austria is that it has worked itself out of its mental assumption that it can exist only as a parasite dependency of some great power. It has lived on its own going on 2 years now. During that period its economy has gained steadily in health and soundness. The old assumption of inevitable dependency has been transformed into a new assumption of solvency and the possibility of self-reliance.

It is solvent today. It is sounder physically and mentally than at any time since 1914. It is small, but it is a going concern, piling up a rising treasury trove of trade and credit. Its terrible internal hatreds between the Socialists of the cities and the peasants of the country have been dissolved in the common experience of achieving the present recovery. Perhaps Austria is a tiny glimpse into the future for other and bigger countries.

Austria has successfully bridged the gap between the devastation of the last war, followed by the experience of multiple occupation by eastern and western armies, and a new future which gives every evidence of being sound, sane, and prosperous.

For other countries the future can hardly yet be discerned. If I read the signs of the times correctly, we are living in one of those phases of history in which the old, familiar, established pattern of human relations, both between individuals, and between governments, is almost everywhere in flux.

The postwar settlement is breaking down on both sides of the Iron Curtain. The political concepts not just of a generation but of a century are lying all around us like cast-off clothing. The old battle cries have lost their vibrancy and the old slogans their meaning. Washington is as hard put to prop up the structure of the NATO alliance as Moscow is to make the Warsaw Pact look like anything but a Potemkin village. We have seen Washington vote with Moscow in the United Nations against London and Paris, and we have seen the Roman Catholic Church in Poland support one faction of the Communist Party against the other.

We have lived through a long period of history in which the issues between men and nations appeared to be black and white. We are moving into a phase of history dominated by many shades of many colors. Washintgon's propaganda establishment has attempted to define the economic system prevailing in the United States as "people's capitalism"—a phrase no more accurately descriptive of the mixed system now prevailing than the old word "capitalism."

A new Government in Britain is moving boldly, if dangerously, against the system of applied socialism generally known as the welfare state.

There are unmistakable signs of private capital formation in the Soviet Union.

The times are out of joint. And yet are they? Is is bad that it is difficult these days to find two Communists who can define communism in the same way, or capitalists who can agree on the meaning of capitalism, or any diplomat who really thinks he can foresee the shapes of the future relations of the nations? Is Britain going to find a new expanding horizon for itself in the European common market to release its people from their present sense of a contracting horizon of opportunity? Is Germany at long last to become a constructive member of the society of nations? What new political doctrine is going to appear to revive a sense of purpose and yearning in the minds of the young?

The way ahead is full of questions to which no one knows the certain answers. The best thing about these times is that dogmatism is giving place to questioning. And, at least in tiny Austria, one people has broken through into what gives every prospect of being a new form of social, economic, and political stability. It isn't perfect. But it's better than anything Austria has known for half a century.

Awards to E. B. MacNaughton, Monroe M. Sweetland and Charles A. Sprague

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, March 2, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Oregonian of Portland, of February 25, 1957, describing an award to three outstanding citizens of my State in recognition of their work in bringing about some measure of justice for our Japanese-American citizens who were relocated during the tense and trying hours of World War II.

These three Oregon residents E. B. MacNaughton, a banker who is also chairman of the American Civil Liberties Union; State Senator Monroe M. Sweetland, who is a weekly newspaper publisher in Milwaukee, and former Gov. Charles A. Sprague, publisher of a daily newspaper in Salem, the Statesman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEAGUE GIVES AWARDS TO THREE

Three Oregonians received certificates of appreciation Sunday from the Japanese American Citizens league in recognition of their support during the resettlement era of World War II.

The certificates were presented to E. B. MacNaughton, chairman of the board of the First National Bank of Portland, and State Senator Monroe Sweetland. Also honored was Charles Sprague, ex-governor, and Salem editor, who was unable to attend the Portland dinner.

DIRECTOR GIVES AWARDS

The certificates were presented by Maseo Satow, national director of the league, who described the three Oregonians as "friends who retained their faith in us, stood by us and were the kind of Americans we ourselves would like to be."

He declared that Japanese Americans are becoming more and more a part of the American scene by entering into community efforts and urged that league members prove by their efforts that they are worthy of being called Americans.

He condemned some recent television shows, which he said, were reviving films made in the wartime hysteria, based on lies.

SUBSTANTIAL ADVANCES MADE

Satow continued: "Before World War II we thought we were good citizens, but when war came we found few people knew we were good Americans. We were taken at face value; we looked like Japanese, therefore we must be Japanese."

But he said great advances have been made since the war. "Only in a democracy is it possible to make the advances we have made," he declared.

Entertainment was provided by the Japanese Odori dances of Mrs. George Gokami. New officers of the Portland and of the Gresham-Troutdale chapters of the league were installed.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficien to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

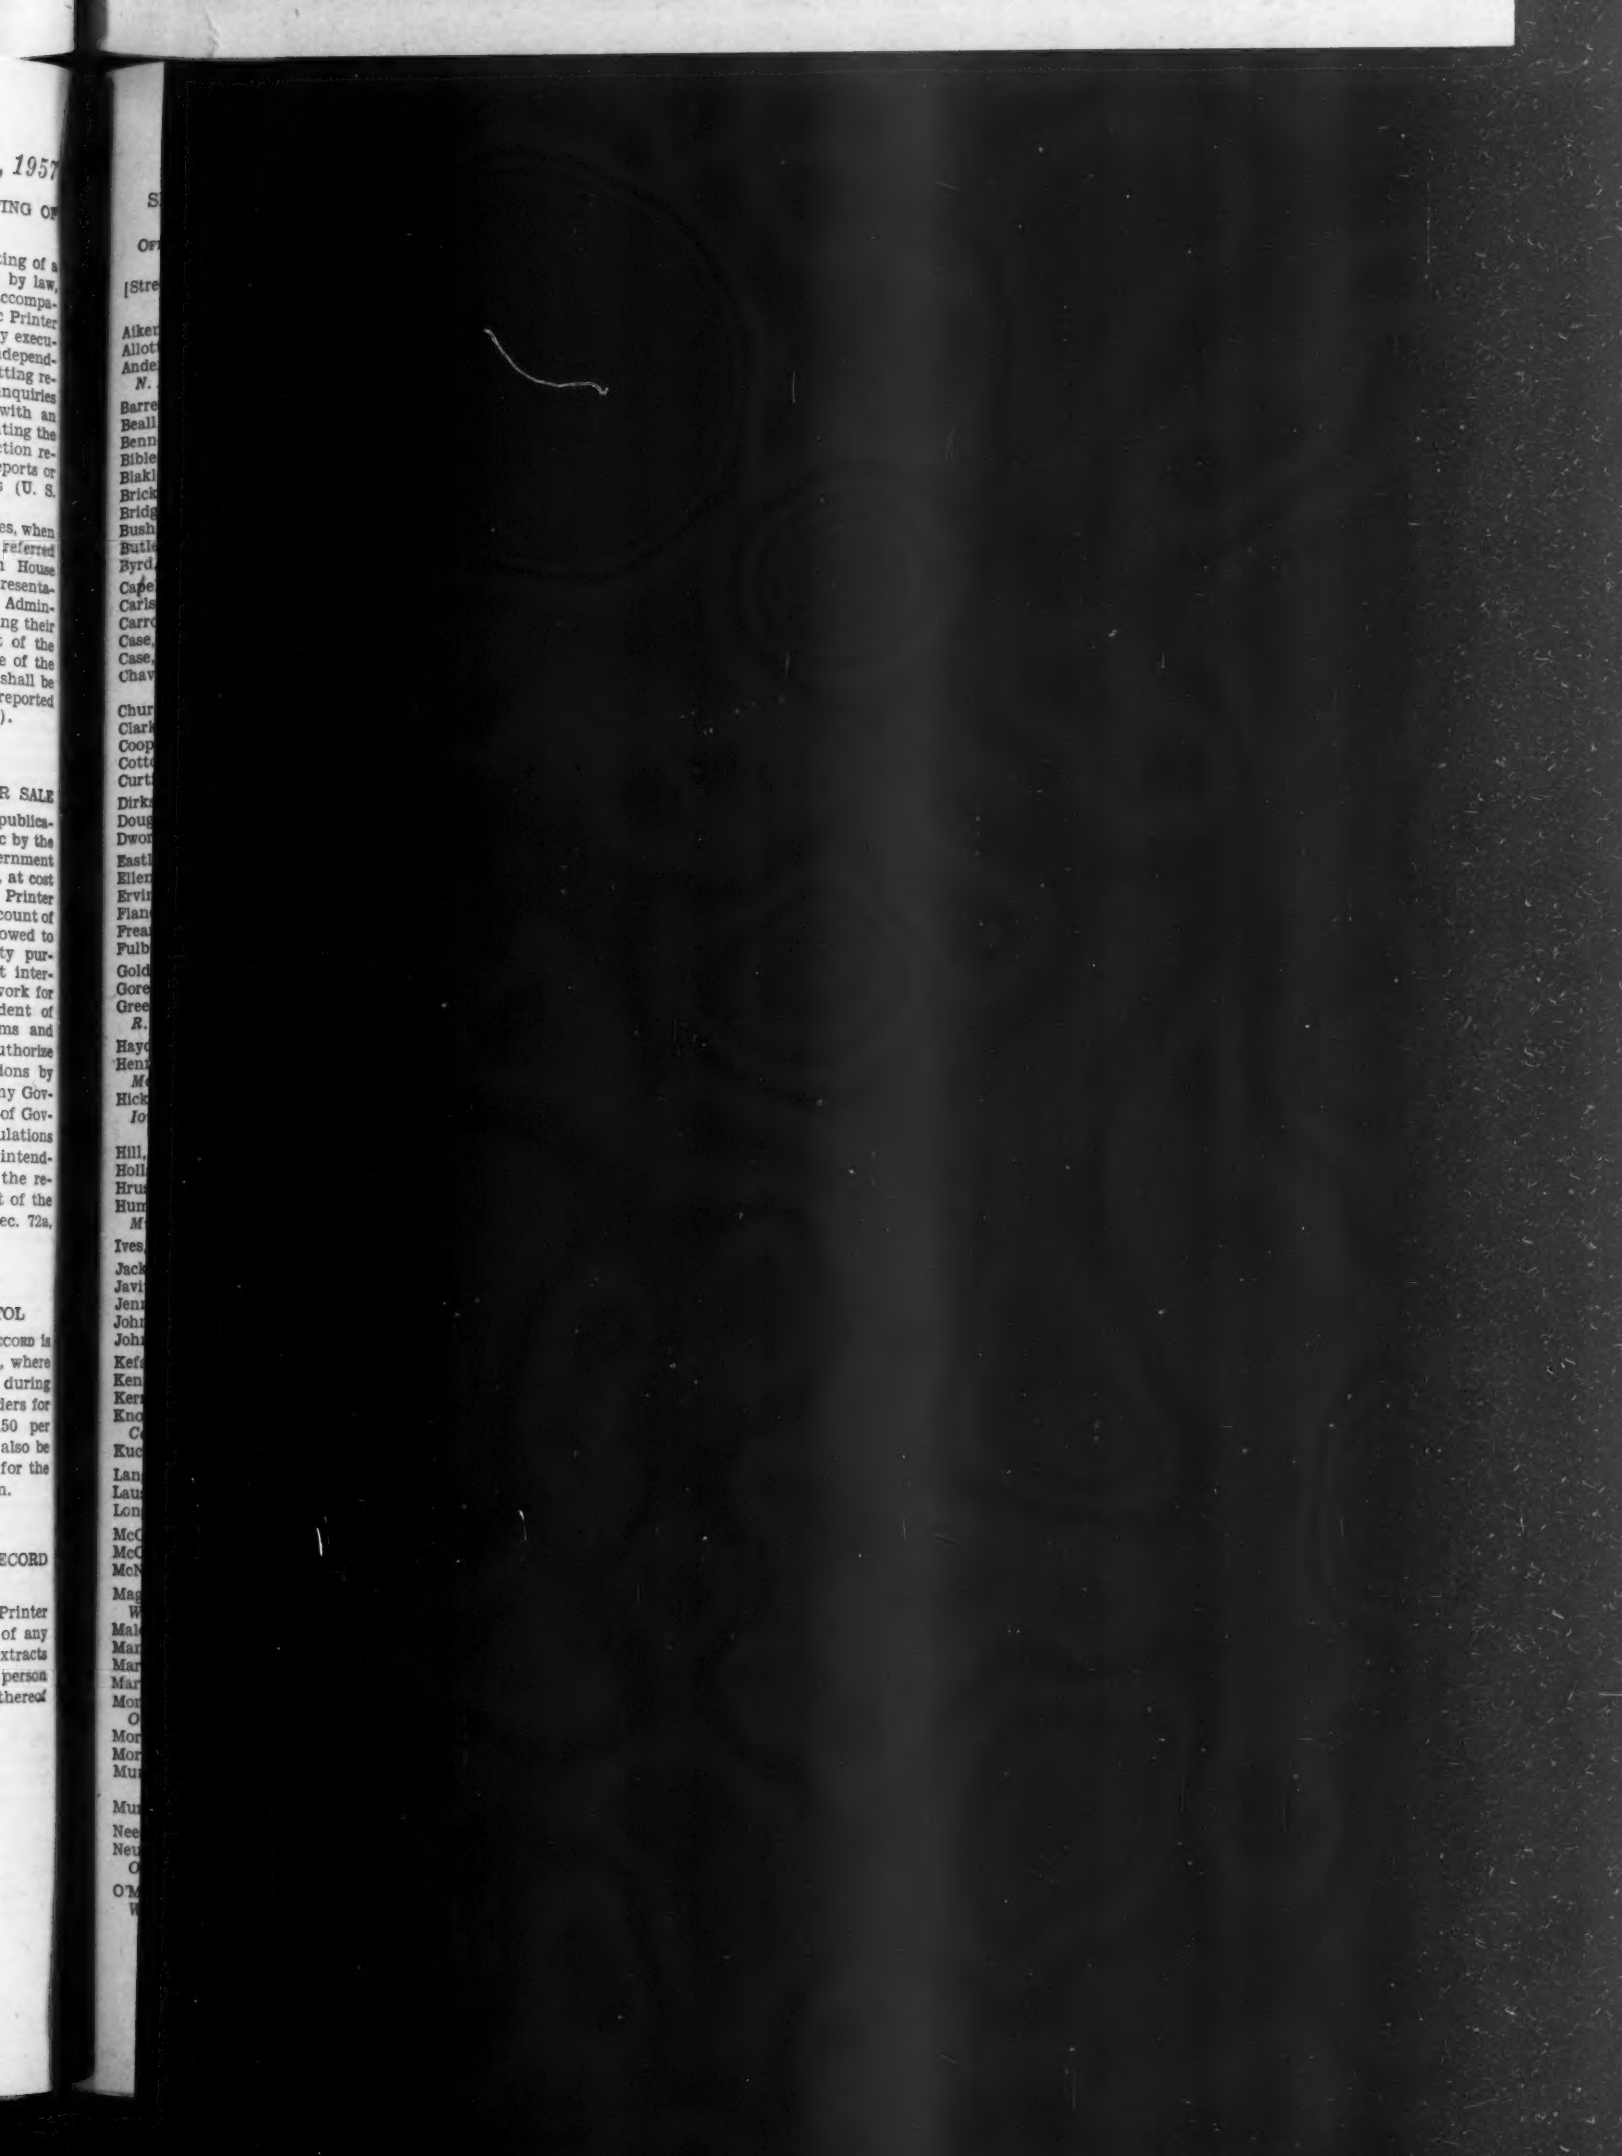
Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).



Appendix

The Federal Highway Program

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delievered before the National Crushed Limestone Institute, in which I discussed the Federal highway program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BEFORE THE NATIONAL CRUSHED LIMESTONE INSTITUTE

It would be difficult, indeed, to overestimate the value of the highway program that is just now getting underway.

Transportation, communication, is vital to a great nation. It is vital to the industry of a nation, to the health, to the happiness, and to the security of the nation.

The highway program, the bill of which I was coauthor, cannot be claimed by anyone exclusively from the standpoint of credit. I doubt if the program would have been enacted today if President Eisenhower had not suggested it, if General Clay and his committee had not made a study and a report and a recommendation. Then it came to the Congress and, as Mr. Patton suggested, it was necessary for someone to take the responsibility of pushing it to final enactment, pushing to final enactment a bill that would be acceptable to the Congress, to the administration, and to the country.

That was not an easy task. We found the plan which General Clay and President Eisenhower recommended as unacceptable. But finding unacceptable the details of a plan to answer a great national need was not sufficient.

It was incumbent upon those of us who found the details of that particular plan unacceptable to propose a constructive substitute which, in our opinion, would be better.

That we did and that was my particular responsibility.

The battle was hard fought. In 1955, the bill passed the Senate but was killed in the House.

In 1956, we went all the way, passing it in both Houses and President Eisenhower signed it into law.

You can imagine that I suffered a little chagrin when one night during the campaign I was watching television, seeing a very interesting performer perform, and heard President Eisenhower claim credit for my bill.

I made some jesting remark about this to the subcommittee which had worked on the bill. Thereupon, Senator HRUSKA inquired, "Who signed it into law?"

I had no answer.

So the program is partly that of President Eisenhower. It is part that of Congress; it is part of the Bureau of Roads, of the State highway commissioners; many people had a part in bringing to fruition this dream, long held.

Now, there is another job, again a job requiring teamwork, again a job, a task in which many people can play a part. That is, the conversion of the dream, of the plan of the bill, the law, into the actual construction of highways.

When one has a career in Congress, he is fortunate if, during the course of a career, he can carve out for himself, or if a kind fate assigns to him, a particular role of importance.

It was by chance, so to speak, that this role of highway authorship became my fortune.

Upon entering the Senate, I asked to be assigned to committees other than the Public Works Committee. I did not get what I wanted that day, so they gave me what was left. I had no particular choice as to what subcommittee I served on. Senator CHAVEZ put me on the Highway Subcommittee. I had really never thought that within a short period of time in the Senate that I would become chairman of that subcommittee. I was at the foot of the list in membership.

Two years ago, however, Senator HOLLAND went to the Appropriations Committee; Senator STENNIS went to another committee; there were enough changes until I suddenly found myself chairman of the Highway Subcommittee. But again, I asked to be assigned to another committee, asked to leave the Public Works Committee. Again I didn't get what I wanted and kept what was left.

So, you see, had I been assigned to the Senate Finance Committee, or to the Senate Appropriations Committee, or to the Foreign Affairs Committee, all of which were of my preference, I would not have been intimately connected with highway legislation at all.

Yet, no matter how long I may be privileged to remain in the Senate, it may be that the fondest landmark of my service will be the Highway Act of 1956.

So, one can never tell, in this journey of ours through life, whether, in public life or private life, just what turn of fortune may be most fortuitous,

Last fall, I became concerned with what I regarded as tardiness of the interstate highway program. So I decided to call a hearing immediately after the convening of the 85th Congress.

My apprehensions were given foundation by the evidence that has been brought out at the hearing.

There are two things of primary concern: (1) there is a lack of uniform progress; (2) there is a threat of serious steel shortages.

Now, when we had hearings 2 weeks ago, there were, I believe, about 20 States—I may not be correct in that estimate—there were several; I would say about 20 States—that had committed less than 20 percent of their 1957 fiscal year interstate allotments.

Five or six States were in the zero column.

Some other States, fortunately, had 100-percent commitment of 1957 funds.

So, you see, we ran from 0 to 100 percent in the initiation, in the commitment of 1957 funds in this vital program.

I call that a serious lack of uniformity.

I asked the Bureau of Public Roads—I know it must have been a little unpleasant for them to do so—but I asked them to prepare a list naming those States that were in the 0 column, naming those States that were in the 20-percent column, in the 40, the 50, the 85, and the 100.

I made this information public.

Well, you know, it happened that my State had a good record, so I will take my State as an example.

If a story had appeared on the front pages of the newspapers, and had been broadcast on radio and television that Tennessee was one of those States in the zero column, in getting this vital highway program started, I imagine that Commissioner Leech and Governor Clement would have had some telephone calls, and I imagine there would have been some conferences and maybe Tennessee would have gotten busy. Fortunately, Tennessee had already been busy and, fortunately, some other States have gotten busy because, Captain Curtis of the Bureau of Roads tells me that there is only one State in the zero column 10 days later.

The purpose of the committee hearings is not to criticize the Bureau of Roads; not to criticize various State highway departments.

The purpose, instead, although some people may become criticized by the facts, is to bring this program into early initiation, to keep it on schedule in construction. Else the people soon will be complaining that they have paid for highways that they haven't got and, unless, ladies and gentlemen, there is a uniform progress, then people such as you, for instance, may have added capacity, may have added stockpiles and inventories for which you have no ready market.

Unless there is uniform progress, then some States, 10 years from now, will be well along the way; others will be well back in the march.

I think the hearings have produced the beneficial results thus far.

I think that it was unfortunate that we did not have early a permanent administrator. I know there were many factors involved. Secretary Weeks came up to the Senate last year, just a few days before Congress adjourned, and he came to see me personally about it and said that he needed very much to have a position created as Highway Administrator, needed badly, needed a man badly in that position.

Well, I frankly thought that a bipartisan commission of, say, three men with long terms might be a better method of administration, freeing the program from the dangers of partisan politics. But I did not let that stand in the way. Here was a vast program, beneficial to the whole Nation. Though I felt it could be better administered the other way, the Secretary of Commerce said he needed this position, a man in that position. We cleared the tracks. We passed the bill in a matter of hours. But the permanent administrator is not on the job yet. I am glad that one is now nominated. From what I hear of him, it appears to be a good selection, though I do not believe that I have yet met the gentleman. I hear very good reports of him.

I am not bringing this up as a matter of criticism, but it is one of the things that has retarded the program and I think it is best for all of us to have all of the facts out on the table on this program. I consider one of my principal jobs as a Member of the United States Senate, this year, and I think that one of my principal jobs as a Member of the United States Senate for several years to come, will be that of exercising surveillance over this vital program to see to it that it is prosecuted to completion in all of the States as nearly on schedule as possible.

Now, I come to the second matter of most serious concern, and that is the threatened

shortage of steel. Nearly every witness who has appeared before our committee, whether from equipment manufacturing, material supply, contractors' organizations, or what, have been optimistic; but most of them have had one reservation, provided steel is available.

Now, I have not asked representatives of your organization to testify because preliminary inquiries have satisfied me that the aggregate industry had responded to the highway program, to the enactment of the law, that the aggregate industry had made plans for increased production to meet the need. I may be in error, but I felt reasonably satisfied. I felt very disturbed about steel, somewhat disturbed about cement. So I have asked those two industries to testify and they are coming up tomorrow.

The testimony that was presented this morning by Mr. Leon Kyserling indicates that with a projection of the price cufve on steel, with the projection of the demand for steel, and the projection of productive capacity of steel, indicates sharply increasing prices in the immediate future and a gap between supply and demand of some 15 million tons by 1960.

If that be true, it is serious.

I am not an economist. Mr. Kyserling is a very respected economist—controversial in some respects, sure—in the political arena—but few people have found serious fault with his economic predictions for the past several years.

For instance, 2 years ago, Mr. Kyserling predicted that by 1960 the total national output would be $500 billion. Two years ago the economist of the administration disagreed with that. They thought it was too high.

Just a few days ago, the administration made its estimate of national product in 1960 and their estimate is now $500 billion, the same as Mr. Kyserling's estimate 2 years ago as to what it would be in 1960.

I just cite that as an indication that he is a rather conservative man in his predictions.

Well now, ladies and gentlemen, whatever the future is, let us talk about the present.

Presently, the delivery date on steel products runs as high as 20 months behind and I understand that practically all the concerns have an escalator clause in their contracts.

I have been told, also, that every now and then contractors and businessmen will get telephone calls from gray market operators and that sometimes they are selling steel at twice the market price, the supposed market price.

So, we are already in the gray market area on steel with a black market threatened.

I have no legislative proposals to make in this regard. I am not here discussing this problem with any intent of leading up to the introduction of a bill to have the Government build steel plants. I don't think that is necessary.

I do believe that I can play a responsible role in the solution of this problem by having a responsible public discussion of the problem and a disclosure of the facts and the truth of the situation. A democracy has a way of solving problems through understanding.

If the businessmen of our country, if private enterprise in our country, understand that there is to be a greater demand for steel in the future than there is productive capacity to supply, then some enterprising man or group will either expand and add to their productive capacity, or some enterprising group will build a new steel mill all upon their own. That is the American way of solving the problem. I hope that our hearing will have that effect.

Now, suppose that this predicted serious shortage does occur. I think it is already rather acute, don't you? Gray market operations already have doubled the price with 20 months' delivery date now, escalator clauses, prices going up all the time.

But if it becomes far more acute, then the financing plan of the program is askew. Then cost estimates on which the program is based are rendered invalid,, unrealistic. Then a contractor who proposes to buy aggregate from you may be held up for a year, for 18 months on a project for want of steel. Meanwhile you are holding a bag full of aggregate.

So you see, unless this program moves uniformly, many people will be hurt. If it does move uniformly, many people, in fact all of America, will be vastly benefited.

It is in the performance of this task that I am now engaged.

I hope that this year, next year, and the next year, and the years after, that through cooperation with the various segments of the highway construction industry, road-building organizations, the Bureau of Roads, the Department of Commerce, the Congress, the State Highway Commissioners, all working together in teamwork, we can bring this program to completion on schedule and link all the principal cities of America with multilane ribbons of the most magnificent highway system any nation on earth has ever had. Then we will feel justified in saying, "A job well done."

The American Ideal

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an inspiring address delivered by J. Edgar Hoover, Director of the Federal Bureau of Investigation, at Valley Forge, Pa., on Washington's birthday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN IDEAL

(Address of J. Edgar Hoover, Director, Federal Bureau of Investigation, at Freedoms Foundation annual awards, Valley Forge, Pa., February 22, 1957)

This day and this place are dear to the hearts of all true Americans who realize the meaning of the freedoms which our forefathers won for us. So long as this Nation endures, we pray that men will gather, as we have today, to do honor to the memory of the man, George Washington, who was "first in war, first in peace, and first in the hearts of his countrymen."

The American Revolution was kept alive by the dreams and the genius and the indomitable spirit of George Washington. In those dark hours here at Valley Forge, he and his men fanned the flame of liberty to inspire by their determination others who had lost hope or had grown faint of heart.

Because of George Washington and his valiant men, this place is hallowed ground. Here, our American heritage was made secure. Here, our own freedom fighters stood firm to protect our infant Republic, and refused to permit the forces of tyranny to crush their dream.

It, indeed, is fitting that Freedom Foundation should be centered at Valley Forge, where the laying of the foundation of our American heritage was assured by the willing sacrifices of those brave men to whom liberty was dearer than life; liberty, not alone for themselves, but for the generations which were to inherit the precious fruits of their sacrifices. The foundation's location lends emphasis to its purpose—of passing on, through knowledge of its real meaning, the torch of freedom.

In this historic setting and in this reverent atmosphere, I am deeply honored to be selected to receive Freedoms Foundation's George Washington award. In honoring me, you also are honoring the loyal men and women of the Federal Bureau of Investigation who have made its achievements possible.

Our America was born out of the yearning for freedom, the same yearning which only recently spurred heroic Hungarians to fight enemy tanks with stones and homemade bombs. Our shores have become the haven of the oppressed and beckon to those in the old world to come and to be free; to worship God as they choose; to seek the opportunities which America offers to those who are willing to work and fight to preserve a way of life which gives so much to so many.

The American ideal is woven of a thousand things. It is woven of unfaltering faith in God, faith in the destiny of this Nation, of battles and of Valley Forge, and Gettysburg, and the Marne, and Anzio, and Iwo Jima. Threaded through the fabric is the patience of a Washington, the wisdom of a Franklin, the humility of a Lincoln, the integrity of an Eisenhower, the courage of an unknown soldier, the vision of a Jefferson and the sacrifice of a Nathan Hale. It is laced with the memory of men's words: "I have not yet begun to fight" and "I only regret that I have but one life to lose for my country."

The American ideal is embodied in our Nation's integrity and honor and in our homes in which respect for the rights of others is taught by precept and example. It is part and parcel of our Bill of Rights and the constitutional concepts which recognize that all men are free and equal, endowed by their Creator with the unalienable rights of life, liberty, and the pursuit of happiness. The American ideal embodies the sum total of the wisdom, the courage, and the sacrifices of our Founding Fathers. Its foundation is the faith of our fathers.

The American ideal has its roots in religion. Without its religious sanction and inspiration, the American ideal would pale and wither to extinction. It is the American precept that men shall live as equals under a government by law, which is embodied in the greatest of all laws:

"Whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets."

From those bleak days in Valley Forge, men have fought and died for the American ideal. We know ideals can be preserved only through eternal vigilance. Our own ideal of freedom and our way of life are under ceaseless attack both from within and without. We fail in achieving our ideal every time an American home fails by producing a juvenile delinquent. The failure is that of adult America. Youth needs only to be guided along the proper path and to be given the direction and training to de-

termine right from wrong; good from bad; the true from the false; belief in the dignity of man; belief in themselves; and faith in a Supreme Being.

Every law-abiding person who wishes to preserve our American freedoms certainly must recognize that they cannot long endure without respect for authority which is dedicated to preserving civil liberties rather than to destroying them. Without freedom, a society loses its meaning, and without protective authority, it becomes anarchy.

The primary mission of our constitutional Republic is to preserve the proper balance beteween freedom and authority. Our generation has witnessed assault after assault on this constitutional balance of freedom and authority.

The pseudo-liberal and the neo-Fascist seek either license or an excess of authority. The pseudo-liberal has increasingly conceived committees in the name of defending every freedom, but none to uphold authority. When he has succeeded in lessening freedom by curtailing authority, he has claimed social progress. These self-styled social reformers seek to substitute license for freedom. They have become the ready tools of the Communist conspiracy and their refusal to recognize the difference between authority for the common good, and oppression, has aided in making possible an era of Communist expansion.

To be sure, the pseudo-liberals proclaim themselves as anti-Communist. They have made efforts in recent years to curtail the Government's authority to defend our national security. Some of them may be honest and sincere but they are misguided. Others seek the pseudo-liberal cloak to conceal more sinister objectives, because deceit is the very essence of communism.

The tragedy of our generation has resulted from our spiritual shortcomings, from the disastrous moral failures of our age, and from the failures of the last war and the last peace.

Our generation has suffered two world wars. After World War I, the free world awoke to the realization that the war "to make the world safe for democracy" was not finished. After World War II, a tired and peace-seeeking people had the satisfaction of knowing that the fascist monster had been destroyed. Then came another shock. Soviet Russia launched a cold war against the West and a not so cold one against other defenseless peoples to extend its orbit of destructive influence over one-fourth of the earth's surface and approximately 40 percent of the world's peoples.

The free world has been slow to recognize the Communist approach despite the blueprints for action which the Communists have proclaimed to all with ears to hear and eyes to read. From the time the Communists came to power in Russia until today, they have used duplicity, propaganda, treason, and even armed force to distort truth. In the 109 years since the Communist Manifesto was written they have never won power in any country by the free vote of a majority of the people.

Communism is doomed ultimately to fall, because it is anti-God and denies the dignity of man. The day will come when it will be rejected by all the peoples of the world. But that day never will come through wishful thinking. It will come only when the fires of freedom burn bright and the sinews of freedom are strengthened. No brutality can erase the urge to liberty which surges in every man's heart. The fall of worldwide communism will come only when the world, both the free and the enslaved, resolves that this heartless dictatorship shall end. We can hasten that day by eternal vigilance in protecting the American ideal against abuse and by extending the power of its influence.

The present generation of fathers and mothers must decide now for the future generations—whether that future shall hold freedom or slavery, depends on how completely the challenge of communism is met and vanquished.

Let there be no mistake, the fires of freedom smoulder even in the heart of Communist stronghold. Even the power of Stalin and his successors has not been able to extinguish it.

The Hungarian freedom fighters give testimony to the ruthlessness of the Communist might and to the strength of peoples yearning to be free. Last November Nikita Khrushchev, the present head of the Russian Communist Party and the principal spokesman for the Soviet Union, in referring to the freedom-loving countries of the West, stated:

"Whether you like it or not, history is on our side. We will bury you."

More recently, Khrushchev has praised Stalin and even had the atheistic audacity to call upon God to send more men like Stalin to fight for communism.

It cannot be denied that 10 of the 11 members of the present governing body of the Communist Party of the Soviet Union were puppets for the old tyrant Stalin, and whatever they learned in the art of governing by force they learned from him.

The gyrations of the Soviet Communists have produced a chain reaction in Communist Parties around the world. American Communists have put on a dazzling performance of shifting and turning. In the days and weeks which lie ahead, they will resort to every time-proven Communist trick to deceive the American public by advocating a peaceful transition to socialism, by appealing to the masses with trumped-up charges of injustices, by seeking to build a broad coalition of Socialist forces, by recapturing the naive, and mobilizing the pseudo-liberals. Behind all this still prevails the determination to intensify the class struggle with resort to deceit, misrepresentation, and the use of force and violence when necessary.

Their aims and tactics are obvious. The Communist conspiracy has been exposed for what it is in courtrooms, by congressional committees and by the press, radio, and television. Its new look and program are designed to enable the American Communists to regroup and develop a militant party to accomplish their historic mission of destroying American freedoms. Soviet-style communism remains the ideal, and the Communist Party intends to do its best to impose it upon this country.

Crippling blows have been dealt to the Communist cause in the United States. But there is a greater task which rests with our teachers, the molders of public opinion, the ministers of every faith, our labor leaders, and our industrialists. In short, the responsibility of education to preserve the American ideal rests with every American home. Truth and education are the ultimate answers in the fight to preserve the American ideal.

The Nation can be thankful for a Freedoms Foundation which stands as a sentinel, as did our Revolutionary freedom fighters here at Valley Forge, which is the vivid symbol of their suffering.

If we have the courage and the determination to face the future with the humility and the dedicated sacrifices of our Founding Fathers, then the Star-Spangled Banner shall continue to fly over this—our home of the free and land of the brave, and freedom fighters in other lands may eventually secure these blessings which are ours. This is the goal of the American ideal.

Civil Rights Legislation

EXTENSION OF REMARKS
OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1957

Mr. RUSSELL. Mr. President, some very able constitutional lawyers in every section of the country who have examined the proposed legislation are expressing the fear that the administration's so-called civil rights program is more likely to imperil some of the constitutional rights of all the people than to establish the civil rights of minorities, which the proposals claim to protect.

The right of trial by jury is the keystone of our civil rights. It is the most cherished landmark of our form of government. The creation of the right of trial by a jury of one's peers is the most effective barricade ever erected against oppression and tyranny. It was not easily won and it should not be lightly discarded.

In the course of the hearings being conducted by the Subcommittee on Constitutional Rights of the Committee on the Judiciary the distinguished Senator from North Carolina [Mr. ERVIN], who has not only had broad experience in the law but who has also served as a justice of the State Supreme Court of North Carolina, discussed this issue at some length with Attorney General Brownell. The Senator from North Carolina clearly established the fact that the proposed legislation could be used as an instrument of tyranny which would endanger the inalienable and fundamental rights of all American citizens, wherever they may live.

It is my opinion that if every citizen of our country could have heard this discussion, it would have stripped this issue of some of the emotional support which has been created for it by politicians and propagandists.

Several notable articles have been written on this discussion. One of the outstanding ones was written by Mr. Arthur Krock and was published in the New York Times of March 1, 1957. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—ANOTHER PART OF THE (STATE-FEDERAL) FOREST

(By Arthur Krock)

WASHINGTON, February 28.—A couple of the amendments made by a House Judiciary Subcommittee in the texts of what are known as "the President's civil rights proposals" meet objections that have been raised against the legislation. Chairman CELLER characterized the changes as making the program less unpalatable to the South. But discussions in a Senate Judiciary Subcommittee between the Attorney General and Senator ERVIN, of North Carolina indicate that the dose will still be repugnant to the South as well as to some constitutional lawyers.

This repugnance will be expressed by a Senate filibuster. But though the prospect of beating the filibuster is rated pretty good, it may still prove very difficult to keep the dose, unless much more diluted, from being regurgitated by the South. That is because, in addition to the emotional resistance to the program, excellent Southern lawyers are building a strong legal case against certain of its items.

DEBATE ON PROCEDURES

Taking note of this area of opposition, a current Congressional Quarterly report stresses the circumstance that "when Senator ERVIN, a former State supreme court justice, and Attorney General Brownell debated the civil-rights measures for 3 days before the Senate subcommittee, they argued not about the goals of the legislation but about its procedures * * * ERVIN's argument being that the administration bills designed to protect civil rights of minorities actually would endanger the constitutional rights of all Americans."

The Senator based his argument on this hypothesis, as summarized by C. Q., of what might happen in a given case in any State if the bills became law:

John Doe appears to register to vote. Under the provisions in the Constitution that authorize the State to fix the qualifications of its voters the registrar asks Doe questions, then refuses to register him. The incident comes to the attention of the Attorney General, who suspects that the procedure has been employed to deny Doe his voting right in violation of the 14th amendment ("on account of race, color, or previous condition of servitude"). With or without Doe's permission the Attorney General intervenes; or, anticipating that the registrar intended to deny Doe his rights, intervenes even before Doe appears before that official.

THE ATTORNEY GENERAL'S COURSE

Regardless of State administrative and judicial procedures for determining voting rights, the Attorney General takes the case to the Federal court and asks for an order to the State that Doe shall register and vote. This injunction is granted on simple affidavits, the legislation overriding the requirement that both sides present evidence and cross-examine witnesses. If the registrar disobeys the court order, he is subject to summons, trial, and sentence for contempt by the Federal judge who issued the order, without either grand jury indictment or petit jury trial guaranteed in ordinary criminal procedures.

Brownell conceded this was an extremity to which the proposed legislation could be pushed. But he said, "We are faced with the fact that without this authority in the Federal Government the people are disenfranchised en masse by reason of their color," and with this authority Attorneys General would be spared the duty of undertaking unduly harsh criminal proceedings against respected local officials who deny voting rights to Negroes. "No amount of postelection criminal punishment," said Brownell to ERVIN, "can rectify the harm which the national interest suffers when citizens are illegally kept from the polls."

ERVIN observed that the legislation "contributed very much to the theory that the States ought to be destroyed instead of preserved. * * * In doing what you consider to be legally righteous, you would supplant existing remedies which gave [an election official] the right to be * * * indicted by a grand jury and tried before a petit jury and be confronted by, and have the right to cross-examine, his accusers." The Attorney General wanted to know if the Senator would rather have the Federal Government send the official to jail than get an injunction against him.

THE SENATE PRESENTATION

That is how the two legal experts left the argument. But ERVIN's side of it will be exhaustively presented in the Senate debate as proof that a grave constitutional issue—as also in the sweeping Federal court injunction in the Clinton, Tenn., cases—and not simply an emotional resistance to change in the sensitive area of southern Negro-Caucasian relations is the core of the opposition to extending Federal court and executive powers in this area.

As for the administration's proposal that sets up a bipartisan Federal commission to study racial problems (the House committee excised the subpena powers given in the administration text and put witnesses under the protection of House procedural rules), the resistance to this will be based on the argument that it will do much more harm than good to its objective.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Stumbling Block to Hawaii Statehood," written by Mr. Frank R. Kent, and published in the Washington Evening Star.

It points out rather well the different situation in which Hawaii finds itself as compared with the situation that exists in Puerto Rico.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GAME OF POLITICS
(By Frank R. Kent)

STUMBLING BLOCK TO HAWAII STATEHOOD

Before this session of Congress ends there promises to be a gorgeous fight over the admission of the Territories of Alaska and Hawaii to full statehood in the Union. At the moment, there are strong lobbies favoring both these territories encamped in Washington and actively engaged in furthering their separate projects, the essential legislation for which is slumbering in committee and may not come out for some weeks—if at all.

Normally the objective for which both Alaska and Hawaii have for so long struggled should be achieved this year without too great difficulty. For example, both the Republican and Democratic Parties endorsed the proposal last summer in their respective national conventions. In addition there are a number of exceedingly good arguments why both should be admitted. Certainly this is true of Alaska and a considerable number of these favorable Alaska arguments also apply to Hawaii. However, there is one very strong reason for not voting for Hawaii which does not exist against Alaska—at least, not to such full and devastating extent.

BRIDGES A DRAWBACK

The name of this reason is Harry Bridges. Mr. Bridges is a notorious union labor boss, equipped with more deadly power than any of the others. He is president of the Longshoremen's Union and of the Warehouse Workers' Union. He was born in Australia, has never become a citizen of the United States, and has twice been convicted of perjury in swearing that he has never been a Communist. Long ago he was sentenced by Federal judges to 5 years' imprisonment and ordered deported back to his native Australia. With the help of what seems to be unlimited money and extremely able lawyers, for nearly 20 years he has been in and out of the courts on these indictments. Appeal after appeal has been taken and twice the Supreme Court has allowed him to escape deportation on what seemed to be technicalities.

The smoothness with which he moves from arrest to indictment to conviction to release on $25,000 bail and then repeats the process is confusing and more than a little alarming. Three things that are entirely clear, however, are these: (1) He is in complete control of the big union he heads; (2) he is easily the most powerful man, politically as well as economically, in Hawaii; (3) and if and when Hawaii achieves statehood, Mr. Bridges, more than anyone else, will choose two Senators and the House Members to which Hawaii will be entitled. This raises the big question as to whether the interests of the United States will be served by the admission of Hawaii to full statehood while it is still under the domination of an alien labor boss, strongly suspected of Communist affiliations, twice convicted in court as a perjurer, not a United States citizen, and still fighting deportation efforts to send him back to his native country.

Before a Senate committee which recently visited Hawaii, Benjamin Franklin Dillingham, who was born in Honolulu and is recognized as one of its most substantial and influential businessmen, testified as follows:

"We depend upon shipping for virtually all our basic needs of life here. Outside of air mail and a few commodities that can be brought in by air, we have no trucking service, no railroad service, nothing to tie us to other communities of the United States. So when shipping is cut off we are not only denied access to the mainland for the sale of our products upon which we depend for a living but we are denied opportunity to receive food, clothing, and other necessary supplies."

DOMINATES ISLAND

Also said Mr. Dillingham: "And when you realize that our shipping and the sugar and pineapple industries are subject to the whims of 1 man, regardless of any kind of contract or obligation, you will understand the position this community is in every day, every week, every month of every year." This is, as George E. Sokolsky recently wrote, a frightening picture but undoubtedly true. It is certainly outrageous that Hawaii, one of the most beautiful possessions of the United States, should be so completely subservient to the will of such a man as Harry Bridges. Nevertheless, it does seem that some way should be found either by Hawaii, itself, or by our courts, to rid these islands of unions, such as those over which Mr. Bridges rules, before granting her full statehood. Two Bridges-dominated Senators would hardly raise the Senate level nor help the country. Democratic or Republican, it is hard to think of anything worse.

Alexander Hamilton Bicentennial Week in Tennessee

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a proclamation by the Governor of Tennessee proclaiming the 200th anniversary of Alexander Hamilton, one of the chief architects of our system of government.

There being no objection the proclamation was ordered to be printed in the RECORD, as follows:

STATE OF TENNESSEE PROCLAMATION BY THE GOVERNOR

Whereas Alexander Hamilton was one of the chief architects of our system of government and participated forcefully in the drafting of our Constitution; and

Whereas he served his country well in a military capacity during the Revolutionary War and later in the Continental Congress and still later as first Secretary of the Treasury; and

Whereas this year marks the 200th anniversary of his birthday and calls again to mind his significant contributions to the foundation of our Government: Now, therefore, I, Frank G. Clement, Governor of Tennessee, do hereby proclaim January 11, 1957, as Alexander Hamilton Bicentennial Week in Tennessee and urge all Tennessee citizens to appropriately observe this period.

In witness whereof, I have hereunto set my hand and caused the great seal of the State of Tennessee to be affixed at Nashville, this 28th day of December 1956.

[SEAL] F. G. CLEMENT,
Governor.

Attest:

G. EDWARD FRIAR,
Secretary of State.

United States Communists Show Their Hand

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. JOHNSON of Texas. Mr. President, in yesterday's edition of the New York Herald Tribune, Roscoe Drummond devoted himself to a sensible discussion of the current status of the so-called American Communist Party.

Mr. Drummond, in his precise, dispassionate manner, analyzes some of the claims that the Communist Party has shaken off some of the ties that bind it to Moscow. He establishes the fallacy of any such claims on the basis of the evidence.

But even more important, he makes the point that even an independent Communist Party would still be a party of evil objectives.

I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES COMMUNISTS SHOW THEIR HAND

(By Roscoe Drummond)

Question: Recently you discussed the action of the Communist Party in the United States, through which it sought to appear to be divorcing itself from the Moscow line. I gained the impression that you thought this would be a good thing. My question is: Wouldn't an American Communist Party be just as subversive of our democratic society as a Soviet-controlled Communist Party?

Answer: I would like to point out at the start that there is no basis in fact for accepting the Communists' claim that the party has broken its ties with the Kremlin. All they have actually done is to assert that they might use a little independence in interpreting theoretical Marxism-Leninism. Even that remains to be seen.

Several aspects of the New York convention of the Communist Party, which did not come out at the time, show that while the Communists were talking independence, they were toeing the Moscow line.

A false reason was given for excluding the press. Communist reporters were present at the Democratic and Republican Conventions). The stated reason for the exclusion was that if some of the delegates were identified, it might imperil their jobs. But when the reporters asked that a loudspeaker, be installed in the pressroom so they could hear, if not see, the proceedings, this was emphatically rejected. This made it much easier for the party spokesmen to interpret the convention actions to suit their tactics.

There were two readymade opportunities whereby the Communist Party could have shown its independence of the Soviet Union—and failed to do so. It had before it in convention a resolution criticizing the Kremlin's bloody repression of the Hungarian workers. It shunted this aside. It had before it a resolution critical of Soviet anti-Semitism and calling for a return to the 1919 to 1935 policy of equal rights for Jews. It shunted this aside. Both resolutions were conveniently referred to committee.

When the Communist Party in the United States remains silent on what Moscow's tanks did to the Hungarians, and condones its anti-Semitic measures, it means that it is not a free party, that it is subservient to Moscow.

How, then, can we ever know whether the Communisty Party in the United States is breaking, decisively and totally, the yoke which binds it to the Soviet Union? There is a conclusive test:

If and when the Communist Party ceases to harbor Soviet spies and cooperates unreservedly with the FBI in turning up Americans whom it knows to be traitors because they acted as agents for a foreign power, then the Communist Party would be exhibiting real independence. Is that an unfair test—loyalty to one's own nation over loyalty to the Soviet Union?

I don't know that this will ever happen; the odds are strongly against it. But it seems to me that it is beneficial to the West whenever a Communist Party or regime breaks with Moscow—as Tito did, as the Polish and Hungarians tried to do—because it means that such a Communist Party is no longer an instrument of Soviet imperialism. Communism divorced from a powerful state would be a greatly weakened force.

As to whether a nationalist Communist Party would be as subversive of our form of government as a Soviet-controlled party, my answer would be: Yes, it would seek the same pernicious ends it always sought; namely, a political dictatorship, the suffocation of a free society, an end to equal justice under the law, extinction of free speech, free assembly and freedom of religion.

The evil objectives of the Communist Party would not be changed by separation from Moscow, but it strikes me that unless the Communists are fortified and nourished by a worldwide movement, they are likely to find much of the steam leaking out of their cause. Remember that Titoism is not just a party in Yugoslavia—it is the state itself.

Perhaps the most significant fact about the Communist Party in the United States today is that its leadership is getting older and older. Where is this young, new-look Communist Party its leaders talk about? Apart from 2 or 3 young Negroes, there wasn't a delegate at the New York convention under 40. Of the 20 new members of the party executive, the average age is 45. The average length of service in the party 22 years.

American youth has handsomely rejected the Communist Party.

Regulation of Donations and Expenditures in Preelection Campaigns

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials published in the Chattanooga Times of Sunday, March 3, 1957, and the Washington Daily News of today.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chattanooga Times of March 3, 1957]

ACT ON THE GORE BILL

The bill to regulate campaign spending introduced yesterday by Senator GORE of Tennessee is full of safeguards that ought speedily to be enacted into law

It imposes reasonable spending limits for the first time on primary elections—a key consideration in the South where primaries have so often been decisive. This was a principal stumbling block (it may be again) causing inaction on two election spending bills during the closing session of the 84th Congress.

It strengthens the requirements for public disclosure of campaign expenditures by candidates, parties and committees, as well as any donation of more than $500 by an individual in 1 year.

A cardinal point is that responsibility for reporting all the spending on a candidate's behalf has been placed on the officeseeker himself. Another is that no committee could spend more than $1,000 for a candidate unless that expenditure is authorized by the man running. There are at present no effective limits to the number of committees organized on behalf of a candidate.

Any individual would be limited to $1,000 a year in contributions to or on behalf of all candidates for Federal office. We have pointed out that as much as $70,000 from 1 Democratic and $65,000 from 1 Republican supporter poured into the treasuries last year. The Gore bill's provision that not more than $250 of this $1,000 shall go to House or Senate candidates outside the contributor's home State aims at big family, big business or big labor spending in congressional elections.

And the Gore proposals insure substantial reductions in overall spending. The figure of 20 cents multiplied by the number of votes cast in a previous presidential election makes for realistic thinking about election costs. There will be no way of an accurate determination, but the $33,185,725 officially reported in the 1956 presential contest was far surpassed because of loopholes in the law.

The bill, as the Senator says, is a tough one to meet a tough stituation. Television and popular demands that more be seen and heard personally from the candidates have skyrocketed expenses. But fair limits do injustice to no one, and the financing of these campaigns has been acutely unsatisfactory.

A great many of the corrections suggested by Senator GORE were contained in both the Hennings bill and the so-called Johnson-Knowland bill, both of which died in the last session of Congress. By a majority mutual consent, aparently, the subject of clean election laws was put off until this session, when the climate would be less political.

That is only relatively true, of course, at any time on Capitol Hill, especially when ever-pressed representatives run every 2

years. Reaction to the Gore bill has been reported as not exactly glowing. But Congress must get at the job and it cannot easily evade its responsibility for just election laws this time.

[From the Washington Daily News of March 4, 1957]

GORE BORES IN

Senator GORE, of Tennessee, who headed that committee which made a study of last year's whopping-big campaign spending, now has introduced a bill.

His bill proposes drastic regulation of donations and expenditures in preelection campaigns.

Senator GORE has put a lot of work in this measure. He thinks he has a realistic and workable plan.

We wouldn't say it is a perfect bill, because a perfect law to control the reckless, extravagant, confused way in which campaign funds are raised and spent probably is out of the question.

But the Gore bill has two outstanding virtues:

It attempts to regulate spending in primaries and conventions, now entirely uncovered by the law.

It provides for detailed reports from all committees and candidates before elections, as well as later.

If there is to be any sense of proportion legislated into our lavish campaign spending, and any kind of accurate accounting, primaries and conventions will have to be covered, as well as general elections. They are just as vital as the November elections.

And the best insurance for decency in campaign spending is full publicity. If the public knows the story, public influence will make itself felt.

If ever we are to clean up campaign spending, the Gore bill is one of the ways to do it. The sincerity of those conspicuous Senators who last year talked so loudly about the need for a cleanup now can be measured by what they do about Senator GORE's proposal.

We Cannot Justify Atom Power Complacency

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Oak Ridger, Oak Ridge, Tenn., dated February 18, 1957, in support of the fine work of our able colleague the junior Senator from Tennessee [Mr. GORE], in pressing for the development of nuclear energy in the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE CANNOT JUSTIFY ATOM-POWER COMPLACENCY

Senator ALBERT GORE assures that he is renewing his fight for legislation that would greatly increase our Nation's role in nuclear power development. In his formal talks here on Friday he again made a strong case for large-scale reactors being built at the sites of present nuclear installations.

(Power projects presently underway here and at other installations, such as the homogeneous reactor project at Oak Ridge National Laboratory, are considered relatively small-scale experimental projects. Senator GORE speaks of a large-scale reactor actually designed to produce a sizable amount of power for actual and continuous usage.)

Although his bill was defeated in Congress last year, our State's junior Senator, and one of the most prominent Senators in the Nation on atomic matters, thinks the prospects for passage this year are much brighter. He has solid reasons to believe this.

First of all, the opposition of the United States Atomic Energy Commission itself—primarily in the form of the personal opposition of Chairman Lewis L. Strauss—is not as strong. Chairman Strauss still objects to the Gore bill. However, he has softened his previous opposition. A year ago he contended flatly that private industry was and would continue to do a proper job of atomic power development. This year, however, Chairman Strauss is willing to agree that if private industry doesn't do the job in the next few years, then the Government should. This, Senator GORE feels, is an admission that our present power program is inadequate. So why should we delay any longer in putting the present program to rights?

Still other developments are the progress during the past year of other countries—primarily Great Britain and Russia. In those nations there is large-scale government power development and it has produced several types of reactors which are now in production (Calder Hall in England, for example). We cannot let these other nations get so far ahead of us, even if we do not have the economic incentive that they have. We must keep pace in development if not in need or use, Senator GORE points out.

Here are some pertinent quotes on this important subject from his talks here:

"Several years after our explosive announcement of having harnessed the atom, we have little to show as far as peacetime power uses are concerned—no atomic power reactor of even moderate size in operation. By what standard can this be held adequate progress? * * *

"I have reintroduced in the current session of Congress a bill similar to the one I sponsored last year, which was approved by the Senate and narrowly defeated in the House of Representatives. This bill would provide $400 million for the governmental construction of demonstration atomic power reactors of large and intermediate sizes, all on Federal property with their output to be used entirely by Federal installations.

"In doing this, I do not seek to provoke a public power versus a private power fight. There is ample room and need for both in atomic electricity, just as there is room and need for both in the generation and distribution of conventional power. The point is that only the Government has the means to bring to us the needed power. * * * Our Government will foster private enterprise by advancing the date at which there can be widespread participation by both large and small in the atomic power industry.

"I reiterate: Why continue to rely solely on a program that is so demonstrably inadequate? It has been characterized only by continued delay when delay could be most costly. The extended period this Nation has waited for actual atomic power reactor development has already exceeded a reasonable period of time. We cannot afford to wait longer.

"From the standpoint of our own domestic economy, it is manifestly in our interest to develop economically atomic electricity. Our supplies of conventional fuels are not inexhaustible. Our power needs grow steadily.

"Of greater significance to the American economy in terms of urgency of the problem is the question of foreign markets for reactors and other items related to their operation. Loss of the race even to Great Britain or some other free nation would leave its economic imprint on those in this country desiring to supply world markets.

"United States loss to Russia in the atomic power race would cause United States prestige to suffer a serious blow. Moreover, United States economic leadership would be put to serious challenge. And friendship, let us not forget, follows the trade routes.

"Regardless of what we would like to believe, our relative position in the atomic power race is far from ideal. Reasons to be complacent are absent.

"In the eyes of the world, we have placed major emphasis upon atomic destruction, as indeed we have. We, therefore, have a clear moral responsibility to be the first to make this marvelous new source of energy available to improve the lot of mankind."

We wish Senator Gore success in his efforts. Of course, we should not be so short-sighted as to seek passage just because this bill would most probably mean a large-scale power project here. We should agree that there is a definite Government responsibility here that can not and will not be as well undertaken by private interests.

We'll watch developments on this bill with great interest as the Congress session becomes more decisive. We know our junior Senator will wage a most effective fight.

George Washington and Alexander Hamilton

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks I include an address by Dr. John A. Krout, vice president and provost of Columbia University, delivered before the 1957 George Washington Day Dinner of the American Good Government Society at the Hotel Statler, Washington, D. C., Friday, February 22:

GEORGE WASHINGTON AND ALEXANDER HAMILTON

(An address by Dr. John A. Krout, vice president and provost of Columbia University, delivered before the 1957 George Washington Day Dinner of the American Good Government Society at the Hotel Statler, Washington, D. C., February 22)

On a raw December day in 1776, while the American troops were engaged in that disheartening retreat across the State of New Jersey, George Washington ordered them to stand in a rear guard action on the banks of the Raritan to stop the relentless advance of Cornwallis' veterans. Although the action did not stop the British, they broke through and crossed the river, it accomplished its purpose, giving the Continental Army time to withdraw into temporary refuge in Princeton.

In the annals of the Revolutionary War, that action would be almost insignificant, and yet it had momentous results for the people who were struggling to make good the independence which they had so recently declared. The Commander in Chief observed the coolness and adroitness with which a young captain of artillery was handling the men and guns in his battery. He learned that his name was Alexander Hamilton, and he sent word that he'd like to see him at headquarters. There were numerous meetings after that, especially during the winter at Morristown, and Washing-

ton finally offered the young captain a post as his military aide with the rank of lieutenant colonel. Thus began the association which was to bring incalculable benefit to the American people.

As we celebrate tonight the 225th anniversary of Washington's birth in Alexander Hamilton's bicentennial year, it seems wholly appropriate for us to turn our thoughts briefly to the collaboration between the Virginia planter and the impetuous native of the British West Indies, who combined their talents in high endeavor for the country which they both loved.

It would be perpetuating a myth to argue that the association between the two men rapidly developed into an affectionate friendship, or that the course of their work together in the public service always ran smoothly. There were all sorts of irritations; and accumulated grievances finally caused the young colonel in anger to resign his position and leave Washington's headquarters. And yet he could write in the midst of his anger to his father-in-law, Gen. Philip Schuyler, "General Washington is a very honest man. I think it is necessary that he should be supported."

During the period that they were operating as commander in chief and military aide there can be no doubt that Washington came to rely increasingly upon the ingenuity, upon the interesting suggestions of his young associate. It was Hamilton that he sent north in those critical days late in 1777 to see whether he could persuade the self-confident Gates, and the somewhat hesitant Putnam, to send brigades south that were so sorely needed by the commander in chief. It was Hamilton who established the liaison between the commander in chief and that energetic and popular Governor of the State of New York, George Clinton.

When the word went out in headquarters, as it so often did, "Call Colonel Hamilton," it might mean a variety of things: dispatches to be written, conferences on military strategy, confidential missions to be undertaken. Indeed, there were some who knowing that Washington had said when he had appointed Hamilton, "I want a man who can think for me and not just execute orders," who believed that many of Washington's communications in these 3½ years were actually under the authorship of the young colonel. But if one takes the trouble to read the dispatches that were written by all of the military aides in the period of the war, this seems to be crystal clear. No pen was quite so fluent as that of Hamilton but the ideas in his dispatches were not different from the ideas in the dispatches written by the others. George Washington continued to do his own thinking, even if Alexander Hamilton brilliantly polished his phrases for him.

The confidential missions that were undertaken by Hamilton for Washington in the war years really paled into unimportance when you think of the works that the two men did together after the start of the Constitutional Convention in 1787.

For the next dozen years they did not see each other almost every day, as had been true of their military experience. And perhaps it was well that they didn't, because the superficial irritations began to fall away, and the fundamental agreement between them on important issues of economic policy, of statecraft became more evident.

Oddly enough it was not Alexander Hamilton who encouraged his former commander in chief at the Philadelphia Convention which drafted the Constitution. Rather it was the older man who gave courage to his young associate when Hamilton disgustedly quit the convention, saying that he didn't believe there would ever be a government of the United States of America, it was the patience of George Washington that brought him back for the final session and the signing of the documents.

And then the tables turned. The government was in shadow on paper. It had to be given substance. This time it was Alexander Hamilton, persistenly, almost annoyingly, getting friends like Madison and others to write to Washington telling him that one thing was clear to the whole country: without George Washington this Government certainly would fail.

We can't be sure, of course, whether it was Hamilton's letters that finally persuaded the Virginia planter to leave the tranquility which he loved so much at Mount Vernon and assume the arduous task of the presidency of the new Government. But assume it, he did. He turned almost immediately to Alexander Hamilton. Not that he first offered him the position of the Secretary of the Treasury. He conferred with older men. He seems to have brought himself to the point almost of saying to Robert Morris, "You can have the post if you'll take it." But Morris and others persuaded him that the man who knew what ought to be done in the financial field, in fiscal affairs, was the youngest man among them. And they could cite the papers that he had written as a youth of 20 years, indicating in the period when he was still a military aide, what he would do if he ever had the chance to formulate the financial policies of the new Government.

Those were the years, after 1789, when Washington seemed to lean so heavily on the Secretary of the Treasury. And yet, remember that it was a cooperation. It was not the borrowing by one man from the other, even if we did turn as President to his Secretary of the Treasury to answer almost every conceivable question. It was characteristic of Washington so to seek advice. He sought it from many. His greatness was not the fact that he was willing to ask counsel and advice. So many of us know how to do that. The thing that is often lacking is the wisdom to use the counsel and advice in its most effective way. That, it seems to me was the greatness of the first President of the United States. Having asked advice, he knew how to use it. For he made it into his own thinking.

To be sure, he turned to Hamilton on many questions that had nothing to do with financial policy. He discussed with him the question of how you receive foreign ambassadors, diplomatic agents; what kind of protocol should be set up under the new government. Never before had there been an experiment in republicanism on such a scale as the new United States was undertaking. He turned to Hamilton, even asking him "How do I seat my guests at table when I have a state dinner?" "How many state dinners should I have in a year?" "Who ought I invite to these affairs?" May I be selective or must I have a large list of guests?" "How should I be addressed as President of the United States?" "What are the honors due me?" How far ought I go before I'll be charged with trying to draw into America the trappings of monarchy?" It was Hamilton who patiently wrote memorandum after memorandum on that sort of thing, at the same time that he was outlining the important points in his policy.

It was Hamilton who was asked, when European war broke, as the result of the French Revolution, what the role of the United States should be. He was the one to whom Washington turned, quite as much as to Thomas Jefferson, his Secretary of State, to formulate the policy which ultimately was incorporated in the Proclamation of Neutrality in 1793, and then the act of Congress known as the Neutrality Act of 1794.

Let us pause 1 minute there to see what we mean when we say Hamilton formulated the policy. He responded to the request for advice. For Washington took that advice, worked it over, discussed it with others, made it his own. There was never the shadow, it seems to me, of the ghostwriter about the relationship between George Washington and Alexander Hamilton.

The confidence which the two men had in each other, despite the fact that they were not really close and affectionate friends, is the great gift that they made to the American people in their generation. Each of them summed it up so well in words that are not fulsome, that are not over-run with extravagant praise, that therefore carry the mark of truth because they are restrained and speak sincerity.

When Hamilton finally informed Washington that he was resigning as Secretary of the Treasury early in 1795, Washington wrote him a warm letter but certainly no phrases that could be regarded as undue praise. The one sentence in it that seemed to sum up his whole attitude toward his younger associate was this: "In every relation which you have borne to me, I have found that my confidence in your talents, your exertions, and your integrity have been well placed." That's the tribute, isn't it, of a man restrained, yet who speaks the truth about his knowledge over a long period of time of his associate in public affairs.

You have the same sort of thing from Hamilton to those who mourned Washington after his death. The New York wrote to Tobias Lear in sorrow, not a great and glowing tribute to the Commander in Chief and the first President, a very simple confession: "I am much indebted," said Hamilton, "to the kindness of the general. His aegis was very essential to me." Don't you have there also the restraint that carries conviction, that the man was stating the fact and nothing beyond the fact, that without the Commander in Chief and the President he could never have accomplished the things that he did accomplish in establishing the kind of policy which both understood so well?

That's a point I'd like to make very strongly this evening. We sometimes forget it. Among the Founding Fathers I wonder if there was any one who understood what Alexander Hamilton was driving at any better than George Washington did. Franklin was gone before Hamilton's plans had been unfolded. Jefferson and Madison, skeptical at first, quickly took alarm. John Jay and John Adams always seemed to see fragments of the plan and then through a glass rather darkly. It was not Henry Knox, or Oliver Wolcott, or James McHenry, who sustained Alexander Hamilton. The man who sustained him in all of his endeavors, from 1789 to his resignation in 1795, was his chief, the President of the United States.

The best way to see their collaboration is in the famous Farewell Address. Some 20 years ago Victor Paulstits, of the New York Public Library, published that magnificent work on the Farewell Address, showing you all of the copies, all of the interlinations, all of the changes, and came out with the statement that he was positive that the address was not Hamilton's but George Washington's. But sometimes, if you have a chance, read Paulstits' argument looking at the documents, and maybe you will come out with the conviction that I have, that it was neither Hamilton's nor Washington's. It was a joint effort. And if any state paper ever deserved to be entitled "co-authored by Washington and Hamilton" it was the Farewell Address. For Washington took all of the changes that Hamilton suggested, weighed them carefully, wrote back modifying them, and then finally produced a draft in his own hand that took over many of Hamilton's suggestions but they were George Washington's ideas.

They did more though than write jointly a state paper. Their greatest collaboration was the building of a nation. It takes nothing away from those who worked with them in their generation to say that in the

work of these two men you had the magnificent union, the planter of Virginia, the impetuous native of the British West Indies doing their utmost to create a state that would endure.

Internal Security Is Still a Problem

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. WATKINS. Mr. President, I should like to invite the attention of the Members of the Senate to an editorial published in the Desert News-Salt Lake Telegram of February 28, commenting upon a report and the work of the Senate Internal Security Subcommittee. This excellent editorial is entitled "Internal Security Is Still a Problem."

The writer comments on a report made by the subcommittee following a year's study of the threat of subversion, and says:

The tone of the report is, for once, moderate and thoughtful.

He adds:

Building defenses against subversion without ripping holes in civil rights requires the most sober, thoughtful consideration of which the country is capable.

Mr. President, I have been a member of the subcommittee since its organization a number of years ago, and I can therefore join in that tribute to the subcommittee, particularly with respect to its treatment of witnesses and the conduct of the hearings.

I am pleased to see the work of the subcommittee so well recognized by this great pioneer newspaper of the West.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTERNAL SECURITY IS STILL A PROBLEM

America is a strange land of extremes, where problems are seen in either black or white but rarely grays. In few fields is that national characteristic more evident than is the problem of fighting Communist subversion. The Nation is capable of swinging from apathy to almost hysterical concern and back to apathy within a matter of months.

Today, there seems reason to hope that we can get on a road of alert concern but without the witch-hunting and disrespect of human and civil rights that we have sometimes seen in the past.

The Senate Internal Security Subcommittee is releasing this week the results of a year's study of the threat of subversion. The tone of the report is, for once, moderate and thoughtful. Its conclusion is that while there is no occasion for alarm or panic, Red subversion continues to be a threat that must be guarded against.

For example:

Soviet secret police have continued to come into this country under the guise of diplomatic or semi-diplomatic positions, and have engaged in espionage, propaganda, coercion, and even kidnaping.

Tass, the official Soviet news agency, continues to mask the operation of Soviet intelligence agencies.

Communist efforts continue to infiltrate press, radio, television, and other media of public information and opinion.

The theft of American industrial techniques and formulas is a little-known but continuing activity of Soviet agents.

Foreign capital flowing into the United States for undisclosed origin constitutes a threat that cannot be overlooked. Some $26.8 billion in foreign funds are invested in United States industry, a substantial part in defense industries. Much of it comes through countries whose laws make it impossible to determine the origin.

Communist infiltration into organized labor is an unsolved problem.

To all of these charges, the subcommittee adds the color of testimony that, if not decisive, at least bears close attention. To all, it adds recommendations for legislative or Executive action to help correct the loopholes that still exist.

Hunting Reds in Government has always been a thankless task. Usually, it has brought vituperation and often discredit on the men doing the hunting—and occasionally the discredit has been well earned. The present committee under chairmanship of Senator JAMES O. EASTLAND of Mississippi has managed to avoid the notoriety of some of its prerecessors and so may also avoid some of the unpleasant effects that others have suffered.

We hope so. Building defenses against subversion without ripping holes in civil rights requires the most sober, thoughtful consideration of which the country is capable. This kind of consideration is not possible in the circus atmosphere that has taken hold of the Nation in the past.

A Curb on Junketeering

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Times of Saturday, March 2, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CURB ON JUNKETEERING

In a recent press conference President Eisenhower said: "There is no expenditure of public moneys, except only involving that where the public security itself is involved, that should not face the light of day any time any citizen inquires for it." The statement was made in general response to a specific question about the secrecy that enshrouds the expenses of Congressmen traveling abroad on official trips.

A few days after the President's comments, Senator JOHN J. WILLIAMS, of Delaware, took the floor to urge a full public accounting of such funds; and legislation has subsequently been introduced to require it. The amounts involved are not small, almost $500,000 for the fiscal year 1956 in counterpart funds alone, which means local currency made available by foreign governments receiving United States aid. The grand total is not known, nor are individual Members of Congress required to present any itemized breakdown of their disbursements.

Now, it is, of course, possible that most of these and other expenditures go for legitimate factfinding purposes. There can be perfectly proper reasons for Members of House and Senate and their staffs to travel at public expense, and we would be the last to say that they were never entitled to do so. But that there have been some excesses and some unjustified use of public funds for private entertainment it would be equally foolish to deny. As Senator WILLIAMS points out, "Many Members of Congress who have traveled abroad * * * have said they would be glad to see the cloak of secrecy removed in order to prevent suspicion of those who have made these trips for constructive purposes and spent the money in conscientious manner."

In the interests of public confidence in Congress, good relations with other countries and orderly procedure in the dispensation of governmental funds, Congress would do well to face this question frankly and reveal expenditures, in detail, that it ought have no reason to hide.

The Galindez Case

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. NEUBERGER. Mr. President, many thoughtful Americans have been disturbed over the disappearance of Dr. Jesus de Galindez, distinguished scholar who has fought the Trujillo regime in the Dominican Republic. This anxiety has been compounded by the further disappearance of a young American aviator, Gerald Murphy, of Eugene, Oreg., and the two cases are directly connected, according to an extensive survey by Life magazine, in its issue of February 25.

Representative CHARLES O. PORTER, of Oregon's Fourth Congressional District, has vigilantly followed this entire episode ever since it came to public attention. Mr. PORTER was born in Eugene, he was educated in its schools, and today he and his wife, Priscilla, and their four children make their residence in Eugene. Thus his interest in any of that city's residents is genuine, active and sincere. The disappearance of Gerald Murphy, whose grief-stricken parents live in Eugene, was a tragic event which Congressman PORTER would not tolerate without challenge and investigation.

After Mr. PORTER had spoken about the matter on the floor of the House of Represenatives, some of his colleagues were critical of the stand that he took. However, it is significant that the newspaper which is generally recognized as the most thorough and complete and carefully edited periodical published anywhere in America—and perhaps even in the world—has come to Mr. PORTER's immediate defense with a strong editorial.

This editorial constitutes a ringing endorsement of the courage of a new Member of Congress, who has served in the House for only a few months. The editorial demonstrates that much will be

heard in the future from CHARLES O. PORTER, whose maiden address in the House has been described by the editors of the New York Times as a public service.

So that Members of the Senate may have the benefit of the full contents of this New York Times editorial of March 2, 1957, it is my request, Mr. President, that it appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GALINDEZ CASE

Representative PORTER, of Oregon, performed a public service in the House on Thursday when he brought up the Galindez case.

On March 12 it will have been a year since Dr. Jesus de Galindez, a distinguished Spanish Basque scholar teaching at Columbia University, was snatched from the heart of New York City and disappeared as if by magic. He had just completed a doctoral thesis on The Trujillo Era which was a devastating analysis of the regime of the dictatorship of the Dominican Republic. However, no proof was forthcoming to link the disappearance of Galindez to the Dominican Republic.

Representative PORTER referred to the comprehensive exposé published by Life magazine on February 25. This connected the death of the young American flier, Gerald Murphy, to the Galindez case, but the evidence, however impressive, is still circumstantial.

Everyone connected with these mysteries is dead and dead men tell no tales. The duty of solving the mysteries rests, as it always has, primarily on the Federal Bureau of Investigation. The New York police are also deeply involved in the disappearance of Jesus de Galindez. On the basis of information so far divulged, both organizations have failed.

They must keep on trying. It should not be possible for a distinguished foreigner to be wiped out in New York City without anyone being punished for the outrage. So far as the Dominican Government is concerned, Representatiye JAMES FULTON, of Pennsylvania, was beside the point in criticizing Mr. PORTER for attacking a friendly neighbor. Just because one of the worst dictatorships in Latin America is pro-United States does not make it any the less of a tyranny. It should not be the part of the State Department or of Congressmen to curry favor with dictators just because they are friendly. Our duty as a great democracy is to foster democracy and encourage Democrats in Latin America, not dictatorships and not tyrants.

Puerto Rico

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very well written and comprehensive article dealing with Puerto Rico.

It is particularly appropriate that this excellent article should be published at the time the people of Puerto Rico are celebrating the 40th anniversary of their American citizenship and marking the great friendship that exists between the people of Puerto Rico and the people of the United States. I hope all Senators will acquaint themselves with the article, and note particularly the great strides which the people of Puerto Rico are making.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of March 3, 1957]

PUERTO RICO SETS PACE FOR OUR ISLAND COUSINS

(By Chalmers M. Roberts)

One of the courious things about Americans is how little so many of us know about our own country. And this goes double for the United States' offshore possessions. Puerto Rico is a case in point. The Virgin Islands are another.

This reporter recently spent some time in both these pleasant Caribbean spots over which the Stars and Stripes have been flying now for many years—since 1898, in the case of Puerto Rico, and since 1917 in the case of the Virgin Islands. This is by way of a report on what goes on in both places.

Puerto Rico is effervescent; there is a smell of action in the air. Under the leadership of Gov. Luis Munoz Marin, as shrewd a political leader as one is likely to run across anywhere, this jam-packed little island with the skimpiest sort of natural resources is in the midst of lifting itself out of the status of a backward, underdeveloped area into the modern industrial age.

THEIR OWN INITIATIVE

Much has been done; much, much more remains to be done. But the important thing is that it is being done by Puerto Ricans in a democratic way in what has been aptly named, "Operation Bootstrap."

The Virgin Islands, by contrast, are only now beginning to come alive, in part, because of the Puerto Rican example; Puerto Rico is only 40 minutes flying time away.

The key to Puerto Rico's success is twofold: a settled and acceptable political relationship with the United States, and an indigenous political leadership headed by Munoz. For Peurto Rico is a commonwealth under the American flag, with complete local self-government from the governorship and legislature on down, subject only to the United States Constitution and courts. The last two elections (1952 and 1956) demonstrated that two-thirds of the voters prefer this to either complete independence or statehood.

The Virgin Islands, however, remain a Territory, under Interior Department administration, to a large degree. The Governor is named by the President. The President can, and does, override the acts of the locally elected 11-man legislature. (Mr. Eisenhower not long ago upheld the Governor's veto of a bill to authorize some new public comfort stations.) Perhaps most important, as far as this reporter could discover in a short visit, there is no strong local leadership, certainly not of the caliber of Muñoz.

GOVERNMENTAL LABORATORY

In short, what is going on in Puerto Rico is a tribute to both American generosity and to Puerto Rican gumption. It is the combination of the two which has made the island commonwealth a magnet for curious visitors from 99 different countries and territories, all come to see whether what the Puerto Ricans have done cannot help them in the development of their own homelands. Often it can.

On the other hand, what goes on in the Virgins is a black mark against Washington. The United States has yet to offer the opportunity, and the indigenous population has yet to prove itself able to cope with the problems, of commonwealth status or something akin to it.

Puerto Rico is a tiny, 100-by-35-mile rectangular island packed with some 2,300,000 people despite the fact that a net of more than 429,000 Puerto Ricans has moved to the continental United States over the past 10 years. Its population, in fact, is greater than that of at least 15 of the 80 countries which form the United Nations, including 6 or 7 of the Latin American Republics.

The Virgin Islands consist chiefly of 3 small islands (St. Thomas, St. Croix, and St. John) with only 14,000 residents. The Puerto Ricans are Spanish Americans for the most part; the Virgin Islanders are principally Negroes. Puerto Ricans speak Spanish but many also speak English. Virgin Islanders speak English, although it has a calypso singsong quality which has been described as putting the emphasis on the wrong "syllabasis."

INTERNAL SQUABBLING

The current Governor of the Virgins is Walter A. Gordon, a California Negro attorney, former assistant football coach at the University of California, and friend of Chief Justice Earl Warren. He is currently in Africa with Vice President NIXON. He is an intelligent but frustrated man, locked in constant dispute with the legislature. One has the impression that neither tries very hard to find some sort of accommodation in the islands' interest.

As Muñoz has said, Puerto Rico is a "political mutation—perhaps a cultural mutation, too." One finds working for the government in San Juan a number of former Washington New Dealers. David Lilienthal and Gordon Clapp advise on a major irrigation project. The last white mainland governor, Rexford Guy Tugwell, recently returned for a series of lectures at the university. Chester Bowles is one of the island's major advocates.

In short, Puerto Rico is in many ways a child of the New Deal. The economic philosophy of the men who run it is akin to that of Franklin Roosevelt, not Dwight Eisenhower. The government has its fingers in almost every type of pie from housing to hotels, from factories to long-range planning. Yet private industry flourishes and many American businesses have been lured to the island by a 10-year tax holiday program and some 450 government-built, tax-exempt factories.

When Muñoz created his Popular Democratic Party back in 1940 under the Tugwell regime, Puerto Rico was a poor agricultural island dependent on sugarcane. Since 1940, life expectancy has been raised from 46 to 68 years; literacy from 68 percent to better than 80 percent; nearly 40,000 industrial jobs have been created and the birth rate has begun to decline. Family income averages $2,400 today compared to $660 in 1940.

Today, some 260,000 of 486,000 housing units have electricity, 168,000 have water, and 130,000 have television sets, although TV came to the island a bare 3 years ago.

Yet the figures can be illusory. Thousands still live in slum shacks through whose bare boards one can often see the TV sets. Unemployment is around 13 percent of the labor force, compared to under 4 percent in the United States. And the average hourly wage last year was only 64 cents compared to $1.96 for the United States as a whole and something over $1.20 for Mississippi.

Income from manufacturing topped agricultural income for the first time last year despite the fact that two-thirds of the industrial workers are women.

Under the apparently permanent 10-year tax holiday plan, which really got underway in 1949–50, just about any business which would move to Puerto Rico was welcomed with open arms. Some which came did not last long, even with a tax break. Others settled down and expanded. Many complained of high labor turnover despite

the government's efforts to train one-time farm hands how to run machines. Most of the new industries were small with textiles predominant, though some were branches of such major American concerns as Remington Rand, Sunbeam Electric, American Can, and General Electric.

The island's big break, or what Teodoro Moscoso, the dynamic boss of the government's Economic Development Administration, believes will be the turning point, came with the establishment of two oil refineries in 1954–55, a $60 million investment. Venezuelan oil is only some 500 miles south.

Around these refineries there is now the beginnings of a petrochemical complex. Union Carbide is building a $28 million plant to manufacture ethylene glycol, using refinery gases. Two more such complexes seem to be reasonably assured. In the coming decade, Puerto Rico expects to see petrochemicals spawn synthetic fibers and/or plastics—and thousands of new, stable jobs.

As conservative an organization as the Chase Manhattan Bank recently commented in its Latin American business review that "real progress is being made in diversifying the economy" of Puerto Rico.

As the visitor traipses through the maze of facts and figures in Puerto Rico, he more and more wants to know: Where did the money come from to start all this? Is the American taxpayer footing the bill? The facts are these:

The United States gives Puerto Rico two big breaks: it collects no income taxes there (though residents pay a stiff island income tax approaching the Federal rates), and it turns back to the Puerto Rican treasury the customs and excise taxes collected on the island, a total of $23.5 million in the last fiscal year.

Aside from these two breaks (which also apply to the Virgin Islands), Puerto Rico receives, as the 48 States do, Federal funds in the form of military and civilian payrolls ($98 million for Puerto Rico), grants-in-aid for roads, school lunches, etc., of $24 million and veterans' benefits and other transfer payments of $71 million.

Puerto Rico's income also is boosted by money sent home by Puerto Ricans living in New York and elsewhere in the States, about $15 million last year, and by tourist expenditures estimated this year at around $25 million for some 200,000 visitors.

The island government's budget is balanced at $230 million, of which only 5 percent goes for industrial development (it will be 10 percent next year). Thus it seems a reasonable conclusion that while Uncle Sam is being generous, Puerto Rico itself is paying the bulk of the bill.

Curiously, World War II gave the island the initial kitty with which to start industrial development. In those years, as many Americans will remember with displeasure, one had to buy 2 or 3 bottles of rum to obtain a bottle of Scotch. These tie-in Puerto Rican rum sales, or, more correctly, the excise taxes on the rum, provided the bulk of $17.5 million for island development.

Now, Moscoso figures the local treasury picks up $150,000 from every $1 million added to the island's income. Success thus feeds on success, fiscally speaking.

It also works another way. Five years ago the island government invested $7.2 million to build the spectacular Caribe Hilton Hotel in San Juan on a lease basis, with two-thirds of the profits for the government and one-third for Hilton. Last year, says Moscoso, the government's share was a fat $900,000. Hilton's tax-free $450,000 can be, and is, used to finance his hotel activities in many foreign lands. Moscoso likes to point out that Puerto Rico thus is helping the American point 4 program.

Hilton, incidentally, pays taxes on the profits of the legalized gambling casino in the hotel. Puerto Rico also has a legal government lottery which brings in $3 million a year, money assigned to hospitals to make it morally more palatable. There also is a new $5 million racetrack in which a lot of Washington money has been invested.

In contrast to the 100 percent government financing of the Hilton only 5 years ago, a new 368-room hotel to be run by the intercontinental chain is now building with only an 8 percent government interest. To such a degree has private-investment confidence risen.

The 10-year tax holiday scheme, widely advertised in the United States, is undoubtedly the major attraction for industry. But even this would not do the job except for the fact that Puerto Rico is inside the American tariff wall and under the American flag and the protection of its courts.

It was, in fact, the realization by Luis Muñoz-Marin that Puerto Rico could never stand alone economically that led him to abandon his initial bent toward independence.

Muñoz knows, too, that for many years to come thousands of Puerto Ricans must migrate to the mainland, as is their right as American citizens. Were it not for this opportunity, he told the legislature in January, the island would face economic disaster.

Talking to the Governor in his office-residence atop the ancient Spanish-built city wall—Ponce de Leon, the first Spanish governor, was the initial occupant—one is impressed by both the man's drive and his vision.

When the Popular Democratic Party has carried out its pledges, he says, the job will be done and it probably will be defeated. But the goal is still a long way off: Full employment by 1965, a minimum family income of $2,000; an end of illiteracy; good low-rent or low-cost housing for all.

That Puerto Rico wants Muñoz to finish the job is clear enough from the 1956 election returns: Popular Democrats, 437,540; Republican Party (pro-statehood), 176,443; Independence Party (for cutting all ties with the United States), 66,850. Interestingly enough, the Independence Party had been second in 1952 with 125,000 votes to the Republicans' 85,000, compared to Muñoz's 429,000.

Working Together: The Credo of Civil Defense

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to commend to the attention of the membership of this body an article written by the Federal Civil Defense Administrator, Mr. Val Peterson, which appeared in the January-February edition of the Catholic War Veteran.

Governor Peterson's message is timely and of great importance to all of us. He stresses the fact that we must all work together so that we may be trained and prepared to help ourselves, and help others, in the event of an emergency.

I have been deeply distressed by the complacent attitude of some of our people, and some of our officials, with respect to civil defense. Our civil defense preparations have been lagging, and our efforts in that field have been often hesitant and ineffectual.

For these reasons, and because civil defense is everybody's business, I sincerely hope that the article which follows will receive attentive consideration. I also hope that we will begin to exert greater effort to make our civil defense as effective and adequate as possible.

WORKING TOGETHER
(By Val Peterson)

Probably no two words in the history of a free nation have so much meaning for us. It was working together, led by the rugged individualism of courageous men and women, that carved from raw frontiers the United States of today.

It has been working together that built your splendid fraternal organization, the Catholic War Veterans, to the tremendous accomplishments for which it is famous. People, united in a single purpose, can do just about any job.

It will be working together that will keep our freedoms, continue our accomplishments. There can be no end to the kind of cooperation we've made successful. And now, in this age of nuclear weapons, our "working together" spirit may well be the key to America's ultimate survival in the future.

A potential enemy has the weapons and the ways to attack us. We have seen how sudden natural disasters—tornadoes, floods, hurricanes, fires—can leave death, injuries, and destruction far beyond the immediate resources of normal emergency services. There is only one answer to trouble, natural or man-made: every individual must be ready to help himself and others.

This is the credo of civil defense. It might be expressed as "working together, to prepare and train to help ourselves and others survive."

We have seen our entire pattern of life undergo an amazing metamorphosis in the last 25 years. Our cities have expanded beyond the wildest dreams of their original planners and our suburbs are reaching out continuously into what once was country farmland. Our urban dwellers are growing closer to their rural counterparts daily; therefore it is becoming increasingly difficult to find any man who can say honestly that he is completely independent and self-sufficient of his neighbor. Civil defense has become everybody's business.

Because of this, a natural disaster or an enemy attack, if it should occur, no longer can be considered a localized affair. It will become an emergency which can influence the lives of millions far beyond the actual scene of disaster.

We must recognize the hard fact that without civil defense we cannot exist peacefully, for President Eisenhower truly has said that a strong civil defense is a powerful deterrent to war. We also must accept the fact that in time of natural disaster, a strong civil defense is a powerful antidote to the ravages of nature.

Catholic War Veterans can be of invaluable assistance. You are the leaders of your communities. I know you have only limited time for actual participation in the extremely important jobs of operational civil defense such as block wardens, auxiliary firemen and policemen, or rescue squad details. But, in your everyday business activity you can provide the leadership from which will stem the community incentive to do something about the problem we face. Your thinking will precede and encourage the action we must have to make civil defense workable at all levels of our society.

Your industry and business have a tremendous stake in this matter of survival. In recent years, we have seen many of our

factories and business houses dealt crippling blows by flood, fire, hurricane, and tornado. Preparedness against these threats to the best of our ability is civil defense in action.

As businessmen, many of you have reocognized this and have taken steps accordingly. But, have you let this concept of business and industrial survival filter down into your homes and those of your employees in terms of personal survival? Is the man on the street in your community really cognizant of civil defense? Does he truly understand that civil defense is not a static theory of preparedness for war, but that it actually is a dynamic, workable means of survival?

This is your responsibility. Your thinking will stimulate the action we must have to make civil defense a success. Let your thoughts on this line be known in your community. Perhaps you will take issue with some of our concepts and applications. That is your prerogative, but let your opinions be aired for all to hear and understand.

Only by working together can we bring civil defense to all of our people. Only in this way can we be assured of survival.

Statehood for Alaska

EXTENSION OF REMARKS
OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. BURNS of Hawaii. Mr. Speaker, national sentiment for immediate statehood for Hawaii is mounting steadily. This is revealed in the growing number of editorials appearing daily in the press of the Nation. Nearly all of them urge the admission of Hawaii into the Union in this session of the Congress. This editorial expression comes from all regions of the country—from the West and East, from the North and deep South. It is no exaggeration to say that newspapers being read daily in a majority of homes in the Nation today support forcefully the grant of statehood to Hawaii. Here are some recent examples:

ALABAMA

Birmingham, Ala., Post-Herald, January 19: "For the first time since he has been in the White House, President Eisenhower is advocating statehood for both Alaska and Hawaii. This is progress, but his reference to Alaska is still hedged. * * * There's plenty of ground in vast Alaska * * * for ample defense installations. * * * The need for them should not be permitted to confuse the statehood issue."

COLORADO

Ft. Morgan, Colo., Times, January 14: "The admission of both (Hawaii and Alaska) is certain to come sooner or later. They are having the same experience that all of the States west of the 13 colonies had in gaining admission to the Nation."

Rocky Mountain News, January 19: "For the first time since he has been in the White House, President Eisenhower is advocating statehood for both Alaska and Hawaii. * * * There's plenty of ground in vast and sparsely populated Alaska for ample defense installations and even hunting preserves, if they are considered essential. The need for them should not be permitted to confuse the statehood issue."

CALIFORNIA

Riverside Enterprise, January 29: Denying the people of the Territories their due means playing politics with citizenship. By every test Alaska and Hawaii are entitled to statehood now."

Sacramento Bee, January 25: "To duck and dodge longer on the aspirations of the people of these Territories for complete self government will affront them and kick in the teeth public sentiment throughout the United States as well."

Modesto Bee, January 29: "The Republican National Convention in San Francisco pledged that party to 'immediate' statehood for both Territories. The Democratic National Convention made the same strong commitment. Whether such pledges have any meaning will soon get the acid test in Congress."

San Jose Mercury, January 25: "For years the residents of both Territories have been promised statehood and it is about time they had it."

Riverside Press, January 28: "By every just test Alaska and Hawaii are entitled to statehood now. Those Congressmen who acknowledge this should do everything in their power to gain them their admission to the Union."

Fullerton News-Tribune, January 22: "For the first time since he has been in the White House, President Eisenhower is advocating statehood for both Alaska and Hawaii. This is progress."

Los Angeles Examiner, January 20: "Alaska and Hawaii, out of the Union, are the accusing symbols of second-class American citizenship imposed upon people fully entitled to a better place in the family. In the Union, they will give military and economic strength to the Nation, enhance American prestige throughout the world, and attest the solidarity of all our people."

IOWA

Davenport Morning Democrat, January 24: "It is time to end the foolishness and to admit States No. 49 and No. 50 to the Union."

Oelwein Register, January 19: "The case for both Hawaii and Alaska is overwhelming. Popular sentiment has favored statehood for Hawaii and Alaska."

KENTUCKY

Covington Enquirer, December 20: "As long as we withhold full citizenship from the people of Hawaii we are handing our critics, particularly the Communists, a readymade argument to use against us throughout Asia."

KANSAS

Wellington News, January 24: "It is always a pleasure to see people claim their right to self-government, especially when it adds to the power and prestige of the United States. Admitting Alaska and Hawaii to the Union will certainly do that. The case for Hawaii has long been overwhelming."

MICHIGAN

Ann Arbor News, January 12: "Even an argument perhaps based on real concern—the issue of communism in Hawaii—fails to strengthen the validity of opposition. The problem could probably be better dealt with by the Federal Government if Hawaii were a State."

Detroit Times, January 21: "It is a powerful demonstration of the merit of the statehood proposal that he (President Eisenhower) has become convinced of the necessity of bringing Alaska into the American family of States. In the Union Alaska and Hawaii will give military and economic strength to the Nation, enhance American prestige throughout the world, and attest the solidarity of all our people."

Bay City Times, January 14: "In a land that preaches the right of franchise for others, Congress should stop playing Alaska against Hawaii, and vice versa, over political issues that are only indirectly related to the merits of statehood for these two Territories."

Marquette Mining Journal, January 14: "Something tells us Alaska will do. We are plumping for Hawaii, too."

Menominee Herald-Leader, January 26: "Perhaps Michigan's battle for statehood may soon be duplicated by the addition of Hawaii and Alaska to make the Union an even 50 States."

Iron Mountain News, January 26: "If Alaska and Hawaii do not gain statehood in this session of Congress, it will be because some persons do not take their promises seriously."

MISSOURI

St. Louis Post Dispatch, February 3: "Alaska and Hawaii are ready for statehood, they want statehood, and statehood has been solemnly promised them by both major political parties in the United States. Why then have they not been admitted to the Union? That is a question which Members of Congress may find harder and harder to answer unless they do something about it."

MONTANA

Great Falls Tribune, February 6: "Informed Washington observers report chances brighter for approval of statehood for Alaska and Hawaii in this session of Congress than in previous sessions. The Alaskans, like the Hawaiians, have been used as a political football much too long. They qualify for statehood; they want statehood; they should have statehood."

MASSACHUSETTS

Boston Record, January 22: "The twin proposals of statehood for Hawaii and Alaska have been before the Congress a long time, and it was only the question that was in Mr. Eisenhower's mind about Alaska, that held them back."

MINNESOTA

Duluth News Tribune, January 26: "If our politicians want platforms taken seriously, they will admit these two new States to the Union."

NEW YORK

New York Times, January 22: "Both Territories are ready to be represented in Congress by voting Members in both Houses whenever our legislators decide that a little more democracy wouldn't do any harm."

Elmira Star-Gazette, January 19: "Both Territories are eager for an extension of the democratic process. Both are important in the defense of the United States. And both have attracted the temporarily affectionate eye of the authors of party platforms."

Jamaica, Long Island, Press, January 13: Both territories have made out good cases for admission to the Union. We should be proud to have them. This year * * * is a good time for Congress to open the door to them."

OHIO

Findlay Republican Courier, February 2: "It is not unlikely that both Territories will be admitted at the current 85th session of the Congress."

Cleveland Press, January 21: "For the first time since he has been in the White House President Eisenhower is advocating statehood for both Alaska and Hawaii. * * * The need for them should not be permitted to confuse the issue."

Springfield News, January 17: "There are 1 or 2 new recommendations (in the President's budget message) the most heartening of which is addition of Alaska to the recommendation for Hawaii statehood."

PENNSYLVANIA

Allentown Call, January 19: "The people of both Territories long have pressed their claims to such recognition. There is no question as to their ability for responsible government in the political status of sovereign States. They have long served an apprenticeship in preparation for a grant of increased stature."

Pittsburgh Sun-Telegraph, January 21: "Alaska and Hawaii out of the Union are the accusing symbols of second-class American

citizenship imposed upon people fully entitled to a better place in the family."

Connelsville Courier, January 26: "Should Hawaii and Alaska make it 50 States by grant of statehood in the next 4 years, there will be added color to the next inaugural parade. There should be no further delay in adding them to the roster of States."

Scranton Times, January 18: "It would seem only fair that if one Territory is to be admitted the other one should be brought into the Union at approximately the same time."

TEXAS

Athens Review, January 28: "Have you ever wondered how the residents of Hawaii and Alaska must feel about the attitude of our United States lawmakers who continue to sidetrack the issue of their admittance as States in our Union?"

San Antonio Light, January 21: "In the Union, they (Alaska and Hawaii) will give military and economic strength to the Nation, enhance American prestige throughout the world, and attest the solidarity of all our people."

Jacksonville Progress, January 10: "We should make sure every foot of ground, every human being under the stars and stripes has equal participation in government."

TENNESSEE

Knoxville News-Sentinel, January 18: "The need for them (Alaska and Hawaii) should not be permitted to confuse the issue."

UTAH

Salt Lake City Deseret News, January 14: "Citizens of both Territories have repeatedly voted yea on the statehood issue. Both offer large areas of wealth in natural resources if economically developed. Statehood to both would help this Nation's defense, foreign relations and national economy."

Salt Lake City Tribune, February 8: "If words and pledges have any meaning both Alaska and Hawaii—ready for statehood and earnestly seeking it—should be added to the Union this year."

WEST VIRGINIA

Grafton Sentinel, January 25: "President Eisenhower recommended in his budget message statehood for Hawaii and Alaska. There should be no further delay in adding them to the roster of States."

WYOMING

Casper Tribune-Herald, February 5: "Taxation without representation is the issue which brought the United States into being. It creates a strange feeling that anybody living under the flag can raise it today; that Hawaiians and Alaskans, as citizens, are still denied full citizen rights."

A National Grammar Commission

EXTENSION OF REMARKS

OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. HAGEN. Mr. Speaker, I have introduced legislation which would establish a National Grammar Commission to be appointed by the President with the advice and consent of the Senate which shall have the usual prerogative of a National Commission and a specific purpose to be carried out. In this instance, the purpose is that of research into the rules of spelling and grammar deemed to be desirable for use of the English language in the United States. The product of such research would be the establishment of an official dictionary of reformed spelling and grammar. Once established, this dictionary would serve as the directive for the reproduction of material by the United States Government and its officials and employees with the hope that usages established would become common in our society generally.

This legislation was introduced by me at the request of Mr. Homer Wood, of Porterville, Calif. Mr. Wood is presently the publisher of a daily newspaper in that city. In addition to his newspaper experience, he has in his background a qualification to practice law and experience in the administration of courts. For some time he has been concerned with the problems created by the inadequacies of our grammar and spelling. He is convinced that the establishment of a more scientific system of spelling and grammar would result in a saving of tens of millions of dollars and would ease considerably the burden of our educators with a correlative improvement in the language usage habits of our citizens. The proposal has received wide publicity already.

I am convinced that there is much merit in it. Neither Mr. Wood nor myself visualize that such a commission would establish a complete new method of spelling, phonetic or otherwise, or the abandonment of a substantial portion of our rules of grammar. The commission would make its attack on the most obvious inadequacies of our language usage. In other words, the proposals of the first grammar commission would be moderate. Experience would demonstrate to what extent more radical changes in our language usage would be desirable, but the initial effort would be modest according to my conception. The proposal contained in my bill is not original because efforts have been made in the past in various quarters to rationalize language usage which I will give you briefly from the history of such efforts and from the justifications announced in the past.

In 1550, the poet Ronsard said:

Thou shouldst not put any letters in words if thou dost not pronounce them.

Since that time, scholars and learned men of every generation have attempted to simplify the spelling of the language. English, which in most respects is considered a relatively simple language to master, has the most difficult spelling of all. Down through the years, there have been attempts to simplify other languages such as Dutch, French, Norwegian, and Spanish.

Why is such a reform desirable? Reform, when it means improvement, is always desirable. Spelling reform would tend to give the language greater uniformity in pronunciation. It would save time, space, labor, and money. The question of economy is more far-reaching than we might suppose. It occurs day after day and year after year in many countless ways. Think of the hours that a child wastes in school learning to read—hours that could be saved by easier reading. Think of the hours wasted in learning to spell words in which letters and the pronunciation are entirely different. The battle with spelling does not end there. It is a continuous process through life—keeping up and perfecting the knowledge of spelling. It means countless hours wasted at the dictionary consulting the spelling of a word. Then, too, he spends much time in the needless task of writing silent letters. The cost of printing the silent letters runs into the millions of dollars for each generation. Yet, many people defend silent letters by pleading their advantage in the study of etymology. That etymologies would be obscured by the use of simplified spelling is not true. The fact is that etymologies would be clarified—few would be obscured and none would be lost. Finally, the present system of spelling is a hindrance in modern education. It is difficult for a child to learn and difficult for the teacher to teach. A simplified system would save many teaching hours. It would have greater rewards for the child and hence would be of greater interest to him. All of these arguments have been set forth many times. Because they are true, they cannot be repeated too often.

Other languages have adopted reforms in spelling. Because of the differences of writing and printing methods used in the various parts of Germany a conference of delegates was held at Dresden in October 1872. Dr. Falk, the Prussian Minister of Education, proposed that Professor von Raumer should prepare a report on the need for reform. The reforms were prepared, sent to the various governments and then submitted to a ministerial commission composed of von Raumer and 11 other scholars. The commission met in January 1876 and, with certain modifications, approved the reforms. The reformed spelling was then required to be taught in all schools.

In Denmark, in the 1800's the reform movement resulted in an official decree confirming certain regulations. This decree, however, was not made obligatory.

Spain has been designated as one of the languages with the simplest forms of spelling. In 1741 the Spanish Academy laid down the principles for the spelling of Spanish.

Pronunciation must have for its sole and universal rule, that by it alone there can always be known with what letter the sound should be written. (La pronunciación se debe tener por regla única y universal siempre que por ella sola se puede conocer con que letra se ha de escribir la voz.)

More recently, the French Government has requested a report on spelling and other grammer reforms for their native language. In 1950 the Conseil Supérieur de l'Education Nationale requested that such a report be made, and the findings of the Commission de Réforme were made public in 1952. The commission was headed by M. A. Beslais, director of primary education for all France. The report includes the recommendation that what Beslais calls "parasite consonants"—that is, silent letters—be thrown out altogether. In addition, the report recommends that certain letters be dropped and others substituted in the alphabet. M. Beslais says that there is no reason for children in this modern

day and age to spell words the same way that their grandparents spelled them. Children of today have too much to learn. The report quotes the decree of the Conseil Supérieur de l'Education Nationale of 1901, which said that tolerance should be shown to any student who used poor spelling on his exams provided that the student showed intelligence. M. Beslais further stated that the reforms should be started with the children entering in the first grade and not with adults. In conformance with the decree of 1901, tolerance would be shown for student use of simplified spelling in the higher grades. The report states:

In 10 years, reformed spelling will have an existence parallel to the orthography of today and in a generation it will have practically eliminated it.

In addition to the spelling reform, the report also deals with the reform of some rules of grammar which might have an even greater effect than the proposed spelling changes. But before these reforms go into effect, they must be approved by the Conseil Supérieur de l'Education Nationale.

There have been several reform movements for the English language, both in spelling and other forms of grammar. In the late 1800's, 130 British school boards petitioned the education department for a Royal Commission to study the matter. The British Social Science Association, the Philological Society of England, the American Philological Association, and the Spelling Reform Association asked for reforms. In 1877, the State Teachers' Association of New York appointed a committee to ask the State legislature to create a commission to study reform spelling. In 1878, a petition in favor of reform spelling was presented to the Senate and the House of Representatives.

Many prominent men have advocated spelling reform in the English language. Among these are Theodore Roosevelt, George Bernard Shaw, and Colonel Robert McCormick.

In 1906, Theodore Roosevelt had the following to say about the proposed spelling reform:

Most of the criticism of the proposed step is evidently made in entire ignorance of what the step is, no less than in entire ignorance of the very moderate and commonsense views as to the purposes to be achieved, which views are so excellently set forth in the circulars to which I have referred. There is not the slightest intention to do anything revolutionary or initiate any far-reaching policy.

They represent nothing in the world but a very slight extension of the unconscious movement which has made agricultural implement makers and farmers write "plow" instead of "plough"; which has made most Americans write "honor" without the somewhat absurd, superfluous "u"; and which is even now making people write "program" without the "me."

It is not an attack on the language of Shakespeare and Milton, because it is in some instances a going back to the forms they used, and in others merely the extension of changes which, as regards other words, have taken place since their time.

It is not an attempt to do anything far-reaching or sudden or violent, or indeed anything very great at all. It is merely an attempt to cast what slight weight can properly be cast on the side of the popular forces which are endeavoring to make our spelling a little less foolish and fantastic.

George Bernard Shaw was a lifelong advocate of simplified spelling, punctuation, orthography, and phonetics. He advocated the used of spaced letters instead of italics. Shaw wrote many articles on the subject, some of which are as follows: A Plea for Speech Nationalization, the Morning Leader, August 22, 1901; The Dying Tongue of Great Elizabeth, the Saturday Review, February 11, 1905; and Orthography of the Bomb, the Times, December 27, 1945.

Col. Robert McCormick used many of the simplified spelling rules in his newspaper, the Chicago Tribune, all during the time that he controlled the newspaper. He was a firm believer in the benefits derived from simplified spelling.

One other report in connection with grammar reform that should be cited is the Joint Committee on Grammatical Nomenclature. This committee was appointed by the National Education Association, the Modern Language Association of America, and the American Philological Association. Its report was first published in 1913 and reprinted in 1929. In the report, it states the following concerning its purpose:

The adoption of a system of identical nomenclature for identical phenomena in all the languages of our family which the student may take up, with its natural accompaniment of differing nomenclature at the points where the phenomena differ, would have the effect of making these differences stand out more sharply in his mind.

* * * And it is believed, therefore, not only that the acceptance of the system recommended will at once lead to a state of things much more satisfactory than the present one, but also that the greater part of the system will successfully stand the test of future thought; while the general use of it will at the same time direct attention more sharply upon points at which its results may at some future day be bettered.

If we look at the grammar books of today, we find that the nomenclature used differs from textbook to textbook. It is true that there is a greater degree of conformity than in the past, but a uniform system still has never been adopted.

Much has been written on the subject of reform in the past. Reform is still being advocated by the scholars of today. Yet nothing has been done about making official recommendations for reform. A National Grammar Commission, authorized by the Government, would have that power. It would make our grammar as much a part of this modern age in which we live as has modern industry.

Mighty Mites of the Milk Bowl

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article appearing in the December 1956 edition of the Reader's Digest entitled "Mighty Mites of the Milk Bowl."

The Milk Bowl was the brain child of a Mrs. Eugene Weafer, of Bryan, Tex., who, along with the help of her husband, has brought small-fry football into the big-time. I believe Mr. and Mrs. Weafer are to be congratulated for their untiring work with the youngsters in the State of Texas, as they are the backbone of our future society.

The article follows:

MIGHTY MITES OF THE MILK BOWL

(By Oren Arnold)

Early in December two ferociously eager football teams will meet at San Antonio, Tex., in one of the most colorful of the season's Bowl games. Because the play by play will be on an estimated 550 radio and 110 television stations across the continent, you might assume that both teams will be loaded with all-American stars. Actually, no player will be famous, or indeed weigh more than 100 pounds.

In just 7 years, this astonishing new sports spectacle, the National Milk Bowl, has achieved prestige in small-fry football comparable to that acquired by the Rose Bowl in collegiate ball in 40 years. Much of this has been due to a pretty young housewife and her dreams for her own five children.

Back in 1949, Elizabeth Weafer and her schoolteacher husband Eugene were "stuck" in Gause, Tex., a town of 491 people, way off the beaten track. Eugene's pupils were country children who had few assets except energy. Because there were no recreational outlets for their own five, Elizabeth urged her big husband to introduce football at the school.

Eugene had never played, never coached, but he'd at least seen a game or two; and he got a football book and studied it. Between cooking, washing and housekeeping, Elizabeth helped Eugene and several local boys measure off a gridiron in a cow pasture and erect goal posts. The kids took to it with enthusiasm.

"By October we had a team of scared little boys in poor clothes," Elizabeth recalls. "Nobody would play us. We wrote every school within range and were brushed off. Finally Bryan, a city of 18,000, reluctantly agreed to take our fellows on as a 'breather' to fill in their schedule.

"At game time, the Bryan lads showed up in resplendent new uniforms. Embarrassed, our Gause boys, in their faded jeans, sweat shirts and no shoes at all, refused to play. I had to take both coaches by the arm and make them talk kindly to our team to get it on the field. Finally our lads stood out there glaring, then took the kickoff and began playing like cowboys bulldogging steers."

One 12-year-old "mighty midget" ran almost for a touchdown—the wrong way. "I thought either goal post would do, ma'am," he said to Elizabeth during the time out, and burst into tears. She hugged him close a moment, explained the rules, and made Coach Weafer send him right back in. So he took the ball on the next play and ran for a touchdown in the other direction, scattering Bryan tacklers en route.

In the end, the barefoot Gauslings, who had never seen a football game before, had scored 24 points, the stunned Bryan boys, zero.

Word got around and other schools tried the ragtag Gauslings. They had no luck, either; the country boys polished off each one with a grim and deadly determination. They made other progress, too: they acquired shoes.

Meanwhile, Elizabeth Weafer, a baby on her hip, organized the rest of the Gause

youngsters into what could pass for a cheering section.

"If she says holler, then you holler!" one pappy commanded his six school kids. "I don't understand football, but I do understand hollerin'. It tones a body up and makes him work harder at whatever he's doin' if friends holler for him." A trained psychologist could not have expressed it better.

At night, while Eugene graded arithmetic papers, Elizabeth charted hidden-ball plays for him to teach the peewee gridders at practice next day. "Sometimes not even the referee could find the ball until our boy had it behind the goal posts," Eugene says proudly.

The town got to think so much of 25-year-old Elizabeth Weafer that it wanted to elect her Governor of Texas, which down there is a higher honor than being President of the United States. Especially after she wrote a Dallas radio station suggesting that a "bowl game for small fry" be started as a charity benefit, and challenging any team of comparable age anywhere to meet the Gauslings. She proposed that any money received for tickets should go to help crippled children.

The radio station took up the idea. Other radiocasters joined in. So did the newspapers and the general public.

Thus on December 10, 1949, the first Milk Bowl game played at Cameron, Tex. The Gauslings, resplendently clad and confident now, roared onto the field like a Panhandle tornado—and lost the game to San Saba, Tex., 20 to 7.

But the National Milk Bowl had captured the fancy of Texans; and even "foreigners" were intrigued. Herbert Hoover wrote a note of good wishes. So did another Hoover—J. Edgar; and an immortal halfback named Red Grange.

The next year's game launched it as an annual event. Wealthy and influential Texans agreed to be included among the supporters of this unique charity. And the National Milk Bowl's board of directors today is headed by one of the richest men in the world, Hugh Roy Cullen, and such personages as Dr. W. R. White, president of Baylor University; and—Elizabeth Weafer.

"Liz still spends about half her time on the bowl," her husband testifies.

As her fee for all this, Elizabeth Weafer asks and gets exactly what Bryan school got in that first game against the Gauslings—zero. Eugene, nominally the bowl's executive director now, is similarly paid. The Milk Bowl is a labor of love. No member of the board or anyone else has ever been asked for money, though the Weafers themselves have spent considerable of their own.

This year's game will be sponsored by a Lions Club at San Antonio. As always, the teams will play under standard football rules. No player will be over 14 years of age or weigh more than 100 pounds. Pageantry between halves will match the best seen at college games. And a pre-teen queen will be crowned.

The bowl's rise has caused hundreds of small-fry teams to be organized across the Nation. The best team in Texas is chosen by elimination from a region selected by the bowl committee, and the rivalry exceeds that in the tough collegiate Southwest Conference. The champ Texas team challenges one equally strong from out of State. And every State courts the challenge.

"We are even getting feelers from Canada, Mexico, Alaska, South America, and Europe," says Liz. "The whole enterprise keeps getting bigger. I keep trying to shift all the weight onto Eugene—he's twice as big as I am, and football is a man's game. But he just grins and sidesteps like most husbands. I'm not trained for this sort of thing. As a good Methodist, all I know to do is pray for guidance, then continue working as best I can."

But it was a good Catholic who, with a beneficent smile, spoke the feeling in all Texas toward Elizabeth Weafer. Father James Keller, famed head of The Christophers, said to her, "You are a terrific example of what one person can do."

A Concept of American Strategy and a Memo on National Military Units Composed of Escapees From Communist-Dominated Countries

---

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert the text of two statements by former Congressman Charles J. Kersten, of Wilwaukee, Wis. The first, entitled "A Concept of American Strategy," is the statement made by Mr. Kersten before the Senate Committees on Foreign Relations and Armed Services on February 4, 1957, during the joint hearings on Senate Joint Resolution 19 on the Middle East. The second article is a memo prepared on the subject National Military Units Composed of Escapees From Communist-Dominated Countries.

I feel, Mr. Speaker, that in view of Mr. Kersten's background, which includes the authorship of the Kersten amendment to the Mutual Security Act which includes the escapee program and the chairmanship of the House Select Committeee on Communist Aggression in the 83d Congress, that the presentation of his views is both timely and useful. His intense interest in this subject is, of course, a matter of record.

The statements follow:

MEMO ON NATIONAL MILITARY UNITS COMPOSED OF ESCAPEES FROM COMMUNIST-DOMINATED COUNTRIES

(By Charles J. Kersten)

Text of section 101 (a) (1) of Public Law 165 of the 82d Congress under title 1 (Mutual Security Act, 1951, as amended), known as the Kersten amendment:

"Not to exceed $100 million of the funds available under this section may be expended for any selected persons who are residing in or escapees from the Soviet Union, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania, Lithuania, Latvia, and Estonia or the Communist-dominated or Communist-occupied areas of Germany, or any Communist-dominated or Communist-occupied areas of Asia and any other countries absorbed by the Soviet Union, either to form such persons into elements of the military forces supporting the North Atlantic Treaty Organization or for other purposes, when the President determines that such assistance will contribute to the defense of the North Atlantic area or to the security of the United States."

(NOTE.—The above has been renumbered in the Mutual Security Act as passed in 1951 and presently in force and is to be found under section 401 special fund (a) of title IV, other programs of the Mutual Security Act of 1954, as amended.)

PRELIMINARY ASSUMPTION

The source of the Communist threat to world peace rests in their control over extensive armed forces, together with supporting political police.

What follows is based on the conviction that men presently in Communist armed forces do not willingly support international slavery but will, if given a chance, join those ranks of freedom that hold some visible hope of the ultimate liberation of their loved ones and of their native land.

While there is evidence of potential defection from these armed forces, the Communist control of them is as yet uncontested by any effective magnetism from the free world.

If the free world has confidence that its cause appeals to human nature and that the cause of communism, when applied to peoples, is repellent, it will boldly enter the struggle to challenge the absolute control over these armed forces by Communist tyranny. It will not only assert its cause in the international political arena with words but it will also provide the visible and tangible mechanism to activate this potential defection so that freedom-starved men of the captive armed forces may escape from the ranks of slavery to join the ranks of liberty.

Thus we can inject a new dimension into the present world struggle that penetrates horizontally all the areas behind the Iron Curtain with dynamic ideas and ideals which can unite all mankind in the common cause to overthrow tyranny and achieve freedom.

If we ignore the appearance of these new dimensions and continue to set the stage for classic conflict on opposing sides of only vertical lines, we become unwitting partners with the Communists in the preparation of war between the peoples of the slave and of the free world. There is already ample evidence at hand that the Communist tyranny cannot be defeated by only orthodox tactics.

If we accept this new dimension wherein our own security coincides with sympathy for the enslaved, demonstrated by deed, we make allies of those who might otherwise be hurled against us. We will impede the Communist effort to sovietize its armies and its peoples, and disrupt at its source their power to launch universal war by affecting the will to fight of the armed forces behind the Iron Curtain.

No true soldier wants to fight and die for communism.

Therefore, the target of the free world should be to disrupt and eventually destroy Communist control over all the armed forces of the enslaved nations.

BACKGROUND TO LEGISLATION PROVIDING FOR MILITARY UNITS

The legislative history of this section, prior to its initial passage, which took the form of a floor amendment, is not extensive. But it is definite. It is worth noting that it passed both the House and the Senate without dissent, with specific authorization by the Senate of expenditures of not to exceed $100 million. The Congress has, since the original enactment of the above cited amendment, five times reaffirmed its provisions without dissent. The action of Congress appears noteworthy because since its enactment the amendment has been the particular target of concentrated Soviet bloc attack (UNGA, Paris 1951; UNGA, New York 1953). This continuing unanimous support of the Congress would not have been possible if the language of the amendment had not been in tune with the hopes and wishes of the leaders and vast majority of its Members.

For these reasons the author of the amendment has set forth below the intent and objectives thereof as he understands them, and as indicated by the debate on the House floor at the time of its passage.

The prime objective of the amendment was to authorize the establishment of na-

tional military units (from selected persons who have escaped from Iron Curtain countries) to be affiliated with NATO forces.

These national military units are to be made up of such selected persons who are nationals or former nationals of the Soviet Union, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Lithuania, Latvia and Estonia, or any other countries enslaved by the Soviet Union.

To provide the required flexibility and support for such a program the phrase "or for other purposes" was included. Envisaged are such measures as: Maintaining a flow of desired escapees; provision for dependents of such escapees and those who would not or did not qualify for the national military units by providing for them in other United States corollary programs; and, support of activities within the Iron Curtain countries essential to the establishment and development of such military units.

In summary the intent was to provide the President with funds and flexible and wide authority to initiate an affirmative supporting program to strengthen the North Atlantic area and the security of the United States by drawing on the potential for freedom from behind the Iron Curtain which consistently for a long time throughout the Soviet orbit and recently in Hungary, Poland and elsewhere has been so dramatically illustrated.

The idea for national military units grew out of a long study of international communism, its objectives and techniques, and firsthand experiences with a great number of escapees from the countries controlled by communism. It was clear that the international Communist conspiracy has for its primary objectives the destruction of all national, sovereign states and to make the people thereof subservient to the central authority of Moscow. This is the Communist concept of a new kind of class internationalism called by them "international proletarianism" as distinguished from "nationalism," as pronounced by Lenin, Stalin, Khrushchev, Mao, and other leading Communist theoreticians. This concept makes enemies of all "anti-Communist elements" in every nation they take over. In contrast, the vast majority of escaped nationals from the countries now controlled by the Communist Party expressed a deep and vigorous love for their enslaved countries and a bitter hatred for communism and its destroying methods.

These escapees from the Communist orbit spoke with a unanimous voice which was also the voice of the overwhelming majority of the people of their respective nations. They hate communism in any form, national or international.

These expressions were those of national patriotism and love of country of the kind which has made and preserved the United States. They were the true feelings and aspirations of the captive peoples themselves.

It was obvious that some way had to be found to permit these escapees to participate in the common effort of the free world. The free world and particularly the United States is dedicated to the preservation of human freedom and governments which are responsible to the will of the people. We need all the support we can get from the people who are equally dedicated.

Since the escapees—people who have experienced firsthand life under Communist tyranny—did not have the opportunity to participate in the common defense of the free world, the national military units were intended to provide them with such opportunity.

BENEFITS OF NATIONAL MILITARY UNITS

The legislation originally enacted in August 1951 and still awaiting implementation can provide outstanding benefits to the United States. As I see it, the benefits provided would include:

1. Help to solution of refugee problem: The current massive escapes from Hungary raise the question whether permanent resettlement in the free world is the final answer to the problem of the continuing and possibly even increasing numbers of refugees from Communist terror.

The national military units provide a place and a positive purpose for freedom-loving and courageous military defectors. They also foreshadow the means by which the captive nations will be free of Communist rule and the desire for escape will cease and many of those who fled will want to return to their native land.

2. Visible and understandable symbols of freedom: Such units would provide a symbol for all the enslaved people of Central and Eastern Europe. They would be looked upon as manifestations of the legitimate and constant hopes and aspirations of the captive peoples and the nations they represent. This would be accomplished by each unit being formed on national lines with identifying flags, chevrons, arm patches, etc.

3. Rallying point for military defection: The units would serve as rallying points to attract persons of military age behind the Iron Curtain, including those already inducted into the Communist controlled military forces or about to be. Every Communist bloc individual of military age who escapes to the free world and is inducted into the national military units represents a net gain of two for the free world.

4. Deterrent to Communist military aggression: They would serve as a deterrent to war because of the effect they would have on the morale of the Communist military forces. Properly exploited, the mere existence of such national military units could create real problems for the Communist political and military apparatus and render it extremely unsafe for military offensives.

5. Disruption of military will to fight for communism: They would serve as a powerful force to weaken the discipline and will to fight of the Communist controlled military forces in the event of war. Communist controlled military forces will not want to fight against their countrymen who are fighting—in the well known and established national units—on the side of the free world. Capabilities for substantial war time desertions and surrenders together with significant behind-the-lines insurrection can accrue if such units are developed and their establishment properly exploited.

6. Upset Red propaganda re German militarism: They would serve to offset Communist propaganda about the resurgence of German militarism (with regard to such nations as Poland, etc.). National military units, made up of men who formerly lived in captive nations, marching side by side with Germans, Americans and other free people would put the "big lie" on such propaganda.

7. Symbols of a united Europe: The morale of NATO military forces would be strengthened. The French military have traditionally held that the liberation and federation of the Balkan States is vital to the defense of France against Germany and now against Russia, as the Balkans are a mountainous fortress lying across the flank of Germany and Russia. If the significance afforded by the national military units representing Eastern Europe is added to the forces of Western Europe a united Europe and the "European idea" are thereby symbolized—a more inspired banner around which there can rally against atheistic materialism all of the spiritual and cultural ideals common to Europe as a whole for nearly 2,000 years.

8. Economy of American forces in Europe: The initial value of the units would be chiefly their psychological impact on the satellite and Soviet forces. However, as they develop and grow they can, guided by experience and sound military judgment, contribute to the economy of American forces in Europe.

9. Special wartime value in captive nations: They could, in the event of war, in addition to missions as part of United States or other NATO conventional forces, have a peculiar value in essential specific operations behind the lines. Knowing the language, traditions, and terrain of their homelands they could rally and strengthen local resistance and blockade the enemy's lines of communication and supply, and also prepare for airborne or armored thrusts by our conventional forces.

10. Best means available short of war: The establishment of the national military units would provide perhaps the most significant action program short of war to weaken and defeat international communism at its base. The units would be an effective challenge to the loyalty of Iron Curtain armies which demands they serve Communist Party interests. For it is only by such unchallenged loyalty that the Communists remain in power to threaten the world.

OTHER CONSIDERATIONS

Extension of units

While the primary use of these units would be in affiliation with the United States ground forces in Europe, there is envisioned the distinct possibility that air and naval units could be developed from such a program.

Units attached initially to United States forces

In order not to delay the program in its inception and until such time when appropriate arrangements can be effected to provide for their services with other NATO elements, the units should be affiliated with United States forces in Europe and be organized under American commanders.

Would units provoke Soviet reaction?

Soviet propaganda would react violently to the establishment of the units. It has already done so to the passage of the amendment.

But the moral force, with its implications of freedom and independence, flowing from the existence of these units would be more likely to deter rather than provoke. The units would do much to deprive the Communists of that popular support which is necessary in any substantial military aggression.

The concern previously expressed of possible Soviet reaction to the establishment of such units has been discredited since the spontaneous massive military defection of the Hungarian armed forces to the side of the Hungarian patriots as have the previous uprisings in Poland, East Germany and elsewhere. And since we have already been charged with every crime and with particularly a wide range of activities in implementing this amendment, there can therefore be no further charge or provocation in its actual implementation.

Are national military units interference in East Europe's Affairs?

This charge was twice made by the Soviets against the United States in the United Nations and twice rejected by the U. N. It is the Communists who have interfered in the internal affairs of Eastern Europe so as to endanger the West. Anything done to assist the peoples of East Europe to regain control of their own affairs is in defense of the principle of noninterference.

THE LODGE ACT (PUBLIC LAW 597, 81ST CONG., CH. 443, 2D SESS., AMENDED BY PUBLIC LAW 51, 82D CONG.)

The Lodge Act serves a supporting but separate purpose in behalf of the United States security. Under it up to 12,500 alien may enlist in the Regular United States

Army to be integrated with citizen soldiers and not established into separate units of aliens. After 5 years of honorable service such aliens are eligible for permanent residence in the United States. The Lodge Act provides a means whereby an escapee serving in United States uniform may eventually immigrate to the United States.

CONCLUSIONS

1. The greatest problem within the Communist empire is fear of the demands of the enslaved people for freedom. There is reason to believe they are more afraid of their own people than of atomic attack. The national military units would stand as the symbol of freedom for the enslaved. When launched, they would typify the bold initiative expected of United States leadership by the free world and they would greatly increase the fears of the Communist masters and improve tremendously our position at any future conference sessions with them.

2. We have to prevent war, if possible, by disintegrating the capability of the enemy powers to wage war on a significant or dangerous scale. The greatest single means is to render them more distrustful of their own military forces.

3. The ordinary devices of government may not be fully suited to the development of the program herein proposed. Because of the unique nature of such National military units and their direct connection with national security, it is respectfully recommended that, in proper liaison with the Department of the Defense, a special task force be set up at the White House level to do the preparatory work, to launch the program and to give it continued guidance in its orderly development.

Experience to date in getting anything done under the amendment, strongly indicates the need for such special measures. For example, it was almost two years after its enactment before that portion of the program pertaining to escapee relief began to function and demonstrate any real concern for the lot of the escapee. The United States Escapee program which operates under the Kersten amendment has helped to resettle the Hungarian refugees. But the main purpose of the amendment has not as yet been realized.

4. Finally, these National military units would demonstrate by concrete action, understandable to all freedom loving people, the decision of the United States to stand by its publicly stated position of never acquiescing in Communist enslavement of people whereby they can be molded into servile instruments of aggression, and of our determination to see those nations once again free and independent.

A CONCEPT OF AMERICAN STRATEGY: TO CAUSE THE POLITICAL DEFEAT OF THE COMMUNIST PARTY AT ITS MOSCOW BASE AND THEREBY REMOVE COMMUNIST THREAT TO MIDDLE EAST AND ELSEWHERE

(Statement of Charles J. Kersten, former Member of Congress, of Milwaukee, Wis., made to Senate Committees on Foreign Relations and Armed Services, February 4, 1957, hearings on Senate Joint Resolution 19 on Middle East)

It is an extraordinary privilege to appear before these two distinguished committees of the United States Senate in this crucial hour of their deliberations regarding the future course of our American policy in the deadly struggle with the international, Moscow-directed Communist Party.

By way of identification, I am a practicing attorney in Milwaukee, Wis.

From June 1955 to February 1956, I served as a White House consultant on psychological warfare.

Prior to that I was a Member of the 80th, 82d, and 83d Congresses of the United States.

During that period I authored the so-called Kersten amendment to the Mutual Security Act of 1951.

Under this amendment the Congress, for the past 6 years, has provided $100 million annually for the purpose of aiding resistance behind the Iron Curtain, primarily through the formation of national military units composed of escapees from the Communist-enslaved nations.

The idea of these units is that the thousands of young men from the Communist-dominated nations who escape through the Iron Curtain can play an extremely important role for freedom.

Defense against Communist aggression in remote parts of the world should not fall alone on the shoulders of American boys. These young escapees from the enslaved nations, Poles, Hungarians, Balts, Rumanians, Czechs, Slovaks, Ukrainians, even Russians and Chinese and those from elsewhere in the Red orbit, all of which the amendment now covers, burn with a desire to participate against their common enemy: The Communist Party.

Many witnesses before our House Committee on Communist Aggression testified that most of the young men who came through the Iron Curtain did not want to be resettled as refugees in a distant foreign land. Many wanted to join national military units representing their own nation and await the day when freedom would come to their homeland and they and their loved ones could return.

To get some idea of the power of these units to disarm the Communists, suppose the United States were taken over by the Reds; that they had persecuted Americans as they have the people of the captive nations and the American Army were under Soviet marshals. Suppose, then, suddenly there appeared in Mexico or Canada, attached to still free forces—say, the British or French—small American units of American boys who escaped, in the American uniform and the American flag flying once again in freedom. Suppose that the news of these American units were beamed into a Communist-dominated United States.

What would the knowledge of the mere existence of such units do to the ability of the Communists to control American boys? Would the Communists dare to send their captive American armies against them?

These escapees from the Communist world, therefore, have the highest morale against communism. They know Red subversion, false propaganda, and terror first hand. They remember their relatives, their friends, and their homes. Should they be denied the opportunity to join those ranks of freedom that hold some visible hope of the ultimate liberation of their loved ones and of their native land?

These units, with their own free flags and uniforms, are intended to provide the escapees this opportunity they do not now have and thereby lift a very substantial part of the burden from American shoulders.

Such national military formations are intended also to be strong deterrents to Red aggression.

The Communists would be understandably very slow to strike at an American force in the Middle East or anywhere to which these escapee units were attached. In the massive Soviet troop defections in World War II; in the refusal of Russian and Chinese POW's to return to Communist rule; in the uprisings in the Ukraine and Poland; and in the recent dramatic defection of almost the whole Hungarian satellite army, they see very well the tremendous morale defection potentnal of Communist-controlled armies.

They know that Communist-led forces in the Middle East or elsewhere may well suffer defections en masse to escapee units carrying their national flags in freedom.

The American Legion at its national convention in 1952 adopted Resolution 596 urging the immediate formation of these national military units, stating in the resolution, as follows: "Whereas the creation of such military units would strike at the basic weakness of the Communist tyranny, by undermining its hold on the people it has enslaved and would tend to cause large numbers in the Communist-dominated armies to have a will to turn against their oppressors and fight for freedom rather than accept slavery."

And it was the opinion of the American Legion that:

"The existence of such national military units of escapees would reduce the number of American troops required overseas, and in the event of war would be a tremendous aid to the United States and its allies, and would save the lives of many Americans in the Armed Forces of the United States."

The Honorable MIKE MANSFIELD (then Representative and now Senator) on December 20, 1951, in defense of the Kersten amendment in the United Nations General Assembly, Paris, against Soviet attack stated, in part, as follows:

"Tens of thousands of people who make their way through the Iron Curtain had the right to join in the defense of free Europe if they chose to do so."

And further: "We wish to see the day when all people who have sought asylum with the free nations will have a chance to return peacefully to their homes and start their lives anew in the country of their birth."

And further: "Congress intended that those who stand for liberty and freedom should have the honor and opportunity to help defend this liberty and freedom against aggression, whatever their nationality or their residence."

I wish to introduce into the record a separate memo describing these units in detail.

I believe it significant to note here also that the distinguished ranking minority member of the Senate Foreign Relations Committee, the gentleman from Wisconsin, elected to express his endorsement of this amendment and his desire to see it fully employed, not only on the floor of the Senate in 1952, but in a feature article over his signature in a national magazine.

In the 83d Congress, it was my honor to serve as chairman of the House Select Committe on Communist Aggression.

Through a period of 2 years, that committee heard the detailed testimony of 335 witnesses, both in this country and in Europe, regarding the subversive and aggressive methods and actions through which the Moscow-directed Communist Party seized its victim nations.

Most of these 335 testified either as eye witnesses to that seizure, or as actual participants in the events which they described.

Our committee, which consisted of nine members of both parties in the 83d Congress, concluded these extensive hearings with certain unanimous bipartisan recommendations.

The objective of these recommendations was the political defeat of the Moscow-directed Communist Party at its base in the Kremlin.

It was unanimously agreed by the membership of that committee that such a political defeat of international communism provided the only reasonable way to avoid major war and to bring peace—with justice—to the world.

The recommendations which I shall now set down are, therefore, largely those made by that same House Select Committee.

I believe it pertinent to make these recommendations to this august body at this critical moment in which it is deliberating upon Senate Joint Resolution 19 which has as its prime objective the preservation of the freedom of the nations of the general middle eastern area against the very same Communist aggression with which our House

Committee was forced to deal after that aggression had become an accomplished fact of history in Central and Eastern Europe.

The Communists have for some time been conducting a political offensive in the Middle East. In subversion centers in the U. S. S. R. they have schooled cadres of nationals of every one of the Middle Eastern countries, training them to penetrate every echelon of society, such as important educational centers like the great Al Ashar University, the seat of Moselm learning, in Cairo, to which come religious men and students from every corner of Islam. They have bribed writers and reporters of Middle Eastern countries to peddle their line.

From the Czech Embassy in Damascus is operated a vast conspiracy of Soviet economic political warfare. They have engaged in dumping products such as glass in the area so as to ruin local industry and make the Middle East dependent on the Soviets.

They have gone to great lengths in stirring up antagonism among the several nations, seeking particularly to aggravate the differences between the Arabs and the Jews.

This Communist political offensive in the Middle East, which is the actual prelude to that feared aggression, endangers not only that vital area, but what remains of free Europe, and therefore our own national security.

This confronts us with two possible courses of action.

The first would be to limit ourselves to mere reaction to Kremlin initiative.

The second would be to ourselves seize the initiative.

We severely limit ourselves if we merely react to the initiative which the Kremlin is currently employing against us in the Middle Eastern area.

To submit ourselves to this would me to wage this contest on the periphery, which, in effect, would restrict us to waging a self-limited rear-guard action in political, and possibly eventually military, warfare.

Bitter experience with Communist tactics of the type which were graphically revealed before our House Committee on Communist Aggression has emphatically demonstrated that to restrict ourselves to mere reaction to the Kremlin-established initiative at a momentary single trouble spot does absolutely nothing to deter subsequent Communist initiative elsewhere.

For example, in the late 1940's, while we concentrated upon the Communist initiative in Europe, Greece, and Turkey, the Communists were actually busily engaged in what became their successful aggression in China and elsewhere in Asia.

In the early 1950's, while we concentrated upon the Communist initiative of military aggression and their subsequent political offensive in Korea, the Communists were busily engaged in launching the very same initiative to which we only now are beginning to react in the Middle East.

By limiting that reaction to the current Communist initiative in the Middle East, we are merely permitting the Communists to hold our attention and effort there, while, through one of the bloodiest and most massive purges in history, they are trying to resolidify their position in Central and Eastern Europe—which has been so sensationally threatened by recent events in Hungary, in Poland, and elsewhere behind the Iron Curtain—including within Russia itself.

Thus, as at no previous time, should it now be perfectly obvious that to continue to pursue the policy merely of responding to Communist initiative, complete with its feints and its tangents on the flanks and on the periphery, we are but dancing to the Communist-called tune, and paying a fantastically high price to the fiddler in terms of billions of dollars expended, and, from time to time, of thousands of American lives, as in Korea.

For all the billions of dollars and the thousands of lives so far expended in this Kremlin-created atmosphere which is neither true war nor true peace in the sense which we have heretofore accepted those terms—for all of this fantastic cost—nothing has more threatened the Communist structure than the uprisings behind the Iron Curtain by those captive peoples whose only real weapon, sadly enough, is the burning desire for freedom.

It is this weapon, which courses in the hearts and sinews of these people from the Baltic to the Adriatic, which the Communists fear more than whatever new billions of dollars and thousands of American servicemen which we may now be preparing to commit to the Middle East.

The Communists fear this weapon that is the desire for freedom within the captive peoples themselves because that same weapon lies posed for another massive blow which may come at any time, as it has so recently in Hungary, to strike directly at the Moscow base of the Communist Party and the international conspiracy which it controls.

This will for freedom of the Communist-hating peoples of the captive nations is devastating to the Communist cause because it lies like a gigantic time bomb at the very heart of the Communist apparatus, quite unlike whatever reaction to Communist initiative we may elect to employ at some remote tentacle of that Red octopus, whether it lie in the Middle East or in the Far East.

However hard or often we may choose to chop away at such a Red tentacle, we will continue, in so doing, to little harm that heart, as Korea graphically proved.

In fact, even as we now prepare to become enlocked in what could well prove, if the Communists wish, a new Korea in the Middle East, the Communists, in a new initiative in the original Korea, are building themselves to a military strength far beyond that which they enjoyed at the 38th parallel in 1950.

It is time that we abandon this losing and self-restricting policy of mere reaction to the Communist initiative. Instead, it is imperative that we adopt the positive policy of seizing the initiative which puts the Communists on the defensive.

This we can do, with the help of commonsense, and with such forces at our command as those found in the millions of natural anti-Communist allies who look to us for assistance in their prayers and struggles for liberation behind the Iron Curtain.

I fully recognize that to this suggestion the false prophets and blind diplomats who too long have stood as strange gods before us, to lead us from reaction after reaction to Communist initiative, will immediately cry out that to employ these natural allies is to invite war.

I point out, however, that so long as these millions of anti-Communist dissidents remain within the Communist orbit it is as impossible for the Communists to wage conventional overt warfare against us as it is for a sea captain to sail his ship into battle with a mutinous crew.

At no moment in history has any captain, however terrible and tyrannical, ever suffered a more mutinous-minded crew than do the Kremlin-based captains of communism today in the angry face of the restiveness and the demands for freedom which daily grow more massive among the Iron Curtain's Communist-hating millions.

It was in preparation for this very moment that the Kersten amendment was carefully fashioned and enacted into the law of the land 6 years ago.

Among its several purposes for the encouragement of the desire for freedom among the captive peoples was its provision for the United States escapee program which proved of such vital assistance in the care of the Hungarian refugees from the Kremlin-ordered bloodbath in their Communist battered homeland.

Even more important to our Government and to the cause of universal freedom today, is the amendment's provision for the national military units to be composed of able-bodied escapees from the captive nations.

These still little-known units, the nuclei of which are based at Kaiserslautern, Germany, and which represent every Iron Curtain nation, including Russia itself, were designed to become, when properly advertised, powerful magnets of attraction to members of the armed forces of Russia and its satellites, in order to draw the morale of military power away from Communist control.

Again, the recent rebellion in Hungary, which found Russian and Ukrainian troops joining in that defection by the regiment and turning their guns on the Soviet army, should be sufficient to convince the most obtuse among us that the proper implementation and exploitation of these national military units is the most effective means by which we can deprive the Communist Party of its warmaking power.

We are told it may become necessary to commit American troops to stop Communist aggression in the Middle East. But why is so little being done to enlist the willing services of those who burn with the greatest reason in the world to oppose Communist aggression, and are actually able to undermine and paralyze that aggression before it can get started?

This can be done by the Iron Curtain escapees who, in joining the ranks of these national military units based in free Europe, thereby appeal to their brothers in arms who remain under Communist command to join them, if not physically, then morally, by refusing to train their guns and bayonets upon their own people, leveling them instead in defense of their people, at the Communist leaders who too long have been permitted to enslave them.

In concert with this which is basic to the Kersten amendment, certain related steps could easily be taken for the disintegration of the Communist Party and for the downfall of its leaders by means short of war, which are to be found in the following psychological and political measures which could bring about the toppling of the Communist Party by its own weight.

These measures of the initiative, rather than measures of mere reaction to Communist initiative.

These measures include:

PROGRAM FOR POLITICAL OFFENSIVE AGAINST THE COMMUNIST PARTY

1. President Eisenhower, as the free world's foremost soldier-statesmen, can appeal to the armed forces of the U. S. S. R., of the satellite nations and of China to refuse being further used as instruments of Red massacre, but, on the contrary, to insist on the right to stand guard over the inalienable rights and liberties of the people of their respective countries and resist their destruction and perversion by Communist political leaders.

2. Get rid of the academic experts and faceless career advisers who have been dictating that we must continue to do business with the bloody gangsters who compose the Red regimes.

These so-called experts have fashioned the theory that evolution and not revolution will take place within the Communist-dominated nations, and, therefore, nothing should be done to aid the captive peoples to replace their Communist governments with those of their own choice. This theory

of evolution has recently run through much of our policy.

It is the product of the academic experts as is clear from, among other things, the recent book, How the Soviet System Works, issued by the Harvard University Press in 1956 and written by three of these same experts, Harvard professors (Russian Research Center) Raymond A. Bauer, Alex Inkeles, and Clyde Kluckhohn. These and other experts such as Dr. Max Millikan, of M. I. T., Dr. Harold J. Berman, John K. Fairbank apparently have sold our policymakers on the theory of evolution as they describe in this book their work nominally under a Government contract for the United States Air Force, but actually affecting our entire basic policy.

They have also developed the false theory of national communism as a goal toward which the captive nations should strive.

Both of these ideas are dangerous because they deliver with finality all of the captive nations to the Communist regimes and deludes the free world into thinking that the Communist Party can be changed into a decent political party and a decent government.

Anyone who has had any real experience with Communists knows they don't evolve into decent persons until they leave the criminal, godless way of life which Marxism-Leninism prescribes.

They know also that real communism cannot be national, but by its nature is international, based on Marx's idea: "Workers of the world, unite." Evolution and national communism are false faces which the international conspiracy can put on and, like Tito, receive economic support from the free world.

3. An all out United States information program beamed behind the Iron Curtain showing our sympathetic understanding of the suffering of the people under communism, including the enslavement of every segment of society.

Simultaneous with such an information offensive we should withdraw diplomatic recognition of Communist Party regimes as nonrepresentative of any of the nations they dominate.

4. An information offense primarily in Western Europe against the physical entity of the Iron Curtain consisting of 1,200 miles of barbed wire, land mines, watch towers, machine guns, dogs, and border guards which painfully separates the peoples of Eastern from those of Western Europe.

The only rational explanation for the Iron Curtain is to give the Communists the opportunity to hide the reality of life under Red rule from the light of truth and, further, to give them the opportunity to mold the captive nations into willing slaves of aggression. There is no possible defense for the continued existence of the barbarous anachronism of the Iron Curtain. It can only breed war. It should be made anathema.

5. The passage of a well-publicized Political Asylum Act to take temporary but decent care in Western Europe or elsewhere of the dependents of anti-Communist fighters, in the Red-dominated nations, until they are liberated from Communist enslavement and until it is safe for loved ones to return to their homelands.

6. Outside corodination and leadership to popular internal resistance to Red rule in the several captive nations, avoiding abortive uprisings, but giving guidance and timing to general resistance and support to efforts of self-liberation with material aid.

7. A continuing and ever increasing general information offensive led by the American delegation by procivilization and anti-Communist delegates in the U. N. against Red aggression and Red imperialism and colonialism in each of the captive nations, as the chief warmongering in the world today.

8. Setting up of a Free World International Trade Commission to channel all trade with Communist-bloc nations, insuring that every major item of trade would be conditioned with the extension of freedom to the people of Iron Curtain nations; e. g., diesel engines will go to Poland only when the Polish Government will permit the publication of an anti-Communist newspaper in Warsaw, or a certain number of anti-Communist professors are permitted to teach in the large universities, etc.

9. The establishment of an International Juridical Commission within the framework of NATO or in the U. N. so that Communist crimes perpetrated against humanity may be fully recorded and officially noted for prosecution.

Gentlemen, these measures, in concert with that which the Kersten amendment provides for the proper implementation of the national military units, and for which you and your colleagues have been appropriating funds for the past 6 years, are measures which, if properly and promptly exercised, could pave the way for the freedom of the now-captive nations of communism and, therefore, for the removal of communism's military threat to the world, including the Middle East.

In conclusion, I most respectfully suggest that the moment is at hand when great and vital committees such as yours should begin to ask some searching questions as to who, within the executive branch of our Government, for the past half-dozen years, has been frustrating the will of Congress by failing, if not pointedly refusing, to implement this amendment of the Mutual Security Act which calls for the establishment of national military units of escapees and other measures such as these designed for the defeat of international communism and international socialism by means short of war.

And I suggest, as the author of this amendment, that your conduct of such an inquiry will demonstrate that those responsible for this failure to act are the very same faceless men, sinister and powerful within our Government, who never tire in their efforts to bring Red China into the U. N., to bring pressure to have Tito come to America and furnish him with jet fighter planes, who consider that the Communist enslavement of the captive nations is final, and who believe that we must do business with the Communist conspiracy, and who believe that we should abandon international morality and forget our tradition as a Nation which was born in a revolution for free men.

Whether these forces within the executive branch do this in stupidity or conspiracy, they are helping to promote the very Communist aggression which you, gentlemen, are endeavoring to prevent in your dedicated consideration of Senate Joint Resolution 19.

I thank you for this distinct honor which you have afforded me in permitting my appearance before you here today.

Proposed Dams at Bruces Eddy and Penny Cliffs

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1957

Mr. NEUBERGER. Mr. President, one of the outstanding writers in America in the general field of natural resources is John B. Oakes, conservation editor of the New York Times.

In his column in that newspaper for Sunday, March 3, 1957, Mr. Oakes has discussed the great peril which the Bruces Eddy and Penny Cliffs Dams would pose to migratory fisheries, scenery, wilderness reserves, and a priceless elk herd in the vast Clearwater River Basin of northern Idaho.

I also call attention to Mr. Oakes' timely and cogent observations concerning the need to keep our new 41,000-mile Interstate Highway System free of the unsightly defacement of signboards and other roadside clutter. He has likewise lamented the unwise decision to eliminate 53,000 vernal acres from the Three Sisters wilderness area.

I ask unanimous consent that the article by Mr. John B. Oakes from the New York Times of March 3 be printed in the Appendix of the RECORD for the information of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSERVATION: DANGER AHEAD—WILDERNESS RESOURCES ARE MENACED IN SEVERAL AREAS

(By John B. Oakes)

The proposed Bruces Eddy Dam on the Clearwater River in Idaho, a pet project of the Army's Corps of Engineers, has been repeatedly attacked by experienced conservationists as a potentially disastrous blow to fish and game as well as wilderness resources. It is again included in this year's rivers and harbors bill, supported by specific backing in President Eisenhower's budget message.

This project would, according to Senator MORSE of Oregon, endanger "a great wilderness area." Senator NEUBERGER of the same State says it would imperil "the largest elk herd remaining in the United States" and, with its companion dam (Penny Cliffs) "would wipe out a considerable portion of the largest unspoiled primitive territory anywhere in our country." Representative METCALF, of Montana, says it "would destroy a unique scenic and recreational area." Representative SAYLOR, of Pennsylvania, along with other conservation experts in Congress, pleads for more time to permit Federal and State wildlife agencies to complete studies of just what damage the proposed construction would do.

The success of conservationists last year in securing elimination of Echo Park Dam from the upper Colorado development, suggests that even the most dogmatic assertions of the Federal dam-building agencies as to the immediate necessity of their projects are not necessarily controlling when Congress is fully apprised of the irreparable losses in other values that their proposals entail. Postponement of any irrevocable action until current studies are completed is the least that Congress should insist on in the face of the serious objections on the part of informed conservationists all over the country.

WILDERNESS BILL

Among other important measures affecting conservation, the most significant is probably the wilderness preservation bill, discussed in this column last month. The bill has undergone some revision to clarify its unexceptionable aims, which are—in the words of the Legislative Reference Service—"to bring into a single system, for the purpose of insuring their continued preservation as wilderness, the various federally owned areas designated as wilderness by the departmental heads or by Executive order." Bureaucratic resistance to any kinds of outside interference with administrative freedom may explain in part a noticeable reluctance within the Government to accept the proposal

Furthermore, some commercial interests fear that under the bill they might lose privileges they already have. However, the bill is designed simply to establish existing wilderness on a firm legislative foundation and to provide for its permanent protection as a matter of basic congressional policy.

THREE SISTERS AREA

A good example of why some congressional action to protect wilderness areas is necessary is afforded by the very recent decision of the Forest Service (Department of Agriculture) to eliminate more than 53,000 acres of magnificent country from the Three Sisters primitive area in the Cascade Range in Oregon. Despite the most strenuous objections from conservationists seeking to save an irreplaceable mountain and forest preserve, the demands of logging interests prevailed and the area has now been lopped off from the sanctuary of which it had formed an important part—about one-fifth of the total.

The Department of Agriculture headed its release announcing this action by stating not that 53,000 acres had been cut off, but that 32,000 acres had been added to the Oregon wilderness. In calling attention this oddity, C. Edward Graves, western representative of the National Parks Association, notes that "the Forest Service at the same time [as it reduced the Three Sisters primitive area] created two new wild areas containing 82,000 acres elsewhere in Oregon, areas that had nothing to do whatever with the Three Sisters controversy; and the figures have been juggled to make it appear that the Secretary's decision added to the Three Sisters wilderness instead of actually reducing it."

BILLBOARDS

The new 41,000-mile national highway system, for which the Federal Government is paying 90 percent of the cost, may yet become just one more gigantic billboard slum if legislation to control this menace does not get through the present Congress.

A brave effort to put a brake on billboards along the national highways was made when the highway bill was being debated in the Senate in 1955, but was then turned down on the entirely specious cry of "States rights." A new and even milder attempt is being made now; but to succeed against the powerful billboard lobby it must have strong and vocal public support. This measure, offered by Senator NEUBERGER, would in effect forbid all but an absolute minimum of commercial advertising on Federally owned lands along the new highways, but would leave it up to the States to accept or reject the Federal standards for property under State or private control. Thus no "States rights" issue could legitimately arise, as whatever State action was taken would be entirely voluntary. However, if the respective States did decide to accept the Federal standards, 90 percent of the cost of acquiring preclusive advertising rights would be met by the Federal Government, just as it meets 90 percent of all the rest of the cost of constructing the new highways.

CLEAR ISSUE

This is a mild bill, too mild for really complete billboard control, but it may be the best that can be passed. One thing seems certain, and that is that unless the Eisenhower administration—meaning in this instance Secretary of Commerce Sinclair Weeks in particular—expresses strong and lasting interest in billboard control, the chances of any legislation are poor indeed. Inasmuch as the new highways are being constructed almost entirely with Federal funds, it is incredible that there should be any hesitation on the part of the administration or Congress in protecting the clear public interest in preserving the scenic beauty through which the proposed national highways will pass. Neither advertising signboards, nor hot-dog or souvenir stands or any other kind of commercial excrescence ought to be allowed to interfere with either the motorists safety or his right to enjoy the countryside as he travels along the new national highway system. The opportunity is here to do something about this problem before it is too late; that opportunity may never come again. The question is simple: do we want our new highways, which are paid for by all of us, to look more like such a road as the Merritt Parkway or like the many sign-dotted, neon-lighted routes that already defile the face of America?

Federal Programs for the Aging

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. VAN ZANDT. Mr. Speaker, since national attention has been focused on the creation by President Eisenhower on April 2, 1956, of the Federal Council on Aging, I have had the following compilation made of the efforts of the Federal Government to solve the vexing problem confronting our elderly citizens.

The following compilation reveals the many Federal programs for the aging of our country and how these programs are being coordinated under the President's Federal Council on Aging:

A. ESTABLISHMENT OF THE FEDERAL COUNCIL ON AGING

On April 2, 1956, the President requested 12 departments and agencies to designate representatives to a Federal Council on Aging. Representatives were appointed by the Department of Agriculture, the Civil Service Commission, the Department of Commerce, the Department of Health, Education, and Welfare, the Housing and Home Finance Agency, the Department of the Interior, the Department of Labor, the National Science Foundation, the Office of Defense Mobilization, the Small Business Administration, the Department of the Treasury, and the Veterans' Administration; and the Council held its first meeting on April 17. A set of bylaws at the following meeting on May 23 recognized the following goals:

1. To help make it possible for older persons who desire and are able to work to continue their productive lives through suitable gainful employment.

2. To help lessen anxiety about economic insecurity in the later years through an improved income maintenance program.

3. To stimulate the construction of housing and the provision of living arrangements suited to the needs and preferences of older people.

B. PROGRAMS OF THE FEDERAL GOVERNMENT FOR THE BENEFIT OF OLDER PERSONS, 1956

Digest of a descriptive inventory of activities in departments and agencies

I. The Challenge

Tremendous population changes, stemming from our rapid advances in health and medical sciences and industrial productivity, have created difficult problems of social and economic adjustment in modern society. While problems of adjustment to these changes have affected all groups in society, they have borne more heavily on older adults because of special factors in their situation, namely, the factors of aging itself and social attitudes toward it.

The nature and extent of these mounting difficulties for a growing segment of our population have commanded increasing attention.

The beginnings of this country's intensified interest in problems of aging were in the twenties and thirties. Problems of care of sick, infirm, and dependent aged people in the urban family setting began to multiply. Labor surpluses in our industrial system were forcing older workers out of employment in increasing numbers. Depression accelerated the problem. As their character became more widely and better understood, our people began to take steps to meet them.

Two of the most important and fundamental studies during their early period were made by the national health survey of 1935–36 and the President's Research Committee on Economic Trends—the forerunner of the United States Committee on Economic Security.

In the Federal Government, Congress established the National Cancer Institute in the Public Health Service in 1937. In the following decade, six additional institutes were created to establish the National Institutes of Health.

During the 1940's the Public Health Service Gerontology Research Unit and the Gerontological Society were born out of the Macy Foundation's Research Club on Aging, and the American Geriatrics Society was founded.

By 1950 the need was recognized at the national level for a comprehensive review of the whole field, to bring into focus the action, methods, and knowledge which had been developed during the three previous decades. This review was made in a National Conference on Aging held in 1950.

The Federal Government, as an instrument of the people, has been responsive to this growing interest and concern. Basic income maintenance is now assured for most of the aged, many services are being provided, and a large volume of research is being done in Federal departments and agencies and by them, in cooperation with State and local governments and voluntary agencies, to help meet the problems of aging and to stimulate action.

In March 1955 as approved at a sub-Cabinet meeting and upon the invitation of the Secretary of Health, Education, and Welfare, representatives were named to the Interdepartmental Working Group on Aging within the Federal Government. With a membership drawn from 10 departments and agencies having programs relating to aging, the group's general objective was to explore the scope of Federal activities and responsibility in the aging field, to coordinate existing programs, and to develop a broader range of Federal activities.

After little more than a year of experimental work by the working group, on April 2, 1956, President Eisenhower established on a broader and more permanent basis the Federal Council on Aging.

One of the first needs recognized was the need for a review of current programs and activities of Federal departments and agencies in this field. There was, furthermore, agrement that the codification of such information in one place for easy access and use in the identification of areas of common interest and activity was needed as a basis for coordination and mutual support among Federal programs.

The scope of Federal programs affecting the aging touches every aspect of the Government. These programs are, however, specialized and oriented to particular phases of aging as they relate to the responsibilities of the respective departments and agencies. Some agencies, such as the Housing and Home Finance Agency and the Department of Labor, are primarily concerned with a single area of activity, while the responsibilities of others, such as the Department of Health, Education, and Welfare, and the Department of Agriculture, cover many. The programs are, moreover, conducted within

the regular framework of Government structure. Some are direct Federal programs. Others are those under which Federal participation is through grants to private as well as public agencies and organizations.

The material in the sections which follow is organized according to areas of activity: Health services and rehabilitation; employment; income maintenance; education; family life, living arrangements, and housing; other service; and general information services.

The inventory project is still some distance from completion. The pages which follow, therefore, are offered more as a working document than as a finished work, to provide for the immediate use of groups and individuals concerned with the problems of aging an easy reference to services which are actually available in or through the Federal Government.

II. Health Services and Rehabilitation

As Congress has recognized the broad basic need for increased knowledge and skill in the areas of health and rehabilitation, programs of service and research in fields of chronic disease, disability, and the normal processes of growth and senescence, provisions have been made for: (a) Some limited use of public assistance funds to pay for needed medical care; (b) the use of railroad retirement funds for disability payments; (c) compensation payments to disabled Federal civil servants under specified circumstances; (d) medical care of veterans; and (e) funds and services for the rehabilitation of the sick and disabled. Public policies have also been established which give special consideration in taxation to payment of medical expenses. All these programs and policies have special importance to older people.

In the Department of Agriculture

The Extension Service provides information and consultation on nutrition, clothing needs, housing, and shelter, all of which affect the health and well-being of older people.

The Human Nutrition Research Branch of the Agricultural Research Service carried on a continuing program of extensive research in the field of nutrition and diet, including food needs and quality of diet for older people.

In the American National Red Cross

Volunteers visit homebound people and serve the aged in Federal, State (including 120 State mental) and local hospitals; in county, city, and town homes for the aged; in homes operated by religious and fraternal groups; and in privately operated homes for the aged. For example, volunteer nurses' aids assist registered professional nurses in hospitals, clinics, institutions, and public health programs. The motor service transports older people to and from clinics and rehabilitation centers.

The Gray Lady volunteers provide their special services not only to elderly people in public hospitals and institutions but (since 1954) to residents in privately owned nursing homes, in clinics, and in private homes.

The Red Cross nursing services which are fundamental to most of these services give courses in home care of the sick with supplemental instruction on care of aging and chronically ill persons.

In the Department of Health, Education, and Welfare

The Food and Drug Administration: This agency enforces the Food, Drug, and Cosmetic Act which gives the physician and his patient confidence in the medicines used to cure or control disease and is constantly on the alert to bring appropriate legal action against the promoters of worthless products. Research on drugs to cure or mitigate the disease of old age and afford relief from many of the discomforts afflicting aged people is continuously providing new and better drugs. Prior to marketing a new drug, the manufacturer must submit to the Food and Drug Administration results of thorough tests to establish safety of the drug. Products purporting to supply vitamins and minerals to the diet are assayed for potency. They must be labeled to show the proportion of minimum daily requirements supplied by the suggested dosage.

Office of Vocational Rehabilitation: Under the State-Federal program an increasing emphasis on reaching older people with these services (which has accompanied the expansion of the vocational-rehabilitation program made possible by the 1954 amendments to the Vocational Rehabilitation Act) is reflected in the growing number of older people helped by this program. During the fiscal year 1954, over 14,000 persons age 45 and over were rehabilitated; this represented 26 percent of total rehabilitations, as compared with 17 percent in 1945. An important factor in this development has been the participation of the Office in the administration of the "disability freeze" provisions in the 1954 amendments to the Social Security Act, which relate to the old-age and survivors insurance system. A byproduct of this program has been the referral of more than 100,000 disabled persons by the old-age and survivors insurance offices to the State agencies to determine their vocational rehabilitation potential. In the early stages of the disability-freeze program, the majority of the persons referred were 55 years of age and over. Through its Division of Research and Special Studies, the Office prepares statistical reports and conducts and participates in studies on prevalence of disability and on problems of vocational rehabilitation of handicapped individuals.

Several special project grants have been made by the Office of Vocational Rehabilitation for research and demonstration in problems associated with the vocational rehabilitation of older workers. These include a project initiated in Massachusetts to study preemployment evaluation techniques and work-hardening techniques applied to patients with chronic rheumatic diseases, most of whom are older persons; a project in Ohio to investigate the vocational potentials of hospitalized patients with chronic disabilities, the majority of whom are over 45 years of age; and in Illinois a project to determine the rehabilitation needs of nursing home patients and to develop a training program for older disabled and chronically ill persons.

Public Health Service: Among the current activities of the Office of the Surgeon General are the conduct of liaison between the Public Health Service and the Commission on Chronic Illness and the supervision of the Commission's report on care of the long-term patient. A study of selected organized home-care programs throughout the country, a joint project of the Commission on Chronic Illness and the Public Health Service (Office of the Surgeon General and the Bureau of State Services), has demonstrated that these programs serve patients of all ages, with illnesses of virtually all types and all degrees of severity.

The Bureau of State Services helps to delineate the health needs of older people and to focus the role of health departments and related health agencies in meeting these needs. The Division of Special Health Services has available for consultation competencies in public-health administration, nutrition, health education, public-health nursing, medical-social work, statistical analysis, and records management. The Bureau conducts a chronic disease program, tuberculosis program, a heart disease program, and an occupational health program.

Housing hygiene activities of the Division of Sanitary Engineering Services are concerned with the health aspects of housing; that is, the rehabilitation of existing substandard housing, minimum standards for healthful housing, and special housing needs of certain categories of individuals, among them older people. Home-accident-prevention activities of the Division are concerned with reducing the number of home accidents. Over 50 percent of all fatal accidents occur in the age group 65 years and older.

The Division of General Health Services provides assistance and support to State and local health departments in all activities related to public-health programs and problems and administers technical services for the Public Health Service in the regional offices. Regional nursing consultants work with State and local health department personnel on problems of nursing-home licensure. Health education headquarters and regional staff participate on a consultative basis in State hygiene-of-aging studies.

The National Institutes of Health conducts research through laboratory, field, and clinical studies directly on biological, physiological, and psychological aspects of gerontology and investigations on chronic diseases, problems of growth and maturation, and nutrition.

Research in gerontology and geriatrics is being conducted to some degree by each of the National Institutes of Health as well as by many institutions outside the Federal Government through research grants. The National Heart Institute has a special section on gerontology which operates in and with the facilities of the Baltimore City hospitals. The National Institutes of Mental Health has organized a section on aging, which is conducting studies of age changes in human perception and skills and in aging of the nervous system of laboratory animals. The National Institute of Allergy and Infectious Diseases is conducting research directly on nutritional, metabolic, and endocrine aspects of aging in humans and animals. Studies of the National Cancer Institute on basic investigations of cell growth have a bearing on age changes in cells. Each institute has a grant program in the field of aging related to its special interest. These are particularly prominent in the heart, mental health, and arthritis and metabolic diseases institutes.

St. Elizabeths Hospital: In November 1951 a geriatric building was activated. This is one of the first such units in a Federal mental hospital and attracts visitors from practically every country in the world. The hospital carries on continuing study of special medical and health needs of older mental patients and clinical research in treatment.

Social Security Administration: The work of the Division of Research and Statistics in the Office of the Commissioner provides background for legislative proposals and development of the departmental policy in health and welfare fields.

The surveys of beneficiaries conducted by the Bureau of Old-Age and Survivors Insurance have provided data on the extent to which disability has been a reason for the retirement of beneficiaries and on the opinion of beneficiaries as to their ability to work. Information also has been obtained on the medical expenses of beneficiaries.

The Bureau of Public Assistance administers the federally aided assistance programs. About 2.7 million people 65 years of age and over (18 percent of the total population 65 and over) are now receiving public assistance payments. This is a group with a high incidence of chronic illness. In addition to this 2.7 million persons receiving old-age assistance, about one-half of the 244,000 persons receiving aid to the permanently and totally disabled and about half of the 100,000 receiving aid to the blind are either aged or prematurely aging and suffer disease and disability, often of long duration.

The assistance programs help to some extent to meet the medical and health problems of needy older people by contributing to the

payment of costs of medical and health care within the limits of the public assistance payment. Under the assistance program, payments can be made to (1) recipients of medical care in their own homes, in nursing homes, or other private institutions, and in public medical institutions, with the exception of those persons with a diagnosis of tuberculosis or psychosis, or (2) directly to the suppliers of medical-care service.

In the Railroad Retirement Board

The Railroad Unemployment Insurance Act provides unemployment and sickness benefits payable during a benefit year to qualified employees regardless of age. Average benefits, on a weekly basis, amount to about $36. Days of unemployment and days of sickness cannot be combined in the same registration period.

In the Treasury Department

Certain personal and corporate income-tax policies of the United States Treasury Department are significant in the conservation of resources which help older people to meet costs of medical care.

Individuals who are 65 or over are not subject to the 3-percent limitation for medical-expense deduction. If either a taxpayer or his wife is 65 or over, he may deduct the entire amount of his medical expenses for the care of both, within maximum limitations.

The definition of medical expenses, as clarified in 1954, provides for the deduction of amounts paid for transportation expenses for travel prescribed for health reasons.

In the Veterans' Administration

The Veterans' Administration is increasingly concerned regarding the social and economic effects of the advancing age of the veteran population and extensive experimental programs, exploration, and research relating to these problems are being carried on.

Development of a nationwide program, including rehabilitation, for long-term chronically ill and aged veterans in general medical and surgical hospitals has been underway for several years.

In the 40 neuropsychiatric hospitals, special services for older patients have been developed and in several hospitals, notably Tomah, Wis., a special treatment program for this group has been established.

Special housing has been provided in this specialized program for aged patients in six Veterans' Administration neuropsychiatric hospitals.

During September 1955, an average of 16,991 veterans were in domiciles operated by the Administration and approximately 8,800 veterans were being cared for in State soldiers' homes under a grant-in-aid program.

Experimental programs and clinical research programs include: geriatrics clinics consisting of a team of professional staff members which provide a coordinated approach to treating aged people in 2 outpatient clinics for the last 3 years; broad psychological studies in a number of Veterans' Administration hospitals, domiciliaries, and centers on the characteristics and needs of aging and geriatric populations; special study and experimentation in Veterans' Administration hospitals on the care of aged neuropsychiatric patients, including special housing and foster-home-care programs; and other special research projects and studies including studies on the use of various drugs and other medical research, demographic studies, studies in the field of social services, etc.

III. Employment

While Federal activities are focused in the Department of Labor, other departments and agencies are providing or developing services and resources designed to meet problems of employment among older workers.

The services of the Federal-State vocational rehabilitation programs include special placement services for disabled workers, including older workers.

In the Department of Labor

All programs and services of the Department are focused on employment and related factors, and many bureaus and agencies in the Department provide extensive consultation to labor and industry on employment problems including consultation on matters relating to the employment of older workers.

To plan and expedite activities, the Secretary has appointed a Departmental Committee on Older Workers and has named a Special Assistant to the Under Secretary to chair the committee and coordinate departmental efforts to extend and improve employment opportunities and services available to older workers. Through field staff committees composed of regional representatives of the Department's bureaus and offices, consideration has been given to the employment problems of older workers.

The Department has in the past carried out a number of research projects related to the employment and income problems of older workers and is currently engaged in intensive studies of the factors affecting job opportunities for workers past middle age.

Through State employment services the Bureau of Employment Security maintains an active program of specialized job counseling and placement services for older workers. Approximately one-third of the 9 million applicants for work through State employment service offices each year are 45 years of age or older. To assist the States in serving older workers the Bureau has also developed a special manual on older workers as a guide to State agencies and is now working on training materials for both internal and public-relations use. In the next year the Bureau is conducting an intensive study of employment patterns, policies, and practices in seven major metropolitan labor-market areas; an intensive study on the characteristics of the older unemployed person is being made in these same areas. A demonstration of the results of intensive job counseling and placement services for older workers will also be carried on in the same labor-market areas. During the fiscal year 1956 the Bureau is also conducting an intensive study of the impact of pension costs on hiring policies and hopes to develop specific suggestions that will be useful to management, labor, and the underwriters of pension programs in minimizing the effect of pension costs on the hiring of older workers.

The Bureau of Labor Statistics is studying clauses relating to older workers in 1,700 collective-bargaining agreements affecting 1,000 or more workers and in pension and welfare plans. A pilot study now underway designed to develop methods of measuring differences in average work performance among age brackets and variations of individuals within age brackets covers output per man-hour, accident, and absenteeism rated.

The Women's Bureau has contributed significantly to factfinding and promotion in behalf of older women workers. Its most recent publication, Training Mature Women for Employment, describes 23 different community training programs for older women. During the period June 1955 to July 1956 the Bureau will conduct a series of demonstration projects designed to recruit and train mature women to meet current occupational shortages in such fields as teaching, stenography and typing, and some of the health service occupations. Skills forums will also be conducted in several metropolitan centers in order to assist mature women to find suitable employment and to provide technical assistance to them in marketing home products and services.

The Bureau of Employment Security and the Bureau of Labor Statistics are cooperating in a continuing study of the characteristics of claimants for unemployment insurance.

The Bureau of Labor Standards, the Bureau of Employees' Compensation, and the President's Conference on Occupational Safety are all concerned with and carry on research on working conditions and on factors of health and safety involved in the employment of older workers.

The older-worker problem has been a continual concern of the Federal Advisory Council in the field of employment security. The Council has a subcommittee on this subject.

In the Office of Defense Mobilization

Defense Manpower Policy No. 7, issued by the Office of Defense Mobilization in 1952, entitled "Employment of Older Workers in the Defense Program," is currently in effect. This policy states in part:

"It is the purpose of this manpower policy to direct attention to the importance of employing and effectively utilizing older workers and to stimulate voluntary action by labor, management, and government to modify unnecessary restrictions which limit the employment and utilization of older workers in both private and public employment."

In the National Science Foundation

The Division of Scientific Personnel and Education has under discussion, in its own staff and with leadership in the professional societies, the development of a program to utilize retired scientists in regular positions in research and teaching fields.

In the Small Business Administration

Offices throughout the country, as well as the Washington office, provide all types of counseling service to small-business owners and those contemplating entering the small-business field. It has a products assistance service which assists a small-business man to market a new product or to obtain a product to manufacture. This service might be of special interest to an older person who has developed a new product but who is unable to find a market.

In the Veterans' Administration

The member-employee work program now being carried on in a number of Veterans' Administration hospitals and in all stations providing domiciliary care is designed to help handicapped and older workers develop work skills and work habits in a sheltered environment.

IV. Income Maintenance

A variety of services not related to employment but designed to help older people to maintain income are provided by the departments and agencies of the Federal Government. Included are social insurance, public assistance, retirement and related fringe benefits, pensions and compensation payments, and information and consultation services.

In the Department of Agriculture

A special farm family program has been under way for some time to help farm families work out agreements which would permit younger people gradually to take over the business as older people wish to release responsibilities and which would protect the security of both the old and the young.

Special information and service are also being given in connection with savings and investment programs for farmers and on social-security provisions as they affect the farmer.

In the Civil Service Commission

Retirement System: The Commission adjudicates the retirement rights of member-employees who leave the Government, provides actuarial and legal services required in administering the retirement system, maintains individual retirement records and records of annuitants, and accounts for all retirement moneys. It also administers the Federal Employees Group Life Insurance Act of 1954.

In the Department of Defense

The Department administers the retirement program for all military personnel.

In the Department of Health, Education, and Welfare

The Office of Vocational Rehabilitation administers grants to States for vocational rehabilitation of disabled persons when necessary, during the period of rehabilitation treatment and training, maintenance is provided.

Over 8 million of the Nation's total of 14 million persons aged 65 and over currently depend on the programs of the Social Security Administration for a major source of income.

Its Bureau of Old-Age and Survivors Insurance administers a social insurance program supported by contributions of workers and employers.

The Bureau and the Division of Research in the Office of the Commissioner of Social Security carry on continuing and special studies on the characteristics and economic problems of old-age and survivors insurance beneficiaries.

The federally aided old-age assistance program administered by the Bureau of Public Assistance under the Social Security Act is another income maintenance resource of aging people in the Nation. Currently over 2.5 million aged persons (about 18 percent of the total population 65 years of age and over) are receiving old-age assistance. Other public assistance programs, while not set up to provide financial assistance to old people, also include a large number of persons prematurely aging in the 55–65 age range. For example, nearly half of the recipients of aid to the blind are 65 or over, and most of the recipients of aid to the disabled are in late middle life with approximately a third at least 60 years of age. In addition, 7 percent of the families receiving assistance under the aid to dependent children program are families in which a grandparent is the relative caring for the child.

The Bureau of Public Assistance, in cooperation with State public assistance agencies, makes studies and gathers national statistics regarding the characteristics of needy aging people. These data provide useful information on health and medical problems, as well as social and economic problems of older people.

In the Department of Labor

The Bureau of Employees' Compensation administers compensation payments to disabled Federal employees, many of whom are in the older age brackets.

The Bureau of Employment Security participates in the administration of Federal-State unemployment insurance programs. Although no nationwide statistics have been maintained on the age distribution of claimants, many of the larger States report that from 40 to 60 percent of unemployment insurance claimants are 45 years of age and over.

In the Railroad Retirement Board

The Board administers a social insurance program for the Nation's railroad workers and workers performing services connected with transportation under the provisions of the Railroad Retirement Act and the Railroad Unemployment Insurance Act. Approximately 1.7 million employees were in covered railroad employment in 1955. The Railroad Retirement Act was established originally to provide financial protection for aged railroad workers who had grown too old to work or who became totally disabled.

In the Treasury Department

The activity of the Department of primary importance to the aging members of our population is the development and implementation of fiscal and monetary policies contributing to the stabilization of the cost of living. The older age group, many of whom are dependent on fixed incomes such as pensions and annuities, finds it particularly difficult to make the adjustments which are enforced by a rise in prices.

Various provisions of existing law are of particular interest to the aging.

Filing an income-tax return: Individuals who have reached the age of 65 are not required to file an income-tax return unless they have gross income of $1,200 or more during the taxable year, while individuals under 65 must file a return if they have gross income of $600 or more.

Additional personal exemptions: Individuals who are 65 or over are allowed an additional $600 personal exemption under the individual income tax. Older people are also frequently helped by an additional personal exemption of $600, which is allowed for blindness.

Social-security benefits and railroad retirement pensions: Old age and survivors insurance benefits received from the Federal Government and payments from a State under the Federal-State public-assistance program are completely exempt from tax. Railroad retirement pensions are also exempt.

Life-insurance and endowment policies: The treatment of life-insurance aond endowment policies, while applicable to all taxpayers, is especially helpful to the aged. The proceeds of a life-insurance policy which are paid by reason of the death of the insured are not taxable. Proceeds of an endowment policy paid in a lump sum to the holder at maturity are taxable only to the extent that they exceeded the cost of the policy. To reduce the impact of graduated income-tax rates on them, such lump-sum proceeds may be spread for tax purposes in 3 equal parts over the current year and the two preceding years.

Retirement-income credit: As a result of the retirement-income credit provision enacted in 1954, many retired persons 65 years of age or over, who receive modest amounts of retirement income (pensions, annuities, interest, dividends, and rents) are completely exempt from tax on such income. The credit is 20 percent of retirement income, with a maximum limit of $240 for each individual. To qualify for this credit the individual must meet certain requirements as to prior earnings.

Annuities: Under a new life expectancy method of taxing annuities enacted in 1954, each annuitant received annual exclusions which, in effect, are equal to his investment divided by his life expectancy. This gives him an even flow of taxable annuity income over his lifetime and avoids the taxation of capital and the arbitrary fluctuation in taxable income that resulted under the old law.

Pension plans: Encouragement is given to the growth of pension plans by the tax advantages allowed to approved pension plans which do not discriminate in favor of highly paid employees. Within certain limits, prescribed by the law, employers may deduct their contributions to these plans when the contributions are made.

Payments to beneficiaries of deceased employees: Payments by an employer to the beneficiaries of an employee because of the employee's death are exempt up to $5,000. Under a provision of the 1954 code, the payments are exempt whether or not paid under a contract.

In the Veterans' Administration

The Administration administers compensation payments to veterans with service-connected disabilities. An increasing number of these beneficiaries are in older age groups.

Veterans in need and who are totally and permanently disabled by nonservice-connected disabilities are eligible to veterans' pensions.

All veterans of Indian wars and the Spanish-American War, who served for a specific period, are eligible to pensions.

Veterans 65 years of age and over who have a minimal disability of 10 percent, are unemployable and in need, are eligible for full veterans' pensions, if otherwise entitled.

Veterans with service-connected disabilities are also eligible for domiciliary care when such care is needed. Veterans with nonservice-connected disabilities may be provided domiciliary care when needed if space in such facilities is available.

The Veterans' Administration arranges for foster-home care for incapacitated veterans not requiring hospital care.

V. Education

In the Department of Agriculture

Through its network of voluntary leaders and community committeemen, the Federal and State Extension Service offers special opportunities for older people to make significant contributions to community programs and activities.

In the American National Red Cross

A special training course for the Gray Ladies for service to the homebound has been developed particularly for older women.

In the Department of Health, Education, and Welfare

With the recent creation of the section on Adult Education in the Office of Education, it is expected that greater emphasis will be given to this field and that the potentialities for research and service on problems of the aging will be more fully realized than in the past.

The studies conducted in the field of adult education, literacy education, training opportunities for adults, and the preparation of materials and guides on intergroup education for adults have real significance as background material in considering problem of the aging.

The bureaus and divisions of the Public Health Service carry on extensive programs of health education. These include educational programs in field of particular concern to older people: mental health, cancer, tuberculosis, heart, general preventive health care, etc.

At Howard University the registration in new classes has included several retired individuals. In these classes, related to development of skills and crafts for leisure-time activity, there have been as many as 15 to 20 older persons. These new classes propose to enter intensively into the geriatric field. The curriculum of the School of Social Work necessarily takes into account problems of the aging population. Theory courses, fieldwork, and research direct attention to the aging. The School of Social Work is the beneficiary of a special collection of books on the aging called the Rose McHugh Memorial Collection.

The American Printing House for the Blind publishes the Readers Digest in braille and talking-book form. These are circulated among the blind population of the Nation, approximately 250,000 of whom are over the age of 50.

The Bureau of Old Age and Survivors Insurance has inaugurated a program for preparation for retirement among its employees.

In the Veterans' Administration

The Administration provides some prevocational exploration in adult education in connection with its comprehensive rehabilitation services. The Administration also carries on recreation programs with educational aspects in its hospitals and domiciliaries in which special consideration is given to the needs of older patients and domiciliary members.

Programs of community education are also carried on in relation to employment programs and special programs of foster-home care for psychiatric patients.

VI. Family Life, Living Arrangement, and Housing

Increasing attention is being given by departments and agencies of the Federal Government to the development of a variety of services to help elderly men and women

work out their problems of "some place to stay." Included are counseling and information on family relationships, on various types of housing to meet the special needs of older people when special problems are presented, and on actual phyisical arrangements of housing for older people, as well as housing itself.

In the Department of Agriculture

Special programs of the Federal Extension Service are designed to help in the adjustment of older members in rural farm family situations. For example, special information and consultation is provided in the Extension Service's public-affairs program on How to Care for the Aged.

The Home Economics Research Branch of the Agricultural Research Service is also giving special attention to housing problems, family relationships, and living arrangements for older people in our rural population.

In the American National Red Cross

The American National Red Cross provides social services, particularly for the families of servicemen and veterans, in helping older people to make adjustments in family life and in providing some services which make it possible for older people to live in their own homes or in family situations.

In the Department of Health, Education, and Welfare

The Public Health Service's Bureau of Medical Services is responsible for the administration of Federal assistance in construction of health facilities. Among the types of health facilities encompassed in the hospital survey and construction program are chronic-disease hospitals and nursing homes. Most of the patients in such facilities, particularly the latter, are characteristically older people.

The Bureau of State Services' Division of Sanitary Engineering Services conducts housing hygiene activities concerned with the health aspects of housing.

The Social Security Administration's Bureau of Public Assistance and State departments of public welfare are emphasizing the development of resources and provision of services to enable older people to remain in their own homes as long as they can and their health permits. Some States also are making substitute family arrangements, such as foster-home care, for those aged people who are no longer able to maintain their own homes but who do not yet require institutional care.

Staffs in some local public welfare agencies provide counseling services to older people and their relatives directed toward helping them with problems of social adjustment and intrafamily relationships.

The Bureau and the State departments of public welfare have also made studies on various aspects of problems of living arrangements and housing for older people. The nationwide study of characteristics of old-age-assistance recipients in 1953 also contains data on their housing, e. g., size of household, number of rooms, and kind of facilities available.

In the Housing and Home Finance Agency

Low-rent-housing accommodations are provided to roughly 40,000 households headed by a person 65 years of age or over. This is equivalent to 10 percent of the total number of households accommodated in the entire federally assisted low-rent public-housing program.

By facilitating the financing of good housing units under the Federal Housing Administration mortgage-insurance program, many families and some individuals are afforded an opportunity to acquire satisfactory quarters for their declining years before they reach the age of 65.

In the case of rental projects designed particularly for older people the Federal Housing Administration is able in some instances to insure mortgages on attractive terms under the provisions of section 213 (cooperative housing) of the National Housing Act.

The Division of Plans and Programs in the Office of the Administrator of the Housing and Home Finance Agency also conducts basic overall studies of occupants of public housing and of housing requirements of older people.

In the Department of Labor

The Bureau of Labor Statistics studies and reports include information on housing for the aging.

In the Veterans' Administration

The administration helps in meeting problems of housing in its domiciliary program. The foster-home program for psychiatric patients is also a significant development in this field.

VII. Other Services

The chief contribution of Federal departments and agencies in relation to recreation, community organization, etc., as special and separate activities, is by providing general consultation and information. In the general field of social and economic research, however, Federal departments and agencies are carrying on or participating in a wide variety of experimental and research projects designed to provide information on various social and economic aspects of the problems of our aging population and methods for their solution.

In the Department of Agriculture

The Extension Service, as a part of its family life program, provides special service in connection with planning for the later years, information and consultation on diet, clothing needs, and housing and other services which contribute to the economic and social well-being of older people living on farms.

The Farm Population and Rural Life Branch of the Division of Agricultural Economics keeps abreast of available information on population trends and characteristics of older rural people and makes detailed analysis of these data. Such information is provided to both private and governmental agencies.

In the American National Red Cross

The Gray Ladies provide services such as friendly visiting, letterwriting, reading, games, simple crafts, arranging parties, shopping, planning formal group entertainments and picnics, and instruction in subjects of interest to older people.

The Red Cross gives training in handicrafts, painting, and photography.

Social welfare aids assist professional social workers in helping to meet special problems of older people.

The motor service contributes to recreational programs for the older people by providing transportation to golden age and other types of community clubs; by taking residents of homes for the aged on tours, picnics, and outings; by taking entertainers and volunteers to and from hospitals, institutions, and homes for the aged; and by delivering refreshments and gifts donated by community groups.

The canteen service prepares refreshments for parties and picnics and assists dietitians in hospitals and institutions for aging people. The production services of several chapters of the American Red Cross have taken part in making articles of clothing and other comfort articles to meet needs of groups which include older people.

The Junior Red Cross makes special gifts, particularly recreational and comfort articles; collects books and magazines; and gives entertainment in institutions and homes for the aged.

The American Red Cross considers its greatest service to older people the development of programs which give them opportunity to use their skill and experience in productive volunteer work.

Older men and women also find useful ways to serve others in fund raising, public relations, and in all the phases of Red Cross hospital and community programs. Through these avenues of opportunity older men and women have been able to bring their special viewpoint to community planning for older people.

In the Civil Service Commission

The Commission plans to conduct during the current fiscal year a study of utilization of the older worker by Federal departments and agencies. In addition to research directed specifically toward the older worker, the Commission continuously carries on validity studies to determine which measuring instruments best predict performance on the job. Such studies are beneficial to older persons since the qualities they possess are evaluated in and of themselves rather than as they are reflected by chronological age.

In the Department of Commerce

The Office of Technical Services plans to extend its study of programs on use of older employees in special consultation services to industry or in short-time public careers, and carries on extensive research necessary for study of the problem of aging and renders assistance to other agencies requiring specialized data regarding one phase or another of the program.

The Bureau of tthe Census develops extensive demographic data on population, housing, social characteristics, and on various economic factors affecting older people and makes special studies on the request of other groups, Government and private. The costs of such studies are paid or shared by the requesting agencies.

In the Department of Health, Education, and Welfare

The Commissioner of the Social Security Administration has the responsibility for assuring continuing cooperation between the insurance and assistance programs and for maintaining a proper balance in their work in the field of the aging.

The Division of Research and Statistics carries on basic overall research and collects statistical information on the aged population as a whole. Regular estimates of the major sources of income of aged persons are prepared as of each June and December. Special studies in the field are published from time to time. The Social Security Bulletin, which is a responsibility of this Division, devotes many of its articles to studies and information concerned with aging.

The Division of the Actuary carries on studies and develops cost estimates of old-age insurance. Studies are made of demographic data, mortality, and other factors affecting the aged population. Information on insurance-company experience is also collected and evaluated by the Division.

The 532 district offices of the Bureau of Old-Age and Survivors Insurance participate actively in community programs on aging and old-age and survivors insurance offices make appropriate referrals to other local sources and facilities when the needs of individuals are not met by the old-age and survivors insurance program.

The disability freeze provisions in the program, moreover, have the effect of bringing disabled workers to the attention of rehabilitation agencies at an early stage of their disability which it is expected will contribute substantially to the reduction of problems of disability among older workers

and to improvement in programs of care for them.

The central offices carry on a program of research and analysis to provide information on and to evaluate the operation of the existing program provisions and administrative policies and to determine the effect of proposed changes.

The Bureau of Public Assistance and State and local departments of public welfare are increasingly interested in planning and, in many instances, providing some of the many services needed by aging people. These services are usually related to environmental adjustments and counseling to aging persons and their relatives. Increasing attention is also being directed toward community planning and cooperation and the improvement of the knowledge and skill of public welfare staffs working with older people. The Bureau took leadership in holding the first meeting of representatives of national voluntary agencies to consider problems of aging. This meeting resulted in the formation of the first National Committee on Aging, now under the National Social Welfare Assembly, which is a major force in planning for the aging. It also provides leadership, technical consultation, and informational material in assisting State public welfare departments to meet problems of State and local community organization in dealing with problems of aging, including planning for individualized services, group, and recreational activities, health services, and other special services needed by older people.

Local public welfare departments provide information about community resources available to meet the needs of older people and make appropriate referral in individual instances. They also make appropriate referral to recreational facilities in the community. Some public welfare agencies utilize volunteers who assist older people in participating in community recreational and creative activities, and a few have staff members to help organize such community activities.

The Office of Vocational Rehabilitation provides consultation on community vocational rehabilitation activities and, in cooperation with the State vocational rehabilitation agencies, assists communities to develop broad community programs to meet problems relating to vocational rehabilitation of disabled persons, giving attention to the needs of older disabled workers.

The Department's Committee on Aging functions as a clearinghouse for information on research and experimental programs being carried on throughout the country and provides technical consultation on the development and administration of programs designed to provide social services to older people.

In the Department of the Interior

A study is underway in the Indian Bureau on development of community recreation programs on reservations, including adult education for all ages but with special attention to the interests of older people. In connection with this program the Indian Bureau is exploring the possibilities in craftwork for the older Indian group.

The programs of the National Park Service are designed to protect and make available for public enjoyment the national parks and monuments and other areas comprising the National Park System.

VIII. General Information Services

All Federal departments and agencies provide information services with respect to their program operations. More detailed and complete information on any of the activities reported in this inventory may, therefore, be obtained by writing to the information service of the department or agency, involved. The mailing address of all Federal Government agencies in Washington is Washington 25, D. C.

In the Department of Health, Education, and Welfare

The Department itself, through the Office of the Secretary, is a source of leadership and support in this field, provided through speakers, the press, and by participation in, and sometimes cosponsoring with other governmental and nongovernmental groups conferences and meetings on problems of aging.

The Social Security Administration publishes the Social Security Bulletin which provides statistical data and other information on the social-security programs for general public information purposes.

Its Bureau of Old-Age and Survivors Insurance carries on an active information program which keeps the public aware of its rights and obligations under the old-age and survivors insurance legislation. The Bureau also furnishes exhibits, charts, publications, and films for informational purposes in public and private conferences and meetings.

Its Bureau of Public Assistance works with other governmental agencies and national private agencies in cooperative activities designed to increase understanding of public and private efforts in the care of needy aging people. It also makes studies and publishes national statistics regarding the characteristics and needs of this group and prepares reports on the operation of the public-assistance programs.

The Public Health Service carries on a continuing program of public education and interpretation on health and related factors involved in problems of aging. Under this program, Public Health Service personnel make speeches to local groups and meetings, participate in planning conferences, act as resource people in such meetings and conferences, participate in planning, developing, and carrying on local programs designed to help meet health problems of aging.

The primary objective of the Committee on Aging is to stimulate and support programs that will improve the status and help meet problems of older adults in our society. All activities of the committee are designed, therefore, to help promote action that will assist the States and local communities to meet the challenges of aging in our population. These activities fall into three broad categories:

1. Acting as a clearinghouse in the gathering, organization, and dissemination of information on all aspects of aging. In this connection, the Committee publishes Aging, a bimonthly news bulletin, and other pamphlets and material on aging.

2. Provision of guidance and stimulation through technical advice and consultation to groups working in the field. In connection with these activities, the Committee on Aging provides exhibits, published material, films, etc.

3. Provision of a mechanism for cooperation within the Department of Health, Education, and Welfare to aid in promoting the development of coordinated and effective action in programs relating to aging among the operating agencies of the Department and for cooperation with the Federal Council on Aging to achieve coordination and the broad mutual reenforcement of programs and activities carried on among the departments and agencies of the Federal Government.

The district offices of the Bureau of Old-Age and Survivors Insurance are valuable resources for gathering and disseminating information in this field as well as a source of leadership and service in developing action programs in local communities.

In the Department of the Interior

The Indian Bureau has included discussion of topics relating to problems of aging in its staff conference and training programs. For example, a topic in the staff program for December 1954 included the subject, Services to the Aging.

In the Department of Labor

The Department participates in a wide range of activities, including publication of interpretive material such as a leaflet addressed to employees on the needs and problems of older workers, as well as wide contribution to publications, and conferences, seminars, and meetings of the National, State, and local groups interested in problems of our aging population.

The Bureau of Labor Standards has wide opportunity for constructive interpretation of employment problems of older workers in its contacts with other Federal, State, and local groups which include public agencies in the labor field, private industry, organized labor, the International Association of Government Labor Officials, and the International Association of Industrial Accident Boards and Commissions, for which this Bureau serves as secretariat.

The Labor Department has organized a Committee on the Older Worker to coordinate and promote aging programs and activities in the Department.

In the Office of Defense Mobilization

The Office distributes two pamphlets relating to aging: The Older Worker, prepared by the Bureau of Labor Statistics, and Production at Any Age, prepared by the Office of Defense Mobilization.

The Men Behind Nasser

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, written by Arch Parsons, Jr., which appeared in the New York Herald Tribune of February 21, 1957:

MEN CLOSEST TO NASSER REMAIN BEHIND SCENE—LEADER FALTERS IN WAKE OF SUEZ—THEY APPEAR TO GAIN IN POWER

(By Arch Parsons, Jr.)

Is Egypt's Gamal Abdel Nasser master in his own house?

Or is he simply a tool, acting under the orders of his advisers?

It is common knowledge throughout the Middle East that ever since Colonel Nasser began his meteoric rise from the obscurity of an army barracks to become one of the most feared, loved, and hated figures in international politics, he has been surrounded by a number of army officers.

At the time of the coup against King Farouk in 1952, this group numbered nearly 300 officers. Through various reports of dismissals, arrests, executions, and mere lack of further usefulness, the total of those playing any significant role now is estimated to be about 25 or 30, with less than a half dozen in key positions.

Within the innermost of these concentric circles, three names stand out:

Wing Commander Ali Sabry, 38, who is Colonel Nasser's chief political adviser, reportedly is chief of a network of intelligence systems and is generally considered to be the most important of the men around the president.

Lt. Gen. Abdel Hakim Amer, also 38, Egypt's War Minister, commander-in-chief of its armed services, chief of a joint military

command involving Egypt, Syria, Saudi Arabia, and Yemen, and a life-long friend of Colonel Nasser (one of the president's sons is General Amer's namesake).

Lt. Col. Zakaria Mohieddin, Minister of the Interior and therefore in charge of internal security and at least one branch of the Egyptian intelligence system.

There are believed to be one or two others of nearly equal importance, but their names have yet to emerge from under the cloak of secrecy with which the Nasser regime has sought to surround itself.

Ever since Egypt concluded its cotton-for-arms deal with the Communist bloc a year and a half ago, those observers who try to keep the regime under close scrutiny have pondered Colonel Nasser's relationship to the men around him and their political persuasions.

The need for accurate information has become more pronounced recently as a result of two developments:

An increasing number of reports that President Nasser, the undisputed hero of the Arab world just a few months ago, is today confronted with mounting dissension in the Egyptian army and among the populace, and with the threat of economic disaster.

Further reports that in the wake of these troubles, communism is making considerable headway in Egypt. For example, one of the Middle East's most respected Arab statesmen—a non-Egyptian who, nevertheless, has a considerable knowledge of internal Egyptian affairs—is predicting privately these days that Egypt has about 6 months left to decide whether to fish permanently in Communist waters or cut bait.

Yet, as great as the need is for information about the men around Colonel Nasser, the haze that surrounds the bulky, ambitious figure of the Egyptian president grows even cloudier as one attempt to draw near to the inner councils of the regime. Some general theories emerge, however.

SUEZ PINCH MAY DETRACT FROM NASSER

It is believed that since the full consequences of Egypt's nationalization of the Suez Canal last summer have begun to make themselves felt in that country, Colonel Nasser has played less and less of a lone role in deciding Egypt's policies.

Previously, he was understood to have what amounted to a veto power over the recommendations of his close associates, although there is little doubt that he paid close, if sometimes impatient, attention to their advice.

The consensus of most observers is that now, at the least, a form of "collective" leadership, similar to that existing in the Soviet Union, rules Egypt. Some reports have gone further. They describe Colonel Nasser as the virtual "captive" of the 30 or so army officers around him.

MANY ADVISERS LEAN TO COMMUNISM

And what makes the situation exceedingly significant is a substantial amount of evidence that no small number of these men are either Communists or extreme leftwingers.

Perhaps less is known of Commander Sabry than of any of those Egyptian officers who have walked with a peculiar combination of coyness and brash confidence into the spotlight of world affairs. Commander Sabry really emerged for the first time when he went to London last August to attend the international conference there on the Suez crisis as Colonel Nasser's observer.

In the ensuing weeks, he appeared to have more to do with Egypt's Suez policies than Egyptian Foreign Minister Mahmoud Fawzi. Today, it is considered likely that while Dr. Fawzi advises on foreign policy and carries out instructions, Commander Sabry makes policy.

It is said that Commander Sabry has been entrusted with developing a large-scale Egyptian plan to penetrate Africa—economically, culturally, ideologically. What his personal ideology is remains a mystery. There is little doubt that he supported Egypt's request to the Soviet bloc for arms and other forms of aid.

General Amer is probably President Nasser's closest personal friend. The two men have grown up together, fought together in the same battalion in the Palestine war—and conspired together since school days.

Political enemies of General Amer who no longer live in Egypt have charged that he was a Communist in 1948 (they also charge that Colonel Nasser himself was a Communist at the time, and even claim to have proof that his party number was 117). The very source of the accusation makes the charge debatable, but a considerable number of sources believe that both Colonel Nasser and General Amer were capable of joining the Communists, at least temporarily, if it served the end of ousting King Farouk. Both, however, are regarded as men primarily concerned with tactics rather than ideology.

Colonel Mohieddin is also somewhat of an unknown political factor. His brother, Maj. Khaled Mohieddin, however, is known as the Red Major and was thrown out of the officers' groups around President Nasser 2 years ago for alleged Communist conspiracy. Today the major is back as editor of a leftwing Cairo newspaper reportedly financed by Government funds.

Among the other officers close to Colonel Nasser is Lt. Col. Anwar el Sadat, who was also a companion of the President in the trenches of Palestine and whose leftwing writings in the semiofficial Government newspaper, Al Gomhouria have had to be toned down at times by Colonel Nasser himself.

Communist infiltration is believed to be particularly effective in the regime's propaganda machinery and among its economic advisers. But it is in exactly the same spheres that one hears continued reports of another influence: ex-Nazi.

NAZI PROPAGANDIST REPORTED AT WORK

When this correspondent was in Cairo last summer, another reporter was thrown out of the country for writing that he had met Dr. Johann von Leers, a notorious Nazi propagandist during World War II, and identified him as the head of the Egyptian Government's anti-Israel propaganda work. The report persists, however, that von Leers is in Cairo as a propaganda consultant to the regime.

It is no secret that the regime has called upon Dr. Hjalmar Schacht, one of Hitler's economic brains, for advice in that field. What is perhaps ironic, however, is that the method which the Communist bloc is using to penetrate Egypt—gaining the country's economic dependence by becoming almost the one and only market for its principal export commodities—is strikingly similar to the methods employed by Dr. Schacht to bring Rumania into Hitler's camp.

Perhaps it is the situation in Egypt, as much as anything else, that caused Colonel Nasser's next door neighbor, King Hussein of Jordan, to issue a statement on February 2 warning against "the danger of Communist infiltration into our country" and declaring that if the infiltrators are not stopped, "they might affect our nationalism and make us replace imperialism with a new type of colonialism, from which we might be unable to redeem ourselves."

And observers are recalling two comments by President Nasser himself, that "no Middle Easterner has had any experience with Soviet imperialism" and that "the real alternative to true nationalism in the Arab lands is almost certain to be communism."

Egypt appears to be approaching the fork in the road. It is an open question whether Colonel Nasser will have the power to decide the country's direction when the time comes—and where he will be after the decision is made.

Alexander Hamilton Bicentennial

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interim report of the Alexander Hamilton Bicentennial Commission:

ALEXANDER HAMILTON BICENTENNIAL

LETTER OF SUBMITTAL

ALEXANDER HAMILTON BICENTENNIAL COMMISSION,
Washington, D. C., February 7, 1957.

Hon. RICHARD M. NIXON,
President of the Senate,
Senate Office Building,
Washington, D. C.

MY DEAR MR. PRESIDENT: The Alexander Hamilton Bicentennial Commission, to signalize the 200th anniversary of the birth of Alexander Hamilton, has the honor to submit the following interim report, in accordance with section 6, Public Law 601, chapter 770, 83d Congress, 2d session, approved August 20, 1954.

Respectfully yours,

KARL E. MUNDT, *Chairman.*

INTERIM REPORT OF THE CHAIRMAN OF THE ALEXANDER HAMILTON BICENTENNIAL COMMISSION

WASHINGTON, *D. C., February 1, 1957.*

To the Senate and the House of Representatives:

During the 7 months since the last report the small staff of the Commission has carried forward the work of planning for the bicentennial year which opened on Friday, January 11, 1957.

Opening day ceremonies which were widely publicized by all media, were held in Washington, D. C.; New York City; Chicago; Nevis in the British West Indies; Paterson, N. J., which was founded by Hamilton; Baltimore; Habana, Cuba, where a joint session of the Cuban Congress held a memorial session; and in all United States Armed Forces installations at home and abroad.

Commemorative stamps were issued on January 11 by the United States Post Office Department and the British postal authorities. First-day cancellations of the United States stamp were in New York City and the British stamp on the island of Nevis, Hamilton's birthplace. Not only was this the first time, so far as could be learned, that two governments have issued stamps honoring one man on the same day, but also it was the first occasion on which the British have issued a stamp honoring a distinguished American. Both these stamps were inspired by the Commission.

The major New York City ceremony was held on the steps of the Federal Hall Memorial, at Wall and Nassau Streets, the site of the first Capitol of the United States. The Chairman of the Alexander Hamilton Bicentennial Commission participated, as did D Battery of the 5th Field Artillery, United States Army. This battery traces its history to the artillery company Hamilton organized in 1776 in New York, and which he commanded at the battles of Brooklyn Heights, Harlem Heights, White Plains, Trenton, and Princeton. It has the longest record of continuous service of any unit in the United States Army. The battery was flown from Fort Riley, Kans., for the ceremony.

Prior to the Federal Hall Memorial exercises, special Hamilton observances were held by the American Stock Exchange and by the New York Stock Exchange. After the exer-

cises wreaths were placed on Hamilton's grave in the nearby Trinity churchyard by D. Battery, the Columbia University Alumni Association, the Alexander Hamilton Post of the American Legion, and by the Sons of the American Revolution.

In Washington, ceremonies were held at the south portico of the Treasury Department building with Vice President RICHARD M. NIXON and Secretary of the Treasury George M. Humphrey participating. Mr. Humphrey placed a wreath at the base of the Hamilton statue which stands in front of the main entrance to the Treasury building.

Chicago ceremonies were held at the Hamilton Memorial in Lincoln Park. James M. Kemper, chairman of an Illinois Hamilton Commission named by Governor Stratton, spoke at this wreath-laying ceremony.

At the Nevis ceremony, a plaque was unveiled on behalf of the commission at the site of Hamilton's birthplace. On the following day, at St. Croix in the American Virgin Islands, where Hamilton lived and worked as a youth, the ceremonies included the erection of a historic marker on the public square in Christiansted by the commission. On behalf of the commission an oil portrait of Hamilton, a replica of a Trumbull painting, was presented to the people of St. Croix to hang in Government House. The programs in the West Indies were arranged by the commission's committee on birthplace and boyhood home.

On Sunday, January 13, a special Hamilton memorial service was held at the Washington Cathedral. It was conducted by the Reverend Alexander Van Cortlandt Hamilton, of Norwalk, Conn., great-great grandson and ranking direct descendant of Hamilton. The commission chairman also participated in this memorial service.

The commission's Hamilton bicentennial exhibit was officially opened on Monday, January 14, in the main building of the Treasury Department. This exhibit is made up of historic documents and Hamilton memorabilia and includes the famous "Weimar" portrait of Hamilton painted for the city of New York by John Trumbull, an equally famous Stuart portrait of George Washington which Hamilton once owned, the manuscript of Hamilton's "major draft" of Washington's Farewell Address, Washington's final draft of the Farewell Address, and Washington's own copy of the first edition of the Federalist, presented to him by John Jay. These and other items in the exhibit are priceless treasures of Americana.

A substantial part of the commission's effort has been concentrated on the stimulation of books and articles on Hamilton. Already 2 excellent illustrated magazine articles have appeared, 1 in Life and the other in the New York Times Magazine. Other articles are being scheduled for publication throughout the year.

The commission takes especial pride in three books which have just been published. These are:

The Basic Ideas of Alexander Hamilton, a 35-cent pocket book, a selection of excerpts from Hamilton's writing and State papers, edited by Prof. Richard B. Morris of Columbia University. The low price of this authoritative 451-page book, a comprehensive view of Hamilton, fulfills the Commission's hope that such a book would be published at a price which would make it readily available to every American.

Alexander Hamilton and the Founding of the Nation (published by Dial Press), also edited by Professor Morris, is a larger and more complete collection of excerpts from Hamilton's writings. This book, which sells at $7.50, is the February selection of the History Book Club, and it is likely to become the standard 1-volume reference book on Hamilton.

Alexander Hamilton in the American Tradition, by Dean Louis M. Hacker of Columbia University (published by McGraw-Hill), is a book that will go far to correct misconceptions of Hamilton's ideas, motives, and achievements, and their value to the United States in these critical times.

Also to be published this year is a biography of Hamilton in 2 volumes by Prof. John C. Miller of Leland Stanford University (Little, Brown & Co.), the first volume of a 2-volume life of Hamilton by Prof. Broadus Mitchell of Rutgers University (the Macmillan Co.), Alexander Hamilton: Selections Representing His Life, His Thought, and His Style, by Prof. Bower Aly (Liberal Arts Press), and Alexander Hamilton on Public Credit, Commerce, and Finance, with an introduction by J. Harvie Williams (Liberal Arts Press).

Shortly after the Commission was established, Time, Inc.; and the Rockefeller Foundation granted $200,000 to Columbia University for the preparation and publication of a new and definitive edition of Hamilton's papers. This work is being carried on under the direction of Dr. Harold C. Syrett, executive editor. It is hoped that the first volume of these papers can be published before the end of 1957.

President Eisenhower, on September 17, 1956, the anniversary of the signing of the Constitution of the United States, issued a proclamation establishing the Alexander Hamilton Bicentennial Year and calling upon all officials, State and Federal, and all citizens to observe the bicentennial. Subsequently, governors of the several States, with a few exceptions, issued State proclamations. In a number of States special State committees or commissions have been established to cooperate with this Commission.

Throughout the bicentennial year on suitable dates various ceremonies and programs will be held in many localities, in all of which Hamilton's work in establishing the United States will be the major theme. Several major television dramatic shows are planning Hamilton programs. In addition, there will be many local and area programs on both radio and television. Educational radio and television programs have already carried, and are planning, additional Hamilton programs. A good many of these will be discussed in classrooms. National organizations in many fields which have endorsed the Commission's objectives are cooperating in all appropriate ways.

The Commission's Advisory Committee on Education, of which Dr. Henry M. Wriston is chairman, has recomemnded to institutions of higher learning that special lectures on Hamilton be held, that special library exhibits and suggested courses of reading be established and that Hamilton's work be emphasized in classes on history, economics, political science, and public speaking. Many of the institutions are planning to carry out these recommendations.

The Advisory Committee on Contests and Awards, headed by Dr. Bower Aly, has recommended that the Commission undertake the sponsorship of national contests, on a State-by-State basis in high schools and colleges with scholarships and fellowships as awards to the winners. The national finals in each contest are to be in the form of American student constitutional conventions in Independence Hall, Philadelphia, in June. The Commission has been authorized by the Congress to receive private funds for such a purpose. Final details of the financing of this scholarship-fellowship program remain to be worked out.

Correction of canards and misconceptions of various acts and views of Hamilton, or attributed to him, has been one of the purposes of the Commission. Many opportunities have arisen to make such corrections. One of them is worthy of inclusion in this report. The quotation attributed to Hamilton and widely published over the years, "Your people, sir, your people is a great beast," is without basis, according to an exhaustive check by the Library of Congress as the following letter states:

"LEGISLATIVE REFERENCE SERVICE,
"THE LIBRARY OF CONGRESS,
"*Washington, D. C., December 26, 1956.*

"Hon. J. HARVIE WILLIAMS,
"*Director, Alexander Hamilton Bicentennial Commission,*
Washington, D. C.

"DEAR MR. WILLIAM: This is to confirm our telephone conversation of December 19, 1956, regarding the alleged Alexander Hamilton quotation, 'Your people, sir, your people is a great beast.'

"We have searched the Library collections, and we regret to report that we have been unable to establish the original source of the quotation.

"The alleged quotation does appear in the following publications, but in each case, however, the source for the statement is omitted.

"Adams, Henry. History of the United States of America During the Administration of Thomas Jefferson. New York: Albert and Charles Boni, 1889, volume I, page 85.

"Adams, James T., Editor. Hamiltonian Principles. Boston: Little, Brown & Co., 1928, page xii.

"Nevins, Allan. Alexander Hamilton. Dictionary of American Biography. New York: Charles Scribner's Sons, 1932. Vol. 8, page 179.

"Sandburg, Carl. The People, Yes. New York: Harcourt, Brace & Co., 1936, pages 52 and 54.

"Williams, John S. Thomas Jefferson, His Permanent Influence on American Institutions. New York: Columbia University Press, 1913, page 153.

"Sincerely yours,
"ERNEST S. GRIFFITH,
"Director."

Respectfully submitted.

KARL E. MUNDT,
Chairman, Alexander Hamilton Bicentennial Commission.

The following is a list of members of the Commission:

EX OFFICIO

The President of the United States.
The Vice President of the United States.
Speaker of the House of Representatives.

CHAIRMAN

KARL E. MUNDT, South Dakota.

VICE CHAIRMAN

FREDERIC R. COUDERT, JR., New York.

UNITED STATES SENATE

HARRY FLOOD BYRD, Virginia.
THOMAS C. HENNINGS, JR., Missouri.
IRVING M. IVES, New York.

HOUSE OF REPRESENTATIVES

CARROLL REECE, Tennessee.
PETER W. RODINO, JR., New Jersey.
JOHN J. ROONEY, New York.

PRESIDENTIAL COMMISSIONERS

Lt. Gen. Milton G. Baker, Pennsylvania.
Edward R. Burke, Maryland.
Mrs. Marie Brown Coffin, District of Columbia.
Laurens M. Hamilton, Virginia.
George M. Humphrey, Secretary of the Treasury.
Clark Haynes Minor, New York.
Dr. John A. Krout, New York.
Mrs. Robert P. Patterson, New York.

SECRETARY

W. Randolph Burgess, Under Secretary of the Treasury.

ASSISTANT SECRETARY

Robert A. Dillon, Treasury Department.

Nineteen Hundred and Fifty-Six: Great Growth at Small Price

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 4, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "1956: Great Growth at Small Price," which was written by Arthur Upgren, and was published in the Minneapolis Star of February 28, 1957. The article is a most informative one.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND FIFTY-SIX: GREAT GROWTH AT SMALL PRICE

(By Arthur Upgren)

HANOVER, N. H.—In the latter part of last year there was evidence that an inflationary boom was under way in the economy. Prices were rising, capital outlays of business had risen rapidly, and sales of new corporate securities to finance expansion were heavy.

The authorities saw danger signs. Warnings were issued by President Eisenhower, by Treasury Secretary George M. Humphrey, and by Chairman Martin, of the Federal Reserve Board, who said that perhaps the brakes applied last year should have been applied more sternly.

The warnings were reinforced by a strong rate of tax collection, a restraining credit policy, and widespread public acceptance and discussion of the warnings.

Now come the economic measures for the yearend and for January. Whereas the consumer price index had risen 0.6 percent (from 117.1 to 117.7) in the single month of October, the rise was only 0.5 percent in the 3 months from October through January. This was a substantial slowdown from the October rise and from the rise of 3 percent from March through October.

Such inflation, however, was the price we have paid—and a modest one—for the biggest private business plant expansion we have ever had in a single peacetime year. This year we should get big gains from that expansion. The gains will be in the form of more goods, higher productivity of labor and higher real pay. Real pay is what we can buy with our incomes.

If we try to control the economy so rigorously and evenly that these fluctuations which are associated with vigorous economic growth are all evened out, then we shall probably have restrained the economy to a much slower rate of growth. Do we want that?

Further, as the year ended all families increased total personal savings to a rate at least $5 billion above the first high-spending quarters of 1955. Saving more and spending less in an economic boom show two things:

1. Good economic horsesense on the part of the families who will get more goods this year.

2. Public satisfaction that the economic ship of state is being well handled. If they feared further inflation, families would spend more and save less.

Confidence has also been expressed, since the first of the year in United States Government bonds. This confidence evidences no fear of further inflation and reflects the strong budget position for the calendar year 1956.

The regular budget for last year showed a surplus of $1.7 billion. The special "cash consolidated budget," which records all cash taken in and paid out by the Treasury, had a surplus of $5.5 billion.

So there was no deficit spending by the Federal Government in 1956, and no deficits are forecast for 1957.

This is a record of increasingly stable conditions in a period of great economic growth. Total production of all goods and services rose $22 billion in 1956 and that came on top of a gain of $24 billion in 1955.

So we got a great deal of economic growth in 1956 at the price of a very small degree of inflation, and there are good indications the inflation is now slowing down.

General Electric Evendale Is Many People

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. SCHERER. Mr. Speaker, in the February 15 issue of General Electric's news bulletin for the Evendale plant in the Cincinnati area, there is an article entitled "General Electric Evendale Is Many People."

This article clearly demonstrates the constructive effort being made by General Electric in the Cincinnati area, and the part this great business organization plays in our local economy.

I am therefore inserting the article in the CONGRESSIONAL RECORD so that its readers may have the benefit of the import of this article:

GENERAL ELECTRIC EVENDALE IS MANY PEOPLE

Almost as much land is taken up by parking lots for the cars of those of us who work here at Evendale General Electric as is required by the buildings themselves.

The parking lots filled with our cars emphasize the fact that General Electric's business at Evendale, like all business, is made up of people.

Those thousands of cars are visible evidence of the many General Electric employees at Evendale—actually 17,500 of us—but there are many other people in the Greater Cincinnati area sharing in our activity.

It is estimated that every $1,000 of General Electric take-home pay creates $5,000 of business in the area—that the approximately $70 million a year we take home after deduction of almost $10 million Federal income tax, stimulates local business in excess of $350 million each year.

For instance, the purchasing power of the local General Electric payroll annually provides us with thousands of homes, automobiles, articles of clothing, meals, and other necessities of modern life; with the services of professional men like doctors, lawyers, and educators, and with the luxuries that make life more interesting. Our purchases of these help the business of our community neighbors.

Others in Greater Cincinnati who share in the activities of General Electric Evendale are the owners and thousands of employees of the more than 2,600 local businesses that provide the millions of dollars worth of materials and supplies which are required for the plant each year. These local purchases strengthen our economic ties with our neighbors.

Then there are 8,700 people in Greater Cincinnati—6,100 of them local General Electric employees—who have invested their savings in General Electric shares. This illustrates how closely and in how many ways General Electric Evendale and its neighbors are interrelated.

As a matter of fact, 1 in every 10 persons in Greater Cincinnati has his livelihood affected by our jobs and our success at Evendale.

This includes not only the 17,500 of us and our families, our plant's suppliers and their employees, but also those hundreds of local merchants and business and professional people who serve us.

Of course, because our job is to produce for the defense of all Americans—even for all the free world—millions of people in every part of the world have a share in what we do. It is their money, paid in taxes, that buys our product. They are looking to us to produce the best jet engines possible at the lowest practical price.

This is the nature of business—the bringing together of many people for a common purpose. Our business—like the other 4 million in the United States—makes it possible for the many people who share in our activities, directly and indirectly, to do more for themselves than they otherwise could. Unless a business provides its customers, employees, shareowners, distributors, and suppliers the opportunity to get more for what each contributes than would be the case otherwise, each will pull out, seeking opportunity elsewhere, and the business will fail.

So it is that when we speak of General Electric Evendale, we are talking about many people, for General Electric Evendale is many people.

Gratitude to the VA Hospital of West Haven, Conn.

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. CRETELLA. Mr. Speaker, oftentimes our mail reflects harsh and unjustified criticism toward the administration of veterans hospitals throughout the United States, and investigation reveals that the complaints and criticism are without basis and unwarranted.

It is refreshing to have a constituent write a letter of praise toward a veterans hospital and the manager of one, and I therefore include in these remarks a letter addressed to Dr. Lewis G. Beardsley, of the Veterans' Administration Hospital at West Haven, Conn., which is in my district, by a constituent for whom I have the greatest regard and esteem.

I have come to know Dr. Beardsley quite well and in my dealings with him have found him to be extremely sympathetic toward a veteran, cooperative and kind. He has devoted many hours to me when I consulted or communicated with him in behalf of veterans in my district, and I am sure that he is a credit to the Veterans' Administration and to his profession.

The letter follows:

WEST HAVEN, CONN., *February 25, 1957.*
LEWIS G. BEARDSLEY, M. D.,
Manager, Veterans' Administration Hospital, West Haven, Conn.

DEAR DR. BEARDSLEY: Am indeed grateful for your very fine letter of February 11th ex-

pressing sympathy on the death of my brother, Clarence P. Pierson, which occurred at the Veterans' Hospital in West Haven on February 9th.

It will always be most gratifying to remember the excellent care my brother, Clarence, received while a patient at the Veterans' Administration Hospital.

Unlike many private institutions wherein the staff attitude toward sickness (particularly in its terminal aspects) is usually casual, the spirit of all the people of your group exemplifies in the highest degree the qualities of genuine interest and sympathetic consideration. One cannot measure these attributes, nor can he forget them.

I ask that you transmit my thanks to Doctors Gibbs, Coppola and Lindberg for their countless courtesies. And to yourself and the many others who were so kind and so cooperative, my deepest appreciation.

Sincerely,

ALBERT T. PIERSON.

For a Strong National Guard

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial which was published in the Paterson (N. J.) Evening News on Wednesday, February 27, 1957:

FOR A STRONG NATIONAL GUARD

The 3-day combined celebration and demonstration of National Guard strength at the Paterson Armory was an effective display of the constant alertness of our military on the home front.

Officers of the Guard troops stationed at the armory have reason to be proud of their showing and unquestionably, the prime reason for the activities which was to stimulate new recruiting, served its purpose well.

Increasing the strength of the National Guard to help take up the slack caused by reduction of our military forces was the purpose. This makes sense on several counts. For one thing, it's good economics. A large and strong National Guard, composed of volunteer citizen-soldiers, is about the most in the way of defense we can get for our money. Guardsmen give their country much more in protection than they ever receive in dollars, the regrettable recent popping-off in Washington to the contrary notwithstanding.

For another thing, the spirit of volunteer service which is the foundation of the National Guard, is in the very best tradition of our American way of life. Very probably our historic preference for doing a job voluntarily before it is forced upon us, without choice, accounts for much of our strength as a Nation.

The success of the voluntary approach to matters military is forcefully illustrated by the fact that the National Guard, with voluntary service as its keystone, is the oldest military organization in the country. Its history dates back over more than 300 years, well before the Revolutionary War. And from the Revolution on, guardsmen have fought for their country in every conflict in which it was engaged.

The peacetime service of the National Guard is also impressive. We know of its work in time of emergency and disaster in this State. The Guard served valiantly, too, at the San Francisco earthquake, the Galveston and Johnstown floods, at Texas City, in hurricanes on the east coast, blizzards in the Plains States. The list is long.

Now, at the request of Congress, and to meet a need for the particular kind of service which only the National Guard can offer, the Guard must increase its strength. Appropriately, the time chosen for its big recruitment drive falls on the birthday anniversary of the founder of our Nation. Thus it symbolized, if a symbol is needed, the essential character of the National Guard in the affairs of our country. Its campaign deserves public support, as a tribute not alone to the organization but to our own contingents at the Paterson Armory under the capable direction of Col. James G. Depew and Lt. Col. Robert Wilson.

A Matter of Morals

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from editorial page of the Detroit News, Tuesday, January 29, 1957:

A MATTER OF MORALS

The best that can be said for Dag Hammarskjold's report on what the United Nations might do to settle the dispute between Egypt and Israel is that it occupies a legalistic middle ground so unsatisfactory to both sides as to insure its rejection by the U. N. Assembly. The worst is that the report implies moral bankruptcy in the U. N. leadership which not only admits helplessness to enforce a solution but inability even to come to grips with the rights and wrongs of the problem.

Mr. Hammarskjold still insists that Israeli troops must be withdrawn unconditionally from the Gaza strip and fortified places along the Gulf of Aqaba. He suggests then that U. N. troops might follow them into occupation here as they have elsewhere in the Sinai Peninsula. But he also maintains that the U. N. operates as a guest of the Egyptian Government. Colonel Nasser would, therefore, be free at his leisure to dismiss the guardians of the peace and resume his interrupted aggressions against Israeli frontiers and Israeli shipping.

This solution continues to assume that Israel has been an unprovoked aggressor and that Egypt desires a peaceful settlement. It ignores the central fact of the last 8 years: That despite the armistice, Egypt has steadily maintained a state of war with Israel and has openly pursued and justified acts of war against her. Colonel Nasser has never suggested that he seeks peace. On the contrary he has repeatedly refused any negotiations that would remotely imply acceptance of Israel's right to exist at all as a nation.

These are political facts. They are also moral facts. If the U. N. wishes to maintain that war is wrong and undertakes to punish aggressors, it cannot condone, much less strengthen, a government whose avowed policy is to remain at war until its enemy is annihilated. It cannot pretend to work for peace by recreating the conditions of inevitable conflict.

The worst of this sorry business is that the U. N. abetted by the United States is crucifying itself. A world organization so indifferent to international justice and so proper that it can keep peace only with the consent of those who are breaking it may be worse than useless. It may serve chiefly to promote anarchy among nations and hang a cloak of piety over international immorality.

We're Over the Surplus, and Here's Why

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following article from the Farm Journal gives us a more encouraging picture of the disposal of surplus agricultural commodities.

It is devoutly to be hoped that we will soon be back on an even keel and that the present program will finally put an end to our having to pay for and store food in caves and ships, where most of it will perish:

[From the Farm Journal of March 1957]

WE'RE OVER THE SURPLUS HUMP AND HERE'S WHY

(By Claude W. Gifford)

We've finally passed over the hump of the farm surplus pile.

And it looks like we'll keep going downhill for a time.

Within 3 to 5 years—with luck we could be somewhere near normal carryover, depending on whose definition of normal you use.

And within this situation are the makings for the next big farm political ruckus: What to do about price supports and acreage when we get down to livable reserves?

Here's what's happening:

1. We're making unusual progress in moving our surplus hoard. We've already cleaned the CCC cupboard bare of some of the earlier trouble makers: butter, eggs, cottonseed oil and meal, seeds, tung oil, honey, and flaxseed.

The real headaches remaining are corn, wheat, and cotton—together they now represent 79 cents out of every dollar of CCC investment.

2. Hard-hitting export policies are boosting our overseas shipments to the highest levels in history. Cut-rate prices and give-aways are helping here. We'll move out nearly three times more CCC supplies in the year ending June 30 than in 1954.

The cotton disposal program is the most dramatic Government sales success in recent times. In this marketing year we'll export 6½ million bales—$1.3 billion worth. (Last year we moved only 2.2 million bales.)

3. The soil bank shows signs of really cutting production—if politicians will resist the temptation to convert it into an excuse for handing "easy" money around. (That's a big "if.")

United States Department of Agriculture officials estimate that the 1957 soil bank sign-up will shrink last year's wheat and cotton crops by 20 percent.

The corn program that 61 percent of the corn growers voted for would have let the soil bank reduce corn output, too. Congress can still pass a corn program that would do this—the bill has been in the hopper since late January.

4. Foreign tensions and unrest could very well lead to unexpected demands on our farm supplies—either in the form of liberalized United States aid or world scare buying.

Add up these four things, and the day may not be too far away when we'll whittle

that huge surplus pile into a liveable normal supply.

As that time approaches, the hottest farm questions in years will be:

Do we let support prices and acreage allotments climb the flexible ladder, as the law now on the books provides, enticing another production stint to build up the surplus pile again?

Or do we tighten the screws on production in a more determined effort to make supports work—by strict bushel, pound, and bale quotas; by cross-compliance; and by lowering national minimum allotments to where they'll actually check production?

Or do we rebel and throw off Government controls and political determination of how much we can produce? Maybe set stop-loss support levels and let relatively free market prices and individual ability decide who will plant how much of what?

Or do we keep a permanent soil bank and let Uncle Sam contribute to farm income, by maintaining higher-than-needed national acreage minimums, but paying farmers to plant less than their allotments?

Or do we let farm prices fall to whatever level they will and pay farmers a production payment, in hopes that we can have cheaper food and higher farm income at the same time, giving Congress the job of picking up the tab?

Or do we set up American prices for farm goods used in this country and let supports fall to competitive world prices? Should we continue Government foreign trading and sales based on billions of subsidies? Or should we return to a relatively free market and private trading?

There's dynamite in those questions. They're what we'll be reading about, talking over, and voting on in the months ahead.

The opening shots will soon explode as the political lines shape up and the battle begins. It could be a hot issue in the 1958 congressional campaigns—and a real donnybrook in the 1960 presidential election.

If we're wise, maybe we had better settle these questions soon in our own farm meetings and organizations, then tell Congress what we want. If we wait too long, the viewpoint may get so entangled in political positions that all horsesense will be lost.

Poverty Amidst Plenty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of January 23, 1957:

POVERTY AMIDST PLENTY

The pathetic story of the Ramsey family comes as a jolting and needed reminder that the richest Nation on earth cannot be complacent yet about winning the age-old war against poverty. This family of 13 was found living without food in a heatless ramshackle house in Seat Pleasant, Md. It is terrible to speculate what might have happened if a compassionate neighbor had not discovered the Ramsey family's plight.

The story of the family shows again the emptiness of the old cliché blaming poverty on personal weaknesses; a combination of fire, injuries, illness, and just plain bad luck might have felled a stronger man than John Ramsey, 32-year-old head of the large family. The fact that any family could reach the edge of starvation amidst a bustling suburban community should temper the growing mood of national self-congratulation over rising living standards.

Mutual Security: Time for Reappraisal?

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. UDALL. Mr. Speaker, this week one veteran Washington correspondent observed that this session of Congress marks the fateful hour of our foreign-aid program.

Certainly there is evidence at hand that the time has come when we must reformulate and restate the basic premise of our security-through-aid programs.

It seems to me that we must decide once and for all whether these programs are, as Gen. Alfred M. Gruenther put it last night, "enlightened self-interest," or, as others are contending, "useless giveaways."

This, I believe, is one of the major challenges which faces the Congress—and, above all, faces President Eisenhower.

As a contribution to this discussion, I am appending to these remarks an article, authored by Dan Lacy, which appeared in the current issue of Harper's magazine:

FOREIGN AID: IS IT STILL NECESSARY?

(By Dan Lacy)

The outbreak of fighting in the Middle East made it painfully clear that the order we had tried to maintain in that area is hopelessly unstable. Sources of the instability include pathological nationalism, racial and religious hatreds, embittered reactions to Western contempt, and inexperience in responsible government. But poverty is its basis, the poverty that everywhere underlies these specific miseries—and not only the fact of poverty, but also the frustrating hopelessness of being so mired in want that no way out is visible. It was no accident that the recent tragic round of events was touched off by the abrupt and humiliating withdrawal of American support from the Aswan Dam project, one of the few symbols of ultimate escape from the economic morass.

The area's poverty itself cannot be removed in our lifetime. What is important is that its people experience the beginnings of steady, peaceful development and see for themselves that orderly growth can bring real and individual rewards. This is now going to be doubly difficult to bring about. The situation in the Middle East was allowed to deteriorate so far into chaos that only drastic action, if that, can restore its peoples' faith in their economic future. What is even more disturbing, in South and Southeast Asia and in much of Latin America, about which we feel no similar sense of urgency, a like disaster lies only a knife-edge away. Failure to create or sustain a sense of economic progress there can quickly lead to a situation as difficult as that in the Middle East. In the world's hungry half, as far as America's role is concerned, time is indeed running out.

Most of the world's people outside Europe and North America still live in a simple village society, practicing subsistence agriculture. In many ways, their life has grown poorer and more desperate over the past 2 or 3 generations, as more and more of them have pressed harder and harder upon their wasting soil resources. The people of these countries have generally shared in modern economic life only when they lived in large cities, or only in connection with the export of raw materials—like rubber and tin and jute—which was financed and controlled by foreign businessmen.

The already frail economies of these countries were disrupted—indeed almost destroyed—by the decade of war, insurrection, and civil disorder which followed 1939. Trade patterns were shattered; factories and railroads wore out and broke down when replacement parts could not be obtained; and markets disappeared. By 1949 the economies of the Asian and Middle Eastern countries, and even of all but the most fortunate of Latin American countries, had sunk far below their already pitiful prewar levels. Many of them faced famine and collapse. This background for President Truman's proposal of point 4 may help explain the almost hysterical enthusiasm with which it was received in the so-called underdeveloped areas.

Since then five important things have happened. First, several years of relative peace and stability—except in Korea and Indochina—have enabled the traditional economies to regain most of their prewar effectiveness: Roads and railroads have been restored, and people have settled back into the rhythms of work and trade. Second, the Korean war created a sudden demand for military raw materials, a dramatic shot in the arm to the producers of rubber, oil, tin, jute, chrome, manganese, and other needed items. Third, after a slip backward, the boom of the past 2 years in North America and Europe has been reflected, though rather feebly, in a steady demand for the products of the underdeveloped areas—especially oil and coffee. Fourth, the weather has been excellent for several years in South Asia, producing abnormally large rice and wheat harvests. And finally, the efforts at internal development in many of the countries have begun to yield significant returns in the simpler sectors of their economies.

As a result, per capita income has been rising, though not rapidly; conditions of life have improved; and acute famine is no longer a threat. But this improvement is shallow. Per capita agricultural production throughout most of the area is still well below even prewar levels; in Burma, for example, only about two-thirds as much food is grown per person as in 1938. And there are disturbing aspects to even the limited progress that has been made. It still depends on largely uncontrollable outside factors, such as foreign markets or the weather. Two or three successive failures of the monsoon might reduce India to a starvation level, and a marked business relapse in Europe or America could wipe out most of the progress that has been made in the past half-dozen years in the underdeveloped countries.

WHAT WE'VE DONE, AND NOT DONE

Real progress has been made, however, in clearing the way for future growth. In 1949 few underdeveloped countries could have made much use of outside aid. Neither we nor they knew what their real problems were, or for that matter what was required for economic growth in general. Plans for development were nonexistent or fanciful. Inexperienced civil servants were rarely capable of handling the complex problems of taxation, budget, currency regulation, and inflation control involved in economic growth; and tremendous health, sanitation, and edu-

cation programs were needed everywhere before true development could begin. There were no established channels for aid, and we were as inexperienced in giving it as they were in using it. Today, in most countries, these barriers to future progress have been visibly lowered.

The situation that confronts us now is very different. In the early stages of development much could be accomplished with very little capital, by organizing half-employed rural labor to use hand tools on community projects, such as building roads or digging wells. Better seed could be introduced and more efficient farming methods taught. Sanitation projects could be built. Cottage industries could be developed. But these limited means are no longer adequate. Many underdeveloped countries are now reaching a point where their need is not for more such projects but for outside capital, soon and in quantity.

Food production per person must now be increased, radically and quickly. Any reclamation project to accomplish this will require dams and power installations, which mean major capital imports. Industry is equally essential, and not merely village handicrafts, but productive factories which will show the full benefits of modern technology. This means even more capital. And neither industry nor agriculture can survive without increased power supply and radically improved transportation—again more capital. The economic development of two continents is threatening to grind to a halt, before momentum can be achieved, simply because it is capital starved at the crucial point.

Our competitors and imitators, the Russians, have already begun to exploit this situation with attractive, if entangling offers. Russian grain elevators, hydroelectric plants, and irrigation installations are being built or planned in Afghanistan; a Russian steel mill is under way in India; a Russian techological institute is announced for Rangoon; a Russian nuclear physics laboratory is designed for Egypt; Russian fertilizer mills rise in Yugoslavia. All told, Russian economic aid to countries outside the Soviet bloc now totals at least $600 million and may have risen to $1 billion. Soviet offers are dangling before other hard-pressed countries in Asia and the Near East and Latin America as well.

Some of this Russian aid is as clumsy and ineffective as were our own early assistance projects, but there is no reason to doubt its reality. It is the more appealing to many countries, especially in Asia, because in offering it the Russians say, in effect: "We, like you, were once poor and weak and despised by the rich and arrogant countries of the West; but we have learned how to rise by our own efforts, without their aid. In a generation we have become so strong that even America fears us, and we will help you do the same thing." Few governments will choose stagnant poverty for their people rather than entanglement in this honeyed trap, especially if it is their only alternative.

But even if the situation abroad were less menacing, our economic relations with the underdeveloped countries would need to be reconsidered anyway. The foreign-aid bill before the last Congress was presented without enthusiasm by the Administration and approved reluctantly, with major reductions. As an indication of the general dissatisfaction, three separate committees have been created to restudy the whole foreign-aid program: one by the Senate, one by the House, and one—under the chairmanship of Benjamin Fairless—by the President. This dissatisfaction appears to result in part from the way military aid has been handled, in part from a growing recognition that our economic aims are not being achieved, and in part from pure confusion.

Confusion begins when you lump under the vague words "foreign aid" all sorts of transactions for all sorts of purposes. These include the $11 billion we spent, mostly through UNRRA, for emergency postwar relief and the $15 billion in loans and grants that went into the Marshall Plan and related efforts to get Europe back on its feet. Both programs were successfully, even brilliantly, completed and no further money is being spent for either one.

Nearly all of our recent "foreign aid"—about $25 billion in all—has gone to arm and maintain a ring of allies around the edges of Communist power. This sum includes more than $15 billion for weapons, equipment, and other direct military assistance, and some $8 billion to bolster countries (like Korea, Indochina, Formosa, Pakistan, Greece, and Turkey) which have been involved in actual warfare or are supporting armies far beyond their means. Of foreign-aid appropriations sought last year by the administration, seven-eighths were for defense aid, and of this two-thirds were for weapons.

The debate over these proposals was essentially a debate on military policy. The question in the minds of Congressmen had little to do with the economic problems of Asia and Latin America. What they were actually arguing about was whether American security was strengthened more by helping our allies or by spending the same money on our own Air Force. It is worth noting that the cuts of nearly $1 billion in the military aspects of the foreign aid were paralleled by an unsought increase of about the same amount in the Defense Department appropriation, to be used mostly for long-range bombers. The relatively minor sections of the bill relating to economic development received little attention.

What has happened, in fact, is that the bold new program envisioned by President Truman in the point IV passage of his 1949 inaugural has never really been undertaken. Almost a year and a half passed before any funds were appropriated. Immediately afterward, the Korean war broke out and diverted the national attention to military matters. When it ended we might have turned our energies to more vigorous efforts, but by then we had a new administration pledged to the reduction of oversea commitments and a congressional majority which for years had described all economic aid as Democratic globaloney. The Eisenhower administration has continued and even somewhat raised the level of purely economic aid in effect during President Truman's second term; but it has shown little interest in discussing foreign economic development as such, or doing anything decisive about it. As a result—though rapid economic progress for Asia, the Near East, and Latin America has been a stated objective of American foreign policy since 1949—we have only nibbled at the edges of the problem.

WHAT WE MUST DO, AND WHY

The trouble with American aid is not primarily that it has been too little. We are spending almost enough abroad already, so far as totals go. The trouble is that our aid has too often been nothing but a byproduct of other activities. We have been willing to pour out money to fight starvation or resist communism or arm allies or get rid of farm surpluses, but not to meet the realistic needs of economically backward nations. To break the grip of stagnation on those countries, and to start a process of self-sustaining growth, is the most challenging social and economic task the world has consciously faced. Quite possibly it cannot be done. But certainly it cannot be done by scattered and oblique efforts. If we really want economic progress in those areas we will have to make up our minds to it, and aim our foreign-aid policies specifically at that goal.

A new foreign-aid program must extend and expand our technical assistance if it is to be successful, and it must include a number of other elements. But its main component—its new central core—must consist of measures for assuring a flow of capital to the underdeveloped areas; and about these measures we should make six comments:

1. The need for capital cannot be met by savings and investment inside the underdeveloped countries. A critical portion must come from abroad, mostly from the United States.

One of the persistent illusions about our foreign-aid program, under both Democratic and Republican administrations, has been the wishful thought that we need provide only know-how and that somehow all the necessary capital will come from savings within the underdeveloped areas, or from private investors, or from hard loans by the World Bank or the Export-Import Bank. Much of the capital, of course, will be raised within those countries. The materials and labor involved must in any event come out of the local economy; that is, they will represent people or resources either not fully used before or else withdrawn from previous local use. But not all, not even nearly all, the capital can be raised this way. There are two reasons for this.

One is that the capital needs of a developing economy in its early stages are prodigious. You need everything at once: land-reclamation projects; hydroelectric installations; roads, railways, and port facilities; factories; schools and hospitals; and a thousand other things. To some extent, one is useless without the other; there is no point in building a railroad with nothing to haul, or a factory with no power resources or rail facilities, or a hydroelectric plant with no industries to supply. Once development is progressing rapidly, each year's new installations can be financed out of the annual increase in productivity. But until the process is underway, the tremendous increase in investment necessary to get it started can come only from the outside or from the most severe reductions in consumption—that is, in living standards.

A second reason is that the ability to build up capital resources depends on the country's capacity to import as well as the capacity to save. No amount of local savings can pay for machinery, steel, and equipment unless it can be translated into hard currencies. A Brazilian industrialist may have the cruzeiros to finance a new cotton mill, but he won't know whether he can get dollars for the new machinery until he knows how the coffee crop will sell. Though the developing countries can, as indeed they do, take measures to ration their imports, there is simply no way they can now increase their exports to the industrialized countries enough to pay for the capital goods they need.[1]

2. Private investment, though useful, will meet only a part of the need for foreign capital. Most of it will have to come from Government sources.

As a matter of fact, given the nature of the projects, most capital for the basic elements of economic development in all countries has to come from governmental sources. Even in the United States private enterprise alone cannot build schools, roads, port improvements, canals, irrigation and major hydroelectric projects, hospitals, and railroads.

[1] There are thus two gaps that cannot be closed without outside help; the gap between investments needed and what can be saved without coercion, and the gap between imports needed and what can be paid for by exports. As it happens, these gaps are generally of the same magnitude, and the dollars to cover the margin of imports will usually cover the margin of savings as well.

Nor will American or European investors buy Asian or Latin American bonds except in small quantities and at prohibitive rates. Direct investment has only limited appeal to American businessmen, in part because of the insecurity and restrictions imposed by foreign governments, but even more because the opportunities for investment in Canada and the United States itself are so rewarding. As a matter of fact, the net flow of private capital is into the United States and Canada, rather than away.

American and European capital is likely to be invested in volume only in the production of oil and raw materials which Western industries continually and inescapably need. Recently another area for investment has opened up in the foreign production of simple consumers' goods, so as to avoid the tariff and currency difficulties of direct export from the United States. Both these types of investment are well worth encouraging, especially for the experience in modern technology which they offer to thousands of customers, employees, managers, and civil servants and for the general stimulus to modernization which their presence provides. But no underdeveloped country can expect from this source a flow of capital in any way adequate to its needs, or aimed to satisfy its most acute requirements.

3. Once an underdeveloped country is investing as much as it can, we should provide additional capital as rapidly as the country can absorb it without waste. This is not likely to cost nearly as much as you think.

Our natural tendency has been to gauge the need for aid at the lowest amount that will avert disaster. But if our purpose is literally to help the underdeveloped areas reach a level of self-sustaining growth, then it is in our interest to provide, not as little as we can get away with, but as much as they can efficiently use. Quite apart from the political and the humanitarian arguments, the quicker these areas reach a self-supporting stage, the cheaper it will be for us. We were able to finish the Marshall plan quickly, successfully, and—for what was accomplished—cheaply, because we gave enough. If we had tried to make do with annual grants of half the size, we would still be pumping aid into enfeebled and stagnant economies today—if, indeed, discouragement and frustration had not already turned them to communism.

It is impossible, of course, to estimate precisely the annual flow of capital that can be usefully absorbed. Proposals have been made that each of the advanced countries should annually contribute 2 percent of its national income to an international development fund. This would involve an annual American contribution of some $8 billion. Though we could manage this, it is much more than the underdeveloped countries can use. About half the population of non-Communist underdeveloped countries is in India, and more than half the capital needs are probably in that country. Yet India's second 5-year plan would require outside capital, public and private, of only about $500 million a year. Even if we assume, as we probably can, that more rapid progress would be possible if larger funds could be had, the annual sum required in India would still remain below $1 billion.

On this basis, annual demands on us are not likely to exceed $2 billion annually. Dr. Max F. Millikan and Dr. W. W. Rostow of M. I. T., after a carful country-by-country study, concluded that the maximum possible capital flow from all sources that could be effectively used would be no more than $3.5 billion, even if all countries reached their highest needs for outside capital at once. Actually, about $2.5 billion is a more likely maximum for any 1 year, in view of the widely varying stages of development.

This is a very large sum. But it is not much more than half our present foreign-aid program, and most of the present program, however useful militarily and politically, is unproductive economically. The amount is easily within our means. An effective foreign-aid program requires far sighted intelligence, but it does not require visionary and impossible sums of money.

4. We can materially reduce the amount to be provided by the United States if we can enlarge, and most of all stabilize, the dollar income earned by the underdeveloped areas.

The principal source of dollars, for their imports and their savings, are the earnings from the exports of underdeveloped areas. Foreign payments for Latin American exports between 1950 and 1954 ranged between $7 billion and $7.5 billion a year, while the total flow of both public and private loans, grants, and investments averaged only about $450 million a year. A 10 percent fluctuation in the volume or price of exports would have done far more than the whole flow of aid and investments together to determine the area's capacity to import capital goods. Countries like Venezuela or Iraq—which have large, stable exports—need no foreign aid for development. The needs of other countries arise largely from their lack of exports or stable markets. Wild fluctuations in the prices of products like coffee and rubber do special harm, since a single bad year can bring a devastating halt to all development, and the uncertainty discourages prudent investors even in bonanza years.

Perhaps the single most important factor in the recent progress of underdeveloped areas has been the growing market for their exports. If we can maintain a large and reliable market for their products, the amount of aid they need will be greatly reduced, and their progress will move more rapidly into the self-supporting stage. Earlier efforts to stabilize the price of coffee, rubber, and similar products—undertaken by the producer countries alone and usually in periods of declining markets—have generally ended in failure. But carefully planned agreements could be made to work, barring a general economic cataclysm, if the major buying countries were seriously and responsibly to participate in them.

5. "Hard" loans should be used whenever the transaction calls for them, but most aid will have to take the form of grants, which will be cheaper in the long run.

Marshall plan aid came almost entirely in grants, as does our military and technical assistance. Both Congress and the administration, however, have seemed considerably uneasy at the idea of outright grants for economic development; and a number of verbal devices have been used to conceal the practice. The Senate Foreign Relations Committee, for example, has stated on the one hand that it prefers loans, not grants, but then again, it doesn't want the State Department to worry too much about collecting them.

This confusion of loans with grants is too bad, since it is likely to lower respect for obligations to pay, and make genuine loans from the World Bank or the Export-Import Bank that much harder to collect. Loans have important advantages in terms of self-respect for the borrowing country, and the prudence with which they are sought and used; but these advantages exist only when the loan is genuine, given because the borrower is a sound risk, and expects to repay in full. Many of the needs for capital in the underdeveloped areas meet such standards and can properly be met by businesslike loans. When that is so, they should be dealt with through the World Bank and the Export-Import Bank, and the resources of those institutions should be increased accordingly.

We should not exaggerate, however, the ability of the underdeveloped areas to repay. Even the United States, fortunate and relatively painless as was our economic growth, defaulted during the Civil War and the panics of 1873 and 1893 on a large part of the foreign capital we had borrowed for building our railroad network and other 19th century development needs. Most of the remainder was finally repaid only during the two World Wars, when desperate European need for imports from us built up enormous trade balances in our favor. If it is in our interest to make the growth of these economies self-sustaining at an early date, then our least expensive course is to make outright grants and let increases in productivity be plowed back into further investment, rather than into debt service.

6. Grants and loans for economic developments should be made through international channels, if effective ones can be devised.

At present, most international aid is given directly. This would be inevitable if the assistance were always given to forward the short-term political or commercial aims of the aid-granting nation. But if the purpose of the aid is indeed to assist economic growth, then there are powerful arguments for using an international channel. Above all, it allows the aid to be divorced from the shifting requirements of political policy, and permits it to be administered in the disinterested atmosphere of objective economic and technological considerations.

The Aswan Dam is a classic case. Though this seems to be technically a feasible project, its economic advisability is the subject of earnest debate. For Egypt to concentrate potential domestic savings and foreign aid for so many years on so vast a project, from which returns will be long deferred, would expose her to many problems. There would be strong inflationary pressures, and her Government might be insufficiently experienced to carry through so complex and lengthy an undertaking. Would not a series of smaller projects, from which earlier returns could be expected, be a better immediate objective? On the other hand, the Aswan Dam, if successful, would give the maximum return per dollar, and might very well be the only project of sufficient mass and drama to break through Egypt's cycle of poverty-breeding poverty.

Though these are grave questions, they are capable of reasonably objective answers. Yet I suspect that our earlier offer to give support for the Aswan Dam was not based primarily on such answers, and certainly our abrupt and peremptory withdrawal of the offer was not based on a revised judgment of the project itself. These politically governed decisions, as you would expect, initiated a whole series of other politically governed decisions that seriously, and perhaps hopelessly, set back the opportunities for rational economic growth in the Near East. Had the decisions been entirely in the hands of the World Bank, or an organization in a similarly disinterested position, we might have had strong and hopeful progress instead of embittered chaos.

Because the interest of the United States does coincide with that of the underdeveloped areas, we have the most to gain from channeling foreign aid through an international organization. This is particularly true in connection with the rapidly growing Russian program. This aid, skillfully administered for Russian political gain, may become an increasingly effective instrument of Soviet penetration. If so, it will leave the United States in the position of either abandoning some countries to Russian influence or entering an absurd competition in gifts. One way out of this dilemma would be to internationalize our aid, which would compel Russia to do the same or by implication admit her own political motives.

A further reason for using international channels is that many requests must be turned down for economic reasons even where national pride is emotionally involved. When an advanced country makes

such a refusal, ill will inevitably results; an international organization can much more easily afford the tough "No" when it is necessary. Also, the attachment of specific conditions to a loan or grant, frequently including supervision of its use, may often be necessary if the money is to be effectively used. This, like plain talk, is much more readily accepted from an international organization than from any single power.

There remain two serious questions. Does the United Nations have the machinery and the administrative capacity to handle a major aid program without its becoming a political football within the General Assembly and Security Council? Obviously the machinery of the U. N. itself is ill-adapted to so large an operation; but the record of the World Bank shows it is possible to create a special agency—insulated from direct political considerations, staffed by expert professionals, and free of the veto—which can act promptly and well. The proposals for a Special United Nations Fund for Economic Development (SUNFED), though vague as to administration, lie along this line.

The second is whether aid so predominantly from the United States can be made international by calling it so. If 75 or 80 percent of the contributions to SUNFED or any similar organization are provided by the United States, which seems unavoidable, won't the United States necessarily dominate the organization and be held accountable for its decisions?

This is not an easy question to answer. We are confronted with what Gunnar Myrdal has called the awkward fact of the United States bigness. No international organization, even the U. N. itself, has been entirely able to escape an unhealthy dependence on United States support. But United States dominance has not necessarily resulted. We provide most of the funds for the U. N. technical-assistance program and the World Bank, and the president and many of the senior executives of the latter. Yet they have been able to maintain a genuinely international character. The mere fact that policy decisions have to be openly discussed within an international board does much to assure recipient countries that aid is not being offered from concealed motives. Much would depend on the wisdom and self-restraint of the United States; if we are wise and farsighted enough to commit our grant program to the U. N., we will doubtless be wise enough not to forfeit the advantages by trying to exploit our position.

WHAT COMES FIRST?

The necessities of such a program as this have never been laid before Congress. The Truman administration did not go beyond technical assistance; the Eisenhower administration has done somewhat more, but has concealed most of what it has done under the name of defense assistance or surplus crop disposal. The belief has somehow been accepted that spending United States funds will be approved by the Congress and accepted by the people only on the grounds of immediate self-interest, preferably assessed in naked military terms.

Yet a look at the legislative record suggests the contrary. The Marshall plan, requiring a considerably larger expenditure than Asian aid is likely to, and offered to Communist and non-Communist countries alike, was approved in a Republican Congress, with bipartisan support and wide popular backing throughout its history, and is generally viewed today as a wise and successful undertaking. The point 4 program has similarly enjoyed enthusiastic popular support and in Congress has become almost noncontroversial. Even in the heated debates of the last session, it was not the economic aid but the military aid that was attacked and reduced.

There is a latent humanitarianism in the United States that feels an obligation to do what we can to make the benefits of technology available to everyone. There is also a growing awareness of how inseparably our own future is linked to that of Asia, Africa, and Latin America, and a wide dissatisfaction with aid to those areas as it now is given. There is a widespread realization that only immediate and massive action can recover our position in the Middle East and avoid similar collapses elsewhere.

With the simultaneous fracturing of the Western and Soviet alliances, we have arrived at another of those turning points in history where our decision will shape the course of events for years to come. So far our reaction to the challenge has been narrowly and unimaginatively political, with the result that we alienated our friends in Europe and joined hands with the Soviets in the slim hope of courting favor among current regimes in the Arab world. We do right, as the British and French well know, to make certain that the Russians do not monopolize the role of champion, among the colonial and formerly colonial peoples, against the West. But we cannot do so by moralizing and legalisms empty of real content. We can do so only by openly asserting our long-range self-interest—by announcing unequivocally that the rapid growth to self-sufficiency of the underdeveloped areas is a fixed and paramount objective of United States policy.

Only the President can clearly and authoritatively state such an aim. And if, with his enormous prestige, he were forcefully to urge upon the Congress a well-constructed program for achieving it, Mr. Eisenhower would almost certainly get what he asked for. If he does not, the forces blindly opposed to any kind of aid will mobilize themselves in the vacuum, and a negative decision will be made by default. At the first international economic downturn, the slender margins of growth in the underdeveloped areas will be wiped out, leaving as the only alternative for half the world's people a road that leads into the future only by way of tyranny. We have fortunately been spared this decision long enough to learn that we can make it realistically, in careful concern for our own survival. President Eisenhower, freed by the election from any dependence on the bitter-end isolationists in his party, has the country behind him and an unparalled chance to exercise his leadership.

It will not come again.

The Revolt Against Spending

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. SCHERER. Mr. Speaker, there has been a revolt in this country against the ever-increasing cost of Government—a revolution that is certainly justified and long overdue.

Congress has been bombarded with a great volume of angry letters demanding that this spending orgy be brought to a halt. It has not been too difficult for those of us who have an antispnding record to reply. The letters, and in fact the revolution itself, are most encouraging to the antispenders.

It is my feeling that the readers of the CONGRESSIONAL RECORD will be most interested in the comments of Douglass M. Allen, the Washington correspondent and columnist for the Cincinnati Times-Star, on this current issue:

VOTERS LIKE ECONOMY EXCEPT—

(By Douglass M. Allen)

WASHINGTON.—One of the toughest facts of political life that a Congressman must face is that every one of his constituents is for economy in government, except when the constituent's pet project is concerned.

And each seems to have a different pet project.

Also, no one pays any attention to the legislator's voting record unless one of those pet projects is up for consideration.

As an example, take the case of Representative GORDON H. SCHERER, Cincinnati Republican from Ohio's First District. Mr. SCHERER, now in his third term, is inclined to pinch Federal pennies until they look like something a child left on a railroad track in the path of the National Limited.

But right now he is trying to extricate himself from a continuous landslide of mail, demanding drastic cuts in President Eisenhower's budget. The unusual volume of correspondence is attributable largely to the campaign which the United States Chamber of Commerce, the Times-Star, and others have waged, urging tired taxpayers to write their Congressmen.

That is all to the good, in Congressman SCHERER'S opinion.

What hurts is that 90 percent of the letters accuse him, who has never voted for a nickel he didn't think absolutely vital, of responsibility for what the President is asking.

He has disguised his damaged feelings somewhat in the letters he has written in reply. But they're there for those who care to find them.

"During the time that I have been a Member of Congress," he writes, "I have received mail, with few exceptions, only from people urging some new or expanded activity of the Federal Government. It is surprising how many people are opposed to spending except when it comes to a project in which they have a special or selfish interest. Until this recent flood of mail, I often wondered whether people really wanted to stop this orgy of spending.

"Week after week," the solon continues, "I have received letters criticizing my votes against spending measures such as library grants, the Colorado River storage project, Federal aid to education, grants-in-aid to cities for sewage disposal plants, and the tremendous, never-ending foreign-aid programs."

Still, the Congressman is being blamed for all these and many more. It's a tough life, but it has some consolations, both for him and those who think like him.

For example, he hasn't had the slightest difficulty getting reelected twice, whether people know how he votes or not. And he isn't about to change his voting habits.

He's just sort of startled to learn that the people who elect him don't know why.

Louisiana Mardi Gras Ball Staged in Washington Is Gala Event

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. WILLIS. Several years ago, Louisianians in Washington, unable to celebrate the Mardi Gras season in their home State, decided to bring Mardi Gras to the Nation's Capital. To feature this

event they made it the occasion for appropriately honoring the queens of the Louisiana festivals dedicated to the State's principal industries.

Thus the Louisiana Mardi Gras Ball, promoted by the Louisiana State Society under the leadership of President Felix M. (Dan) Broussard, came into being, heralding an annual observance which has developed into one of Washington's most interesting and colorful entertainments, enjoyed by hundreds of Louisiana people and their guests each year. Members of the Louisiana delegation in Congress alternate as sponsors.

This year's ball, held in the grand ballroom of the Mayflower Hotel, Saturday night, February 23, and attracting more than 1,000 persons, honored the forest products industries of Louisiana. Serving as general chairman was Senator RUSSELL B. LONG, with President Broussard in charge of general arrangements. Ruling over their proud and loyal carnival subjects were Mr. Parrish Fuller, prominent business executive of Oakdale, as king, and Miss Barbara Boggs, daughter of Representative and Mrs. HALE BOGGS, of New Orleans, as queen.

Many of the Nation's leaders, headed by Vice President RICHARD M. NIXON, who presented the queen, joined in paying tribute to their majesties and to 26 lovely festival queens of Louisiana who, listed in alphabetical order, were:

Miss Marlyn Bradford, of Jena, Louisiana market poultry queen; Miss Eleanor Cammack, of Winnfield, forestry; Miss Yvonne Cheramie, of New Iberia, sugar; Miss Margaret Dellie Collins, of Bossier City, dogwood; Miss Martha Davis, of Lafayette, Lafayette Mardis Gras Association; Miss Lois Ann Doss, of Alexandria, domino queen; Miss Sherley Estes, of Iowa, Camellia; Miss Mary Jane Grace, of Baton Rouge, Greater Baton Rouge Mardi Gras; Miss Sondra Hogue, of Lake Charles, yambilee; Miss Janice Holloway, of Bogalusa, paper; Miss Carole Ann LeCompte, of New Orleans, spirit of Mardi Gras; Miss Suzonne Lindsey, of Bernice, peach; Miss Patricia Lormand, of Delcambre, Delcambre fishing industries; Miss Theresa Lovolpicello, of Buras, orange; Miss Eleanor McElveen, of Bogalusa, sweetheart of the American Legion; Miss Margie Moore, of Crowley, rice; Miss Billie Jon Mulhearn, of Bunkie, livestock and pasture; Miss Beverly Norman, of Shreveport, holiday in Dixie; Miss Nancy Precht, of Bell City, fur; Miss Flaudry Prejean, of Abbeville, dairyland; Miss Betty Clyde Ratcliff, of Bastrop, North Louisiana Delta; Miss Margaret Richardson, of Haynesville, farm bureau; Miss Raye Rogan, of Baton Rouge, oil; Miss Beth Rogers, of Saline, cotton; Miss Colelene Starn, of Bogalusa, rose; Miss Janet Vidos, Morgan City, shrimp.

The young ladies in waiting to the queen of the ball, also listed alphabetically, were Miss Peggy R. Angelle, of Arnaudville, La.; Miss Corinne Boggs, of Washington, D. C.; Miss Elizabeth Coulon, of Washington, D. C.; Miss Kendall Flanakin, of Silver Spring, Md.; Miss Marsha McFarland, of Baton Rouge, La.; Miss Priscilla Mullins, New Iberia, La.; Miss Diane Nelson, New Iberia; Miss Mary Charlotte Parrott, Alexandria, La.; Miss Anne Scheyd, Arlington, Va.; and Miss Stephanie Voorhies, Lafayette, La.

Joseph Martin Broussard, of Silver Spring, was captain for the pageant, with John Holden, of Silver Spring, and William Hogan, of Alexandria, Va., as aids. Pages to the court were Dennis and Keith Pyburn, sons of Mr. and Mrs. Keith Pyburn, Sr., of Washington.

Guest narrator was Walter Cronkite, of Columbia Broadcasting System. Charles Bornwasser, of New Orleans, was technical adviser.

Adding much to the brilliance of this year's ball, Senator LONG introduced the Krewe of Louisiana, composed of maskers in gay costumes whose number included United States Senators and leading professional and businessmen of Washington. They provided the real Mardi Gras atmosphere as they distributed favors among the ladies and danced with those of their choice during a call-out modeled after a famed institution of New Orleans carnival. There was also the Famous Door Five, straight from New Orleans' Bourbon Street, to play Dixieland jazz in the best manner. A pantomime number was presented by Miss Susan Dupre, of Ville Platte, La.

Among the many Louisianians who came to Washington to enjoy the 1957 Mardi Gras ball were a number from my congressional district. They included Mr. and Mrs. Ray "Moon" Mullins and daughter, Kathleen, and Mr. and Mrs. H. A. Nelson, all of New Iberia; Dr. and Mrs. F. H. Davis, of Lafayette; Miss Marian deGravelle, of Jeanerette, who was chaperone for the festival queens; and Mr. and Mrs. Earl H. Willis, Mr. and Mrs. Anthony Randazzo, Dr. and Mrs. John A. Foti, Miss Blanche Gauthier, and Mr. John Talley, all of my home town of St. Martinville.

Tight Money and Small-Business Panel

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the House to a report of a panel at the western Democratic conference, held at San Francisco on February 15, 1957, under the chairmanship of the Honorable WRIGHT PATMAN.

The report deals with the squeeze on small business as a result of this administration's tight-money policy, and urges the necessity for quick approval of House Resolution 85, providing for the Banking and Currency Committee to conduct a full investigation of national monetary and credit policies.

The problems of the small-business man are of concern to both Republicans and Democrats, and it is my hope that this report will receive careful consideration.

The report follows:

REPORT OF THE TIGHT MONEY AND SMALL BUSINESS PANEL

The panel on tight money reached the unanimous conclusion that home builders, construction workers, and small-business men were faced with a crisis of severe proportions unless the Federal Government intervened quickly to ease the tight-money squeeze. The panel's unanimous conclusions were particularly significant in the light of participation by many Republicans.

The reports by builders, building trades union spokesmen, and others emphasized the magnitude of the home-building crisis in the bay area. For example, from a level of 46,000 homes constructed in 1955 the number of starts fell to 30,000 in 1956 and current estimates indicate that the figure may fall below 20,000 for 1957 unless financing becomes more readily availaole quickly.

The cutback in housing has had substantial repercussions on the bay area economy. Unemployment among building construction workers is presently estimated at approximately 10 percent and the allied businesses connected with the building industry are already beginning to feel the impact. Similar views concerning the impact of the credit squeez were expressed by the president of the Northern California Merchants Association, who pointed out that the number of small business failures had increased markedly, particularly in the lumber industry which, in turn, had been affcted by the cutback in home building.

The problem confronting small-business men, home builders, farmers, and others affected by the tight money squeeze was depicted by Representative WRIGHT PATMAN, panel chairman, as essentially a problem of what basic economic decisions were going to continue to be left in the hands of private bankers acting in behalf of private interests or either the Government would assume its inescapable responsibility to see that the Nation's monetary and credit policy is directed toward promoting the welfare of all groups in the economy.

Congressman PATMAN said that the "bug-a-boo" of inflation had been used as an excuse by the administration to raise interest rates; that inflation was not the real problem confronting the country as evidenced by the declines in agriculture, in home building, and the small-business squeeze

Joseph L. Eichler and other builders present agreed with Congressman PATMAN'S assertion that big business had had little or no difficulty in obtaining funds during the tight-money squeeze, while it had been literally impossible for homebuilders to procure mortgage funds at reasonable rates. For most of the year 1956, it was impossible for builders to obtain mortgage funds at any price and the supply of money available to small-business men was greatly curtailed and made expensive.

An extensive panel discussion, during which more than 30 individuals were heard, rejected as a possible solution to the money squeeze confronting small-business men, homebuilders, and others, the administration's proposal that interest rates should be permitted to rise, thereby attracting an increased flow of savings and making additional funds available for needed loans. Instead, the panel, with one exception, agreed that the time had come to end the interest spiral. What is needed to assure an adequate flow of funds into areas that are currently hit by the credit squeeze is a clear and unequivocal policy declared by the Federal Government that would provide the funds at reasonable rates should private industry continue to refuse to do so.

The panel specifically endorsed a Democratic congressional bill providing for direct Federal loans to support the GI mortgage market or, as an alternative, the investment of national service life insurance funds in

GI mortgages at par value and, if necessary, additional purchase support by a substantially enlarged Federal national mortgage association program. The panel emphasized the substantial harm and inequities resulting from the widespread and exorbitant mortgage discount practice and endorsed Democratic congressional bills prohibiting discounts on Government underwritten home mortgages.

Panel Chairman WRIGHT PATMAN, chairman of the House Small Business Committee, and Representative JAMES ROOSEVELT, a member of the House Small Business Committee, both criticized the inadequate approach of the present administration to the problems confronting the 4½ million small-business men of the country. The panel unanimously endorsed the recommendations of the House Small Business Committee that a more vigorous program of antitrust be carried out by the responsible Federal agencies; that needed tax relief for small business be enacted promptly as promised by the President and the special Cabinet Committee on Small Business before the November election; and, finally, that the Small Business Administration expand its program of credit aid for small business and procuring a fair share of defense contracts for smaller manufacturers.

The panel also endorsed Representative ROOSEVELT'S recommendation that there should be created a Federal Small Business bank to help supply the missing link between the pools of individual savings and the small firms that have sound investment programs to offer.

The sense of the meeting was that at bottom, the solution of the basic long-term problem depended upon obtaining needed reforms in the monetary and financial structure of the country so that it would be more attuned to present-day needs of the country. In this connection, the panel expressed the hope that the Democratic National Conference can go on record and communicate its views to the chairman of the House Resolutions Committee regarding the urgent necessity for approving House Resolution 85, providing for the Committee on Banking and Currency to conduct a full and complete investigation and study with respect to any matter or matters in the field of national monetary and credit policies and the financial structure.

Representative WRIGHT PATMAN.
STANLEY CROOK.
JOSEPH L. EICHLER.

The Traffic Safety Problem

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. BLATNIK. Mr. Speaker, the traffic safety problem is receiving a great deal of attention today, thanks to congressional recognition of the seriousness of the problem. This year over 40,000 persons will lose their lives in tragic, senseless highway accidents. Hundreds of thousands more will be injured and maimed, many for life. Billions of dollars will be lost as direct results of these accidents.

No nation in history has permitted such self-destruction on so great a scale, and yet we all but shrug it all off with the statement, "It was an accident." As if it could not be helped, or there was no explanation as to the causes into which we should investigate with a view to finding a solution to the problem. This fatalistic, it-happens-to-the-other-fellow attitude is dangerous and until the American motoring public faces the fact that it could happen to any of us and traffic safety is everybody's business we will never conquer the killer traffic accident.

For some time I have been of the opinion that there is more to the high way safety problem than mere mechanical or engineering elements. This has been the direction of our thinking on this subject thus far. However, there is the human element, also. It is into this human, psychological aspect of the causes of traffic accidents that I urged the Traffic Safety Subcommittee of the Interstate and Foreign Commerce Committee to go when I testified before that group last year. A recent article in the Washington Post points out that the Shell Oil Co. also is investigating this phase of the traffic safety problem. An hour-long TV drama entitled "No License To Kill" also recently dramatized the problem. Under leave to extend my remarks I include the Washington Post article:

IT'S YOUR ATTITUDE, IT'S NOT YOUR DRIVING, THAT COUNTS

NEW YORK.—Driving an automobile is a more exacting job than flying an airplane, steering an ocean liner, or running a train, according to the Shell Oil Co., which makes the point in the interest of highway sanity.

The company has sent along a series of tips on how to stay alive though driving an automobile—recommendations that vary from a simple admonition to keep one's eyes open to a complicated bid for a deliberate rearrangement of one's psyche.

It will be a giant step toward total traffic safety when psychologists and license authorities work out sound, scientific tests of driver attitudes and make these tests part of every State's license requirements, the Shell people note, because more and more, science is revealing that unhealthy driver attitudes are the real culprits behind our highway tragedies.

They cite the horrible example of Hank Forrester, hastening to point out that that's not his real name. Hank is "above average in ability to handle his car skillfully," the Shell people said. "He's in good health and has fast reflexes. And yet he invites accidents almost every time he drives."

"That's because Hank's attitude is all wrong," according to the company. "For him a car is not just a convenient, comfortable way to get from here to there. He uses a car to express himself.

"When he's mad, Hank drives furiously. When he's with a friend Hank shows off. He cuts corners. He weaves in and out of traffic. * * * Make no mistake, Hank handles a car well. He could pass the toughest road test a driving inspector could give. But with his license in his pocket, Hank forgets all about such things as a sense of responsibility. He's an unsafe driver. He cannot be trusted—with his own life or yours."

The attitudes that produce a Hank on the road are hard to find in a test and even harder to change. Emotions involve your ego, and that puts your on-the-road attitude roughly in the same category as religious feelings or political opinions, according to the Shell people. Have you ever tried to change someone's political views, even when you're armed with a bushel of facts?

Persistent educational campaigns may be the answer to the attitude problem, the Shell people suggest.

The company urges drivers to analyze their own feelings, and suggest the following self questions:

1. Do you feel that the laws are made for you? That by observing them, you help keep everyone who drives safe?

2. Do you realize that close shaves on the highway are not all the fault of "the other guy?"

3. Is your car a convenient, pleasant and comfortable way to go places, rather than a means of showing off or "letting yourself go?"

"If you say an honest 'yes' to these questions, you've just taken the first step toward changing your way of driving—for the better," asserts the company.

To illustrate its contention that "you can have perfect eyesight and still be an accident going someplace to happen," the Shell Oil Co. relates the story of William Smart. William scored perfect on his driving test, reading easily the smallest print on the chart.

"But Smart soon found himself in a collision with another car," according to the Shell people. "It was broad daylight. Neither car had ben speeding. The road was straight and level."

"He came from nowhere," said William.

"This typical complaint led to the finding that despite his excellent vision, Smart had been driving blind," report the Shell people, who explained:

One doesn't really see until one's brain gets the message from one's eyes and understands it. "If you drive absentmindedly, your brain does not 'pick up' what your eyes tell it," they said. "When a driver's mind wanders from the road ahead to the girl he left behind, he is in effect driving blind."

The company admonishes: "Keep your mind clear of irrelevant thoughts—think about driving. This permits anticipatory driving—keeps you ready for an emergency."

The company concludes:

"How is your perception? For example, when you're about to pass a car what do you perceive? The make of the car? Color? Year? Hardly. Such details shouldn't be important to you at this time."

And watch out for William and Hank.

Fort Strother, St. Clair County, Ala.

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a speech given by Mr. Blair Jones, of Pell City, Ala., on historic Fort Strother, located in St. Clair County, Ala. The speech was delivered October 29, 1953, on the occasion recognizing the historical significance of Fort Strother. Fort Strother was extremely important to Gen. Andrew Jackson in his campaign against the Creek Indians in the War of 1812.

The speech follows:

FORT STROTHER, 1813–14, ST. CLAIR COUNTY, ALA.

The beginning of the Creek Indian war in 1813, which necessitated the erection of several forts, among them Fort Strother, can be charged to the powerful and eloquent Shaw-

noese chief, Tecumseh. His parents were born and bred on the banks of the Tallapoosa, removing later to Ohio where, in 1768, Tecumseh was born, one of triplets. He made several trips to Alabama in his youth, visiting his kin. Later, his visits were not of a pesceful nature. He came with the full purpose and intent to provoke his brethren to make war upon the advancing white men. His hatred of the Americans was intense and was kept aflame by the British.

The last recorded visit of Tecumseh to Alabama was in October 1812, at which time he was in a great measure, successful. The effects of his visit began to be realized in every corner of the Creek confederacy. The following year, 1813, the Indians became increasingly belligerent. The culmination came with the terrible massacre at Fort Mims on August 30, 1813.

Nowhere did the tidings from Fort Mims arouse more horror than in Tennessee, where the inhabitants daily expected an attack. September 18, 1813, there was a meeting of leading citizens in Nashville to consider measures of defense. They asked the legislature to authorize such a move, and at their request the Governor agreed to call out for immediate service the recently dismissed Natchez Volunteers.

A committee from the meeting on September 18 waited on Gen. Andrew Jackson. They found him in bed from the wound he received on the 4th of the month in the disgraceful affair with the Benton brothers; but, he expressed the greatest confidence in his ability to lead his division. He did, in fact, at once assume direction of the movement for defense, calling the volunteers to assemble at Fayetteville, Tenn., on October 4, arranging for supplies of food and ammunition, and writing many letters on all kinds of similar subjects.

Jackson sent General Coffee forward with 300 cavalrymen and hastened the preparation of the main body. On the 7th, he rode into camp weak and haggard and took personal direction of the army. Immediately, came urgent calls from Coffee who reported that he was about to be attacked. On the 10th, camp was broken and that evening they marched into Huntsville, 32 miles. On the next day he reached the Tennessee River at Ditto's Landing, a few miles south of Huntsville, and, crossing the river, united his forces with Coffee's; halted here a few days. October 22, he moved up the river from Ditto's in a southeasterly direction for 24 miles and laid out at the mouth of Thompson's Creek, the fortification which he called Fort Deposit.

Jackson's plan of campaign provided for a base of supplies on the Tennessee at its southernmost part, a military road thence for 50 miles to the Ten Islands on the Coosa, where another fortified post would be established for supplies and thence down the Alabama River system to Fort St. Stephens. By this plan he would establish a permanent line of communicaiton from east Tennessee to Mobile.

The second base was established between October 29 and November 3, 1813, 144 years ago. It was located at Ten Islands on the west side of the Coosa River in that part which became St. Clair County in 1818. The base was given the name Fort Strother, probably in honor of General Jackson's topographer, Captain Strother.

It is regrettable that the plans and specifications of this important post have not been found. It is believed by those who have made a study of the site that at least 80 acres of the level and rolling terrain was used in the construction of the main part of the base. A few years ago the location of the blacksmith shop and the main block house were easily identified. The site was well watered with springs which substantiates the evidence that an Indian village was located at this natural setting. Bushels of arrowheads and other Indian implements have been collected there. (I have with me several pieces loaned by Dr. and Mrs. Herschell Bass, of Gadsden, who formerly owned the Fort Strother site). Mrs. Bass's girlhood home is on the site and it is known today, as the graveyard of Jackson's men. Many soldiers dying of dysentery and other causes were buried there (another spot for marker). It was most commendable of the Frederick William Chapter, Daughters of the American Revolution, of Anniston, to erect a marker to Fort Strother. It was erected 35 years ago and is located within 75 feet of where one of the main houses stood.

It was at historic Fort Strother that General Jackson began and executed his extermination of the brave Creeks. On October 29, 1813, the small village of Littafutchee, on Canoe Creek between Ashville and Springville was destroyed. After this action, events followed in rapid succession. November 3, 1813, General Coffee with 1,000 men, among whom was the famous Davy Crockett, crossed the Coosa at Fish Dam a few miles above Fort Strother to subdue the Creek warriors assembled at the village of Tallesehatchee, near present Ohatchee, 13 miles from the fort. The engagement there resulted in a massacre of 186 warriors. Quoting from Davy Crockett's autobiography, "We shot them like dogs." About 50 years ago, this stone (inscribed, D. Crockett, 1814) loaned by Mr. W. H. McDonnald, of Ragland, was found at lunch time by a Negro axman working with Mr. T. E. Smith, a reputable surveyor, within the confines of Fort Strother; also, this adz was discovered by Dr. Bass on the premises.

On November 8, 1813, General Jackson, with an army of 2,000 men, left Fort Strother at midnight to fight the battle of Talladega. After that successful engagement he buried his 15 dead and marched back the 30 miles to Fort Strother as rapidly as possible, for he was out of provisions. Arriving there, he was mortified to find none at that point for him. Several days later lack of supplies and enlistment expirations were responsible for a serious mutiny among the militia and volunteers. The mutiny was stopped by the indomitable and arbitrary Jackson single-handed.

During the winter of 1814 General Jackson employed the few militia who remained with him at Fort Strother, after the battles of E'muck'fau and E'nita'chop'co, in constructing flat-boats to descend the Coosa with stores for the new army which was then being raised in Tennessee, which was to operate below.

When the army arrived at Fort Strother he embarked the stores in the flatboats, which were to proceed down the Coosa in charge of the 39th regiment, and, leaving a garrison of 450 men at Fort Strother, he began the march for the third time toward the seat of war. Within 5 days, about the middle of March 1814, Jackson reached the mouth of Cedar Creek, where he built Fort Williams.

Indeed, Fort Strother is a neglected and historic spot. Jackson, Coffee, Sam Houston, Davy Crockett, and 5,000 other heroes of the Creek campaign were quartered there. The United States DeSoto Expedition Commission in its final report established the fact that DeSoto, the famous Spanish explorer, about 1540 crossed the Coosa near the site of Fort Strother. In 1864 General Clanton, Confederate States of America, fought an engagement with the superior force of the Yankee general, Rousseau, near the same spot.

The site of Fort Strother is most accessible to visitors. It is 16 miles northeast to Ragland from Pell City, black top road; thence 8 miles on the new black top Ragland-Gadsden road to a sign on the right pointing to Hart's Ferry, thence three-fourths of a mile on a good dirt road. The Ragland road intersects highway U. S. 231-State 25, 5 miles north of Pell City.

The Farm Economy as Related to the State of Iowa

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. COAD. Mr. Speaker, there are fundamentals in every line of endeavor in life and now is the time when we need to understand some of the fundamentals which play an important role in our agricultural economy. Mr. Carl Wilken, of Washington, D. C., is formerly from Iowa and has a lot of reasoning in his presentations. In this regard I should like to present here what Mr. Wilken has recently written in regard to the farm economy as it releates itself to my agricultural State of Iowa:

FREE TRADE CONCEPT

(By Carl H. Wilken)

After over a century of economic education throughout the world which held up free trade as the millenium there is no free trade. In fact there are more types of trade restrictions than at any period in world history. The reason is simple. The real trade barrier has been lack of income. Table VIII contains the record of imports and national income for the 25 years 1929–53. It will be noted that all the efforts of our move toward foreign trade under the Reciprocal Trade Agreement policy in the past 20 years has not increased the average rate of imports in terms of income. The conclusion which can be applied to all nations is that their trade is governed by the monetary payment involved.

The economic record of the United States in the year 1955 can be used to illustrate trade. As has been pointed out agricultural areas in the United States in the past 6 years have been underpaid. The author will use Iowa as a concrete example. The income of the State of Iowa in 1946–50 averaged $3.4 billion. If the State had received a comparable price for its production in 1955 its income would have advanced 53.5 percent, the increase in the national rate from 1946–50. This would have given Iowa an income in 1955 of $5.2 billion as compared to an actual income of $4.2 billion. Society underpaid Iowa $1 billion in 1955 and lost a market for $1 billion of goods and services in Iowa.

The record of Iowa proves that the State spends 70 percent of its income for goods at retail. Therefore the businessmen of Iowa lost $700 million of retail sales. There was no tariff between Iowa and industrial areas, but this amount of trade did not and could not exist because of underpayment for farm products. Almost every industry in the United States lost some share of this market which should have been created with new farm production.

Finally the people in the State of Iowa lost the profit inherent in this additional income for expansion of the economy of the State. The loss of this income reduced the tax revenues available for schools and roads. It reduced the level of bank deposits which would have been available for credit.

A similar happening took place in every State in the Union in its agricultural areas in 1955 as rural America was underpaid $16 billion. Again stating it bluntly rural America in 1955 was the victim of unintentional exploitation by industrial America. The happening in Iowa has been duplicated for many years in every area in the world.

SUBMARGINAL FARMING

Economists in every State are preaching the gospel of submarginal farming and telling the people that there are too many farmers. If their theories are accepted and put into practice it will mean greater centralization of industrial production and an exploited rural America with ghost towns and a further loss of markets for American industry.

Their theories bypass the fundamental laws of nature which require the use of submarginal operations. We have submarginal farms from the standpoint of soil and climate; we have submarginal mines and oil wells; we have submarginal labor and submarginal corporations.

Again using Iowa as an illustration, the young farmer in Iowa because of a lack of earnings and savings cannot buy a farm and the necessary equipment. He is forced to start as a tenant with the hope that he can earn the funds from operating a farm. These young men today are in a serious price squeeze as the result of too low a level of farm prices. Many of them are being forced to leave the farm not because they are inefficient or operating a low-grade farm but because society is not paying a comparable price for the food and other farm products being used.

Testimony by Mrs. Loretta Johnson, for St. Louis Consumer Federation, in Support of Compulsory Poultry Inspection

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mrs. SULLIVAN. Mr. Speaker, one of our outstanding women in St. Louis, a leader in the St. Louis Consumer Federation, Mrs. Loretta Johnson, testified last week before the Senate Agriculture Committee on legislation to require Federal inspection of poultry for wholesomeness.

Mrs. Johnson's statement was concise and to the point. It explains why we must have compulsory inspection of poultry for wholesomeness and how such a program should be carried out in order not only to protect the consumer but to help the small poultry processor as well.

I am indeed pleased that Mrs. Johnson's statement endorsed in all details the bill which I arranged to have prepared on this subject last year, and which I reintroduced this year as H. R. 12. Under this bill, poultry would be brought under the terms of the Meat Inspection Act, which for more than half a century has protected us from diseased or unwholesome red meats. H. R. 12 would amend the Meat Inspection Act to require inspection of poultry and poultry products in the same manner in which beef, lamb, and pork must be inspected.

As Mrs. Johnson points out in her statement:

By adopting the standards and definitions of the Meat Inspection Act, long-drawn-out litigation and discussions over terminology would be avoided and still provide for antemortem and postmortem inspection of poultry.

Mr. Speaker, because of the widespread interest in this whole question of poultry inspection, and because of the concise manner in which Mrs. Johnson outlined this problem and its solution, on behalf of the St. Louis Consumer Federation, I am submitting her statement for inclusion in the Appendix of the CONGRESSIONAL RECORD, as follows:

STATEMENT BY ST. LOUIS CONSUMER FEDERATION TO SENATE AGRICULTURE COMMITTEE, WASHINGTON, D. C., FEBRUARY 28, 1957, RE COMPULSORY FEDERAL INSPECTION OF POULTRY AND POULTRY PRODUCTS FOR WHOLESOMENESS; AND IN SUPPORT OF BILL S. 1128

I am Loretta Johnson, of 4416 Westminster Place, St. Louis, Mo. I am a member of, and public relations adviser to, the St. Louis Consumer Federation, and I am here to represent that federation.

The aims of the St. Louis Consumer Federation are: To inform and educate consumers to become more intelligent buyers, and to see that the interests of consumers are represented and protected in legislation. We operate entirely with volunteers and have no paid officers or personnel. A week ago today, on founders day, celebrating the 104th anniversary of the founding of Washington University, our former chairman, Marion Wilson Weir, received an alumni citation from the Graduate School of Social Work in part "because of her tremendous personal leadership * * * as chairman of the St. Louis Consumer Federation * * * and because of her effective work in advancing consumer interests over the Nation as a director of the National Association of Consumers."

The St. Louis Consumer Federation believes that it is economically correct to prevent disease whenever possible, rather than to pay for the cure of it. Therefore, and on behalf of the federation, I am here to plead for mandatory Federal inspection of poultry and poultry products for wholesomeness. This plea, we believe, is in the interest of public health and of value to workers in the poultry industry and to consumers.

We believe that poultry inspection must be at the Federal level—as meat inspection is—since much of the poultry and poultry products cross State boundaries.

We please, also, for compulsory Federal inspection of poultry and poultry products in some intrastate areas, particularly around big cities, if the intrastate poultry and poultry products sold in the city affect or burden the conditions under which interstate poultry is shipped into that city.

We ask that poultry inspectors be employees of the Government rather than of the firms whom they inspect.

We ask that every poultry carcass and all poultry products that have been federally inspected and passed be stamped by a Federal stamp as is meat; and that the stamp be large enough to be easily read with the naked eye.

We believe, after careful study, that the least expensive way to provide for effective poultry inspection is by amendment of the Meat Inspection Act (34 Stat. 1260, as amended) and the Tariff Act of 1930 (46 Stat. 689, sec. 306) by adding poultry and poultry products to the list of animals and animal products to be inspected for wholesomeness. For 50 years the Meat Inspection Act of 1906 has been quite successful in protecting consumers against meats which are unwholesome, unhealthful, or otherwise unfit for human food. By adopting the standards and definitions of the Meat Inspection Act, long-drawn-out litigations and discussions over terminology would be avoided and still provide for antemortem and postmortem inspection of poultry.

We believe Federal inspection of poultry for wholesomeness will have beneficial effect for small packers, because the Federal stamp on each carcass will assure consumers that the poultry sold by the little packers is just as wholesome as that sold by the bigger packers who have advertising advantage. Federal inspection will open up new markets for small packers of poultry—as it has in the case of meat inspection—and will enlarge their purchasing power, so that they can compete more readily with bigger packers; it will also give retail stores more choice as to whom they will go to buy their poultry and poultry products.

Our experience as housewives has taught us the meaning of the adage, "a stitch in time saves nine"; we therefore plead that any proposed compulsory inspection bill or amendment to the Meat Inspection Act be searched for loopholes; and that any loopholes found be mended before the bill or amendment is passed into law.

How to Save $55,500,000

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. HOSMER. Mr. Speaker, recently Interior Secretary Seaton favorably recommended a partnership approach to the Trinity River development. During the last session of Congress we authorized him to investigate the Pacific Gas & Electric Co.'s proposal to buy falling water from the project as an alternative to the Federal Government making heavy investments in the power phases of the project. It would appear that partnership with the power company would not only save the Federal Government at least $55,500,000 in capital costs, but also would, over the 50-year life of the proposed contract, result in the power company paying $135 million in taxes to State and local governments. The following editorial opinion regarding the proposal was contained in a recent issue of the Los Angeles Times:

PRIVATE POWER AND RECLAMATION

The recommendation of Secretary of the Interior Seaton that the reclamation plans for the Trinity River development be teamed with the offer of the Pacific Gas & Electric Co. appears to be in the public interest.

The partnership plan would not only save the Federal Government at least $55,500,000 in capital costs but would return to the Treasury and to State and local tax gatherers about $135 million in taxes during the 50-year life of the contract. At the end of that time the Federal Government, if it desired to acquire the power plants, would pay P. G. & E. only the unamortized costs plus reasonable severance damages. The Secretary says the unamortized costs remaining would be very small but recommends that more specific arrangements as to severance damages than are now found in Federal power law be provided.

Considering that the Trinity River project would cost the Federal Government an estimated $225 million without the P. G. & E. building the power installations, it would seem the Federal taxpayers—and the people of California are heavy Federal taxpayers—should be spared the additional cost.

The Secretary also notes that the surplus project revenues during the 50-year contract would amount to $165 million, which could be used for the construction of other reclamation projects in the area.

"Under the present Central Valley rate structure," the Secretary says, "the Trinity power facilities, if built by the United States, would require substantial assistance from other project revenues in order to meet payment requirements. Joint development under the proposed agreement would convert Trinity falling water into a substantial net asset of the project."

The proposed contract will require the assent of Congress and no doubt will be fought by the fanatics of so-called public power development. But the figures submitted by the Secretary, and the use of plain common sense, would seem to indicate that private development is best for the interests of everybody.

M. Sgt. James Fox, of Packanack Lake, Reenlists at 61 for Duty With Army

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. CANFIELD. Mr. Speaker, the Passaic, N. J., Herald News last Wednesday carried the following news story regarding M. Sgt. James M. Fox, of Packanack Lake, N. J.:

M. SGT. JAMES FOX, OF PACKANACK LAKE, REENLISTS AT 61 FOR DUTY WITH ARMY

PACKANACK LAKE—M. Sgt. James M. Fox, of 208 Hillcrest Drive, has enlisted in the Army for another hitch. He is 61 years old. He was sworn in at Newark Recruiting Station by his son, Maj. James H. Fox, of the Air Force Research and Development Center, Baltimore, Md.

Today, Sergeant Fox will pin the silver oak leaf on his son's shoulders. He is being promoted to lieutenant colonel. Col. Fox is 37 years old.

Sergeant Fox is a veteran of the Mexican border campaign, World War I and World War II and the Korean war. He left the Regular Army after the first world war and joined the National Guard. He had been wounded in the Argone while serving with the infantry. He was recalled to duty in

His son is a graduate of the Missouri School ing duty in Hackensack.

His son is a graduate of the Missouri School of Mines, served with the Army Engineers before transferring to the Air Force and was a B-29 pilot before his present assignment to research and development.

Mr. Speaker, I have been privileged to know Sergeant Fox as a close personal friend for many years and he is one of the most patriotic-minded men I have ever met. He loves everything American, particularly the United States Army. He would be a lost soul if he were not in uniform.

I shall never forget my meeting with the sergeant in Seoul, Korea, during the fighting early in 1952. I saw Gen. James E. Van Fleet, commanding the United Nations Forces, put his arm across the sergeant's shoulders saying, "Congressman, you say you are proud of him, well I want you to know that we are too."

What a picture it must have been last Thursday when this 61 year-old sergeant pinned a silver oak leaf on the shoulder of his 37-year-old son, Lt. Col. James H. Fox, United States Air Force.

Fat Jobs for Faithful

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Peter Edson:

FAT JOBS FOR FAITHFUL

(By Peter Edson)

Any fear among the Republican Old Guard that the Eisenhower administration isn't taking care of the party faithful with fat jobs shouldn't be taken too seriously.

The payoff of contributors to Republican campaign funds of 1956 is proceeding apace. Since January there have been at least seven contributors appointed to high patronage jobs. Here is the list, with the amount of their gifts to the GOP, as given by Senator GORE's campaign-expenditure's report:

Twenty-four thousand five hundred dollars—John Hay Whitney, Ambassador to London.

Six thousand dollars—Amory Houghton, Ambassador to Paris.

Three thousand dollars—James D. Zellerback, Ambassador to Rome.

Two thousand dollars—Lewis W. Douglas, reappointment to United States Advisory Committee on Information.

One thousand dollars—Robert Dechart, General Counsel, Defense Department.

Nine hundred dollars—Leon Pierson, United States attorney for Maryland.

Five hundred dollars—Edward Foss Wilson, Assistant Secretary for Health, Education, and Welfare.

To this list should be added the names of two of the above appointees' wives. Mrs. Whitney contributed $9,000, Mrs. Zellerbach $4,500. This brings the total of these jobholders' contributions to $53,400.

In addition to these recent handouts, it is, of course, a matter of record that during the first Eisenhower term, political appointees to top policymaking jobs were well taken care of with salary increases.

The Executive Pay Act of 1955 increased the salaries of 257 political appointees by a total of $1,250,000 a year. This was to carry out a campaign promise to economize. Natch.

Eleven deputy secretary-rank jobs were raised from $18,000–$20,000 level to $22,000–$22,500. Twenty-two policymakers having the rank of under secretary were raised from $17,500 to $20,000. And 23 assistant secretaries were upped from $16,000 to $20,000.

Below these Cabinet and sub-Cabinet jobs, 184 directors, administrators, commissioners, and the like were raised from $15,000 to $20,000 and 35 more from $14,800 to $17,500.

All these increases were, of course, made to attract higher type executives to Government service. Natch.

What sticks out in all this, however, is how many more of the high administrative types the present administration needs to run the Government than the previous administration did.

President Truman listed 12 White House secretaries and administrative assistants. President Eisenhower lists 38. Total White House employment is up from 140 in 1953 to over 300.

The late James G. Forrestal, first Secretary of Defense, ran the Pentagon with eight principal assistants, no deputies, no under or assistant secretaries.

Today, Secretary Wilson has a deputy and 9 assistant secretaries, plus 3 special assistants and a personnel staff of 11. And each of the assistant secretaries has from 3 to 23 special assistants apiece.

Department of State used to have six assistant secretaries. Now it has eight. Treasury used to have 1 under secretary and 2 assistant secretaries. Now it has 2 unders and 3 assistants. Justice used to have 7 assistant attorneys general. Now it's 9.

Army, Navy, and Air Force used to get by with 1 or 2 assistant secretaries. Now each service has four.

Agriculture, Interior, Commerce, and Labor formerly had 1 or 2 assistant secretaries. Now they have three apiece. There wasn't any Department of Health, Education, and so forth. Now there's a secretary, undersecretary, and three assistants.

This is apparently just the beginning. A letter has now gone out from the White House telling all department and agency heads to make up new and bigger lists of top policymaking jobs which shall be exempt from the career civil service. What they want is greater efficiency through more patronage plums. Natch.

Let's Give Up Hate for Lent

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I should like to include an article by Phyllis McGinley which appeared in the American Weekly yesterday.

The appeal of the article is that, for 40 days, each of us strive to rid himself of hate, a poison more spiritually deadly than cancer. Hate, if indulged, can sap our moral fiber and gnaw away at such lofty purposes as we possess, leaving us in the end bankrupt of any capacity for constructive leadership.

I earnestly commend the article to the careful reading of every Member of Congress. Not only would its suggestion, if followed, provide a useful exercise for each of us individually, but I am convinced that great good could come of it for the Nation.

The article follows:

LET'S GIVE UP HATE FOR LENT

(By Phyllis McGinley)

Lent is the time of year when even the impenitent make resolutions. In this gray season, something in the human spirit reaches out for the sackcloth and the ashes.

All too often, of course, the resolve is only a stylish stereotype. We give up some little luxury which disagrees with us or which we have always disliked anyhow. The sleepless abstain from coffee. The overweight stop nibbling between meals and therefore pat their halos. Young ladies with complexion problems refuse chocolates.

I am reminded of the sacrifice nobly arrived at by a small daughter of mine when she was 4 or 5. It was just after the war when we were caught up in a campaign for feeding the refugees of Europe, and every household was assembling provisions for shipment abroad. We were touched when she, eager little soul, proposed packing a carton of her own. On examination the box was found to consist entirely of jars of prunes, cans of spinach, and a large bottle of cod-liver oil—all her most detested daily fare.

Now there is merit even in such giving. God, we are told, accepts our charity although it may be proffered for less than saintly reasons. And 6 weeks' restraint of even our mildest failings can do us no harm.

But how much more useful if we could discipline our hearts along with our appetites. If, for instance, we could give up not candy or cocktails but our most dangerous self-indulgence—the habit of hating.

Forty days of trying to like our neighbor, odd as he may seem; 40 days of attempting to understand his point of view, of bearing with his faults which are so much the same as ours—how strange and enlightening an experiment that might prove. It would, indeed, entail a giving up beyond all our previous efforts.

For there are few indulgences so satisfying to the ego as hate. Its taste can seem sweet as honey on the tongue. It can fill the mind as deliciously as romance. Hate is the solace of the fanatic, the crutch of the lame-spirited, the ladder upon which small-minded men can perch and think themselves tall. And who of us is quite free of its taint?

So this Lenten exercise would be strenuous and difficult. We would have to start modestly; not expect to become St. Pauls all at once. It might be well to practice nonhating on the nearest object of our rancor, or perhaps the most impersonal. We could stop resenting the voices of the children next door or the alarm clock.

From there we could work up to nonhating the editorials in the opposition newspaper or the temperature or the way our friends impose on us. (I think I shall begin by trying to forgive the deliveryman who always leaves the back gate ajar.) Small boys could give up hating their homework and tidy housekeepers forgive the muddy-footed.

From there, who knows? Losers might learn to like winners. Extroverts might tolerate the moody, intellectuals discover the good points of true-believers. Democrats and Republicans might find it is in themselves to give up hating Republicans and Democrats. Likewise conservatives and liberals, the orthodox and nonconformists, anti-segregationalists and their opposite numbers.

Finally, nations might take a straight look at other nations and do it without scorn.

Forty days of uprooting hate and replanting the heart's soil with charity—what a job that would prove for us poor, weak, opinionated (but on the whole quite decent) members of the human race. But what a sowing it could be—and if the habit remained, what a harvest.

United States Highway 41

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD, House Resolution 17, adopted February 25, 1957, by the House of Representatives of the Indiana General Assembly:

House Resolution 17

Whereas, United States Highway 41 extends from Copper Harbor, Mich., on an island in Lake Superior, to Miami, Fla., on the Atlantic Coast; and

Whereas, it is a natural, scenic highway linking the glorious Lakes Region of the northern midwestern States to the sun-bathed shores of the Gulf of Mexico and the breathtaking beauty of Miami Beach; and

Whereas, coursing through eight States, this highway in and of itself must be considered as a primary artery in the flow of commerce and an enjoyable route in the tourists' search for motoring pleasures, there are few routes equal to it, as thousands of vacation-bound travelers will attest; and

Whereas, the State of Indiana has understandable interest in this national highway, which passes through 10 western counties, and through some of our largest and more important cities, through highly industrialized areas and rich rolling farmlands; and

Whereas, the welfare of the State of Indiana necessarily dictates that our attention continue to be focused upon our fine highways, and in our efforts to advance and further the development of our highway system, we should take advantage of all means available to accomplish this end: Now, therefore, be it

Resolved by the House of Representatives of this 90th General Assembly,

SECTION 1. That the Bureau of Public Roads, Department of Commerce, be memorialized to include United States Highway 41 in the national highway program; and

SEC. 2. That a copy of this resolution be sent to each Senator and Representative of this State in Washington, D. C.

Texans Pay Tribute to Grand Lady

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ROGERS of Texas. Mr. Speaker, in the Thursday, February 21, 1957, issue of the Shamrock Texan, an outstanding weekly newspaper published in Shamrock, Tex., there appeared a feature story written in the fine hand of Mrs. George Stanley, an outstanding newspaperwoman who has worked for the Texan for a number of years. Her subject was a grand lady of the Panhandle of Texas, Mrs. Fred Oliver. Mrs. Oliver is the mother of a man who moved along the halls of the Capitol for a number of years, made an outstanding mark in the history books of the Congress and the Nation, and who presently serves in a judicial capacity here in Washington. She is the mother of Eugene Worley who represented with high honor for several terms the great 18th Congressional District of Texas. Many of you have had the pleasure of meeting Mrs. Oliver on her visits to Washington to see her famous son.

It is an excellent story of a fine lady, and I wanted to pass it on to all of the Members of this House and others who read the CONGRESSIONAL RECORD:

TEXAN PAYS TRIBUTE TO GRAND LADY

(EDITOR'S NOTE.—The Texan seldom publishes a feature story without first obtaining permission from the person about whom the article is written. The following story about Mrs. Fred Oliver is an exception to this policy. Material and the picture were obtained without her knowledge in an effort on the part of this newspaper to pay tribute to a grand lady.)

(By Mrs. George Stanley)

When the pretty young woman, her new husband, and her little brood of three children rode into Shamrock in a model T sedan back in 1921, even the most loyal citizens would admit there wasn't much to write home about.

Wooden buildings. Hitching racks. Dusty streets. No sewers. And the lights went out at 11 o'clock—sharp.

Those were the days when one of the places you got your drinking water with a bucket and rope, was inside Kersh's hardware store, and no one minded if you emptied your bath water on Main Street.

But that was 36 years ago. And, in these 36 years, Mrs. Fred Oliver, one of Shamrock's proudest residents, has had plenty to write home about.

One son, Seibert Worley, is mayor of Shamrock. Another son, Eugene Worley, went to the Texas Legislature, to Congress, and then to the United States Court of Customs and Patents Appeals. A daughter, Mrs. Louise Fields, is librarian at Army headquarters in Pennsylvania. There are 4 grandchildren and 1 great-grandchild.

And, as for Shamrock, it's flourished, too, because of energetic and enthusiastic boosters like Mrs. Oliver.

For a young southern belle, the daughter of a gallant Confederate soldier who received the Southern Cross of Honor for his role in the Civil War, the Texas plains were a far cry from the wooded rolling hills and streams of Georgia.

Mrs. Oliver's father, like her son, was a mayor—and everyone in Cartersville, Ga., knew that Mayor Johnson's daughter could play the piano and sing like a nightingale. Many of her friends urged her to go into concert music. Once in St. Louis the great actress Sarah Bernhardt heard her sing and urged her to go on the stage.

But Idelle Johnson was interested in bringing music into the lives of those she loved in another way. She married and moved to Oklahoma, where shortly after the first World War, she was left to support her three small children. She did this by opening a room-and-board house in Altus, and later in Sulphur, Okla.

Next to the delicious smells of the kitchen, her children remember best the evenings when their mother would read and counsel them. Devout in her faith, she is a member of the Christian Science Church and has made frequent trips to Boston, Mass., to study at the international headquarters of the mother church.

It was in Sulphur she met and married the late Fred Oliver. The couple set out for Texas in 1921 where he had purchased the Liberty Theater in Shamrock.

Mrs. Oliver's cheerful face has been a familiar sight to all the youngsters of Shamrock for the past 2 generations. In depression days when 10 cents admisison was hard to find, children knew that she would accommodatingly turn her head and allow them to slip past and see the movie free. And more often than not, a bag of popcorn found its way into the hands of the hungry youngsters.

Her interest in her fellowman and her work with youth was recognized when Gov. James V. Allred appointed her to the State pardon and parole system of the area. Mrs. Oliver assisted many boys in finding good jobs and took pride in the fact that they kept in touch with her and stayed out of trouble.

During their first days in Shamrock, the Oliver family lived in quarters above the theater. One of the most vivid memories shared by Seibert and Gene Worley is lugging buckets of water up the steep stairs, heating it on a coal stove, and taking their baths in a No. 3 washtub. Afterward the bath water had to be carried back down and was generally emptied right on Main Street.

The Worley boys claim that their lifelong aversion to frequent baths stems from this memory.

Mrs. Oliver took great pride in the role of the theater in the community life. Actively working with her husband in the management of the theater, she was most interested in booking good pictures for Shamrock. This sometimes meant a 10-hour trip in a Model T to Oklahoma City, a round of selecting pictures, and the long journey home which was all too frequently interrupted by the sand and chug holes in the roadbed.

One of the most memorable bookings was "Abie's Irish Rose," which she got for Shamrock even though it was reserved only for larger cities. People from all over Panhandle came here for that production.

Pictures have changed a great deal in 36 years, and Mrs. Oliver has seen the theater business grow from the old-fashioned opera houses with their silent films and overhead fans, to talkies, Technicolor, CinemaScope, air conditioning and drive-ins.

When her children went off to college, her weekly letters with a note of encouragement and affection, plus as much financial assistance as possible, were the highlight of the week.

She encouraged her son, Gene, to make a run for the Texas legislature, even though the veteran politicans were saying he didn't have a chance. She was his ardent campaign manager and what they lacked in political experience, they made up for in energy. Until late in the night, Mrs. Oliver would write letters, make telephone calls, and hope for the best.

Her hopes were not in vain, for not only was he elected to the legislature, but under her wise counsel and guidance he came on to represent the whole Texas Panhandle for 5 terms in Congress until he was appointed to the Federal bench by President Truman.

Mrs. Oliver still has a keen interest in politics and enjoys a trip to Washington to visit with some of the lawmakers who gather frequently for chili suppers in the Worley home. On her visits she has met over the chilibowl, President Truman, Speaker Sam Rayburn and too many Supreme Court Justices and Senators to enumerate.

Washington, she enjoys in small doses. No amount of persuading can lure her into leaving Shamrock to live anywhere else. Surrounded by her friends, her fine collection of antiques and china, she enjoys most her own little part of the world. It is the part of the world she loves best. It is the part of the world which she has filled with the music of her own heart.

Power in the Northwest

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. AVERY. Mr. Speaker, the following editorial appeared in the Washington Evening Star for Tuesday, February 26, 1957. In my opinion this editorial presents constructive thinking. I urge my colleagues to give serious attention to this excellent editorial:

POWER IN THE NORTHWEST

The Wall Street Journal, in a report from the Pacific Northwest, has cited some impressive figures that tend to pull the rug out from under Senator MORSE and other politicos who have been clamoring for a vast Federal dam-building program in that part of the country. The figures leave little room for doubt that the clamor, which has included all sorts of dire predictions about an imminent and critical power shortage, has had a considerable amount of hot air in it.

Actually, according to these figures, private companies and local governmental agencies in the Pacific Northwest have been doing a tremendous dam-building jobs of their own. In fact, as the Journal reports, they now have approximately 4.6 million kilowatts of hydroelectric power under construction, just completed or definitely licensed for development, and they are seriously considering projects designed to produce an additional 4 million kilowatts. In the words of one utility official, this postwar program has been the largest of its kind ever undertaken at any one time in any single area in the history of America. By way of contrast, all the Federal dams built in the same region in the past 25 years amount to no more than 4.6 million kilowatts.

Indeed, after looking over the Northwest's private and local public utility accomplishments of recent years, the head of the Federal Bonneville Power Administration—which a year ago warned of a near-future serious shortage in electrical output in the region—now asserts that the danger of a crisis has been deferred until at least 1964 or 1965. All of which makes one wonder about the accuracy of the information that has led Mr. MORSE and like-minded legislators to predict a sort of calamity unless our National Government steps into the picture and goes on a dam-building spree.

The Natchez Trace

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by H. L. Coppenbarger:

(By H. L. Coppenbarger)

In the beginning—the beginning being the birth of America—there were only the buffalo paths and Indian trails.

But America grew from its outer edges—the Original Colonies in the Northeast, the Spanish in the Southeast, and the French in the length of the Mississippi Valley.

So it was that the buffalo paths and Indian trails became connecting links between the white man's outposts in the new world.

One of the most famous of these was the Natchez Trace.

The only land route between the East and the busy, growing Southwest, the Natchez Trace wound through 500 miles of Indian territory from Nashville, Tenn., to the Mississippi town for which it was named. From this point it was a short ride down the river to New Orleans.

In 1800 the United States made the trace a post road and, as such, it was cleared, widened and smoothed off by Federal soldiers.

Toward the latter part of the 19th Century the old road entered into decline. The steamboat was a more dependable means of transportation. And there were the railways.

Some sections of the trace were abandoned and the ground given over to cotton, corn, or tobacco.

But the trace wouldn't die. The hundred years of its life had worn it deep into the face of the earth. A half-century later many abandoned sections of it were still identifiable.

Between Port Gibson and Natchez, Miss., travel and rain-washing left a sunken roadway overhung by solid lines of huge oaks, dripping moss. It was a veritable hallway, with the sunlight filtering through the leaves.

The trace wasn't forgotten. Historians and novelists found a wealth of tales in its lifetime—of highwaymen and gamblers, of roguery and romance.

It was these historians, both amateur and professional, who led the movement in the early 1930's to get the trace restored.

The States began to acquire lands. In 1937 construction was started by the National Park Service with Federal funds.

Today, 205 miles of the trace have been restored as a part of the National Park System.

It isn't the same trace, to be sure. Where it was a dirt path, with logs laid in the river-bottom stretches and ferries to cross the rivers, there is now a paved highway and bridges.

But the romance is there. The huge oaks, as old as the trace itself and festooned with Spanish moss, are still there.

And there are markers and museums to revive the life and the legends of the trace's times.

Of the 205 miles already restored, 125 miles are paved, 38 gravel-surfaced, and 18 dirt-surfaced, with 24 more under grading contract.

One of the major, and most popular, sections is the 79 miles between Ridgeland and picturesque old French Camp, Miss.

A simulated-log museum stands at Ridgeland as an information center for visitors. The Parkway has no commercial traffic, advertising, service stations, or restaurants. It is pure, unspoiled scenic beauty.

Its recreational areas, swimming areas, and picnic areas are relatively "undiscovered," and, because of the huge area they cover, probably never will be crowded.

The National Park Service expects virtual completion of the 450-mile parkway by 1966. When completed, it will extend from Natchez, across Mississippi and the northwest corner of Alabama to Nashville, Tenn.

ROAD TO A PILGRIMAGE

March is an especially pleasant time to traverse the improved portions of the Natchez Trace and it's the best time of year to see Natchez, its terminus.

Some of the South's most beautiful gardens and ante bellum homes are at Natchez and they are open to the public only during the annual Natchez Pilgrimage. This year it continues through all of March.

Readers may get a free packet for planning a Natchez trip by writing: Miss Hospitality, Travel Department, State of Mississippi, Department WD–2, Jackson, Miss.

Hoxsey Cancer Treatment

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. HARRIS. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I desire to make a statement for the information of the Members of Congress and others

interested in the subject of the Hoxsey cancer treatment and as to its status, that the Committee on Interstate and Foreign Commerce on March 6, 1957, expects a representative of the Food and Drug Administration to appear before the committee to discuss in a general way their current program and any recommendations for amendments of the Food and Drug and Cosmetic Act, which the Administration desires to submit to the Congress. In the course of these hearings, the committee will call upon the Food and Drug Administration to explain in greater detail its activities in connection with the Hoxsey cancer treatment.

The Food and Drug Administration has already submitted information with regard to judicial decisions relating to the Hoxsey cancer treatment which form the basis for the Administration's present activities in connection with this treatment.

On July 31, 1952, the United States Court of Appeals for the Fifth Circuit on appeal from a decision of the United States district court for the northern district of Texas, decided unanimously that:

> The overwhelming weight of credible evidence [introduced by the Food and Drug Administration] requires a conclusion that the representation that the Hoxsey liquid medicines are efficacious is false and misleading.

The court also made the following statement with regard to present recognized methods of cancer treatment:

> It is further true that despite the vast and continuous research which has been conducted into the cause of, and possible cure for, cancer the aggregate of medical experience and qualified experts recognize in the treatment of internal cancer only the methods of surgery, X-ray, radium, and some of the radio-active byproducts of atomic bomb production. This is so even though the ghastly truth is that these methods frequently fail and are, in many cases, themselves unsatisfactory. But it is true, nevertheless, that with present enlightenment they are our sole defense against the scourge of cancer.

Following the court decision on October 26, 1953, the Federal District Court in Dallas, Tex., enjoined Harry M. Hoxsey or his agents from shipping the cancer treatment or similar drugs in interstate commerce with any labeling suggesting or representing that they are effective in the treatment of cancer.

In March 1955 a supply of cancer pills and labeling was seized at the Hoxsey Cancer Clinic in Portage, Pa. The Government charged that the pills were the essential part of the Hoxsey cancer treatment and that the labeling which represented the treatment as effective for cancer was false and misleading. The case was tried before a jury which returned a verdict for the Government. The District Court at Pittsburgh issued a decree condemning the pills. The claimant has moved for a new trial.

On January 28, 1957, the Food and Drug Administration furnished for display in 46,000 post offices and substations throughout the continental United States a poster giving public warning against the Hoxsey cancer treatment. The poster states that cancer can be cured only through surgery or radiation and that those that are afflicted by cancer are warned not to be misled by the false promise that the Hoxsey cancer treatment will cure or alleviate their condition.

This action of the Food and Drug Administration was taken pursuant to section 705 (b) of the Federal Food, Drug, and Cosmetic Act which provides that the Secretary of the Department of Health, Education, and Welfare may cause to be disseminated information regarding food, drugs, devices, or cosmetics in situations involving, in the opinion of the Secretary, imminent danger to health, or gross deception of the consumer.

Antarctica

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. ASPINALL. Mr. Speaker, I recently introduced H. R. 4252, a bill to direct the Secretary of the Interior to formulate a plan and make recommendations for consolidation in a single executive agency of the responsibility for, and supervision of, activities involving Antarctica.

It is hard to get very excited about this vast ice-covered area down around the South Pole, but we should. To point out why, I should like to include in my remarks a clipping from the New York Times of February 10. This short article points out some of the activity of our good friend, New Zealand, in this area, activity to establish her claims to a part of this area.

Mr. Speaker, we should be no less diligent in our own operations. We cannot stand by in hope that all will be well in this area, and a small effort and investment now might prove of substantial value in the future. I recommend this article to the Members:

McMURDO SOUND, ANTARCTIA, January 12.—New Zealand, which for over 33 years has claimed a sector of the Antarctic continent far larger than her own territory, acted today for the first time to exert her sovereignty here.

A New Zealand post office was opened at the New Zealand expedition base near Butter Point. Stamps were issued for the first time by the Ross Dependency, as the claim is called.

Likewise a colonial government has arrived—in token form, for the only permanent inhabitants of this great land area are seals, penguins, and other polar creatures. Among the officials is Capt. Harold Ruegg, who for 3 years has held at Wellington the position of administrator for the Ross Dependency.

Neither he nor any of his three predecessors had hitherto set foot in the frozen domain. Captain Ruegg's more active job has been nautical adviser to the New Zealand Government.

The newly appointed magistrate of this region is Sir Edmund Hillery, leader of the New Zealand contingent of the Commonwealth Trans-Antarctic Expedition, which is building its base here. Dr. Trevor Hatherton, who heads the group of scientists who will make observations here during the International Geophysical Year, is justice of the peace and coroner.

Should We Help Poland?

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. GORDON. Mr. Speaker, I wish to bring to the attention of the Members of the House a thoughtful and informative editorial which appeared in the Washington (D. C.) Post of Saturday, March 2, entitled "Should We Help Poland?"

The United States has in surplus supply wheat, cotton, and other farm commodities, of which the Polish people have an urgent need. The reasons why the United States should extend assistance in the form of surplus agricultural commodities and certain types of machinery are logically set forth in the Post editorial. I hope that arrangements for the extension of assistance to the Polish people will soon be concluded that will operate to the mutual advantage of both the American and the Polish people.

The editorial follows:

SHOULD WE HELP POLAND?

As the negotiations with the Polish mission in Washington go forward it is well to keep in mind the fundamentals of American policy. What does this country want in regard to Poland? The answer that has been coming from statesmen, politicians, businessmen, commentators, and the people generally for the last decade is that we want to see Poland an independent nation. We earnestly hope that Moscow's rigid grip on all the satellite countries may be relaxed; that the peoples of those lands may be free to live in peace, to pursue their economic interests, and to take their proper place in a larger world community.

Considering the strength of this feeling about the satellites, it would be strange indeed if Poland's first venture in enlargement of her freedom should meet with a cold shoulder on the part of the United States. The very fact that the Gomulka government has sent an economic mission to Washington is a demonstration of a new measure of national independence. No previous Warsaw regime since World War II could have done so (remember when the Poles at first accepted Marshall Plan aid, then rejected it under Soviet orders?). The United States must necessarily welcome the more friendly gestures of the Warsaw regime or make a mockery of the policy proclaimed by both Democratic and Republican administrations.

Poland has not, of course, gone as far as we should like to see her go in establishing her independence. But she has probably gone as far as she can go at present without suffering the fate of Hungary. The basic question in the negotiations now under way is whether the United States is willing to help the Polish people improve their standard of living while they seek to extend their freedom. The fact that the problem is a delicate one for both governments does not make it the less important to move in the direction where lies some promise of greater freedom and prosperity and, therefore, greater security.

From the economic point of view, an increased flow of trade could be highly advantageous to both countries. Poland urgently needs wheat, cotton, and other farm commodities of which the United States has price-depressing surpluses. Poland also needs coal-mining and farm machinery of which this country has ample supplies. Loans will be necessary to enable the Poles to buy these products, but if such credit is limited as to amount and duration the risk will not be great.

It is, however, the political considerations that are paramount. All the satellites will be watching to see whether United States help and encouragement can reasonably be expected if they succeed in attaining a semi-independent status. Viewed from this angle, any failure of the negotiations would be perilous both for Poland and for the cause of world freedom.

Dr. Gunnar Twistmaul

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from National Review of January 26, 1957:

DR. GUNNAR TWISTMAUL

(With acknowledgments to John Kreuttner)

Dr. Gunnar Myrdal is the Swedish economist who took time off to become the world's greatest authority on the American Negro; and if you don't believe it, ask the Supreme Court, which ruled segregation unconstitutional because Dr. Myrdal says that segregation does unconstitutional things to the Negro psyche. As we were saying, Dr. Gunnar Myrdal is the Swedish economist who once served as Sweden's Minister of Trade, in which capacity he rushed to conclude a trade agreement with the Soviet Union so favorable to the Soviet Union that it caused a political crisis that ended up transporting Dr. Myrdal out of Swedish politics, but, alas, into world—or rather one-world—politics. He sits today as executive secretary of the United Nations Economic Commission for Europe, whence he passes on matters of economics and morality.

Which is what got Dr. Myrdal to passing judgment on American foreign aid which, he has ruled, is in its present shape, bad economically and bad morally. It is bad economically because, having dispensed that foreign aid, we proceed to do business, nationally and internationally, according to the rules of free enterprise, which rules, as any Socialist will tell you, add up to poor economics. Under the circumstances, our foreign aid is nothing more than an economic palliative.

It is immoral because the United States picks and chooses the countries to which it will send aid, and, as everybody knows, "when international aid becomes unilateral and politics thus enters into the distribution of it, both moral and economic standards are apt to crumble." Thus it becomes plain that "generous America often turns out to be niggardly selfish in its regular commercial and financial policies and practices."

The solution? Give money to the United Nations, and let the United Nations dispense it as it sees fit.

Listening, spellbound, while Dr. Myrdal spoke (at a seminar on welfare democracy) were three stouthearted American intellectuals: Arthur Schlesinger, Jr., Adolf Berle, and Milton Katz. ("None of these patriots," the Chicago Tribune noted, "opened his mouth to defend his country or rebuke this Swedish carpetbagger.") No doubt they will figure out a way of persuading the Supreme Court that foreign aid, except via the United Nations, is unconstitutional.

House Joint Resolution 117 and Foreign Policy.

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (H. J. Res. 117) to authorize the President to undertake economic and military cooperation with nations in the general area of the Middle East in order to assist in the strengthening and defense of their independence.

Mr. CARNAHAN. Mr. Chairman, I yield 7 minutes to the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, I wish to pay my tribute of appreciation to the chairman and the senior members of the great Foreign Affairs Committee who so graciously received the new members of that committee among whom I was numbered. I am glad of, and grateful for, the opportunity given me to serve on that committee and to be present at the hearings and the executive sessions having under consideration this resolution.

I wish to commend the able chairman, the Honorable THOMAS GORDON, for the masterly manner in which he assumed the large responsibilities that the voluntary retirement from Congress of the former chairman, the Honorable James P. Richards, placed on him. We know that it had been Dick Richards' hope that after a long and distinguished career in public life he might in private life find more time for relaxation in the society of his delightful family and among old friends in the home community. The crisis in the Middle East which has brought before us the consideration of House Joint Resolution 117 as the first urgent business of the 85th Congress has changed the path of the life of Dick Richards from that which he had mapped with such warm longing of the heart only a short time ago. It is proper to remark here that the fact that the proposed program is to be under the supervision and direction of the Honorable James P. Richards, who enjoys the confidence and the affection of the Members of both bodies of the Congress and who at the call of duty was willing to make sacrifice of cherished personal plans, has been a major factor in the dissolution of doubts.

Chairman GORDON has proved himself a worthy successor of the beloved gentleman from South Carolina and of the others who in the past during periods of stress and crisis carried the large responsibility of leadership in the committee of the House having jurisdiction over legislation in the field of foreign affairs. In the public hearings and in the executive sessions Chairman GORDON adhered strictly and impartially to the 5-minute rule even when the witness before the committee was the Secretary of State so that all members of the committee had free and equal opportunity to inform themselves and to develop such points as to them seemed pertinent and vital. I stress this to give emphasis to the important fact that the approving vote of the committee reflected the individual thinking of the members, all of whom had been given full opportunity of participation in the examination of witnesses and in the discussions that followed in executive sessions.

MISGIVINGS AND UNEASINESS

I anticipate the resolution will be adopted in the House as it was recommended out by the committee, and in the same spirit and for the same reasons. There will be among many the same misgivings on the use of the ultimatum in the clarification of our position and the pinpointing of the zone from which in our national security we cannot retreat. There will be the same uneasiness that always attends the making of momentous decisions wherein there is the element of great but calculated risk. There will be the same regret that the President in the conditions of a gathering storm did not find it expedient to consult in advance and on a bipartisan basis with the leadership of the Congress.

But I anticipate that among the Members of the House, as among the members of the committee, this sense of misgiving, uneasiness, and regret will be dissolved in the realization that to win the peace of our prayers we must show to the world the same national unity that is expected in time of war.

It was said long ago that politics end at the waterline. As with families, so should it be with nations. The authority of the family as one contributing factor in building a community of wholesome character is destroyed by the public airing of domestic differences and squabbles. The appearance of disunity in the presence of a grave international crisis between a Chief Executive elected as a Republican and a Congress controlled by those elected as Democrats could result only in our embarrassment and ruin of any hope that at the end of the road we now are asked to follow will be awaiting us the peace for which we pray.

DIFFERENT POLITICAL AFFILIATIONS

I am not of the President's political party. Not many weeks ago in the heat of his own campaign for reelection, and to further the interest of the political party to which he was indebted for his nomination in 1952 and his renomination in 1956, the President asked for the defeat of every sitting Democratic Member of the Congress, including those whose percentage of support of the key measures of his first administration was larger than that of many members of his own party. I think that the President for party advantage should not have taken that position. But if he did, it was only

when we were having a private family squabble within our own national home. In prudence we cannot permit it now to be used to the advantage of our enemies and the endangerment of our security by presenting a picture of disunity.

President Eisenhower is my President, the President of the Members on this side of the aisle as he is the President of the Members on the other side of the aisle. No man attains the Presidency of the United States of America who does not devoutly wish his administration to be remembered in history for its contribution to the prosperity and the happiness of the American people and to the welfare of mankind. When his foot steps over the threshold of the White House, he has entered the office of highest authority and highest honor in the world. For 4 years, or for 8 years, he will remain the occupant of the White House, knowing that ahead are no promotions and that when he leaves it will be to take his place in history.

The place of Dwight Eisenhower in the history of war was made when he commanded and directed to triumph the largest army ever massed in all recorded time. His place in the history of peace, I think, is now the subject of his first and deepest concern.

The attainment of that peace concerns us all for every hour of our days we live under the threat of an atomic power that, loosened by the triggering of an incident relatively minor, can destroy both us and our civilization. The President presents to us in the program provided in House Joint Resolution 117 that which he believes is the surest guarantee against such tragic eventualities. He fears that if the Middle East, with its vital oil supplies and its geographical advantages, is permitted to fall piecemeal and by attrition into communistic hands in another 2 years our control over events determining peace or war would be gone.

DESIGNED TO PROMOTE PEACE

Secretary of State Dulles in his testimony before our committee said:

All our treaty and legislative action has been designed to promote peace by making clear our position in advance, and thus to deter aggression and to prevent dangerous miscalculation by would-be aggressors. Also, in each case, our resolve has been impressive because of the national unity which expressed it. Also in each case where we have so acted, we have in fact preserved freedom—page 3, hearings of Committee on Foreign Affairs.

Later the Secretary said:

The purpose of the proposed resolution is not war. It is peace. The purpose, as in the other cases where the President and the Congress have acted together to oppose international communism, is to stop world war III before it starts—page 6 of hearings.

In reply to a question of mine, the Secretary said:

I think that the failure of the program would lead with a high degree of probability to a major war—page 145, committee hearings.

Thomas K. Finletter, the former Secretary of the Air Force, in the introduction of whom Chairman GORDON made reference to the many times Mr. Finletter had helpfully testified before the Committee on Foreign Affairs in the past, said:

Indeed, the Secretary has gone so far as to say, as I understand it, that the alternative to the administration's proposal would be a very great likelihood that United States troops would have to fight in the Near East; whereas there would be very little likelihood of such an event if Congress approves the administration's resolution, including the section about the $200 million. Now, sir, with that testimony of the Secretary of State before the Congress, I respectfully suggest that the authority relating to the $200 million also be approved as submitted—page 446, hearings.

Later Mr. Finletter said:

I am very much affected by the record, as I understand it, before this committee, and certainly before the Senate, of Mr. Dulles, that as this resolution goes, so goes the likelihood of American boys fighting in the Near East or not fighting in the Near East. And with that testimony before the legislature, I think we must approach with considerable diffidence the idea of making changes with it—page 458, hearings.

Mr. Finletter thought the resolution should be strengthened to include resistance to covert as well as overt aggression. When I asked him if he would recommend support of the resolution if a strengthening amendment was not included, he replied "Yes"—page 461, hearings.

AS PICTURED BY GENERAL GRUENTHER

The testimony of Gen. Alfred M. Gruenther, president of the American Red Cross and former Supreme Commander of the Allied Forces in Europe—SHAPE—was especially helpful to the committee. Much of this testimony is deleted from the printed hearings for security reasons. I quote a portion of General Gruenther's testimony that was not deleted and which furnishes an index of his thinking:

The NATO area extends from here to the eastern borders of Turkey—a distance of 4,000 miles. In NATO we have always been concerned about our right flank, here, where it reaches toward the Middle East. Coming to the Middle East area itself, I, as a United States commander and a United States citizen, have always felt that, from a strategic standpoint, it is of great importance to the security of the United States.

The Soviets, as you know, now have a tremendous submarine fleet. They have more than 400 submarines. So that this number is meaningful, you should know that the Germans, when they went to war in 1939, had fewer than 75. The Soviets last year built more than 80 submarines.

Mrs. BOLTON. Where do they build them?

General GRUENTHER. They have shipyards here (pointing) and they build them here (pointing). Strangely enough, some of them have been built here and then the parts have been moved at great expense and moved to ports here (pointing).

That submarine fleet of 400 is a force that disturbs me very much. One can explain why the Soviets have an army. They couldn't be controlling the satellites without it. An army has a very definite cold war value. You can explain why they have an air force also as a cold war instrument. But when you come to explain why they pouring so much money into a submarine fleet, which is basically a war instrument—there is little explanation because such a fleet has a very small use in times of peace. There is no cold war value to it—you never see submarines. The Soviets have spent a great deal of money to keep them up, and it is a very, very heavy burden. Considering all aspects then—military, political, and economic—I would say that the security of the United States and of the free world would be seriously endangered if the Middle East should fall under the domination of international communism.

IMPORTANCE OF OIL SOURCE

In this connection, I should like to discuss the importance of Middle East oil to the West and particularly to Europe. Europe, as you know, is tremendously dependent on Middle East oil in peacetime. The oil reserves in the United States now are estimated at approximately 30 billion barrels. The oil reserves of the Middle East area are estimated now at about 230 billion barrels.

Before the use of the canal was interrupted, approximately 2 million barrels of oil a day were being shipped from the Middle East to Europe. Europe receives about 80 percent of her oil from this area. Many of the European countries are heavily dependent on oil as a source of energy. For example in Greece, 73 percent of the energy requirements are in oil. In Denmark, 46 percent of the energy requirements are for oil. These are not wartime requirements; this is in time of peace. Germany is least dependent with a requirement of about 9 percent. You have noticed probably in the press that there is no oil rationing in Germany now. This is because Germany has mainly a coal economy.

Not only is Europe now heavily dependent on the oil from this area, but estimates of requirements for the next 10 years indicate that this dependence will become much greater.

The coal veins of Europe are, generally speaking, running thin. Atomic power is still too far away to make a significant contribution.

In 1950 the oil consumption of the free world was 10 million tons. In 1955, it was 15 million tons, and by 1965 it is estimated that the requirements will be 25 million tons. The great bulk of these requirements must be met from this area.

In view of all of these factors it is evident that the area which you are considering in connection with the joint resolution is vital to the free world.

General Gruenther stressed the importance of economic aid, suggesting that it perhaps was even more important than the military phase. He thought the administration of the program should be flexible. From the standpoint of psychological impact, he thought it "of tremendous importance that it be a unified declaration by the Congress and by the Executive so that the United States shall serve notice, a notice which the Soviets understand very well."

GENERAL SPEAKS AS A FATHER

He continued, page 361, hearings:

I know that the question arises: "Well, in this risk doesn't it mean that American boys are apt to have to go out there?" That is possible, although I think the risk is substantially reduced by making clear what our position is in this matter. I say this as a father because we have a son who is a captain and a paratrooper. If trouble broke out in the Middle East, he might well be among those sent there. He has a wife and 4 children, the oldest one 6. He was wounded seriously in Korea. I know of the cold shudder that came into my heart the day that the message was handed to me reading, "The Secretary of the Army regrets to announce that your son has been seriously wounded in Korea."

For some 8 days his life hung in the balance. So I think I am quite sensitive to

this reaction of American boys going there because Mrs. Gruenther and I suffered the agony of a near tragedy in our own family. I think that this proposal gives us reasonable insurance. I don't say it gives us a foolproof insurance, and I don't try to oversell it. I say that it is necessary action. I say that the alternative is such a grim one that it is a risk that we have to take. The risk will be significantly less if we follow this procedure than if we do not. I say that as a father, aside from my military interest in this area.

PLEDGE TO PROTECT ISRAEL

There was concern in my mind, a concern shared with other members of our committee, that to obtain the acceptance of our program by the Arab States and their cooperation concessions might be made harmful to the interest of the State of Israel. When Secretary of State Dulles was testifying at an executive session of our committee I asked him the question point blank. I am quoting from page 145 of the hearings:

Mr. O'HARA. As the success of this program depends on its acceptance by and the voluntary cooperation of the Arab States, is there a possibility in obtaining that acceptance and voluntary cooperation there may be a lessening of our position in upholding the sovereignty of the State of Israel?

Secretary DULLES. I can assure you, sir, that we shall not in any application of this policy or any of our discussions with the Arab countries do anything whatsoever that would detract from the statements so often made by this administration and others and by the Congress that the preservation of the State of Israel is a vital part of the United States foreign policy.

Mr. O'HARA. I wonder, Mr. Secretary, if the statement you have just made, and if agreeable to our distinguished chairman and the committee, could be made public? There is among my constituents, and I am sure among many others, a keen interest in the welfare of the State of Israel.

Secretary DULLES. I would think there is no reason why the statement should not be made public.

The security of the State of Israel is entwined with that of our own country. Israel in a troubled area is an outpost of an industrial order that in our own country in the building up of our large cities has given buying power for the products of our agricultural regions. So will it be in that now troubled area when experience has dissipated the Arab fear of that which is new and from the growth and prosperity of industrial Israel the Arab states will reap benefits beyond calculation. It is to our own interest, as well as being true to the moral law that always must guide our relations with other lands and other peoples, that the Arab states at the very commencement of negotiations under the program provided in House Joint Resolution 117 should understand that the protection of the sovereignty and the interest of the State of Israel is riveted so deeply in the foreign policy of the United States that no American administration in honor and in respect for American public opinion can use it for bartering purposes. I am glad that Secretary of State Dulles in his answer to my question gave reaffirmation of this and that by agreeing to lift the secrecy of an executive session to permit publicity to his words he gave to his words the character of an open pledge to the American people.

MONROE DOCTRINE IN MODERN GARB

Mr. Chairman, this is not the first time in our history when the President of the United States has asked the Congress in the protection of the security, the interest, and the honor of the country to bypass the question of relative constitutional powers to give to our position in the face of a grave international crisis the appearance and the strength of national solidarity in the acting together and jointly of the President and the Congress.

The gentleman from Arkansas [Mr. HAYS] with penetrating understanding of the earlier foreign policy of this Nation, has suggested a similarity between the Monroe Doctrine and the Eisenhower Doctrine. The suggestion of the gentleman from Arkansas is that the doctrine now advanced by President Eisenhower is in reality the Monroe Doctrine in modern garb. What I understand the gentleman from Arkansas to contend is that the same fundamental principles are embodied in the Eisenhower Doctrine as originally were defined in the Monroe Doctrine and that the difference is only in the narrowness of the world today, in travel time, as compared with the broadness by the same measure of the world in Monroe's time.

The Monroe Doctrine was applicable to conditions as they existed in 1823. It was proclaimed in the protection of our own interest and security, but also in the protection of the system of representative democratic Government that we had established on the American hemisphere and which later had been adopted by the countries of Latin America once the colonies of Spain.

This is important to emphasize. The present world conflict between democracy and communism as forms of government, and which occasioned President Eisenhower's request for the passage of the pending resolution, had its counterpart in 1823 in the then conflict between monarchy and democracy.

In 1823 Spain had proposed a conference of the allied powers of Europe to promote the design of the Spanish monarchy to regain its revolted American colonies. This the American people could not contemplate with complacency since the security of our own Republic would be endangered if by force our sister republics on this hemisphere were overthrown and their domains returned to the status of colonies of a European monarchy.

What the proclamation of the Monroe Doctrine did not state in specific language but what was its clear meaning and import was that the two conflicting systems of government could not in respect for our independence be permitted to compete for hemispheric power. I need not dwell upon how differently might have been the course of history if in 1823, when the United States was young and relatively small territorially compared with its present expansion, the monarchies of Europe had taken over the free governments of Latin America. Certainly there would have been hurdles to our progress.

FREE GOVERNMENT THEN AND NOW

In 1823 the American people were willing to take the calculated risk of war to preserve free government in the hemispheric area wherein was their interest and security. Today the interest and security of the United States is bound up with that of free and independent nations the world around. In travel time the most distant nation now is closer to our shores than Washington to Mexico in the days of Monroe.

The Monroe Doctrine was applicable to conditions as they existed in 1823. Our best protection from the troubles of Europe then was in hemispheric isolation. Democratic government still was not so strongly established in this hemisphere that, in our own national interest and safety, we could contemplate with complacency the design of the Spanish monarchy of regaining its sovereignty over its revolted American colonies. When Spain in the furtherance of this design proposed a conference of the allied powers of Europe, the Monroe Doctrine was proclaimed.

There was an apprehension in this country that the reestablishment of the power of Spain, bringing back to her sovereignty the countries that had thrown off the Spanish yoke and established themselves as free and independent republics, might endanger our own people and the integrity of our own institutions.

Another object of the Monroe Doctrine was to contain European occupation of territory on the American Continent to that already occupied. This objective was accomplished. Thereafter no territory in the American hemisphere was considered as derelict or unoccupied and the practice previously pursued by European powers of seizing such territories was ended.

CLEVELAND DOCTRINE OF 1895

But nothing, Mr. Chairman, remains status quo. The rule of nature and of life is change. From one plateau mankind goes to a higher plateau. There is change in the scenery, change in the focus of higher vistas, but the rule of progress that guides mankind on its climb upward alone remains unchanged.

It will be helpful to us now, in our determination of whether the Eisenhower doctrine of 1957 is not in its spirit and in its portent the Monroe Doctrine of 1823, regarbed and modernized, to give to the Cleveland doctrine of 1895 a consideration that seems to have escaped the observation of most of our modern historians.

The gentleman from Arkansas has not mentioned the Cleveland doctrine of 1895. In my questioning of former Secretary of State Acheson, which will be found on page 199 of the committee hearings on House Joint Resolution 117, I made some mention of the Cleveland doctrine, which was brought before the 54th Congress in a manner not much different from that at the present time.

Last night, on the eve of the debate in which we now are engaged, I read again the record of the proceedings in

the House of Representatives of the Congress of the United States on December 18, 1895. The same questions were raised then as have been raised today, including that of constitutional powers. The Congress responded by passing the measure proposed by President Grover Cleveland even though in the minds of most of the Members of the Congress, as in fact of most of the American people, was a conviction that the result would be a war with Great Britain.

The national unity reflected in the unanimous acceptance by the Congress of the President's doctrine, despite the uneasiness and misgivings of some Members, was effective in bringing about an understanding and the abandonment of Britain's designs to enlarge her holdings in the American Hemisphere through boundary disputes in which Britain would be the sole and self-appointed arbiter and the exercise of sovereignty in the names of claimants, the validity of whose claims were recognized solely by Great Britain.

SIMILARITY IN 62-YEAR LAPSES

The Monroe Doctrine was proclaimed in 1823. It was 62 years later that it was brought up to date by the Cleveland doctrine, which broadened its application to cover new conditions that had come with the passage of the years. Now after a lapse of another 62 years comes the Eisenhower doctrine of 1957. It is interesting, if not significant, that the lapse of years in each instance is the same, 62 years between the Monroe Doctrine and the modernizing Cleveland doctrine, 62 years between the Cleveland doctrine and the Eisenhower doctrine of today. In tracing the historical sequence we may discover the outlines at least of a foreign policy to which the United States has adhered for 134 years.

Because of the rapid sweep of great world reshaping events in the closing years of the 19th century and the first half of the 20th century, the Cleveland doctrine of 1895 is not familiar to a generation born since its adoption and with a valuating perception of the events of the past dulled by the succession of dynamic events in its own generation.

With the proclamation of the Monroe Doctrine colonization on the American hemisphere was restricted to the countries on this hemisphere then in the colonial status. The doctrine that further colonialization on this hemisphere was inimical to the interest of free democratic government, and this was of legitimate concern to the United States as affecting its own security, received universal acceptance.

But in the late decades of the 19th century Great Britain, while professing acceptance of the Monroe Doctrine, embarked upon a program calculated vastly to increase her American domains and eventually to build on this hemisphere a colonial system rich and strong enough to compete with the democratic system of our creation. The success of this design, as we look back now with the appraising eye of a generation remote from the times, certainly would have placed hurdles in the way of our progress. It might have changed the course of history on this hemisphere. Conceivably if we consider the contribution of the United States in two world wars and in the rebuilding period that followed it might have changed the course of the history of the world.

As I have stated, Great Britain openly recognized the validity of the Monroe Doctrine and joined with us in compelling its respect by her neighboring powers in Europe. But while giving open recognition she herself sought to crawl under its protective curtain under a strategic of indirection.

NICARAGUA A VITAL AREA

Nicaragua then was a nation of great importance to us, partly because Bluefields on the eastern coast was a trading center in the Caribbean area and the heart of the banana industry, but more so because it then was the expectation of our Government to build across Nicaragua a sea-level canal uniting the Atlantic and the Pacific. Indeed work on this already had started and American dredges had dug the canal some mile or more from the sand-bar harbor at San Juan del Norte, called Greytown by the British. It must be remembered that at that time the Panama route had been dismissed from consideration on the finding of its utter unfeasibility by engineers.

Great Britain sought to fix her hold on this area, most vital to our national interest as well as that of democratic government in this hemisphere, under color of an alleged protectorate of the Carib Indians. She proposed to take over not in her own name but as the protector of King Clarence, then domiciled in Jamaica as royalty in exile and maintained by the British in a palace with regal attendants and all the trimmings of monarchy.

KING CLARENCE AND THE CARIBS

The Carib Indians were in fact a group of seafaring persons living for the most part in Belize in the British colony of British Honduras. They manned the small sailing vessels, usually made from dug-out logs, that furnished the means of sea transportation from one Caribbean port to another. This type of small sailing vessel was named after them and was identified by everyone as the Carib craft.

How the British discovered the tracing of King Clarence's royal line and the basis for the claim that as the regal head of a dynasty he had the right to sovereignty over the eastern part of Nicaragua lying on the Caribbean must be left to conjecture and logically to the unravelling by Sherlock Holmes, who as a loyal British subject could be depended upon to come up with a good British answer.

But the serious part was that King Clarence had placed himself under the protection of the British and had delegated to Britain the mission of seizing and ruling in his name the domain he claimed. As Jamaica seemed a more likely background for the enwrapment of King Clarence in royal robes than British Honduras, where the seafaring Caribs were unconscious that they had a king of their own, the transfer of domicile preceded the eventful day in Bluefields when British Vice Consul Hatch took over the seat of local government at Bluefields and in the name of King Clarence and the Carib Indians proclaimed sovereignty over all the Nicaraguan eastern coast extending north from Bluefields.

The Nicaraguans unceremoniously put British Vice Consul Hatch in handcuffs and further brought down upon themselves the hot wrath of Britain by hauling him, still in chains I understand, the slow and tedious route up the coast to San Juan del Norte, up to the San Juan River in one of Mr. Pellas' steamboats and so to lodgings in the jail in Managua, the capital city.

Great Britain resented this affront to the dignity of her consular service and this defiance of her authority, to say nothing of that of King Clarence, languishing in luxury in his palace in Jamaica, by forthwith dispatching warships to Bluefields. This was nothing new in those parts. How many times San Juan del Norte, called Greytown by the British, further south on the Nicaraguan coast had been shelled, I do not know. As a boy at San Juan del Norte, my Nicaraguan playmates often would show me big round shells, lying unexploded in the earth, so often indeed, that I got to thinking San Juan del Norte was ringed around with such big round unexploded shells as a sort of chain of monuments to British visitations.

This time, however, also came American gunboats. Grover Cleveland, a rugged man, then was President. The issue was coming to a head.

BOUNDARY TROUBLES IN VENEZUELA

Meanwhile in Venezuela there was being waged a onesided boundary dispute. Under cover of resetting the boundary lines of British Guiana and Venezuela, Britain was endeavoring to seize as part of her colonial estate much of the choicest and richest part of the territory of the Republic of Venezuela. She refused to submit the dispute to a board of impartial arbiters. She insisted that the settlement of the dispute must be left to an all-British board with no representation thereon of the Venezuelan Government.

The Venezuelan incident, combined with that in Nicaragua and some others of lesser importance, made it clear to President Cleveland that Great Britain in indirect violation of the Monroe Doctrine was seeking to destroy piecemeal, free government on this hemisphere and to reestablish the expanse and the power of colonial government.

The essence of the Cleveland doctrine was that the United States had ample and moral justification in interference in a situation on this continent wherein the interest, security, and honor of our country was at stake, that such interference was not in the nature of interference in the domestic affairs of another country and was not an undertaking to protect another state except insofar as the protection of that state was incidental to the preservation of our own national interests, security, and honor.

I have taken the time of the House to go into the past on matters germane to our present discussion but not bearing directly on the present issue. This has

been done in an attempt to find by these tracings if we do not have a fixed American foreign policy that we have pretty well adhered to, with slips now and then, throughout the years.

UNITY AND ACCORD DEMANDED

I am supporting House Joint Resolution 117 because to win the struggle for peace and to assure our own security against those who may seek not peace but conquest there must be unity and accord with the President and the Congress. No one believes that President Eisenhower and those about him for one moment would think of plunging this country into an atomic war certain to destroy our civilization. They may be wrong in their thinking and in their calculations. The calculated risk may prove to be the risk of grim reality. But I for one shall not contribute to a show of disunity that adversely might effect the stout chance for peace that the President believes is held in the legislation now before us. And in the past of our history whenever we showed firmness in standing on the moral law, affirming our position and not counting the consequences, the hour of understanding has been hurried and the dangers we might have feared have evaporated.

Puerto Rico: They Have Made Good

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. MILLER of Nebraska. Mr. Speaker, during this observance of Puerto Rico Friendship Day in this House of Representatives, I want to extend my congratulations and my best wishes to the fine American citizens of the great Commonwealth of Puerto Rico.

I have known the Commissioner from Puerto Rico since he came to Washington some 10 years ago. It has been a pleasure to work with him. I have found him skillful and intelligent in the performance of his duties. Always he has worked diligently for the benefit of his Commonwealth and for the good of the entire Nation. I can think of no man who could have done more for Puerto Rico in this House.

Mr. Speaker, it has been my privilege and pleasure to visit this island paradise several times. I trust that I may have the opportunity to go back many times in the years to come.

Forty years ago the people of Puerto Rico were granted citizenship and became more important units than ever among our people. We are proud to call them fellow citizens.

I like this statement which is taken from an editorial in the Washington Daily News titled "Proud Americans":

"Perhaps the most notable of American governmental experiments in our lifetime," Chief Justice Warren has said of the young Commonwealth of Puerto Rico.

In San Juan, in Washington, in New York and elsewhere the former colonials who are now citizens celebrated Friendship Day as a proud and dedicated people should.

Puerto Rico is an island of 3,435 square miles with a population of well over 2 million people. Until recently agriculture has been regarded as its most important industry but now manufacturing leads the way. Per capita income is still too low, but it has improved vastly in the past 20 years and is still on the upgrade. There are more than 100,000 motor vehicles, 23 radio stations, 3 TV stations, airport facilities and numerous other advantages. Year by year the Commonwealth is developing.

This island was discovered by Christopher Columbus November 19, 1493. Ruled by Spain until 1898, it was ceded to the United States in that year.

Year by year the people are taking a greater interest in their government. The Commonwealth invests the legislative power in a senate and house of representatives. Executive power lies with the Governor who is elected by the people. The judiciary is composed of the supreme court and a lower court sytem. It is a good system of government.

Mr. Speaker, I say again I am proud to have this opportunity to congratulate the fine American citizens and the distinguished Commissioner of the Commonwealth of Puerto Rico.

In Flexibility We Trust

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks, I am requesting that the following editorial from the Friday, March 1, 1957, issue of the Daily Dunklin Democrat, published by Jack Stapleton, Jr., of Kennett, Mo., be printed in the RECORD as a reminder that the present Secretary of Agriculture has, as Editor Stapleton points out, "achieved the dubious distinction of spending more money during a 4-year period and achieving less than any Secretary of Agriculture in the history of the country":

[From the Daily Dunklin Democrat, Kennett, Mo., March 1, 1957]

IN FLEXIBILITY WE TRUST

It has become increasingly evident during the past few weeks that the only farm commodity being grown today which can still be sold at 100 percent of parity is hay. The principal difficulty with this situation is that the farmer's only customer for the hay is the drought-stricken farmer of southwest Missouri, who is in the worst sort of financial straits.

Recently, Secretary of Agriculture Ezra Taft Benson announced the new 1957 support prices for major farm products. True to his word, the Secretary made the support prices flexible—he reduced them all. And now, while announcing lower price supports for 1957, the Secretary has achieved the dubious distinction of spending more money during a 4-year period and achieving less than any Secretary of Agriculture in the history of the country.

The Missouri Farmers Association this week compiled the price chart shown below showing the decline in the price of Government support for the buying power of various farm commodities that are represented by the 1957 support prices recently announced by Secretary Benson.

As the MFA points out, farmers' costs are running at the highest level in history. The figures shown in the first column have been adjusted to show the buying power in current dollars of the support prices that were in effect for these commodities when Secretary Benson's term of office began 4 years ago.

Commodity	1952 support	1957 support	Cut in support
Cottonseed (ton)	$69.03	$46.00	Down 33 percent.
Cotton (pound)	.32	.28	Down 12 percent.
Corn (bushel)	1.66	1.36	Down 20 percent.
Barley (bushel)	1.26	.94	Down 26 percent.
Oats (bushel)	.81	.60	Down 25 percent.
Rye (bushel)	1.47	1.15	Down 21 percent.
Sorghum grain	2.46	1.83	Down 26 percent.
Soybeans (bushel)	2.65	2.09	Down 21 percent.

The figures above are an amazing record of 4 years of Ezra Taft Benson in Washington. Few persons could have spent a record amount of money and achieved a poorer record than Mr. Benson has done.

The American farmer, be he cotton or dairy, is tired of farm-problem platitudes. He no longer believes in the time-honored slogan of the GOP—In flexibility we trust.

New Industry for Central Kansas Drought Area

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a resolution forwarded to President Eisenhower by the LaCrosse Chamber of Commerce, LaCrosse, Kans., which resolution is dated February 7, 1957:

Whereas the area comprising the Central Kansas Industrial Development Association is in the drought-stricken area of Kansas; and

Whereas this drought condition is of such serious nature that regardless of favorable weather conditions, it will affect the economical condition of this area for not less than 2 years in the future; and

Whereas the oil industry which we have enjoyed for the past many years is rapidly depleting; and

Whereas many small machine shops which have been tied in with the oil and agriculture are finding it impossible to stay in business and that such industries are manned with the very best of mechanical help:

Now, therefore, we, the members of the LaCrosse Chamber of Commerce in regular assembled meeting on this 7th day of February 1957 do hereby memorialize our Government to consider a means of assisting

such small industries as well as additional industries in financing, leasing, and otherwise securing the necessary machine tools to participate in the many subcontracts which the national defense program is creating. Thus furnishing them with the necessary help and information needed to participate in these lettings.

This is one positive way of balancing the economy of this area which is, and has been, depending entirely on oil and agriculture, and will create part-time employment for many small farmers, who otherwise will have to move off the farm;

That copies of this resolution be mailed to the following persons and departments as well as to the President of the United States, Dwight D. Eisenhower.

LLOYD MAGGARD,
President, LaCrosse Chamber of Commerce.

Politics Dominate Corn Bill

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following article from the Sioux City Journal of February 26, 1957:

POLITICS DOMINATE CORN BILL

The predictions of those who know congressional agriculture bloc politics are more borne out by the political production known as the democratic farm bill, which the House Agriculture Committee on a straight party line vote has offered for passage.

It was almost a foregone conclusion that if Congress was asked to reopen soil-bank debate to provide special action for the commercial Corn Belt, the result would be a flock of new demands for every segment of agriculture.

When commercial corngrowers returned an indecisive vote on two corn plans, they opened the door wide open to logrolling politics. Those lawmakers who have offered bills along the lines of the program that received more than a 60 percent indorsement by corn producers have been ignored, and their goal of early action that would enable the commercial Corn Belt to cooperate best for the oncoming crop season completely was disregarded in favor of tampering with the programs in every basic commodity area—tobacco, cotton, wheat, as well as corn.

As it stands, the democratically authored bill before the House offers practically little if anything usable to the commercial corn belt that was not contained in the soil bank base acreage program offered it in the December referendum.

The joker in the Democratic bill is a vastly more complicated program which piles on special soil-bank gimmicks and bonuses of primary benefit to the areas outside the Corn Belt, and resulting new soil-bank costs, the magnitude of which cannot be gaged at all at a time when the farm budget is already projected at some $5 billion and the overall Federal budget will be lucky to stay in balance unless some unexpected savings can be made.

It seems very simple to some Corn Belt people who believe that Congress can give special treatment to one commodity bloc without voting additional new subsidies to every other commodity area of the farm industry. The House committee action demonstrates anew that whenever one area goes after something additional, all the areas are determined to get it whether they need it or not, and to hang with the overall cost.

It is, of course, too soon to predict with any accuracy the shape of the final farm legislation. But of this Corn Belt farmers can be certain: The final legislation will not come until Congress has catered to nearly every agricultural interest and the Democratic majority has done its best to maneuver the administration into a bad light.

That the opposition will go to almost any lengths to do this is fully evident in the reckless proportions of the House committee's action. Politics for 1958 and 1960, not a solid sensible start for the soil bank's first full year, is too likely to be the dominating factor in the agricultural debate from now on. A workable program, within reasonable bounds, will be a miracle unless statesmanship, undiscernible as of now, makes itself felt soon.

Positive Action Toward Development of the Resources on Indian Reservations

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. METCALF. Mr. Speaker, recently the Council of the Episcopal Diocese of Chicago adopted three resolutions asking Congress for positive action toward development of the resources on Indian reservations.

These resolutions follow, together with the council's explanatory statement:

Now, therefore, be it

Resolved, that the Council of the Episcopal Diocese of Chicago ask (1) Congress so to modify H. Con. Res. 108 (83d Congress) that it state positive services to the development of the Indian tribal resources in capital investments, full utilization of natural and physical resources for the benefit of the people and technical assistance in planning and establishing services to provide for the utilization of these resources.

(2) That Congress so amend Public Law 280 that consent of recognized Indian tribal organizations must be obtained prior to any transfer of jurisdiction of Indian reservations from Federal to State governments.

(3) That the relocation program be so defined as to present to the Indian peoples accurate and true information about relocation and its attendant responsibilities and satisfactions, and that it not be undertaken until all physical and human resources, actual and potential, within the reservation or its environs fully utilize the skills and abilities of the people except as any individual may desire to leave the reservation for outside employment or living.

That this relocation program be developed in such a way as to give full consideration to the human dignity and value of each individual including all family members so relocated.

House Concurrent Resolution 108 (83d Congress) and Public Law 280 enacted July 1953 are intended to end the supervision of Indian affairs by the Federal Government as follows:

H. R. 108 (1) End all Federal relationships with the tribe, including trusteeship of tribal and individual property, all supervision of tribal assets and tribal government and all Federal services; (2) Transfer tribal assets to individuals, partnerships, corporations or to a trustee as the tribe elects. Allow tribal members to sell their undivided share in tribal assets; (3) Distribute tribal money on deposit in the United States Treasury on a per capita basis.

Public Law 280. Transfer to the State of all services formerly provided by the Federal Government, bringing the tribe and all its members under the laws of the State. Cancel all provisions for tribal self-government except the self-government allowed any community under State laws. Cancel Federal corporate charters.

From the foregoing, it is clear that these laws are attempts to deal with complex social, economic and cultural factors clearly beyond their domain and with a long historical relationship not so easily broken.

These factors of culture, economy, and social relations must be recognized in the following ways:

Each tribal organization has over the years built relationships not only with the governments of the States in which they are severally located, with the Federal Government and its agencies, but also with the various members of the tribes themselves.

Each reservation has physical assets of greater or lesser value, depending upon its extent and location. These reservation areas are granted to members of the several tribes or to tribal arganizations themselves. Under such grants is implicit the need to develop them for the benefit of members of the tribe under the conditions of the grants. Such improvements require capital, technical advice in land use, and mineral development. That the Indians can and do make such improvements is evidenced by the increase of Indian holdings of 10 million acres between 1933 and 1950.

Under a sustained Federal Government policy of land disposal this acreage is now being reduced at the rate of 500,000 a year beginning in 1953.

Under the current administration it is policy to order the termination of Federal responsibility to tribes with the most valuable assets, many of which have been developed in such a way that any dislocation of the holdings will devaluate all of the property.

It must be remembered that the removal of property from a tribe or from individuals produces instant economic dependency which affects not only a single person but an entire economy. Such action forces the individual into either dependency or relocation.

Evidences of the inadequacy of services already in existence can be gleaned from these facts.

"Proportionately, the Indian population during 1953 had 20 times as many deaths from measles as did the non-Indian population, 9 times as many deaths from tuberculosis, 4 times as many deaths from pneumonia and influenza and 3 times as many infant deaths."

"The infant mortality rate of our Southwest Indians is 139.4 per 1,000 live births as compared with 33.2 per thousand for non-Indians in the same geographical area."

Similarly education and welfare services are minimal providing little more than passing attention to the needs of the various tribes.

The opinion of the American Anthropologist indicates the attitudes of the leading students of the question:

1. "The Indian in the foreseeable future will remain a series of separate and identifiable groups despite absorption of some individuals."

This is in sharp contradiction with Federal policy and the American history of cultural absorption. This two-pronged tenacity accounts for much of the failure and frustration in Indian-white relations.

2. "Over the years, the Indian can expect no consistency in policies regarding him."

3. "The interest of the dominant society will take precedence over Indian interests

in any policy decision: Indian interests will be considered only when they coincide or at least do not contradict white interests."

While this dominance of interest is often the inevitable product of uncontrollable social forces, there are today many instances where the predatory hand of vested interests deserves severe condemnation.

4. "That the Indian can do little to affect decisions concerning Indians and that sympathetic non-Indian groups are virtually powerless."

5. "The turning over of Indian Affairs to the States is inevitable and will result in increased hostility and incapacity to render the requisite health and welfare services."

Furthermore, although it is the essence of our American form of government to obtain the consent of the governed, we find instead Indian organizations and associations protesting the economic and social policies of the Federal government. These organizations have submitted positive workable programs for building decency and self-government by Indian leadership in cooperation with both the Federal government and the several State governments which has thus far been ignored.

I am particularly interested in the second resolution because I have sponsored legislation requiring consent of the tribes prior to transfer of jurisdiction over Indian reservations from Federal to State governments.

However, the Commission of Indian Affairs has called this an "insidious proposal" and has said that its adoption would be "the worst thing for the Indian people."

Mr. Glenn L. Emmons made these statements at the final general session of the Bureau-tribal conference in Salt Lake City, Utah, September 6, 7, and 8, 1956. Here are Mr. Emmons' remarks on this subject as they appear in the minutes of that conference:

I don't feel that I could let this opportunity pass without clearing up a certain point. I don't think the Indian people have a more sympathetic champion than I to your problems. I hope you all realize there are certain things that come up and we hear a lot more than you do. Of course, we have to sift a lot of suggestions that are made as a number of them are not in good faith. Sometimes it can be a very insidious proposal that looks beautiful, but when you analyze it, it is the worst thing for the Indian people. I refer to the word "consent." I told you what my definition of consultation was. That word "consent"—I wonder if you know what that would involve. In any action taken regarding Indian affairs, the council of the Indian people would be required to be there every time. Can you see what that would involve? You can see, too, the amount of money that would involve. The U. S. Government can't afford to pay that and I doubt if the tribes in America could efford to pay for this every week. We should talk things over as the Indian people have a lot of good suggestions that they can make and I think we should carefully listen to every proposal that an Indian makes and analyze it. It is true that only through understanding can we accomplish anything. Whether these meetings will be continued over the years, I don't know. I would like to have these meetings every couple of years if possible. Remember it costs quite a bit of money to have these meetings because we feel the Indians are invited guests and we should pay their expenses in attending these meetings. Some tribes can afford to pay their way but others can't and the poor one have to be considered just as well as the more fortunate ones.

One of those present commented at Salt Lake after hearing the above statement: "Until I heard this, I thought democracy rested on the consent of the governed."

Would Substitute American Doctrine for Eisenhower Doctrine

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the McComb (Miss.) Enterprise-Journal of March 1, 1957:

WOULD SUBSTITUTE AMERICAN DOCTRINE FOR EISENHOWER DOCTRINE

Clayton Rand, Gulfport editor, says that America needs a new doctrine—an American doctrine. He discusses the Monroe Doctrine, the Truman doctrine, and the Eisenhower doctrine, and then comes up with some demands for economy in general. He says:

"President Monroe must have made a mistake when he let his political followers and the press name his warning to the world to stay out of the South and Central Americas as the "Monroe Doctrine."

"The idea has spread until Truman who tried to keep China out of Korea and didn't—gave us the Truman doctrine. General Marshall got the crazy idea he could make Nationalist and communistic Chinese sleep together, figured as how he could dish out our billions all over the world and convert Communists into becoming Democrats or Republicans. Though we dumb taxpayers or our grandchildren will have to pay for this wild splurge into the third generation, he let us call it Marshall aid. He didn't pay for any of it any more than Eisenhower will pay for the Eisenhower doctrine, cooked up to save the Middle East just like we saved Korea, Egypt, and Asia. In fact, Eisenhower is paid by us to spend our substance in the Middle East, just like Marshall was paid by the American taxpayer to dish out Marshall aid all over the globe.

"Both Marshall and Eisenhower are United States Army Generals, and army brass is the most extravagant class of spenders on earth.

"What the country needs above everything else right now is an American Doctrine. This doctrine is so simple that even old dull Dulles can understand it. We have no legal or moral right to spend a single dollar of the people's money anywhere outside of our own country unless we get a dollar's worth of something in exchange for it, or that its expenditure is vital to the defense of our own country. Nowhere in the Constitution is the President or the Congress given the authority to tax the American people to support foreign governments.

"Many nations have gone busted exacting tribute from conquered foes, but we are determined to be the first to go broke feeding, financing and fortifying our foes. We are the first to meddle in the affairs of people everywhere, and itch to get in every dog and cat fight wherever they prowl.

"How can we finance Communist Tito to the tune of a billion, contemplate succor to Communist Poland, and then thumb our noses at the Soviet? If it is absolutely necessary to destroy Communism, why fool around about it in Yugoslavia, Poland, or Egypt?

Under any circumstances how do we justify ourselves in pouring out our wealth to Tito or Nehru, Yugoslavia or India, to purchase their neutrality with a bribe? They are either for us or against us. You can't trust a man like Tito who has both hands outstretched for succor, one for United States of America and the other for the Soviet.

"In the meantime we are faced with the biggest peacetime budget in history—$71,800,000,000. Ike calls on businessmen to avoid unnecessary price increases, especially at a time like the present when demand in so many areas presses hard on short supplies. He pleads that increases in wages and other labor benefits be reasonably related to improvements in productivity. He calls for a commission to study and make recommendations for strengthening the Government's financial system. He says we must economize, balance the national budget, and pay something on the national debt and then, according to his own budget, proposes to spend money like a drunken sailor.

"Neither Roosevelt nor Truman, with all their orgy of extravagance could match Eisenhower who preaches economy out of one corner of his mouth and asks for billions to squander out of the other.

"Our economy has become strictly a political economy. It's inconsistent to preach thrift while we throw away our substance all over the earth. It's silly to throw away billions in the Middle East and waste millions right here at home building public housing where it is neither wanted nor needed, and then prate and preach about the need for economy.

"The American doctrine should first set the good example. We should show the world we can be strong as we have in the past, conserving our own resources and fortifying our own defenses. The directions we go now—many of them—in the light of history lead to chaos and national suicide. And who will save us when we are exhausted?"

The other day we met a distinguished journalist and talked with him at length. He was pessimistic. Said he, "We now not only have a dangerous trend in our country but a tempo of the trend which cannot be stopped. It means that we have already lost our form of government. It is noy only a matter of time."

Mr. Rand seems to concur with the journalist referred to above. Has the trend gone so far that it cannot be stopped? This we cannot say. But we can say that mighty few people seem to indicate a desire to halt this dangerous trend.

The Junior Colleges

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1957

Mr. DIXON. Mr. Speaker, this week the American Association of Junior Colleges meets in annual convention in Salt Lake City. Utah is honored to be host to this great organization, 600 colleges strong, and extends congratulations to its president, James M. Ewing; its executive secretary, Jesse B. Bogue; its other officers, directors, and membership.

Much interest is centered around the Salt Lake City convention because our country turns to the junior—community—college to accommodate a sizable

portion of the influx of students soon to reach college.

It is none too early now for Members of Congress to formulate plans to take care of the incoming college population. Even if we start now, I fear it might be a case of too little and too late as it appears to be with regard to aid for the elementary and secondary schools.

The situation brings to my mind the fable of "The Fox and the Wild Boar," in which the fox came upon the wild boar sharpening his teeth on a rock. "What are you doing that for?" asked the fox. "Because when the hounds are after me it's too late," said the wild boar.

The tidal wave of students is now beginning to flood the high schools and will soon reach our colleges. Twice as many youth will graduate from high school in 1969 as did this past year. This assures us that by 1970 there will be twice as many people attending school on the college level. If building construction progresses at its present rate of $750 million every year until 1970, there will be room for only 4.3 million of the 6 million applying for admission.

What then are we going to do about it? President Eisenhower has already made a beginning by appointing a Presidential Committee on Education Beyond the High School. Its executive secretary, Dr. Elvis Stahr, will be one of the featured speakers at the Salt Lake City convention this week. Last November the Committee released a preliminary report. It recommends at the outset that Congress appropriate $2½ million to be distributed among the States to encourage and assist every State to develop a State program designed to meet its college problems. The first thing that Congress can do about it is to appropriate this money.

The President's Committee takes the position that equality of educational opportunity beyond the high school is the goal to be reached and that four important developments are necessary before institutions of high learning are able to achieve that goal. These developments are:

Quantity: There must be a sufficient number of institutions and faculty persons to provide for all qualified students.

Quality: The quality of opportunity offered must be good.

Variety: There must be a variety of educational institutions under a diversity of auspices to offer many choices to individuals of various abilities and talents who differ in interests, aspirations, and beliefs

Accessibility: There must be facilities for education which are accessible to all students if equality of opportunity is truly to be realized.

Now how can these goals of quantity, quality, variety, and accessibility be realized?

More than 20 years' experience as an administrator in a junior college has satisfied me that at least part of the answer may be found in an expanded junior college movement. In fact, the Truman Commission on Higher Education, of which I was a member, stated boldly that the bulk of the increased college enrollment during the next decade should be absorbed by the community—junior—college.

The junior college is usually a 2-year local institution—community or regional—catering to a wide diversity of student population. It has an extremely practical bent. It goes into all of the homes of all of the people who do all of the work of the community and helps them to do their work better and live more happily in those homes. Its mother is the high school and its father is the university. The father wants junior to walk in his footsteps but junior is already making some significant footsteps of his own. For example, junior is less bound by tradition, less regimented by standard university curricular requirements and far more free to do those things most needed to meet the needs of his own students and the needs of his own community.

The junior college takes the position that there is nothing sacred about the word "four," so fixed by senior institutions as the minimum number of years required for a bachelor's degree. It points out that there are many skilled and semiprofessional occupations for which youth or adults might prepare in 1 or 2 years. Consequently the junior college gives a certificate of completion to students finishing a 2-year terminal curriculum and a title of associate of arts or associate of sciences for students transferring into the university upon completion of the first 2 years of the traditional university program.

Those completing the terminal—nontransfer—program are encouraged to pursue adult classes in night school. Approximately 55 percent of the junior college graduates are graduated from the terminal programs and go into industry or into semiprofessional work while 45 percent transfer into the junior year of the university.

THE JUNIOR COLLEGE IS SENSITIVE TO COMMUNITY NEEDS

The junior college has an adaptive mechanism within the structure of its organization which makes its program extremely sensitive to community needs. In setting up a terminal vocational program it usually takes steps as follows: first, it makes an occupational survey to determine positions available in the particular occupation being considered; second, it organizes an advisory committee of people engaged in the occupation; third, it develops the course of study with the help of the advisory committee; fourth, it installs the program; fifth, it places the graduates upon completion of their school program; and sixth, it supervises and assists those graduates to succeed on the job.

Now let me give you three illustrations out of my own experience to show the adaptability of a local college which is free, as far as its terminal program is concerned, from the uniformity and regimentation of the university standards.

During the darkest days of the depression when the Weber Junior College graduates could not find work, the occupational survey of the Ogden, Utah, area showed that the 3 railroads centering at Ogden could use 25 station agents. While hundreds of men applied, no qualified men were available. Weber Junior College organized an advisory committee of 3 union station agents and 2 railroad administrators, set up a course for station agents, hired the best agent the railroads had as a teacher, and in 12 months turned out 25 good operators, all of whom the committee placed in positions. Such a course would not be eligible for credit or be considered academically respectable by a university.

Four years ago our survey showed that the hospitals in the Ogden area were short of nurses because the 3- and 4-year programs of the university were not turning out nurses fast enough. We formed an advisory committee consisting of the president of the county medical association, the head nurses of our two hospitals, the director of nursing at the State university, the State president of the nursing organization, and the State supervisor of nursing registration.

The committee heard of the nursing education research at Columbia University—encouraged by our esteemed Congressman FRANCES P. BOLTON—which revealed that by placing the nursing program under the college itself and by using the hospitals as a training laboratory, nurses could qualify for registration in 2 years instead of a minimum of 3 or 4 years. Furthermore, it was pointed out that by permitting the girls to live at home instead of living in the nursing home at the hospitals, the hospitals would be freed of the expense of the nursing home, could use it for other purposes, and the girls' school life would be far more attractive.

We announced and offered the 2-year nursing program. Immediately we had more applicants than student stations because living at the nursing home proved to be the chief barrier to girls entering nursing. Fully a year's time was saved by eliminating routine hospital services which the hospitals required the girls to perform long after the educational values of these services had passed. All of the first 2-year graduates except one passed the State examination last year and I am told ranked as high as the nurses with 3 years' training in the old program.

One of the features of the American Association of Junior College Convention now in session at Salt Lake City is a trip to Ogden so the administrators can see the Weber Junior College 2-year nursing program firsthand and appraise its outcomes.

Wealth is created by money, materials, and men, but the greatest of these is men. The dispersal of industry legislation passed by Congress last summer holds out great promise to communities under 200,000 population if conditions are right. One requirement is a high-class competent labor force. The proven ability of Weber Junior College to turn out good technicians was one of the important considerations leading recently to the selection of Ogden as the site of the large Marquardt Ram jet-engine plant.

THE JUNIOR COLLEGE MEETS THE COMMITTEE'S TEST OF VARIETY

This 2-year school caters to a widely diversified school population. Students who want to go on to a 4-year degree can find the standard first 2 years at the junior college and then transfer to the university. Those desiring a trade or semiprofessional preparation can complete a well-rounded 2-year course consisting of both vocational and general education which is more broadening and far richer in social and civic values than the narrower work of a strictly trade or area vocational school. And those who want a more narrow intensively vocational program of shorter duration can find that as well and in a better setting.

The junior college caters to people of all ages. Its adult and night school program is meeting with unusual success.

The junior college is also adapted to varying capacities and abilities. It takes an intelligence quotient of about 115 to gets a C or passing grade in the universities. Two-thirds of our youth have not an intelligence quotient that high, yet a large percentage can find their nitch in the variety of offerings of the junior college. Only about one-third can complete a 4-year program at the university while more than one-half can complete a 2-year program at either the junior or senior institution. This is one of the reasons why one-half of the students in the senior colleges discontinue their work on or before the end of the sophomore year.

The junior college is admirably adapted to help the student discover his interests, aptitudes, and abilities. Many students are what President Arthur Adams, of the American Council on Education calls late bloomers.

It strikes me—

He says—

that identifying them (the late bloomers) and encouraging them is a major task of the junior college.

Many of our most outstanding scholars are discovered in the terminal programs of the junior colleges, and encouraged to go on into the senior schools. These valuable young people might otherwise never have been discovered.

The smaller school of the junior college variety can give better individualized instruction than the huge university. Our industrial age is so accustomed to the goals of speed, mass production and uniformity of product that it tends to impose those goals on the college to the detriment of the individual enrolled. The school should resemble a clinic, where each patient is treated in accordance with his own needs, more than it should resemble a huge factory.

THE COMMUNITY COLLEGE MEETS WELL THE COMMITTEE'S TEST OF QUALITY

Several rather reliable followup studies have been made of the success of junior college transfer students at the university.

Grace V. Bird, associate director, relations with schools at University of California, arrived at the following conclusion:

Junior college transfers make records approximately the same as those made by transfers from 4-year colleges and by native students. There is clear evidence that junior colleges are salvaging a large number of students for success in advanced studies who would otherwise have missed them entirely.

THE JUNIOR COLLEGE MEETS THE COMMITTEE'S TEST OF ACCESSIBILITY

The community college makes college available to more people. Coleman Griffith, in his book The Junior College in Illinois, found that only 19.7 percent of high-school graduates went on to college when there was no free junior college in their community as against 53.5 percent when a junior college was present. In the latter case, also, 46.7 percent of the graduates of lower economic status were found to be attending the junior college.

George Meany, president of the AFL–CIO, has stated that the American worker could not afford in many cases to send a child on for 4 years of education, but a 2-year program could be afforded.

The Truman Commission found that the financial barrier was the greatest barrier in the way of equal education opportunity to all American youth and that the costs to the student are going up rapidly. The Commission refers to a study of 1 State which shows that only 1 out of 3 of the highest 10 percent of the high-school graduates ever entered college.

W. Hugh Stickler made one of the most reliable studies of comparative student costs in public senior colleges, private senior colleges, public junior colleges, and private junior colleges. In these costs he included tuition, fees, room rent, board, books, supplies, clothing, transportation, and miscellaneous expenses. His results are as follows:

	Cost per year
Public senior colleges	$1,304
Private senior colleges	1,531
Public junior colleges	1,062
Private junior colleges	735

It costs the student nearly twice as much each year to attend school at a public senior college as it does a public junior college.

THE JUNIOR COLLEGE MEETS THE TEST OF QUANTITY AND ECONOMY

The junior college is more economical. Senator CLIFFORD CASE of New Jersey, who, incidentally, is an alumnus and trustee of Rutgers University, in a recent news release describing the advantages of the community college, stated:

Clearly, the community-college plan produces the most for the tax dollar. It avoids the expensive costs of building dormitories and of long-distance transportation. It gives the student a chance to live at home, to find part-time work among his friends and neighbors, and perhaps to combine education and work.

It is to be hoped that the States will, in their planning with the $2½ million—which I hope our legislation in Congress will give them—give careful study toward establishing a coordinated system of public education beyond the high school which will include the junior college as an integral part of that public-school system and give this segment its fair share of dignity, emphasis, and financial support. Not long ago the completion of the eighth grade constituted in people's minds the end of public-school education. The goal was then raised to the completion of high school. And now nothing short of the completion of the junior college is the goal.

Conservation Successes and Failures of Past Year

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1957

Mr. METCALF. Mr. Speaker, once again our Nation's Capital is host to the North American Wildlife Conference, which was born here 22 years ago.

About 1,500 conservationists are participating in discussions covering the whole broad range of conservation, including soil, water, timber, and wildlife. Delegates represent all types of organizations, public and private in all 48 States, the Territory of Alaska, and the Provinces of Canada and Mexico.

Traditionally, the conference is opened by one of this country's great conservationists, Dr. Ira N. Gabrielson, president of the Wildlife Management Institute and former Director both of the United States Fish and Wildlife Service and of its predecessor, the United States Biological Survey.

In his address today, Dr. Gabrielson summarized the conservation successes and failures of this past year and listed some of the goals for this year. As he pointed out, in the 22 years since the first conference we have seen a rapid growth in the knowledge and understanding of conservation problems. But there still is much to learn and to teach to those who have yet to appreciate conservation and what it means to our American way of life.

Dr. Gabrielson's summary, which is of immediate concern to Congress, follows:

This has been a rather momentous year in conservation history. There have been successes and failures, but the gains seem to be of more significance than the losses. So many things have happened that it is not possible even to list all of them, but it might be well to mention a few.

The good forestry and wildlife provisions in the Soil Bank Act are there because the conservationists across the country united to put them there. The forestry provisions are being implemented, but so far the wildlife provisions have been applied very sketchily. We hope that during the next year steps to carry forward this part of the Soil Bank Act will become more fruitful.

The new Pollution Act, a much stronger law than the original legislation, and also providing more funds for this important work, was another victory for the conservation forces of this country. Nevertheless, appropriations still are needed to carry it out completely, and the victory will not be won until adequate funds are made available for carrying out this important program.

The Fish and Wildlife Service's reorganization bill, which upgraded this important work in the Department of the Interior and provided an assistant secretary for fish and

wildlife, was a step forward. It might also be mentioned that during the past year, better appropriations have been made available for the work of the Forest Service, Fish and Wildlife Service, National Park Service, and Soil Conservation Service which reflects the conservation thinking, both on the part of the public and many of the Members of Congress.

The passage of the bill retaining in public ownership lands which the Florida Game and Fresh Water Fish Commission had undertaken to develop for fish and wildlife purposes around the Jim Woodruff Reservoir was an important victory because of the precedent it established. The problem will not be resolved, however, until an amendment to the Coordination Act is passed which corrects the loopholes in the present Coordination Act and the inequities in the present joint land acquisition policy signed by the Interior Department and the Army Corps of Engineers.

A bill to transfer part of the Wichita National Wildlife Refuge to the Army failed to pass due to the active opposition of practically every conservation organization in the country. An agreement by the Army to accept a use permit as a buffer zone on 3,600 acres lying along the south boundary of the refuge has just been announced.

Against this we have to list the failure to enact the key deer bill, which was passed by both the House and the Senate committees. It failed, however, to pass the Senate due to the last-minute objections on the part of one of the sponsors of the bill. We hope for better results this year.

The proposed watered-down amendments to the Coordination Act got nowhere. Not even committee hearings were held. A much more vigorous proposal is being circulated, and we hope it will be introduced and backed by all conservation groups. If this bill can be introduced and supported, it has a good chance of passage.

Bruce's Eddy Dam authorization got through on the omnibus bill, despite the opposition of the conservationists. It was included late in the session and there was little opportunity for hearings on this item and on an item that would turn over to the Army engineers a drainage right-of-way through the White River refuge, one of the major wintering grounds in the refuge system. The proposal gives no voice to the Interior Department as to the location of drainage canals, no matter how much damage they might do to the refuge and its present management program. Both of these items were saved when President Eisenhower vetoed the omnibus bill, and we certainly owe him a vote of thanks for that. Both items are again included in the present bill, and it will take vigorous opposition on the part of conservationists to prevent their enactment.

While you are in Washington, you have a fine opportunity to let your Senators and Representatives know how you feel about these two items.

In closing this brief legislative summary, I think that it is proper to say that conservationists are glad to see so many of the stanch conservation Members of both the Senate and the House return to serve the public further. Senator James Duff, of Pennsylvania, was the only outstanding conservationist who was not reelected. All of the others who fought valiantly on the conservation side, both Democrats and Republicans, are back with us, and we can all rejoice in this fact.

In putting the fish and wildlife reorganization bill into effect, there have been some tentative proposals that have been widely opposed by conservationists. These, however, have not been put into effect. Most conservationists have been immensely heartened at the appointment of a well-known conservationist, Ross Leffler, as the new Assistant Secretary for Fish and Wildlife. While we may not always agree with his decisions, we can be sure that they will be made from a conservation point of view. Secretary Seaton has also greatly heartened the conservationists by his interest and understanding of the various matters that have been brought to him. It appears that this part of the conservation program is again in forward gear.

Many conservationists are particularly heartened by the fact that in the Fish and Wildlife Service reorganization career men have been appointed to the important administrative posts. This should do much to strengthen the morale of the Service.

All conservationists are looking forward hopefully to the future program now being developed in the United States Fish and Wildlife Service. We all hope that it will be broad enough and imaginative enough to really carry on the job and to establish goals that will be eminently worth fighting for.

The Military Obligation of Young Americans

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1957

Mr. BRAY. Mr. Speaker, will you serve 2 years in the Army under the draft, or will you serve 6 months in training and then a few years attending weekly drills in a nearby armory with 15-day training each summer?

That is the choice confronting the young men of America who are under 26 years of age. Since the Army cannot obtain by enlistment enough soldiers to keep it at the strength our Government believes necessary, the additional men must be obtained by the 2-year draft.

The American people have always opposed maintaining a large Army during time of peace. Today the Army is relatively large, but it is far smaller than would be needed in any major emergency. To meet an emergency the United States must now, as it always has in the past, depend principally on a civilian Army raised in time of need. The nucleus of such a large civilian Army is our Ready Reserve, composed of the National Guard, called the militia from colonial days, and the Organized Reserve.

To meet this need our country now has developed a definite policy. The youth of America is being given an opportunity to join a Reserve—National Guard or Organized Reserve—unit and take either 11 weeks or 6 months of active duty training, followed by participation in Reserve training for a specified time. Reserve training usually consists of a 2-hour training period in the local armory each week and a 15-day summer training period in camp. A reservist receives the same pay for each drill period as he would receive for each day in the Regular Army.

MEN BETWEEN 17 AND 18½ YEARS OF AGE

Young men between 17 and 18½ years of age—until April 1 of this year—may enlist in the National Guard without taking any basic training and then must participate in Reserve training as set out above until they reach 28 years of age. After April 1 and before October 1 men between the ages of 17 and 18½ years of age may enlist in the National Guard, take 11 weeks' training and participate in Reserve training until age 28. Or if the volunteer takes 6 months' training instead of 11 weeks he will be required to serve only 3 years as an active reservist. After October 1 enlistments for the 11-week program will cease and only the 6-month program will be in effect.

MEN FROM 18½ TO 26 YEARS OF AGE

Until now young men from 18½ years to 26 years have had the choice of a regular enlistment in the services or waiting for a draft call. They now will have a new program which allows the young man in that age bracket to fulfill his military obligation by enlisting in the guard or Organized Reserve for 6 months' training and Active Reserve participation for 5½ years.

The young man may also wait until called by the draft for 2 years' active duty. After return from 2 years' training, he still has 2 years' obligation in the active Reserves. Since only those needed will be drafted, there will be some who, although not joining either the Guard or Reserve, will not be drafted. It is a calculated risk that some youths will prefer to take.

The program a young man selects does not reflect on his patriotism. Young men are merely, within certain limitations, allowed to choose how they will serve in peacetime; in the active Army or in the Reserve.

Resolution by the Chicago Dental Society

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. McVEY. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution drawn by the Chicago Dental Society, which has been transmitted to me by the board of directors of that organization. This resolution concerns H. R. 9 and H. R. 10, which have been introduced into the Congress by Representative JENKINS, of Ohio, and Representative KEOGH, of New York. It represents the deliberate judgment of a most intelligent and discriminatory organization, and I believe their attitude toward H. R. 9 and H. R. 10 should be made a part of the CONGRESSIONAL RECORD for the benefit of study by all Members of the House of Representatives.

The resolution from the Chicago Dental Society follows:

Whereas self-employed persons such as the members of our profession are not permitted to realize the tax benefits that are available under the Internal Revenue Code to officers

and employees of corporations with respect to funds placed in private pension and retirement programs; and

Whereas this is patently an unjust discrimination; and

Whereas the recently proposed H. R. 9 and H. R. 10 introduced by Representative JENKINS, Republican, of Ohio, and Representative KEOGH, Democrat, of New York, embody the principles that have underlain similar bills introduced by these two men in the past several years and gained the approbation and support of both major parties, of the President, of our leading tax authorities, and millions of self-employed persons; and

Whereas we feel that the plan has been instituted in other countries and found workable and feasible and because it is a sound program of saving and providing for future retirement funds which is of advantage to the country at large as well as the particular individuals involved: Be it

Resolved, That the Chicago Dental Society support the principles of H. R. 9 and H. R. 10, sometimes referred to as the Jenkins-Keogh proposal, and urges the Congress to enact it into law.

This Philosophy Is Simple

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. CEDERBERG. Mr. Speaker, one of the most comprehensible explanations of the operation of socialism and capitalism I have seen in a long time appeared a few days ago in my hometown newspaper, the Bay City Times.

It is so well presented that I would like to recommend its reading by my colleagues and for that reason I am submitting it for the RECORD.

Also dealing with our way of life here in America I submit an article which appeared in Sunshine magazine recently under the heading "In an Ideal America."

The articles follow:

THIS PHILOSOPHY IS SIMPLE

[From the Bay City (Mich.) Times of February 23, 1957]

Socialism levels down; capitalism levels up. Socialism reduces the man who has more. Capitalism ups all, including the fellow who has less.

Reduced to their simplest proportions, let us see how these two systems operate:

Picture a small community of 1,000 men. One is wealthy; the others are poor. Socialism levels down by equalizing the wealth and now all are poor.

Capitalism tries a different way. The rich man is allowed to retain his capital. He invests it in constructive enterprise. Five men develop thriving smaller enterprises required to furnish Man No. 1 with the many things he needs to operate his big business. This great industry employs many men at good wages. The five lesser manufacturers supply many well paying jobs. Many others become small or medium-sized businessmen, or succeed in a great variety of service trades and professions.

After a lapse of 25 years we take another census. The rich man is now richer. The smaller businessmen have grown rich. Most of the men employed in these industries have accumulated substantial savings, own stock in the companies they work for, or share in various incentive plans.

Smaller businessmen also are prospering and those in the professions and service trades are doing well. There is little need for bureaucrats as the whole system operates on the basis of the free market with a strictly limited government exercising few functions.

Consequently, taxes are low and the profits earned by the big, medium and small businesses are plowed back into them for expansion of their activities. This increases production and makes possible higher wages. In turn, the professional men, service trades and shopkeepers profit by the increasing amount of wealth that is being produced.

Some doctors, some lawyers and other professional men have earned substantial sums. All are free to work as hard as they like and to retain and enjoy nearly all of their earnings. Capital accumulates rapidly, making possible a continuous expansion of industrial activity.

To be sure, great inequality still exists but the poorest now have more than the richest under the leveling down of socialism. Capitalism has leveled up. It hasn't decreased anyone but it has made all more prosperous. Of course a few, a very few, are unfortunate or handicapped in some manner. They are liberally cared for by churches and private agencies set up to meet their needs.

It is better to help everyone up than to pull everyone down.

[From the Sunshine magazine]

IN AN IDEAL AMERICA

Every person should be free to pursue his ambition to the full extent of his abilities, regardless of race, or creed, or family background.

To associate with whom he pleases for any reason he pleases, even if someone else thinks it's a stupid reason.

To worship God in his own way, even though it is not orthodox.

To choose his own trade, and to apply for any job he wants; and to quit his job if he doesn't like it, or if he gets a better one, at any wage he cares to accept.

To go into business for himself, be his own boss, and set his own hours of work, be it 3 hours a week or 14 hours a day.

To use his honestly acquired property or savings in his own way—spend it foolishly, invest it wisely, or even give it away.

To offer his services or product for sale on his own terms, even if he loses money on the deal.

To buy or not to buy any services or product offered for sale, even if the refusal displeases the seller.

To disagree with any other person, even with the President of the United States.

To study and learn whatever strikes his fancy, so long as it seems to him worth the cost and effort.

To do as he pleases in general, so long as he does not infringe upon the equal right and opportunity of every other person.

This, in a nutshell, is the way of life which the libertarian philosophy commends. It is the way of individual liberty, of the free market, of private property, of government limited to securing rights equally to all.

Status of Forces

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. BOW. Mr. Speaker, the January issue of the American Legion magazine carried an article, We Learned About Jap Prisons From the Inside, based upon my interviews with two American servicemen who had been tried and convicted in Japanese courts under the authority granted Japan by our agreement on the status of our forces. Col. Howard S. Levie of the Office of Judge Advocate General of the Army has asked me to disclose the identity of the two former servicemen so that the Army may investigate their complaints of improper treatment in the Japanese prisons.

A part of the article reveals the ineptitude of Army officers who visited the prisons from time to time and who, according to the prisoners, seemed more interested in friendly relationshps with the jailers than in improving conditions of confinement. As I talked with these boys, I thought it was shocking that the Army apparently had made no serious effort to be informed of the conditions of their imprisonment. I am certain spot checks of the prisons or interviews with American servicemen after their release would have brought out all the facts stated in my article, and more.

I am certain that serious investigations undertaken even at this late date would reveal all that the Department of the Army could learn by interviewing the subjects of my article. For this reason, and because I do not wish them to be subjected to further harassment at a time when they are having the greatest difficulty in establishing themselves, I must decline to reveal their identity. Let me say, however, that I am personally convinced of the accuracy of their reports, and I think the article will have been well worthwhile if it arouses the conscience of the Defense Department with regard to the victims of the status of forces agreements.

In order to publicize my reason for protecting the identity of these former prisoners of the Japanese, I include Colonel Levie's letter to me and my reply made to the Secretary of Defense:

Hon. FRANK T. BOW,
House of Representatives.

DEAR MR BOW: I refer to your article entitled "We Learned About Jap Prisons From the Inside" which appeared in the January 1957 issue of the American Legion magazine.

The Department of the Army, as the designated executive agency of the Department of Defense for such matters, is in the process of investigating the serious charges set forth in this article concerning the Japanese prison installations in which convicted United States personnel are confined, the conditions under which such personnel are confined and the treatment which they receive while so confined. We recognize that you are as interested as the Department of the Army in a fair, impartial, and thorough investigation of any charge of mistreatment of American servicemen confined in Japanese prisons to the end that efforts may be made to correct any deficiencies that may exist.

Inasmuch as any congressional committee which might be called upon to consider the charges would require a complete report on a matter of this nature, it would be greatly appreciated if the full names of "Ed" and "Bill," as set forth in your article, could be made available to this office so that the investigation may be properly concluded.

It is noted that in a conversation with Mr. Esgain of this office on February 18, 1957, Mr. Melchior of your office confirmed the fact indicated in your article that the subject individuals are no longer subject to military jurisdiction since they are not members of the military establishment and ad-

vised that they have indicated a willingness to appear before any congressional committee concerned with the treatment of our soldiers in Japan.

The results of any investigation will, of course, be used for official purposes only.

Your interest in the welfare of these servicemen and of those who may find themselves in a similar situation is appreciated.

Sincerely yours,

HOWARD S. LEVIE,
Colonel, JAGC, Chief, International Affairs Division.

CONGRESS OF THE UNITED STATES,
House of Representatives,
Washington, D. C., February 25, 1957.

Hon. WILBER M. BRUCKER,
Secretary of the Army,
Washington, D. C.

DEAR MR. SECRETARY: I am in receipt of a letter from Col. Howard S. Levie, JAGC, dated February 20, 1957, requesting the full names of the men whose experiences were described in my article in the American Legion magazine entitled "We Learned About Jap Prisons From the Inside." I regret that I am unable to comply with his request.

These men served their sentences of imprisonment in Japan. They both received the type of discharge as provided, I believe, by regulations. Their records made adjustment to civil life rather difficult, particularly in the matter of securing employment. I do not wish to subject them to the embarrassment or harassment of further inquiry by Army investigators. It might cost them their present jobs and upset the whole new pattern of existence they have tried to build for themselves in their communities.

Frankly, I am unable to understand why the Department of the Army must know the identity of these men in order to make a complete investigation of the conditions which have existed in the various prisons in Japan. Apparently your officers have lacked either the ability or the desire to penetrate the window dressing supplied by the Japanese officials whenever an inspection was imminent. Some of the inspectors were either too anxious to maintain cordial relations with the Japanese officials or approached their duty with the feeling that the prisoners deserved what they were getting.

I have found sufficient corroboration of the stories of these former prisoners to accept their statements as true. It is to be expected that some persons will attempt to discredit them. I hope that your present investigation will be more thorough and productive than inspections have been in the past. Any effort put forth by the Defense Department to lessen the hazards of service in foreign countries is commendable. However, no panacea will cure the first wrong, which was the surrender of jurisdiction over our servicemen in the first instance.

Sincerely yours,

FRANK T. BOW,
Member of Congress.

Landlords Dump Tenants for Soil Bank Payments

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter and petitions forwarded to me by one of my constituents, Mr. Murlin Carter, Syracuse, Kans.:

Enclosed find petitions addressed to you and brought to me to forward on to you. These petitions are self-explanatory; however, I would like to add the following: Notices have been sent by six landlords that I have heard of and undoubtedly several others. Some of the tenants being so notified have been with the same landlord for over 20 years, so the reason is apparent. We are aware of the conditions on the back of the soil-bank application but that is felt to be too mild and there should be either additional teeth added or more instructions from a higher level. The fact that the landlord may be thrown out of soil-bank participation does not help the tenant that has been dispossessed. The notices to vacate are coming from both the local and the nonresident landowner. You are aware that over half of our county is owned by nonresidents and surely this is true of our better land. To be sure, the sales of the last several years have gone to the nonfarmers as the resident farmers have been too hard hit by Secretary Benson and the drought to buy much of anything, much less the farms that have been selling. We have been most pleased by your efforts in our behalf, and we are more than proud and enthused to have a man in Washington with the punch, knowledge, and background to give us the kind of representation that the Great Plains sorely needs.

Sincerely yours,

MURLIN CARTER.

SYRACUSE, KANS.

PETITION TO CONGRESSMAN J. FLOYD BREEDING

We, the undersigned farmers of Hamilton County, Kans., are petitioning you as we feel an injustice is being done the small farmers by the landlords.

These farmers have farmed the land at a loss for the last 3 years and now the landlords are taking their land so they can collect the soil-bank payments. How can the tenants make up for their loss without land to farm? We feel that the only solution to this is a provision in the soil-bank plan that any landlord who takes his land from a tenant, without just cause or for personal gain, should not be allowed to collect from the soil bank for 5 years.

We feel that you understand the problems of the small farmers and will give this matter due and just consideration.

Mr. Nixon's Mission

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. HILLINGS. Mr. Speaker, once again Vice President NIXON has gone

abroad to create good will for America. All the reports from Africa where he is representing President Eisenhower indicate his tour has met with tremendous success and that it will result in real benefit to our country and the free world. I wish to call to the attention of the House, the following editorial which appeared in the New York Times on March 3, 1957.

The editorial follows:

[From the New York Times of March 3, 1957]

MR. NIXON'S MISSION

Vice President NIXON is on an important trip. He is giving fresh emphasis to our concern regarding the continent of Africa as a whole and some of the states within it in particular.

Originally the purpose of the NIXON mission was to represent the President at the inauguration of a new free government on the West Coast of Africa, when the historic Gold Coast becomes the Commonwealth of Ghana on Wednesday. Since then, however, the scope and objectives of the trip have been enlarged. Mr. NIXON will go to seven African states, in addition to Ghana, and will also make a stop in Italy. In each of his visits he will bear a message of interest and goodwill from the United States.

The Vice President is no stranger to this sort of activity. He has traveled as an envoy to express our national interest in Asia, in Latin America and, most recently, in Europe. He has been consistently successful in this capacity.

Behind and beyond all this lies the gradual emergence of the Dark Continent from some of its darkness. It has frequently been said that Africa is "stirring" and this is true. New modes of thought and behavior are making themselves felt. Some new political structures, such as those in Ghana, the Sudan, and north Africa are being developed. Some areas are already even further advanced. It is a time of change and growth.

It is the aim of the United States—and some other great powers—to help to make this change and growth orderly, fruitful, and free. We are conscious of the tremendous resources of the continent, not merely in material things, but also in human beings. It is right, therefore, that we show our interest not merely in plantations and mines. We are also interested in persons and concerned for them. It is a vital part of the Vice President's mission to show this concern. He has made a good start in that role.

Post Office Hopes Go Glimmering as White House Stops Building Plans—Vacant Lot Owned by Government Called Ike's Half Acre

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. EVINS. Mr. Speaker, the following story appeared on the front page of the Carthage (Tenn.) Courier newspaper, dated February 21, 1957:

Hopes for a new post-office building at Carthage, which had been alternately low and high for the last 2 years, went to a new low this week with the announcement that the White House has ordered a halt to all construction plans to help stop inflation.

Senator ALBERT GORE told friends here last week that the lease-purchase program has been stopped. Representative JOE L. EVINS told the Courier this week the history of the cessation. His letter fully explaining the situation follows:

"The long-anticipated Federal building and post-office construction program is being stalled and delayed by orders from top officials in the administration.

"This week Administrator Franklin Floete, head of the General Services Administration, which supervises the Federal building program, testified before the House Appropriations Committee that he has received instructions from the White House, the Secretary of the Treasury, and the Director of the Budget that the construction of Federal buildings and post offices under the lease-purchase program will be deferred for the time being because of the fear that these construction projects will contribute to inflationary pressures.

"Two years ago, President Eisenhower in his state of the Union message endorsed a long needed and awaited public-building program and stated that the time had arrived when we must move forward in the construction of needed post offices and Federal buildings. When the President came before the Congress this year, he stated, however, that because of inflationary conditions that projects which could be deferred would be postponed. After the President made this statement, Administrator Floete and Post Office officials were instructed to halt the Federal building program.

"The Congress has approved construction of almost 150 Federal buildings under the lease-purchase program; however, only one, a post office at Rock Island, Ill., is under construction. Representative JONES of Alabama announced, shortly after Administrator Floete told Congress of the halted construction, that hearings will be scheduled by the House Public Works Committee to investigate and inquire into the workability of the Federal lease-purchase building program.

"Many are of the opinion that the economy of this Nation is spotty in areas and that construction and improvement of needed post-office buildings in certain regions would bolster the economy.

"The halting of this program just as it was getting underway was done by administrative action, notwithstanding the fact that the Congress had passed the required legislation and authorized sufficient appropriations to initiate the program. Deferment of this domestic program does not meet with the approval of a large number of the Members of the Congress.

"In his testimony before the House Appropriations Committee, Administrator Floete did indicate that the Federal agencies will proceed with the acquisition of sites for Federal buildings and contracting for architectural plans will be completed for construction, but the actual building will be halted until the present order is rescinded by the White House.

"A number of Federal buildings and post offices in our district and State affected by this order includes buildings at Carthage, Smith, Lafayette, Hartsville, Woodbury, and Murfreesboro, plus additions to buildings at McMinnville, Fayetteville, Kingsport, Nashville, and other locations."

In a recent issue of the Nashville Tennessean there also appeared a story by News Columnist Elmer Hinton which indicates that the vacant post-office lot held in Carthage, Tenn., for more than 17 years, with weeds growing on the lot, has now been named in honor of the President. It is called Ike's Half Acre. Columnist Hinton and Carthage Editor Sam Neal indicate that construction of a building in Carthage would certainly not contribute to inflationary pressures, but would perhaps help relieve some of the spotty unemployment and business lag.

Mr. Hinton's comments follow:

HERE'S A DOUBTFUL HONOR FOR IKE

(By Elmer Hinton)

In Carthage a plot of ground has been named for President Eisenhower. The honor was bestowed by the editor of the Carthage Courier.

It's being called Ike's Half Acre, where a new $300,000 post office was to have been built.

"But now the post office won't be built," comments Editor Sam Neal, "because the administration is afraid it might cause inflation."

"Last year, before the election," the editorial said, "the General Services Administration was bursting at the seams with rushing building plans. They told us the actual work would begin by late summer or fall. Then, after the election, plans had to be changed in a few particulars. Purely a technical proposition. The old delaying game was really on.

"Now we learn the White House has called off the program. That's because it might cause inflation. What a laugh. A $72-billion budget, covering the biggest spending spree, the biggest tax take in history, is shrugged off as a mere bagatelle.

"Now the weeds can continue their 17 years' growth on the Government's Main Street lot—Ike's Half Acre. If the sight of this town's eyesore assails the esthetic, at least it will remind us that we are doing our little bit to stave off national catastrophe."

Practice of Labor Racketeers Well Known

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the McClellan subcommittee investigating labor racketeering is performing a real service for our country. Further, the chief beneficiary of the expose now under way will be the union member.

I am calling attention, Mr. Speaker, to the fact that while the McClellan committee holds the spotlight today many of the facts were well known by several Republican Members of the House of Representatives, namely, the gentleman from Michigan, the Honorable CLARE E. HOFFMAN, and the gentleman from Kansas, the Honorable WINT SMITH. As members of a special subcommittee of the House Committee on Labor and Education, these Members were in possession of many facts that are being revealed today but unfortunately somewhere along the line, their efforts to expose to the light of day vicious labor practices were prevented.

We can, however, Mr. Speaker, be thankful that the Senate committee has the courage to tackle a problem which is bound to react against all members of the committee by the racketeer in labor

who has been concerned only with lining his pockets with questionable gold.

Under leave to extend my remarks, Mr. Speaker, I am including a timely editorial that appeared in the Hastings, Mich., Banner on February 28, 1957, which points out the work that Mr. HOFFMAN and his subcommittee did to expose racketeering in the ranks of labor:

A special Senate committee headed by Senator MCCLELLAN, Democrat, Arkansas, has begun a full-scale investigation of labor racketeering. This probe which has the strong support of Congress and the Eisenhower administration as well as labor leaders of the caliber of Walter Reuther and George Meany is expected to produce facts concerning unsavory connections between some labor units and organized crime that may suggest long-overdue corrective measures.

Oddly enough, this investigation is out to cover the same area that Michigan's Representative Clare E. Hoffman attempted on his own several years ago.

At that time, however, organized labor, including Meany and Reuther, as well as liberals in the House and Senate attacked Hoffman as a "labor baiter" and ridiculed him as a reactionary of the old school who hadn't yet moved into the 20th Century.

MCCLELLAN and his committee are thus out to do what Hoffman said needed to be done more than 4 years ago. So, instead of being a "reactionary" in this instance, Hoffman was merely years ahead of the liberals.

Formerly labor leaders, almost to a man, seemed to be extremely touchy and resentful of criticism. Any and all suggestions that implied unsavory practices and connections in sections of the labor movement, were taken as reactionary attacks on labor itself.

Labor leaders who at first accepted the support of Communists on the ground that they were "fellow travelers" (and resented criticism of this policy) later and on their own initiative cleaned house of Red connections. Responsible labor leaders now seem anxious to give their full support and blessing to a congressional probe designed to help crush racketeering elements in labor.

All this indicates real progress on the road to labor statesmanship.

Business had to go through the same sort of "growing pains" and still hasn't found the perfect answer. Despite the existence of better business bureaus and trade associations that attempt to enforce fair practices within their special areas and chambers of commerce that keep a lookout on the local level, it still takes a full scale investigation now and then to keep everyone honest—and probably always will.

Sixteen Latin American Ambassadors Visit the TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. EVINS. Mr. Speaker, during the past week Nashville and middle Tennessee has been the host to some 16 Ambassadors from South America touring Tennessee and honoring the memory of Cordell Hull, the author of the good neighbor policy, and beloved Tennessee statesman who did so much to promote friendly relations, international good will and peace. These Ambassadors and representatives of neighboring nations from South America, and others from Washington, flew to Memphis where they were welcomed by the Honorable Edmund Orgill, mayor, city of Memphis, later to Nashville where they were greeted by the Governor of Tennessee, Gov. Frank Clement, and other Tennessee officials.

Tennessee was most pleased to be host to our friends and neighbors south of the border.

The names of the 16 Ambassadors and the countries they represent are as follows:

Dr. Guillermo Sevilla Sacasa, Ambassador of Nicaragua.

Dr. Hector David Castro, Ambassador of El Salvador.

Hon. Victor Andrade, Ambassador of Bolivia.

Hon. Manuel Tello, Ambassador of Mexico.

Col. Jose Luis Cruz-Salazar, Ambassador of Guatemala.

Dr. Miguel Angel Campa, Ambassador of Cuba.

Dr. Adolfo A. Vicchi, Ambassador of Argentina.

Hon. Gonzalo J. Facio, Ambassador of Costa Rica.

Dr. Jose Chiriboga, Ambassador of Ecuador.

Hon. Oswaldo Chavez, Ambassador of Paraguay.

Dr. Ramon Villeda Morales, Ambassador of Honduras.

Hon. Luis Quintanilla, Ambassador of Mexico to the Organization of American States.

Dr. Cesar Tulio Delgado, Ambassador of Colombia to the United States.

Dr. Fernando Lobo, Ambassador of Brazil to the United States.

Hon. Eduardo Augusto Garcia, Ambassador of Argentina to the United States.

Dr. Jose T. Baron, Ambassador of Cuba to the United States.

Because of the interest shown by these diplomatic representatives of our Latin American neighbors and the indicated desire to pattern projects after our great Tennessee Valley Authority, I ask unanimous consent to have reprinted in the RECORD an article which appeared in the Nashville Tennessean, issue of March 3, 1957, describing the visit by the Latin American Ambassadors to the TVA installations.

The article follows:

VISITING AMBASSADORS ENVISION OWN TVA'S

KNOXVILLE.—Sixteen Latin American Ambassadors wound up a 3-day visit to Tennessee yesterday with a glimpse, by air and land, of Tennessee Valley Authority installations.

Coming here from Nashville aboard two Air Force transports, the diplomats flew over TVA dams on the Tennessee River and also saw the Kingston steam power plant, described by TVA as the world's largest.

From Knoxville, they motored to Fort Loudoun Dam near Lenoir City, Tenn., for a closeup look at 1 of the 9 barriers erected on the stream for flood control, navigation, and power purposes.

The visittors from south of the border then boarded planes to return to Washington.

DEEP INTEREST

Almost to a man, they expressed interest in the TVA program of regional development.

"The TVA program has been followed and studied by all Latin American countries," said Luis Quintanilla, Mexican Ambassador to the Organization of American States.

Alluding to the controversy over private versus public power, Quintanilla said it was necessary for the Mexican Government to provide as much power as possible for its people "because private initiative has not developed in our country to the point where it can do things for the people on a large scale."

Guatemalan Ambassador Jose Luis Cruz-Salazar said he hoped that a river development program similar to TVA could be established in his country.

"We have both public and private power now, but we could use a lot more," he declared.

Gonzalo J. Facio, Ambassador of Costa Rica, said the Tempisque River in Costa Rica was ripe for a TVA-type development.

"We have to apply the TVA multiple-use program to this stream," he said. "It causes much damage during the flood season and we have a great need for power."

The diplomats were invited to Tennessee to help promote the Cordell Hull foundation, which has as it purpose promotion of a "good neighbor policy" by sponsoring scholarships for the interchange of college students between the United States and Latin American countries.

Slovaks Pay Tribute to Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the December 28, 1956, issue of the Allentown (Pa.) Times. The article, entiled "Slovaks Pay Tribute to President Wilson," written by John C. Sciranka, editor of American Friends of Slovak Fredom, follows:

SLOVAKS PAY TRIBUTE TO PRESIDENT WILSON

(By John C. Sciranka)

Slovaks in America and abroad paid tribute to President Woodrow Wilson on his centennial birthday, December 28. There is a story that Wilson's first interest in the oppressed nations was awakened by a book Racial Problems in Hungary, written by Dr. Seton Watson, better known as Scotus Viator (Scotch Traveler), who visited Hungary and Slovakia 50 years ago. Watson's book was left by a Slovak milkman on Wilson's porch at Princeton University, where the late President and Governor of New Jersey was also president.

Wilson is remembered as champion of "small nations." However, few liberated nations during World War I were willing to do as much for President Wilson as the Slovaks.

Before Dr. Thomas G. Masaryk, first President of Czechoslovakia left for his liberated country, he revealed to Wilson that the capital city of Slovakia, Bratislava, then known in Hungarian as Pozsony and in German as Pressburg, would be named in his honor as Wilsonove. President Wilson being familiar by then with the history of the Slovaks and their capital city, Bratislava, refused this

great honor. He did not want the Slovaks to make such great sacrifice.

This story was corroborated by Col. Stephen Bonsal, author of Pulitzer prize winner, Unfinished Business (about the Versailles Peace Conference, etc.), and also author of Suitors and Suppliants, in which he has a special chapter about Msgr. Andrej Hlinka and Gen. Milan R. Stefanik, both known and immortal Slovak leaders, whom Bonsal, as confidential interpreter of President Wilson, has met.

I had a happy and rare privilege to know Colonel Bonsal personally. His many letters to me are of great historical value and some are mentioned in the recent Slovak White Book (1,000 pages) by Dr. Ferdinand Durcansky, who, although an international lawyer and diplomat, considers these letters a "missing link" to many questions, to which he was seeking answers for his books. All these letters mention President Wilson and his affiliation with the Slovak and Czech cause for liberation.

Colonel Bonsal, whose son Phillip W. Bonsal, American Ambassador to the Republic of Colombia, is presently with the United States delegation at the U. N. General Assembly as chief of political liaison, was with the famous Colonel House, the closest to Wilson. And Colonel Bonsal informed Wilson about the Slovak problem. Shortly before his death in Washington, D. C., where I had the privilege to visit him on many occasions, Col. Stephen Bonsal put the following words in writing: "Today the lovers of truth and justice are promised another chance through the United Nations. The failure to do justice to the Slovaks at the Peace Conference after World War I was the piece of unfinished business which I most regretted; I hope to see it redressed."

Because President Wilson refused to have the city of Bratislava, capital of Slovakia, be named after him, nevertheless in the capital of Czechoslovakia, the historical city of Prague, a Wilson Square (Wilsonova namesite), with his monument was established.

The late Arthur Brisbane, famous American editor, while visiting Prague, keenly observed and praised the people of Czechoslovakia, that when men passed Wilson's monument, they tipped their hats, as they do in front of churches. President Wilson was held in high esteem by the Czechs and Slovaks.

Children in the schools of Czechoslovakia recited special prayers for President Wilson, calling him "Uncle." I still remember a prayer, which was recited to me by Dr. Jaroslav Novak, who was Cincul General in New York City, after returning from Warsaw, where he was with the Czechoslovak Embassy and there met Pope Pius XI, who was papal nuncio in Poland. When Dr. Novak spoke of Wilson and the love of the people of Czechoslovakia for this great American President, tears came to his eyes. He recited how children, after saying their evening prayer to their guardian angel, added a special prayer for "Strychko" (Uncle) Wilson. In one of the books on the life of President T. G. Masaryk, it is stated that Masaryk warned President Wilson not to come to Europe to attend a peace conference. Masaryk found Wilson too obstinate in his opinions. Masaryk felt that President Wilson's very directness would prevent him from understanding European statesmen and he felt that he would not be quite at home in the hatreds of Europe.

Colonel Bonsal, on the other hand, felt that although Masaryk had great admiration for Wilson since both were scholars and university professors, nevertheless, Masaryk had to play his game with Lloyd George and "Tiger" Clemenceau and he felt that Wilson's obstinacy and forwardness would cause implications, which would harm Czechoslovakia.

Masaryk signed the Pittsburgh Pact with the Czechs and Slovaks on May 30, 1918. The writer at that time, as a youth, carried an American flag in the parade which greeted Masaryk in Pittsburgh, Pa. The Pittsburgh Pact later was called a scrap of paper by President Masaryk, which caused ill feeling between the Czechs and Slovaks. The Slovaks stuck to the 14 points of President Wilson and, therefore, they still feel with Colonel Bonsal that justice for Slovakia is an unfinished business of the United States of America and the United Nations.

President Wilson did all he could for the liberation of small nations, therefore we pay tribute to him on his centennial birthday.

Resolution Endorsing Alaska-Hawaii Statehood Adopted by Western States Conference of Democrats, San Francisco, Calif., February 17, 1957

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I am pleased to present to the attention of all the Members of this great legislative body the following resolution dealing with the important subject of Alaska-Hawaii statehood. The resolution was adopted by the recent Western States conference of members and leaders of the Democratic Party in San Francisco, Calif., February 17, 1957:

RESOLUTION ENDORSING ALASKA-HAWAII STATEHOOD ADOPTED BY WESTERN STATES CONFERENCE, SAN FRANCISCO, FEBRUARY 17, 1957

Whereas the United States of America has become the greatest power in the history of mankind because it is a united Nation of equal and sovereign States and not an empire; and

Whereas the people of the United States devised a method and program of incorporating Territories, which method, as a first step leading to the full privileges of statehood, imposes on the people of such Territories the obligations of the citizens of the several States, while withholding from such territorial citizens, however, the basic rights of self-government and full representation in the councils of the United States; and

Whereas Alaska and Hawaii have been incorporated as Territories of the United States for many years, and by the very act of such incorporation as United States Territories have been promised the full privileges of statehood with first-class citizenship for the peoples of Alaska and Hawaii; and

Whereas both political parties have recognized that every consideration of fairness demands that the people of these Territories be given the full privileges of American citizenship in their platforms and other party declarations; and

Whereas the granting of statehood to these Territories will strengthen the United States immeasurably in human resources and in its foreign relations, particularly as regards the great Pacific Basin area; and

Whereas we in the West have a particular interest in and close ties with the people of Alaska and Hawaii: Now, therefore, be it

Resolved by this western Democratic State conference, That Alaska and Hawaii be admitted to the Union in this year 1957; and be it further

Resolved, That a copy of this resolution be sent to every western Senator and Congressman, and that each of them be requested to make every effort to see that bills to grant statehood to Alaska and Hawaii be promptly considered and passed.

Whittaker for the Bench

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. AVERY. Mr. Speaker, I wish to join the many who heartily endorse President Eisenhower's nomination to the United States Supreme Court of Charles E. Whittaker. Mr. Whittaker is the first native-born Kansan to be selected to serve in our Nation's highest tribunal.

The Washington Sunday Star newspaper March 3, 1957, presents an excellent account of Mr. Whittaker's desire to become a lawyer and his outstanding record as a member of the legal profession. A portion of the article follows:

SKUNK TRAPPING HELPED WHITTAKER GET SCHOOLING

Charles E. Whittaker, nominated yesterday to the Supreme Court, had his eyes on the legal profession while still in country school in Kansas.

The foundation of his law education was a $700 nest egg he had acquired by selling fur pelts from his trapline as a boy.

He was born on a farm 6 miles south of Troy, Kans., on Washington's Birthday, 1902.

"My most frequent catches," he recalled in telling about his trapline, "were skunks, and although their furs brought me $3 each, they didn't make me very popular at school. Many times the teacher sent me home."

But the trapline profits grew and 3 years after finishing grade school he came to Kansas City, intent on getting a legal education.

PASSED BAR BEFORE GRADUATION

It took a little doing to get into the old Kansas City School of Law without a high-school education, but the determined youth promised to catch up on his high-school courses while studying law. At the same time he worked as an office boy for a law firm.

Justice Whittaker passed the Missouri bar examination in 1923, a year before he finished law school.

Since then he has argued cases from police courts to the United States Supreme Court and in State courts from Maine to California.

Eight years after going to work for the firm of Watson, Gage & Ess he became a junior partner. He became a full partner in 1930.

Mr. Whittaker was elected to the board of governors of the Missouri bar in 1948. Five years later he was elected president of the board.

His appointment to the Federal district bench in 1954 and to the circuit court of appeals post last fall received wide endorsement from members of the bar.

Mr. Whittaker's birthplace is located in my congressional district. Residents of Doniphan County have nothing but high praise for his background. Residents of both Kansas and Missouri are proud of his recognition. We all know he will be a credit to the Court and he will make his mark of contribution to the honor, prestige, and integrity of that body. In the Washington Post and Times Herald newspaper, March 4, 1957,

appears an editorial which clearly indicates approval of Mr. Whittaker's selection by this outstanding newspaper. The editorial follows:

WHITTAKER FOR THE BENCH

President Eisenhower's nominations to the Supreme Court have followed a rather consistent pattern. He likes to name relatively young lawyers, usually in their fifties, who have made a good reputation in private practice and have had some experience on the bench. As yet he has not gone to the Department of Justice or to Congress for a Supreme Court nominee. In this respect he has sharply departed from the practice of the Roosevelt and Truman administrations.

The naming of Chief Justice Warren in 1953 does not conform to the general pattern because, as the President has noted on several occasions, he thought the Chief Justice should be well known to the Nation—a man in whom the rank and file would have immediate confidence. The three Associate Justices named by Mr. Eisenhower have not been well known to the country, although each has been highly respected in his own area. Justice Harlan had been a member of the United States court of appeals before his elevation to the Supreme Court and Justice Brennan had been a member of the Supreme Court of New Jersey. The new nominee, Charles Evans Whittaker, has served on both the Federal district and appellate courts in Missouri by appointment of President Eisenhower.

The fact that Judge Whittaker is not nationally known is no argument against him. His reputation in the Middle West, both as a lawyer and as a judge, is excellent. His friends say he has been "law struck" since he was a boy. That description would seem to be well substantiated by the fact that, in addition to his farm work, he maintained a trapline while attending elementary school and saved more than $700 from the sale of skunk (and other) furs to put himself through law school.

In practice and on the bench Judge Whittaker has lived up to his reputation as a prodigious worker. His industry has helped to clear the dockets of the courts he has served. In addition he is said to be a sort of tender nursemaid to the law. He is a Republican, but his highest devotion has been to his profession rather than to politics. His judicial temperament is attested by the enthusiasm of Democratic as well as Republican legislators from the Kansas City area over his nomination. On the High Bench we may reasonably expect him to be a dedicated jurist rather than an advocate of any particular doctrine or line of reasoning.

There may be a touch of nostalgia in the selection of a namesake of the late Chief Justice Charles Evans Hughes so soon after the appointment of the grandson and namesake of Justice John Marshall Harlan. But the significant thing is that the President is reaching out for men of high ability whose lives have been given to law at the bar and on the bench.

More Grassroots Science Needed

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. BOLAND. Mr. Speaker, I desire to direct the attention of the House to a very thought-provoking article by Malvina Lindsay in the Washington Post of February 27, 1957. Miss Lindsay's column concerns itself with one of the very pressing matters our country faces. That is the problem of the supply of well-trained scientists. Much has been heard from leaders in Government and education on the dire necessity for education in the scientific field. The National Science Foundation, the National Advisory Committee on Aeronautics, the Atomic Energy Commission, the Defense Department—all have decried the small number of students of high school age who are interested in higher mathematics and the sciences and who are anxious to pursue an education in these fields. I think Miss Lindsay well points out that the teaching of mathematics and science is inadequate and uninspired. She also dwells on the fact that many high school students turn away from careers in these fields because of study difficulties. I agree with her that one of the ways to overcome this difficulty is to start early. In my judgment, it is too late at the high school level to build up any love for or desire to study mathematics. This, it seems to me, should be done in the elementary schools. It will require adequate, devoted, and self-sacrificing teaching personnel for it will be no easy task. However, if the United States is to hold its leadership in the physical sciences—and there is some question as to whether or not it now leads—an all-out effort must be made in the lower grades to direct young students into this field. The opportunities are great and the challenge is greater.

The article follows:

MORE GRASSROOTS SCIENCE NEEDED

(By Malvina Lindsay)

The house that Jack built has its analogy in the problem this country faces of getting its urgently needed scientists.

How children feel about mathematics in the fifth and seventh grades determines the future of many a potential scientist, a poll recently made by the University of California at Los Angeles indicates. Other studies emphasize that the future scientist's interest in mathematics and science must begin at least in the secondary school.

But this interest is largely determined by the type of teacher in the mathematics or science class.

The type of teacher in turn depends on whether the school offers enough in salaries and facilities to offset the raids industry is making on science teachers.

Dr. Edward Teller, a leading nuclear physicist, recently said it was too late for the United States to maintain its lead in physical science—that the leadership would pass in 10 years to the Soviet Union. But Robert Carleton, executive secretary of the National Science Teachers Association, insists the United States can retain its lead if the lot of high school and college teachers of science is improved.

Much thought is now being directed to what seems the root of the scientist shortage, the inadequate and uninspired teaching of mathematics and science. The National Science Foundation has set up a program of fellowships to improve teaching of science, mathematics and engineering in the United States. It is also, through a project at the Massachusetts Institute of Technology, doing something about a neglected phase of high school science teaching—the tools to do a competent job. Studies are being made of the best techniques for science teaching including laboratory equipment, films, kits and do-it-yourself kits for experiments at home.

Many high-school students tend to shun careers in science, atomic science particularly, because they believe such study too difficult. They are also often discouraged by parental attitudes toward scientific careers. Poor teaching and lack of community understanding of modern science are responsible.

Many good science teachers leave the classroom for industry for economic reasons. But another cause of their discontent is often overlooked; namely, their lack of opportunity to participate in research.

A research scientist at George Washington University puts it this way: "Anyone today who has the desire and the energy to master a science well enough to teach it is not likely to be satisfied to teach for long unless he also has a chance to participate in the pleasures and stimulation of research."

High school science classrooms are often bleak, unchallenging places to both teachers and pupils. If better facilities for experimentation were provided, science would not seem so remote from everyday life to the pupil, and might acquire more meaning to the community.

Much valuable research can be done with simple instruments, the research scientist previously quoted points out. One way of restoring public interest in science, he believes, would be to decentralize scientific research so that the average citizen would once again have personal contact with it as he did in earlier days when every neighborhood had its part time or amateur scientist.

To that end, he would have modest research centers developed in high schools and perhaps in some smalltown hospitals, and thus return science to the grassroots. Technical support and guidance for these could be provided from larger research centers.

The public attitude toward scientists, basic ones especially, has handicapped scientific development in this country. Scientists have great prestige—as well as high salaries—in the Soviet Union. American society tends to regard them as visionaries, eccentrics, sorcerers, or useful though half-baked geniuses. Much of this attitude could be changed if science could be brought down to earth and given community appeal through the high-school classroom.

Farmers Object to Even Lower Prices

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1957

Mrs. KNUTSON. Mr. Speaker, the Department of Agriculture's proposed change in grain grading standards is of much concern to my constituents. It appears to be of benefit to no one, perhaps with the exception of some grain processors, but it would mean ever lower prices to the farmer who is already in economic trouble.

Under leave to extend my remarks, I request permission to insert copy of a letter written to Secretary Benson by farmers in my congressional district:

MAHNOMEN, MINN., *February 26, 1957.*
Hon. EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: During the past several years we have been experiencing a severe economic squeeze, as farmers, and

there doesn't seem to be any measure of relief in sight for us yet. As the producers of food we seem to be getting taken to the cleaners more and more, someway, by somebody, because although the consumer can buy more food today for less working time than ever before, he is still paying higher prices than ever before, and farmers are getting a smaller and smaller share of the consumers food dollar, while, it seems, almost everybody inbetween, especially the processors, are making greater profits than ever before.

Now, we understand, another idea has been thought up to buy our product at a lower price, the changing of our wheat-grading standards.

Many of us in this area are wheat producers, in a small way, and we object to these proposed changes. We believe that the present grain-grading standards are fair to farmers, and millers, and other processors, and to change them can only result in lower overall prices to producers.

In the case of wheat, we as farmers are doing everything we know how to do, with the help of our crop-improvement associations, extension service, and so forth, to raise and market the best quality wheat possible, and we do not believe that changing the grading standards will improve the quality of the wheat on the market one bit. We believe that the proposed changes can only result in a downgrading of our wheat, and the result will be lower prices to us. And we think this is unfair.

Neither do we believe that such changes would in any way improve the quality, or the price, of the finished products to the consumer, which would widen the spread between consumers and producers.

This is an issue which concerns us very much; but strangely, we are the last persons to be consulted in this, not even to find out what we might even think. Our newspapers haven't breathed a word of it, nor have our regular radio news services, nor has the United States Department of Agriculture made any effort to acquaint farmers with these proposals. Had we not had a farmers union GTA, or a farmers union we would not have heard of it at all, probably.

We are, herewith, petitioning you to reject the proposals for changing the wheat-grading standards.

Very respectfully yours,

Palmer R. Pederson; Joseph Fuxa; Robert Stetlin; Arne Hendrickson; Newman Jacobson, Fiam, Minn.; Calvin T. Boem; Ralph Lewis, Howard Belshan, Bejou, Minn.

"We Cannot Withdraw From the World"—Cordell Hull

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. EVINS. Mr. Speaker, under unanimous consent, I ask that there be reprinted in the Appendix of the RECORD an address delivered by the late, great Secretary of State Cordell Hull—an address which is timely for review and which was delivered in Tennessee on June 3, 1938.

Judge Cordell Hull devoted his life to the fullest in promotion of international law and order. He believed firmly that isolationism cannot prevail in the world in which we live. His speech on The Spirit of International Law follows:

WE CANNOT WITHDRAW FROM THE WORLD—IN A STILL TIMELY PLEA FOR INTERNATIONAL LAW, SECRETARY HULL URGED LEADERSHIP FROM THE UNITED STATES

(From the Spirit of International Law, an address Secretary of State Cordell Hull made to the Tennessee Bar Association in Nashville on June 3, 1938)

In the evolution of man's civilized existence, there has been only a slow and sporadic development of the doctrine that, if progress is to continue, nations must be subject to certain defined rules of conduct in the same way as are individuals within communities and communities within nations.

There was long prevalent the belief that each nation was a law unto itself, the sole arbiter of its international conduct, fully entitled—if it possessed sufficient power—to engage in aggression and aggrandizement, to destroy by armed force the independence of other nations and to subjugate other peoples. * * *

Happily for the human race, the world gradually emerged from this darkness. The assertion of the doctrine of armed force became the exception rather than the rule. International law began to develop as an increasingly accepted basis of relations among nations. The flowering of man's intellectual and mechanical genius began to create all over the world a steadily extending network of peaceful international relationships, based upon a growing sense of community among nations of political, economic, social, and cultural interests. * * *

Recognition of the surpassing importance of international law in the relations among nations as well as in our own national life has been, throughout our history, one of the most firmly established traditions. It was in that spirit that, in the Declaration of Independence, the founders of this Republic invoked "a decent respect to the opinions of mankind." Succeeding generations of our jurists and our statesmen have concerned themselves with the law of nations.

Our Presidents and our Secretaries of State, from George Washington and Thomas Jefferson on down, have seldom deviated from the tradition that our foreign relations should be conducted in such a manner as to make this Nation a force in the world for peace, international morality, justice, and fair dealing—a champion of international law as the governing factor in relations among nations. I cannot believe that today our people will accept or condone departure from this tradition.

There was never a time in our national history when the influence of the United States in support of international law was more urgently needed than at present—to serve both our own best interests and those of the entire human race. The world is today in the grip of a severe upheaval, the outcome of which will affect profoundly the future of mankind.

There is again abroad, in more than one part of the earth, a spirit of international anarchy. Solemn contractual obligations are brushed aside with a light heart and a contemptous gesture. Respect for law and obsevance of the pledged word have sunk to an inconceivably low level. The outworn slogans of the glorification of war are again resounding in many portions of the globe. Armed force, naked and unashamed, is again being used as an instrument of policy and a means of attaining national ends through aggression and aggrandizement. It is being employed with brutality and savagery that outrage and shock every humane instinct.

In the face of these grim developments, there are some among our people who would have our Nation withdraw into its own shell and isolate itself from the rest of the world. They would have us seek safety and security in a hermitlike existence among the nations of the world—in a voluntary surrender of legitimate rights and interests, which we have regarded for generations as essential to our national welfare, and a voluntary abandonment of our support of international law and of the instrumentalities for its application, which alone can make us secure in the exercise of such rights and the enjoyment of such interests.

Those who counsel this course of policy and action should pause in their fervent crusade to cast up an account of the possible benefits and injuries that its pursuance would entail.

There is no worthier desire than to assure for our people the blessings of peace. But long and unmistakable experience offers abundant proof that the attainment of this precious end through a policy of national isolation is wholly outside the realm of possibility.

It is my firm conviction that national isolation is not a means to security, but rather a fruitful source of insecurity. For while we may seek to withdraw from participation in world affairs, we cannot thereby withdraw from the world itself. Attempts to achieve national isolation would not merely deprive us of any influence in the councils of nations, but would impair our ability to control our own affairs.

Deliberate renunciation by us of any participation in international affairs would make for an easier triumph on this planet of lawlessness, brute force, and war. In a world growing internationally more and more disordered and chaotic, we would be compelled to increase our armed defenses on a scale that would impose a truly crushing burden on our people.

And even so, we would have to live in constant danger that the rising wave of international anarchy would, sooner or later, reach and batter down our own walls and engulf us as well as the rest of mankind.

As against the unattainable benefits claimed for the policy of isolation we must visualize the costs of such a policy.

By embarking upon a policy of national isolation we would doom our Nation to conditions of life under which it would inevitably become economically poorer, intellectually impoverished, morally decadent. We would deliberately deprive ourselves of the benefits of those numerous international relationships which have nourished the stream of human progress and enriched the lives of all peoples, including our own. Neither our political structure of democratic government nor our social and economic structure of free enterprise and individual freedom under law could long survive the material and spiritual decay which national isolation would inescapably impose upon the Nation.

Like the individual who would seek safety and security for himself through escape from the responsibilities of organized society into hermitlike isolation, a nation pursuing a similar course—even if it were to succeed for a time in avoiding assault by and conflict with other nations—would soon find its dream of safety and security a bitter illusion. * * *

In the years which lie ahead, the chances that international anarchy and lawlessness will be replaced by order under law will largely depend upon the sincerity and firmness with which some nations, at least, maintain their devotion to the principles of international law, resting in turn upon the foundation of cooperation, justice, and morality.

I can wish for our country no more glorious course than to be a leader in devotion to these principles and in service of their preservation and advancement.

His Labor Buys More and He Has Greater Leisure

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MULTER. Mr. Speaker, the following article by Leslie Gould which appeared in the New York Journal-American of January 8, 1957, is worthy of the attention of our colleagues:

HIS LABOR BUYS MORE AND HE HAS GREATER LEISURE

(By Leslie Gould)

The consumers—Mr. and Mrs. Average American—hold the key to 1957.

They have never had it so good, nor has the country's economy.

How they spend, how they save, and how they invest will tell the story of this challenging year.

This can and should be a good year. The consuming public has the spendable funds. Payrolls will be at a record total. American business has never offered such a variety of high-quality and reasonably priced products.

The true yardstick of value is the hours of work required to buy a given product. Not the number of markers—the dollars.

It isn't how many dollars it takes to buy, say, an automobile, but how many hours of work a man or woman must put in to acquire it.

For practically everything—from the barest necessities to the finest luxuries—it takes less hours of work to buy it today than it did prewar.

Take an automobile. In 1939—the last prewar year—the average factory worker had to put in 984 hours—123 days—to acquire a car. Today the same car—only a much improved and better and snappier model—takes only 891 hours—111 days and 3 hours.

FIFTY-CENT DOLLAR TALK BUNK

A man's suit prewar cost 55½ hours—considerably more than a week. Today the cost is 32½ hours—less than a week.

For an electric refrigerator, it took 111 hours, but today only 90 hours. So it goes with practically everything a person buys.

Thus, this talk of a 50-cent dollar and inflation is largely the bunk. That is the fallacy of the Federal Reserve's tight money policy.

The trouble with the so-called money managers is they can't see the forest for the trees. This is not a credit inflation, yet that is where the screws are being applied.

This is a consumer economy. What makes for prosperity is not production—although that is the yardstick used as to the ups and downs of business. What counts is consumption.

Production is only important if it is sold, if it is consumed. The present tight money policy is aimed at holding down consumption, although there is hardly a line, except possibly steel, that is in tight supply, and steel only in certain products like plates. Practically everything else, particularly consumer goods, is in ample supply, and production is equal to or in excess of demand.

The automobile industry is the best proof of this. In 1955 production outran sales. As a result, large inventories of new cars were built up, 925,000 at the start of last February. The manufacturers were smart, and they cut back production, so that by the end of the model year new car stocks were down to around 150,000.

BASIC CHANGE OVERLOOKED

Now, the auto industry is gearing production to sales, instead of vice versa. And, unless the Federal Reserve makes it too tough to buy the models—probably the best in style and value the industry has ever offered—this will be a good and profitable year for that key industry.

If this same pattern is followed by other lines—gearing production to sales—there will be no boom or bust. The prospects are good for this kind of management of the economy. There is no reason for another 1929 and following depression.

The 1956 performance by industrial management is encouraging on this score. There was in 1956 what the First National City Bank aptly calls a rising readjustment. While some lines lagged, such as autos in the first part of the year and textiles and home construction, the overall business trend was rising. These declines were more than offset by the high level of employment and activity elsewhere.

What many economists—particularly the egghead variety—miss is the basic change that has taken place in this country. They talk about dollars and production.

The eggheads will tell you that the prewar dollar is worth only 42 cents when it comes to food, 49 cents when it comes to buying clothing, 65 cents for rent, 53 cents for transportation, and 54 cents for medical care.

In dollars, it is true that today's is about half what it was prewar—but this is ignoring the fact that the worker today is getting more dollars—and for less work and easier work, thanks to automation and other improvements that have lightened the burden of labor.

The average hourly earnings of factory workers in 1939 was 63 cents an hour. Today it is $2. In the steel industry, the pay has gone from an average of 84 cents an hour to $2.59. Even after this is whittled down by today's larger tax bite, the take-home pay buys more than that of prewar.

While the average factory worker is getting three times or slightly more dollars, his job is easier. Much of the backbreak has been taken away. Trucks are loaded by hoists. A push button does what used to take plenty of sweat. Much of the drudgery has been removed—not only in the factory, but also in the office and in the home.

LEISURE TIME INCREASED

Another point missed is the impact of the greater leisure time. It used to be that the factory hand had to rest up at home on Sunday for the next workweek of 6 days of 9 and 10 hours. Now, after a 2-day weekend, he returns to rest up on the job—now a week of 5 days of 7 hours. Also he gets 2-to-4-week paid vacations.

This is a leisure time boom—and the demands of this new leisure time of the working men and women and their families is giving an added lift to the overall economy.

Prewar, Americans spent about $1½ billions on pleasure driving—vacations, weekends, etc. Now they spend more than $5½ billions a year. Where they spent half a billion dollars on radio and records prewar, now the annual outlay for these plus TV is more than $3 billion. They spend more than 3 times as much for newspapers and magazines, nearly 5 times as much on foreign travel, and more than 6 times as much for durable sports equipment—golf clubs, etc.

While dollars, like the stock market averages, are not too reliable an index, there has been a significant upgrading of families. Prewar, around 33 million families—with population 76 percent of today's total—had incomes of less than $3,000. Today, the number is only 14½ million. Where less than 8 million families made more than $3,000 a year prewar, the total today is close to 37 million.

Prewar, around 40 million families had income of less than $5,000 a year. Today the total in this bracket is just under 30 million. While 16 years ago slightly more than 2 million families had incomes of more than $5,000, the present total is over 23 millions.

Less than a million families had incomes of more than $7,500 prewar. The total now is close to 10 million.

A factor in this is the number of working wives. Women today account for 33 percent of all employed—nearly 22 million, against just under 12 million or about 25 percent of the working force prewar.

FINANCIAL STATUS UPGRADED

There is some concern about the high total of consumer credit, particularly installment credit. But here again, too little consideration is given to the financial upgrading of American families, as shown above, and the contributions of working wives.

It must be viewed against the background of other things. The current installment credit total of around $31 billion represents about 12 percent of the take home pay of these consumers, compared to 10 percent in the prewar year 1939. In the intervening years, pay has about tripled.

This debt also must be related to savings. Savings of individuals in banks of all kinds run around $72½ billion. In addition, there are $35½ billion with savings and loan associations and $50 billion in United States savings bonds. The total of such savings is $158 billion. This is without including the $94 billion in assets of the life insurance companies.

There is an interesting fact about installment debt and savings. Two-thirds of those making time purchases have savings accounts or savings bonds and half of these have savings in excess of their installment debt. In other words, they would rather buy on time than disturb their savings.

Installment credit outstanding is in effect a revolving fund. Payments are being made every month, and every year millions of accounts are paid up.

Some of this credit, where it is financing automation in the home, replaces former expenses for servant hire.

The danger in installment credit is where, as a result of competition, terms become too liberal—the no down payment and 36 or more months to pay sort of thing.

There is no market like the American market. It has been made by a climate that has encouraged private risk taking. Nowhere have so many achieved so much.

This country has 169.4 million people—6.2 percent of the world's population. But this relative handful of people have 72 percent of the world's automobiles, 55 percent of the telephones and a larger percentage of inside plumbing—to list three conveniences and necessities.

In America there is 1 automobile for every 3 persons—men, women and children. In England there is only 1 car to every 20 and in Russia 1 for every 200.

Americans live longer, eat better and live better than people anywhere, under any system. It is no accident that this is so.

Where family budget goes

	1941	1957
Average income	$2,475	$5,520
Food	773	1,297
Clothing	243	423
Housing	574	1,183
Taxes	267	644
Medical	100	243
Recreation	120	287
Furniture and appliances	97	243
Transportation, including car	198	488
Insurance, savings, etc	103	612

Training for What?

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith the following editorial from the Washington Post, dated February 28, 1957. This editorial recognizes the great contribution our distinguished colleague, and ranking member of the Armed Services Committee of the House, the Honorable OVERTON BROOKS, has made to the solution of the contest between the Army and the National Guard.

Mr. Speaker, Mr. BROOKS has held hearings during long hours. His leadership in this matter as well as other matters affecting our Reserve components entitles him, with justification, the name of "Mr. Reserve."

Mr. BROOKS has rendered a great contribution to the future security of the Nation:

TRAINING FOR WHAT?

The National Guard is to be congratulated for exercising its not inconsiderable political power with some restraint to make possible a settlement of the training dispute with the Army. The outcome is, as Secretary Wilson notes, "a victory for the country;" in which both the guard and the Army gave ground under the skilled mediation of Representative OVERTON BROOKS. The Army has lost nothing of importance in agreeing to postpone the effective date of the 6-month training order for National Guard recruits to next January 1. The guard, on the other hand has won important concessions that will facilitate recruitment and a public pledge of Pentagon support for maintenance of the guard at approximately its present strength.

The result will be an overall military training and service program that is both more fair and more effective, although it would be a mistake to assume that an across-the-board 6-month training program is a total answer to the need for adequate Reserve Forces. What is still required is a fresh review of the probable role of the Reserve Forces, and especially of the guard, in any future war.

It is unlikely that there would be time to mobilize the guard for any extensive combat service in large nuclear war, though the Reserves might have a later role. Not enough attention has been given, however, to the very great likelihood that vast numbers of reservists would be needed for wartime duty in the United States in the event of effective nuclear missile or bomber attacks on this country. Large areas might have to be temporarily under martial law, and much of the initial responsibility would necessarily fall upon State governments to authorize and direct military efforts to cooperate with civil defense in coping with the destruction. The guard, with its dual status, is the logical force to carry the brunt of home-front military duties. The training program that is developed ought to take this prospect into account.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Distinction Between Freedom and Communism

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. THYE. Mr. President, I was present at the Masonic dinner on February 20 at the Hotel Statler, Washington, D. C., at which Dr. Milton S. Eisenhower delivered one of the most scholarly addresses I have been privileged to hear this winter.

I have been informed by the Public Printer that the address is estimated to make approximately 2¼ pages of the RECORD, at a cost of $173.25. Notwithstanding the cost, I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

Mr. MARTIN of Pennsylvania. Mr. President, the address by Dr. Eisenhower was noteworthy in pointing out the distinction between freedom and communism, but, more particularly, the truly fundamental moral and intellectual differences.

I feel that the reading of this address will be helpful to all Americans, and I had intended to request that it be printed in the Appendix of the RECORD so that it would be available, so it gives me pleasure to join the Senator from Minnesota in his request.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MILTON S. EISENHOWER, PRESIDENT OF THE JOHNS HOPKINS UNIVERSITY, BEFORE THE CONFERENCE OF GRAND MASTERS OF MASONS IN NORTH AMERICA, FEBRUARY 20, 1957, HOTEL STATLER, WASHINGTON, D. C.

I

For several reasons, I welcome this opportunity to address the Grand Masters of Masons in North America and your fraternal associates.

In the first place, I wish to acknowledge to all of you the pride I have felt in the action taken several years ago by the Grand Master of Pennsylvania in making me a Mason-at-Sight. I am deeply grateful for having thus been enrolled in an order which subscribes to, and lives by, the ideals of morality and brotherhood.

In the second place, I am sure that, because of this dedication to basic religious principles, you will have a genuine interest in what I have to say this evening.

I want to talk, not about the superficial or more obvious outward distinctions between freedom and communism, but about the truly fundamental moral and intellectual differences. And I shall do this not merely by making glib assertions, but by proving each point with citations from the authoritative literature of these two concepts or systems.

We are living in a wonderful, though tense and sometimes frightening, age. It is a time that tests men's souls and the vigor of their beliefs. It is an age in which, once again, only a few years after the bitter war against fascism, the free nations of the world are face to face with the inscrutable countenance of a vicious tyranny.

This tyranny wears a new label, yet it is as old and as ugly as sin. The Communist tyranny is even more frightening than a fascism, for it is not so brittle and it has a faith, however tragically in error. Communism poses not only a military, economic, and political challenge to the free nations; it strikes at the very heart of the ideology of freedom—the Judaic-Christian heritage which forms the basis of Western civilization.

II

The current conflict between two diametrically opposed systems of morality, while perhaps now reaching a climax, nonetheless has been developing throughout the whole sweep of human activity.

In the long early history of mankind—before the age of freedom—two themes of human belief and organization threaded their way—the one that man and society are shaped by the impersonal forces of destiny and circumstances; the other that the state is omnipotent and the source of all meaning. "Subjects were no more than shadows of shadows," said one historican in tracing these two themes through thousands of years.

As great civilizations rose and fell, the people remained in servitude to the state, and the state and the people, alike in bondage to destiny. All phases of human endeavor—behavior, ritual, even thought itself—were collectively determined. Men and women lived out their lives as pawns and prisoners of omnipotent government and omnipotent fate.

Then two peoples—the Jews and the Greeks—broke the fatalistic cycle and transformed the human scene with a new force of ideas. With the advent of the Jewish and Greek societies, the whole character of human development was altered and "the Western spirit" took hold. So dynamic were the ideas around which the Jews and the Greeks built their civilizations that they seemingly obliterated the two previously dominant themes.

An understanding of the impact of Jewish and Greek ideas on the course of history is one important key to a comprehension of the fundamental issues which divide the world today. The Western civilization which evolved out of ancient Greece and Judea is truly revoluntionary in its outlook, whereas the Communist ideology is, as we shall see, wholly reactionary.

Barbara Ward sums up the great debt Western man owes to Jewish and Greek thought in these words:

"The idea that the sum of things could by human will * * * be transformed and remade in the image of the divine took hold of men's imaginations. * * * The desire to * * * create, the desire to seize on material circumstances and change and mold them as an artist transforms the material he works with, this was the immense energy injected into the Western World by the rational vision of the Greeks and the moral vision of the Jews. * * * Try as he would * * * Western man could never again drive the fever of creation * * * and progress out of his blood."

Our second debt to ancient Judea and Greece may be found in the devastating attack the Greek logician and the Jewish philosopher made upon the idea that the state was omnipotent. The Greek saw man as a creature endowed with reason and possessing inalienable rights, among them the right of self-government. The Jew believed that the divine image in man created in him moral responsibility to his fellows. From Cain's first question, "Am I my brother's keeper?" comes the Judaic-Christian doctrine of personal responsibility and moral accountability.

As inheritors of the legacy of ancient Greece and Judea, we are therefore the spiritual heirs to a revolutionary philosophy and a radical ideology. Marxist communism, on the other hand, which all too often succeeds in identifying itself as a revolutionary philosophy and in wrapping its program in the cloak of pseudosocial reform, is in reality a profoundly reactionary philosophy which restores to man the old fetters of fatality and tyranny.

III

There are at least four moral issues in today's ideological conflict which reveal communism as the new gospel of the omnipotent state and omnipotent fate, and Judaic-Christian teaching as the revolutionary credo of man who have faith in God, trust in their fellowmen, and a dedication to the good life in the good society. Those four fundamental issues involve widely divergent concepts of the status of the individual; views of history; attitudes toward means and ends; and ideas regarding a Supreme Being.

Let us see if we can sharpen first, the issue of the status of the individual.

It is a basic tenet of Judaism and Christianity that man is a child of God, that all men are equal in His sight, and that society exists for the individual.

We read in Genesis: "So God created man in His own image, in the image of God He created him * * *. And God saw everything that He had made, and behold, it was very good."

In his epistle to the Romans, St. Paul says: "For all who are led by the spirit of God are the sons of God. For you did not receive the spirit of slavery to fall back into fear, but you have received the spirit of sonship * * *. God shows His love for us in that while we were yet sinners Christ died for us."

A contemporary theologian, Dr. John C. Bennett, points out that "Christianity combines, in a remarkable way, concern for the uniqueness and ultimate worth of every person with concern for the community of persons. * * * The love that is central in the whole New Testament is love directed toward individual persons, and yet it is love that binds them together into a community."

It is on the spiritual conviction that men are children of God that the free nations of the West have built their social, economic, and political institutions. The basic purpose of the whole democratic system, with its manifold institutions, is to protect the dignity of the individual and the sanctity of the human spirit.

Communism, however, denies the worth of the individual. It holds that men are creatures of material forces; that life has only such meaning as is ordained by the party or state; and that man has no God-given natural rights. Karl Marx proclaimed bluntly: "The democratic concept of man is false * * *. (It) holds that each man is

a sovereign being. This is the illusion* * * of Christianity."

Communism's contempt for the idea of individual dignity has been revealed repeatedly in statements by Communist leaders, in political purges, in the ruthless, iron-fisted slaughter of human beings (such as we have just witnessed in Hungary), and in the relentless, tortuous inquisitions known as brainwashing.

Marshal Zhukov once said that "Man under freedom is an undisciplined, unoriented entity," and Lenin wrote that "the will of a class is at times best realized by a dictator who sometimes will accomplish more by himself." You will recall Winston Churchill's revulsion during one of the wartime conferences when Stalin described the liquidation of the Russian kulaks in the twenties and thirties—a bloody purge, of which one historian said the Communists "appeared less disturbed by dead kulaks than by dead cows."

Perhaps one of the most vivid statements illustrating communism's attitude toward the individual can be found in Arthur Koestler's novel, Darkness at Noon. Koestler, a former Communist, is now a stanch friend of freedom. In his book, Ivanov, the police investigator, is arguing with an old Communist who was beginning to have moral scruples concerning the methods the party had forced him to use. In the course of the argument, Ivanov says:

"Every year several million people are killed qute pointlessly by epidemics and other natural catastrophes. And we should shrink from sacrificing a few hundred thousand for the most promising experiment in history? Yes; we liquidated the parasitic part of the peasantry and let it die of starvation. It was a surgical operation which had to be done once and for all."

IV

The second major issue between the Communist and the Judaic-Christian philosophies lies in their opposite views of history.

In the Judaic-Christian view, ideas determine history: Men are capable of altering the course of history, for good or ill, of creating new social, political, and economic institutions, and of thinking and acting for themselves. Western man believes that if the mind is exposed to all information (true and false) and all possible ideas (good and bad), lies will die of their own poison, truth will prevail, and the mass judgment will be valid. Western man sees the world, not as the sum of things that are, but as the sum of things as they should be. His society has become the most restlessly dynamic and explosive social order the world has ever seen. His eyes are on the stars, and the limitless reservoirs of his mind are continually yielding more challenging ideas, greater standards of perfection, and higher ideals. He is committed to the ceaseless search for knowledge and truth.

The fundamental Judaic-Christian view of history is set forth in the doctrine of creation in Genesis. "And God said to them, Be fruitful and multiply, and fill the earth and subdue it; and have dominion over the fish of the sea and over the birds of the air and over every living thing that moves upon the earth * * *."

In the Judaic-Christian faith, the whole of this actual world is to be taken seriously as a community of persons in which the living God acts and to which men freely respond.

In contrast to this view, communism holds that history is shaped by economic forces; that it is impossible for men to change these forces; and that Communists have been preordained to "assist" these forces toward their invetiable goal: the "classless society." In his Preface to Das Kapital, Marx cited as the ultimate aim of his work "to reveal the economic law of human society," and in his Critique of Political Economy, he wrote: "It is not the consciousness of men that determines their existence, but, on the contrary, it is their social existence that determines their consciousness."

Thus, in the Marxist scheme of things, there is nothing beyond the social order. Every act of human life, every thought of human minds is entirely conditioned by the general state of material events at that time. History becomes once more "the arbiter of all destiny." Freedom vanishes. Once again, events mold men, not they events.

V

A third area of moral conflict lies in the Communist versus the Judaic-Christian attitude toward means and ends.

It is the Judaic-Christian conviction that the means to any end, even the most laudable, must be in conformity with certain moral standards. The end does not justify the means. St. Paul, in his letter to the Romans, cautions: "Do not be overcome by evil, but overcome evil with good."

The Judaic-Christian doctrine of ends-means is clearly related to that of the status of persons. Men are made in the image of God and are in their separate existences dear to Him. The person is the crown of creation, and the value of everything else on earth is to be judged by its service to persons as the offspring of God. Since persons are unique in creation, none is to be used as a means. To serve the good of man is the function of all human institutions.

St. John wrote: "Beloved, let us love one another; for love is of God, and he who loves is born of God and knows God. He who does not love does not know God; for God is love."

Against this gentle doctrine communism pits a philosophy based on the idea that the end does justify the means and that Communists are therefore duty-bound to use any means to accomplish their objectives. Since the Communist Party is conceived to be the sole vehicle of the good, fulfillment of its directives is the path of virtue.

Lenin put it boldly in these words: "The dictatorship of the proletariat is a persistent struggle—bloody and bloodless, violent and peaceful, military and economic, educational and administrative—against the forces and traditions of the old society * * * A Communist must be prepared to make every sacrifice and, if necessary, even resort to all sorts of schemes and stratagems, employ illegitimate methods, (and) conceal the truth * * *."

In other words, as Koestler said in the book I mentioned earlier, the Communist ethic is that a "collective aim justifies all means, and * * * demands that the individual should in every way be * * * sacrificed to the community."

In an analysis made for the Princeton Center of International Studies, Gabriel Almond concluded, after studying case histories of ex-Communists, that "for a fully committed Communist, lying, misrepresentation, and brutal actions, if done in the service of the party, are the fulfillment of ethical obligation, mere incidents on the road to salvation."

VI

A fourth issue in the modern ideological conflict may be found in the Judaic-Christian concept of a Supreme Being versus Communist atheistic dogma.

Faith in God as a living reality is basic to Judaism and Christianity. It is because men are believed to be accountable to God that the Western World has evolved strong moral standards of conduct: some things are held to be eternally right and some things are eternally wrong. The prophets Jeremiah, Isaiah, Amos, and Habbakhuk lay the foundation for our belief that God acts in history with justice, mercy, equality, and purpose. Christianity starts with a personal God—not blind force or power, but a conscious, thinking, striving, personal Being. God's revelation of Himself was not through a law, physical forces, or a book, but through a Person. We of the Judaic-Christian heritage believe that God participates in the life of the world. We heed the words of the prophet Isaiah, "The grass withereth, the flower fadeth; but the word of our God shall stand forever."

The Communist philosophy rejects the reality of God and substitutes a materialistic absolutism. Since, in the Communist view, ultimate reality lies in matter alone, there is no fixed morality, save that prescribed by the party and the state. "In what sense?" Lenin asked, "do we repudiate ethics and morality? In the sense that they were preached by the bourgeoisie who declared that ethics were God's commandments. * * * We repudiate all such morality that is taken outside of human class concepts. * * * We say that our morality is entirely subordinated to the interest of the class struggle of the proletariat. * * * Morality is that which serves to create a new Communist society."

Engels wrote: "All religion * * * is nothing but the fantastic reflection in men's minds of those external forces which control their daily life. * * * We reject every attempt to impose on us any moral dogma. * * * We maintain on the contrary that all moral theories are the product of social and economic forces." And Marx held that "Religion is the sigh of the oppressed creature. * * * It is the opium of the people. * * * Thus it is the mission of history, after the other worldly truth has disappeared, to establish the truth of this world."

Communist "truth" of course is defined by the state and the party. Lenin wrote: "The proletariat needs the state * * * both for the purpose of crushing the resistance of the exploiters and for the purpose of guiding the great mass of the population. * * *" And Stalin stated frankly in his defense of Communist ideology that "the dictatorship of the proletariat is * * * a domination that is untrammeled by law and based on violence."

VII

These, then, are four of the great moral issues which divide the free and the Communist worlds and with which all of us who love freedom must cope continuously, persistently, for as long as we live. In this clash of ideologies, we in the United States are once again finding our surest weapons to be our faith in God, and our dedication to the cardinal convictions that man, in his sonship, must be a person of worth and dignity and that the basic purpose of all social institutions must be to help man live in dignity, his eyes fixed on God's great sky. It is with these powerful spiritual concepts that we and our allies in the free world have built our democratic institutions.

The conviction that all men are children of a Supreme Being lies at the heart of the Declaration of Independence and the Constitution. When the Founding Fathers proclaimed that "all men are created equal," they were speaking of equality in the eyes of God. The doctrine of natural rights around which they forged our free political and economic system refers to rights that are God-given, not manmade. Spiritual values govern the way we live—the way we conduct ourselves as individuals and as a people.

By way of illustration of the ideological gulf that separates the free and the Communist worlds, I should like to conclude by relating, in greatly abbreviated form, a discussion which took place in Berlin between a well-known American and a prominent Russian, just following the common victory over Hitler:

The Russian said he would genuinely like to understand the fundamentals of the

American system; so the American began by carefully explaining the Magna Carta, the American Revolution, the Declaration of Independence, and the Constitution.

The Russian interrupted. "I understand what you are saying," he declared, "but I do not see how you can believe what you obviously do. You say you want man to do as he pleases, to say what he pleases, to work or not work as he wishes, to worship as he desires. You are appealing to all that is selfish in man. We, on the other hand, appeal to man's nobler instincts. We teach sacrifice, the nothingness of self, the glory of the state."

At this point the American realized that he would have to help the Russian comprehend our basic concepts of human dignity, mutuality in human relations, and consecrated intelligence—to understand that our whole political, economic, and social system is designed to make possible the attainment of these unassailable moral beliefs. When he attempted to do so, the Russian threw up his hands and the conversation ended.

Bipartisanship in Foreign Affairs

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered on Sunday, March 3, at a testimonial dinner given in my honor by the nationalities division of the Democratic National Committee at the Waldorf-Astoria Hotel in New York City.

My address relates in part to bipartisanship in foreign affairs, so I believe it may be of interest to the Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR THEODORE FRANCIS GREEN, OF RHODE ISLAND, HONORARY CHAIRMAN, NATIONALITIES DIVISION, DEMOCRATIC NATIONAL COMMITTEE, AT THE TESTIMONIAL DINNER, MARCH 3, 1957, WALDORF-ASTORIA HOTEL, NEW YORK, N. Y.

Mr. Toastmaster, Governor Williams, National Chairman Butler, distinguished guests, and fellow Americans, the happy occasion of today's gathering is evidence of the increased importance of this nationalities division which was established in 1948—a short 9 years ago. I was privileged to be the first chairman of the division when it was a small political unit, and I have seen it conquer its difficulties and win its victories until it has now grown to the stature at which it may fairly well be said to represent the hopes and the ideal of 35 million Americans of the most varied and diverse origins.

From the very begininng it has been the function of this nationalities division to help our country by providing an opportunity for political expression to these 35 million of our fellow citizens who trace their family histories to origins abroad within the last couple of generations. It has also been our function to help our Democratic Party by getting it to respond to the needs of this segment of our population, and, particularly, by securing their participation as active members of our organization.

Since that 1948 election, this unit of our organization has been active in many parts of the ocuntry and has been recognized as the one organization to which ethnic groups can confidently appeal when in need of assistance on political matters.

I cannot speak further without paying tribute to one who has identified himself with this movement from the very beginning, namely, "Mish" Cieplinski, as we all fondly call him. He has been the active spearhead of our organization, and through his efforts the division has taken part in many campaigns to elect Democratic Senators, Representatives, governors, mayors, and other candidates on our various tickets.

Other speakers have already mentioned the work which all of you have done in specific campaigns, so I will not go over that again, but I would like to say something especially to you leaders of the nationalities division.

Our organization typifies the unity of all the peoples who make up America. It typifies also our democracy in action.

We have helped 35 million of our citizens to a better understanding of our country's problems—for every man and woman is a better citizen when he or she is given the opportunity, and takes it, to think about the affairs of government.

We have also helped the Democratic Party to bring its message to these same Americans—and the message of the Democratic Party has always been one that each of us should be proud to talk about.

And we have also helped to bring unity of purpose to our fellow Americans of almost every national origin, and to interpret American democracy to foreigners.

This Nation has proved that a great democracy in which millions of people are able to develop according to their own best inheritance, and without being forced into any kind of uniform totalitarian mold, is a democracy which can work, which can grow and become strong enough to withstand any kind of attack, military or ideological.

Most of us familiar with the course of history, realize that there have been other nations with heterogeneous populations which have failed to attain unity and unanimity of purpose—while we have reached that goal. We should realize also that our national development has not come about through the haphazard whims of fate. It is the result of long, arduous, and dedicated cooperation of freemen, with unswerving faith in the Almighty, striving to better their national community and thus, the larger world community.

In our present world situation it is of vital importance that not only this purpose, but also this reality, be impressed upon men everywhere. You can help to do this. You can help by devoting attention to the contracts which many of you have with people living in far-off countries. You can do this more effectively than any kind of special agency—even a highly financed organization like the so-called people-to-people program. You can do it better because you have contacts as individuals in every country from which America draws her great inheritance, and because you can convey the message of our democracy to those countries, not through any impersonal mechanism of propaganda, but from your own individual minds and hearts.

I wish that there were more unity, of the kind we see represented here tonight, in the affairs of our Nation in Washington. From time to time we have heard much about bipartisan politics and I have been privileged to see it applied in foreign affairs to some extent. Under Presidents Franklin D. Roosevelt and Harry S. Truman bipartisanship was a real and vital thing—a principle by which we lived. From it came men like Frank Knox and Henry L. Stimson; and under our Democratic administration, outstanding Republicans like my former colleague, Senator Warren Austin, represented us in the highest diplomatic posts. The name of Arthur Vandenberg became almost symbolic of this living and active bipartisan policy, so far as foreign affairs were concerned.

The present administration has hitherto given only lip service to bipartisanship, which is one of the reasons why our country is in trouble abroad. When there has been any bipartisanship, it has been only a bipartisanship of expediency.

The administration has waited until—as in the Middle East today—it was in deep trouble. Only now, belatedly, it has invited the Democrats to sit in at hurriedly arranged conferences at the White House, in the hope that, in the name of bipartisanship, we would underwrite remedies which could best be described as random and expedient.

I do not mean to suggest that all wisdom rests in the Democratic Party, but I do mean to say that in the difficult conditions which prevail abroad today, it is imperative that the Government of these United States make full use of all the wisdom, ability, and practical experience which can be found in both parties.

However, whatever one may think should have been done at any particular time or place, I am sure that we can all agree that it is hardly fair or sensible to wait until a situation is already in grave disorder—only then to come forth with a crash remedy, with the illogical expectation that those who had no part in determining our policy, and had not been fully informed of what has been going on, should underwrite such expediency.

While I am on the subject of information, may I add another word.

A democracy must conduct its foreign policy in the light of day, so that everyone may know what is being done. In a totalitarian state, a dictator can afford to keep his motives and plans to himself because there, the people are forbidden under penalty to express themselves. In a democracy, however, the success of foreign policy depends upon full information about the factors which lead to decisions and actions.

The present administration has been less than frank with the people in this regard. Only a month before the last election we were informed that the Middle Eastern crisis at Suez had been virtually settled. And yet, it erupted violently before November. Either we were not fully informed as we should have been, or else our Government itself was not fully informed as it should have been.

I cannot emphasize too strongly the importance of having our Government provide full and sincere information, not only to Members of Congress but also to the whole people, of what is going on in the world and how we expect to deal with it.

In normal times, as in critical times, the love of freedom strengthened by truth, is the uniting force of mankind. The world is witness to the gallantry of the Hungarians and the Poles. By their stubborn resistance to the tyranny of communism, they have shown that, though held captive, they still preserve their faith in democracy which is nourished by freedom.

To preserve our freedom, and thus inspire others, both to regain and to preserve theirs, it is imperative for us to chart our future course with a positive program in the conduct of our foreign relations. In this we may safely be guided by the ideals of Woodrow Wilson—freedom of the seas, self- determination for nonself-governing peoples, open diplomacy, improved trade among free nations, and the end of imperialism, of the right and of the left—all of these ideals are as applicable today as when they originated.

And as new situations arise for which there is no precedent and no available solution, we will use our wisdom in finding the way, in setting a good precedent ourselves. This resourcefulness is what has made America great, and this will enable us to preserve

our benevolent leadership of the free world, a leadership forced upon us by the shrinkage in the size of this world as a result of modern inventions.

This leadership we have not sought—in fact some of us have regretted it—and some have even opposed it—but man's ingenuity in the field of transportation and of communication has brought all parts of the world close together and the world has apparently shrunk. Like it or not, we must accommodate ourselves to it. Experiences such as ours in the nationalities division of the Democratic Party, where those of all races have worked together for a common patriotic purpose, not only is valuable to us in our beloved country, but also to the world at large. It holds forth as a lively experiment of what the whole world may hope to achieve. Let us give our best to a realization of that hope.

Address by Fulgencio Batista, President of Cuba, at Visit of Goodwill Mission From the United States

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by President Fulgencio Batista at the palace reception in honor of the guests of the American Chamber of Commerce of Cuba, in Habana, December 3, 1956, together with the reply address by Judge George D. Neilson, on behalf of 150 members of the Goodwill Mission representing the Chambers of Commerce of the United States.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY PRESIDENT FULGENCIO BATISTA AT THE PALACE RECEPTION IN HONOR OF THE GUESTS OF THE AMERICAN CHAMBER OF COMMERCE OF CUBA, HABANA, DECEMBER 3, 1956

Ladies and gentlemen, I am particularly pleased to be able to meet and chat with such a distinguished group of neighbors this evening, and before I say anything else, let me thank you for coming to visit us. We are delighted to have you, the outstanding leaders of industrial, commercial, and civic affairs in your respective areas, and we know that in order to come to Cuba, you have had to sacrifice some of your valuable time. I hope that when you return to your homes, you will feel that the sacrifice of your time has been offset, at least to some extent, by the benefits of your stay in our country.

Cuba and the United States have always been close and good friends, and your presence here today indicates that you want to become better acquainted with Cuba and her people. I have always believed that besides the historical and political ties which hold us together, the good relations between the United States and Cuba have, over the year, been improved and maintained, in a large measure, by trade relations between our two countries. The day-by-day transactions between our industrial and commercial entities have made for understanding, and have developed a sort of economic dependence, one nation upon the other, based on mutual interests and mutual respect. This partnership has prospered in times of peace and in times of war. All of you must know that Cuba sells a great amount of her most important product, sugar, as well as her other products, in the United States, and that, in reciprocation, Cuba buys an even greater dollar-amount of your products for her own consumption every year. This is a good example of free trade, and I believe we should maintain, or even improve, this kind of reciprocity.

We do not believe North Americans have ever found it too difficult to do business with Cuba. Our best witnesses are your own compatriots who have lived in Cuba for many years. I refer, of course, to your hosts on this visit to Cuba. I hope you will have an opportunity to know them better and to get their opinions. We regard them as valuable assets in our country, and I think you will find that they know most of the answers. I am pleased, of course, to receive our neighbors from the north, because, in addition to the pleasure of meeting them personally, the occasion always serves to remind me anew of the blessings we of the free world are permitted to enjoy. It is the shocking truth that at this very moment, while we are able to live and enjoy the benefits of free men in a free world, millions of men and women, and even helpless little children, who were once free, are being forced to live out their miserable lives under the brutal domination of the evil tyrants of international communism.

On occasions such as this, all of us might do well to pause and count our blessings, because we are fortunate enough to be among the few human beings who are free to live their own lives and chart their own destinies. Nor can we ever relax our vigilance toward the forces which would devour us. For those who were blind enough to accept, in good faith, the recent, widely publicized "dulcification" of Soviet Russian policy, we have only to point to events of the past few weeks in Hungary.

You will pardon me, I hope, for bringing up such a disagreeable subject at this time, but I feel that you, as leaders in your own country, which is a citadel of democracy, must remain ever alert to the dangers ahead of us.

Certainly, in the give-and-take of trade relations we have an opportunity to contribute substantially to the preservation of our democratic way of life, by strengthening the economy of our respective nations, and by improving the standard of living for the great masses of our peoples. Improving the standard of living is not only good business from a strictly self-interest standpoint, as reflected in greater demands for our products, but what is, perhaps, more important, is the fact that better living conditions act as a deterrent to the very forces which would destroy us and our way of life. I am sure that all of you realize that the benefits of free trade are not always measured in terms of balance sheets and financial statements. I know that you are dedicated to the improvement of international relations, through friendly foreign trade, which, in itself, is an effective antidote for the venomous doctrines of Soviet totalitarianism.

In these noble efforts you may count on the traditional, patriotic support of the people of Cuba. Thank you very much.

Salud! Salud!

REPLY TO PRESIDENT BATISTA—ADDRESS OF JUDGE GEORGE D. NEILSON, GIVEN ON BEHALF OF 150 MEMBERS OF THE GOOD WILL MISSION REPRESENTING THE CHAMBERS OF COMMERCE OF THE UNITED STATES AT THE PRESIDENTIAL PALACE, HABANA, CUBA, DECEMBER 3, 1956

Mr. President, on behalf of the 150 members of the good will mission to Cuba, representing the various chambers of commerce of the United States, I express to you our sincere and deep appreciation for your kind and gracious hospitality. I want to tell you at this time on behalf of each person here assembled what is in our hearts.

We have now been in your midst and among the lovable people of Cuba for about 4 days, and we have had the good fortune to mingle with your citizens both in and out of Habana.

During our stay in Cuba two things, among others, have made a profound and lasting impression on us. First, we have learned, and happily so, from firsthand experience, that the people of Cuba have great admiration and respect for you personally, Mr. President, and for the farsighted and progressive programs which have been carried out under your inspiring leadership—all for the betterment of Cuba and its people.

Secondly, we are indeed happy to report that we have found that your fellow countrymen have a deep and enduring friendship for the United States and its people. I can assure you, Mr. President, that this expression of true friendship is a mutual one and that we in the United States likewise hold your country in high and friendly esteem.

The thought occurs to me, as I recall the pleasant memories of our stay in Cuba and as I look over this distinguished group in this magnificent and historical palace, that Cuba and the United States have two primary things in common. I say without fear of contradiction that Cuba and the United States are in the forefront in seeking, through the United Nations and elsewhere, an enduring and just peace. In this respect we work hand in hand. Also, we have the common and worthwhile objective of striving and diligently working for permanent prosperity through a sound and healthy economy based on a strong and mutually helpful trade program.

Mr. President, through peace and prosperity we will actively and forceably combat the threat of communism to our sacred institutions. If we diligently strive to raise the standard of living of all of our peoples, both in Cuba and the United States, communism and its sinister forces will not prevail as a potent force in our midst. In fact, throughout all of Latin America and North America we will build for ourselves and our beloved countries the necessary unity and strength to withstand the threat of such unworthy forces.

So, Mr. President, as our good will mission to Cuba comes to an end, and as we reluctantly depart with cherished and happy memories from this friendly land of beauty and sunshine, permit me, on behalf of the 150 members of this good will mission, to wish you godspeed in the great and important responsibilities of your office and extend to you and your associates and the people of Cuba our sincere wish and prayer for a most happy, joyous, and prosperous future.

Passports To Newsmen

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. HUMPHREY. Mr. President, among the growing chorus of opposition on the refusal of the State Department to grant passports to newsmen is the recent protest of the national commander of the Veterans of Foreign Wars, Mr. Cooper T. Holt. In an editorial complimenting Commander Holt for his views, the St. Paul Pioneer Press, in St. Paul, Minn., took a similar stand this week.

I ask unanimous consent that the text of this editorial, which appeared on February 26, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VFW WOULD LIKE TO KNOW

Cooper T. Holt, national commander of the Veterans of Foreign Wars, has joined those voicing opposition to Secretary Dulles' efforts to keep American newsmen from going into Red China to write about conditions there.

The VFW is violently opposed to the Red Chinese regime but, says Holt: "This does not mean that we are willing to give up our birthright which entitles us to know what is going on behind the Bamboo Curtain or anywhere else in the world."

Holt's statement focuses attention on the fact that the Dulles' policy is not merely something affecting newspapers and other information media. Instead, its primary result is to deny the American people the opportunity of knowing more about developments in China. How this will benefit the United States is difficult to understand.

Regulation of Campaign Expenditures

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Campaign Spending," published in the Baltimore Sun of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAMPAIGN SPENDING

Three reforms constitute the core of Senator GORE's plan for regulating campaign expenditures. First is a firm ceiling on the amount of such expenditures. Second are rigid requirements for public report on and disclosure of such expenditures. Third is explicit legal obligation on the candidate himself to see that points one and two are met.

Senator GORE would gear the ceilings on campaign expenditures to the number of votes which were cast in the previous election. Presidential candidates could spend 20 cents a vote, which on the record of recent elections would run to about $12 million, evenly divided between the National and the State campaigns. Similar ceilings, similarly keyed to vote totals, would givern spending in the congressional campaigns.

Other limitations would bind the raising of the money before it was spent. It would be up to the candidate to say what committees and groups could raise what proportions of the total quota allowed—in the case of the presidential candidate, this total quota, as stated, would be around $12 million. Nondesignated committees could raise money for the candidate—but only to the very modest amount of $1,000 each.

Other regulations would limit the shipment of campaign funds across State lines. The new curbs would apply to primary as well as to general elections. To the outright ban on direct spending by labor unions provided in present law, the new proposal would add severe limitations on the spending of labor "political action" committees. That is, it would ban any spending at all by such committees beyond the sum of $1,000 unless the candidate designated such a committee part of his official backing. And then the labor group would be held to the sum imposed by the candidate as dividing up his overall quota. The same new curbs would naturally cover business groups.

To propose such a bill is a long way from getting it enacted, and Senator GORE, a not inexperienced man, knows this full well. When he touches State prerogatives as in the regulation of campaign spending in primaries, he is asking for special trouble. Labor and business groups will only reluctantly yield to further curbs on their political finance. Many a candidate will shrink from the grim burden not merely of holding contributions to a prescribed limit, but of forcing full report and disclosure thereof. But the thoughtful public has long disliked the acrid dollar smell that has curled away from many an individual election fight. Senator GORE may not get all he wants but he ought to get something.

Donald Comer Reviews Cotton Import Situation

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Donald Comer Reviews Import Situation From 1936 to Present," published in the Cotton Trade Journal for January 25, 1957. Mr. Comer is chairman of the executive committee of Avondale Mills, Inc.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DONALD COMER REVIEWS IMPORT SITUATION FROM 1936 TO PRESENT

(By Donald Comer)

(EDITOR'S NOTE.—Since the following article was written the Japanese have announced an export quota schedule on cotton textiles and apparel extending over a 5-year period.)

This is the second time that Japan has come across the ocean to us with her unneeded cotton goods. It's the second time she has involved herself in this unfriendly situation with a friendly nation, and particularly with that large segment engaged in spinning, weaving, and garment manufacturing for their home needs, which is the main concern of this article.

It is hard to understand how the intelligent Japanese people should have attempted this uncontrolled invasion a second time. After saying this, I think it best to review the whole situation from 1936 to date.

In 1936 Japan was fairly launched in the textile business, and, after supplying her home needs, she captured Britain's export market and took first place in it as exporters. Her shipments to America previous to 1935 were negligible. In 1935 this began to increase tremendously percentagewise. They exported to us in 1933 less than 2 million yards, 36 million yards in 1935, and 75 million yards in 1936.

The only reason this invasion was possible was Japan's relatively low wages. She offered nothing new in style or quality—only an imitation of our goods. Our home market was already oversupplied with adequate spindleage operating fiercely, competitively.

President Franklin Roosevelt met this threat by increasing the tariff to the limit of our trade program. This was entirely ineffective. It would take a fantastic tariff to equalize the wages between the two countries. An exchange of views between the leaders of the industry was thought desirable and a committee from our industry went to Japan in December 1936.

Dr. Claudius Murchison was chairman of the committee, and Mr. Cason Calloway, Mr. Harry Bailey, Mr. Bob Phillip, and the writer were the other members. Our committee went with the knowledge and approval of President Roosevelt and both Governments.

Just a short time before this I had coauthored an article in Liberty magazine which they had headlined "Japan Is at War With Us Now." In this article I attempted to answer their claim that because they bought some of our cotton they were entitled to ship the manufactured goods back to us.

SILK FOR COTTON

I thought then, and I still think that Japanese silk for our cotton is a natural and, of course, there are other such bilateral trades. But beyond this, there could be three-way trading—Japanese cotton goods to Malaya paid for by their tin and rubber sold to us for our cotton.

I stated in my Liberty article that whether Japan manufactured our cotton into gun cotton and shot bombs at us, or sent it back to us in manufactured goods, there would be casualties in either case. Of course, there was no thought in my mind then of the tragedy 2 years later at Pearl Harbor when she tried the bombing alternative with its casualties. The closed mills and unemployed workers are casualties with us today as the result of her imports. That was the war that Liberty had in mind.

When our committee arrived in Osaka in January 1937, Japan had already sold 55 million yards for that year's delivery. As a result of our visit, we reached a quota of 155 million yards in 1937 and a 100 million yards for 1938.

During these negotiations, we were entertained pleasantly at luncheons and dinners, and on one such occasion, I remarked that it seemed a waste of effort to fuss over an already well-supplied market; that we ought to be joining hands to improve economic conditions in other countries by developing new markets, lifting the yearly average of cotton consumption per person from practically nothing in Africa to nearer the 33 pounds per person consumption in the United States.

The gentleman next to me, whose name I think was Senator Ogura, said, "You are entirely right, Mr. Comer." And here I want to say that our approach to the problems we discussed was invariably met with courteous and sympathetic understanding, and their gracious hospitality was also extended to the members of our families who were with us—Mrs. Bailey, Mrs. Calloway and her two young sons, Cason, Jr., and Howard, Mrs. Comer and our daughter, Martine—from the time of our arrival until the time of our departure.

In this connection, I wrote Life magazine complimenting them on the beautiful pictures of Japan carried in a recent edition. Our two Governments could well afford to encourage a larger tourist travel program, which would be very beneficial to Japan's economy and further greater knowledge in other countries of Japan's beautiful country and hospitable people.

Japan had 14 million spindles in 1937. These were either bombed out or melted down for war use in the Second World War. After peace, General MacArthur asked a committee from our industry to come to Japan to help reestablish her textile industry. Dr. Jacobs, Fred Symmes, and the writer were

selected as a committee to go to Japan in answer to General MacArthur's request.

Our 16 recommendations for needed help were largely implemented and Japan has now 8 million spindles in operation. One thing that is not understandable to me is that she should now, with this history as a background, be not asking, but demanding, that her unwanted goods again come over here and again shut down our mills and disturb our markets, insisting on some so-called voluntary quota of their own devising, millions of yards more today than in 1937 when they had nearly twice as many spindles, and reserving to themselves the right to make future changes.

When I began to write the Cotton Trade Journal a year ago about this Japanese attitude, their Mr. Kojiro Abe, chairman of the All Japan Cotton Spinners' Association, wrote the Cotton Trade Journal that Mr. Comer should be willing "to live and let live." I replied to Mr. Abe that our record went beyond this, that we believe in "living and helping to live."

We not only negotiated the quota arrangement in 1937, but had been assuring them of our willingness to return again to a reasonable quota arrangement. We all know that every yard from Japan stops an American loom and an American job.

I can't help but think that if the industry had leaders today like Mr. Shoji and Mr. Nango, with whom we negotiated in 1937, this recurring controversy would have been avoided.

In reply to his "live and let live" letter, I'd like to ask Mr. Abe what Japan did to help our tuna-fish industry live on our Pacific coast? What they did for the silk-scarf business, the velveteen business, pillow cases, blouses, etc.? Plywood, 1½ million square feet in 1951 and 43 million in 1955, sewing machines, umbrella frames, chinaware, etc.? In this unfair competition is Japan helping these industries to live?

Such trade relations with Japan leave us confused. I'm not so surprised that Japan, with her Asian wage scale, takes advantage of our lush market, built up over the years by our American standard of wages. I am sick and sore that our Government continues to permit such an unfair trade relation.

To whom does this American market and purchasing power belong? American industry with its genius, know-how, protected labor, protected agriculture, and cumulative advertising, has built it up, and our wage scale can only be maintained by our buying what each of us makes. No one segment of our industry can take its high wages and spend them for low-priced Japanese wares and thereby shut down another home industry.

The tunafish people built their market. They developed it, advertised and promoted it—and Japan reaped the harvest. Our cotton mills developed, promoted, styled, and advertised our ginghams and our velveteens, etc. Japan has capitalized on velveteens and is attempting the same policy toward ginghams—3 million yards in 1953; 70 million yards in the first 9 months of 1956. Out of the total United States market of 250 million yards, this does not include shorts or other garments with their double injury.

For any further information on the subject, I suggest that you read the testimony by our industry before the Tariff Commission on December 4, which includes the statement by Mr. Craig Smith, president of Avondale Mills, on December 14.

American industry was built behind a tariff wall for protection against European wages. The South opposed this program because our cotton was sold on the world market. This situation was later corrected when Congress wrote the word "parity" in our agricultural legislation. How foolish it seems to build a barrier against European wages, only to tear it down before the onslaught of Asian standards.

When Congress had our present foreign-trade legislation before it, President Eisenhower wrote Congressman MARTIN as follows:

"This program, therefore, must be and will be administered to the benefit of the Nation's economic strength and not to its detriment. No American industry will be placed in jeopardy by the administration of this measure. Were we to do so, we would undermine the ideal for which we have made so many sacrifices and are doing so much throughout the world to preserve. This plain truth has dictated the retention of existing peril-point and escape-clause safeguards in the legislation. Signed: Dwight D. Eisenhower."

There was no "if" or "but" in the President's letter to Congressman MARTIN and till this good day, how the Secretaries of State, Commerce, Agriculture, and Labor can explain their failure to carry out these promises is a mystery.

PROMISED TO ACT

Because of the continued growing imports from Japan, I wrote to Gov. Sherman Adams and he promised reassuringly that something would be done about it in his letter to me May 14, 1956. He repeated this promise in Portsmouth, N. H., in September.

I know that anyone in charge of great affairs must depend upon others to carry out a program, but I believe our industry is justified in our growing concern, more particularly because of the President's recent action in refusing to carry out the unanimous recommendations of the Tariff Commission, proposing a tariff to protect the New England fishermen from cheap imports from Iceland. I can only think that he acted because of bad advice from the State Department. Jobs of New England fishermen certainly should not be used to buy a United States Government airbase in Iceland.

If, for the good of all of us, it is desirable to run a straight expressway through my front yard, and the Government takes my front yard, at least they pay me for it. The Government has no right to take the purchasing power which I have helped to build up and trade it to Japan for "this or that." Japan is selling textile machines to Mexico, China, and the rest of the world.

Is the Government going to permit imports from all these relatively low-wage nations who may decide to export textiles? At present, the Government establishes a floor to wages, it fixes the price of cotton, the parity price paid the farmer, the hours and wages of employees and, as of right now, they sell the same cotton to Japan and the rest of the world at about 7 cents a pound less than they sell it to us, and they refuse to equalize these differences by tariff procedures. After paying our Federal, State and city license, we are told to go out and make things against this kind of competition.

QUOTES FROM PAPERS

An extract from an editorial in Jesse Jones' Houston Chronicle of November 27 is as follows:

"So American cotton, made into cloth in Japanese mills, having crossed the Pacific Ocean twice, is now underselling American cotton goods in the domestic market.

"It strikes me, neighbor, that this is carrying do-goodism too far."

From the Cotton Trade Journal, November 16, a news item from Atlanta, Ga.:

"A nationwide conference to protest the administration's textile tariff policies was recommended today to Gov. Marvin Griffin, of Georgia.

"The recommendation was made by a special committee appointed several months ago by the Governor to study the effects of Japanese imports on Georgia industry."

In the Birmingham News of June 12, Senator GEORGE called for greatly expanded trade between Japan and China. He said this is the only way to insure a prosperous Japan, and at the same time to avoid cutthroat competition between the United States and Japan. There should be a relaxation. Japan should be allowed to trade in her ancient and natural markets.

If our Government owes Japan anything, everybody should pay it. Let the Government buy their cloth and give it to naked people of Africa and Borneo. They may like two cotton shirts and become future customers. Our textile industry is vital both in war and peace.

To those of our leaders who seem to be playing a kind of international game of chess with our industries as pawns, I'd recommend the reading of a message sent by the late Frank Knox, then Secretary of the Navy, in the trying days of January 1942, addressed "to the men in the textile industry":

"Hitler is learning, as Napoleon did, that a war can be lost because of clothes. The fact that the German army must face bitter weather in ersatz uniforms, and too few of them at that, may well prove to be the Achilles' heel of this Austrian house painter. An army marches on its stomach—but only if that stomach is kept warm.

BEST CLOTHED FIGHTERS

"America is sending to the battlefronts of the world the best-clothed Armed Forces in the history of warfare. To you, the men of the textile industry who made this possible, go the heartfelt thanks of all our fighting men—from the soldiers huddled behind the antiaircraft guns in Hawaii to the sailors standing watch on some chill and spray-swept deck in the North Atlantic. To you, also, goes the sincere gratitude of the people who wait for them at home.

"This is a total war, a war of industry as much as arms. And the great roar of the country's looms is as vital to the victory as the rumble of the blast furnaces or the clatter of the riveting guns in our shipyards. You of the textile industry have led in casting your 'business as usual' policy to the winds and sparing no effort to meet the tremendous demands placed upon you by our war program. Carry on your work, inspired by the knowledge that you will share in the credit for our final victory."

From the beginning, the State Department has refused not only to recognize this invasion and its increasing threat, insisting that we prove the damage done before the Tariff Commission. Even though our case was so obviously true, we did go before the Tariff Commission, although the experience of the tuna fish, the silk scarf, velveteens and pillow cases, etc., held out no hope.

We are still bewildered at the lack of sympathetic understanding of our situation on the part of the Government. The State Department has opposed the quota bilateral arrangement. Why, I do not know. Our immigration law imposes a quota on persons, why not a quota on what they make and fixed by us, also.

FIXED BY US

Incidentally, this quota of persons is fixed by us, not by the other party. In spite of the President's letter to Mr. Martin, in spite of the promises and statements from Governor Adams and Secretary Weeks, the State Department continues to pursue a crippling program for our textile industry.

Mayor William C. Johnston of Anderson, S. C., and brother of South Carolina's Senator OLIN D. JOHNSTON, said he is asking the support of the American Municipal Association to get the Government to act promptly to stem the flood of foreign-made textile products into this country. He said the administration had not taken promised action to give the American Textile Industry the promised relief from the ever mounting influx of goods and garments from the low-wage industry of Japan.

COLONEL BEATTY QUOTED

The Southern Textile News of Charlotte, N. C., quotes Col. Francis J. Beatty, president of the National Cotton Council, from a letter sent to Gov. Sherman Adams, Secretary Weeks and Secretary Benson, as follows:

"This (referring to the council's resolution calling for import limits) has a highly demoralizing impact on the whole American textile industry, including both fabrics and apparel."

Mr. F. E. Grier, president, American Cotton Manufacturers Institute, said:

"If an aggressive foreign policy could open up the regions of want and rags in Asia, Africa, the Near East and the many Pacific territories, and set them free economically, there would be more than enough markets for all the world's textile industries.

"That's the kind of foreign policy we need. I, for one, intend to hold to the faith that the American people will demand it in place of the wishy-washy foolishness now being pursued in the name of free trade, charity and international politics.

"Once we have met and overcome this greatest challenge, our industry will have a sound footing for progress. We'll know where we stand, and we'll have the incentive to move ahead into greater production, better markets and a brighter era for textiles."

I am writing this during the Christmas holidays, and I would like Mr. Abe and his associates to feel that in agreeing to a fixed sharing of our market with them, it comes voluntarily and in response to our desire to live and help live and in keeping with the spirit of this season.

Uranium and Its Country

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. FREAR. Mr. President, a short time ago one of my constituents, Mr. Ashworth Burslem, composed a brief but very descriptive article entitled "Uranium and Its Country." It was originally printed in a publication of the Hercules Powder Co., but has since appeared in other publications as well. I believe that the Members of the Senate will find it worthwhile reading, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

URANIUM AND ITS COUNTRY

(By Ashworth Burslem)

Born out of grim necessity, in the horror and agony of Hiroshima, Nagasaki, the nuclear age grew from swaddling clothes into manhood almost overnight.

There was a question mark over the future from the first hour the birth was announced.

Today, 11 years have passed since that first blinding flash of light wrote upon the pages of history another chapter in man's conquest of nature.

There is still a question mark. It is still not certain that man's conquest of himself is complete.

The awesome power of the creation is in truth linked to man's good intentions and his striving toward improvement of his lot.

There is still the question mark—one misstep and then destruction. There is, however, hope and faith that only good and no evil will emerge from the nuclear piles that begin life in the colorful, barren earth of New Mexico, Arizona, and Montana, of Utah, Colorado, and Nevada.

There is an omen for good in the lilt of the names given to places only yesterday known but to a few. Listen to the singing of Monument Valley, Moab, Red Rock, and Monogram Mesa. There is Mexican Hat, and Paradox Valley, Shiprock, Cisco, and Naturita. Then, there's Dead Horse Point. Oh, yes, this is Indian country, home of the Navaho. They are still the only masters of this desolate waste which reflects the colors of uranium in both its raw and finished state. The yellows and greens of ore are there; the flaming red of fire is there. Both animal and vegetable manages to survive, and it has been so for centuries. The early Indians used uranium for their war paints, unaware of any portent for the future, and the skeleton a giant dinosaur, a fossil of an early chapter in history, was tumbled out of the rock with its ancient bones so radioactive a Geiger counter came to life. Life. That word keeps recurring.

Uranium can mean much to life and to living, if the power man holds in his hands is devoted to the glory of a future at peace.

Equal Rights for Women

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. McDONOUGH. Mr. Speaker, as a consistent sponsor of the equal-rights amendment, I have urged that women be accorded their full equality with men in every phase of business, professional, and domestic activity, and that they be accepted to full partnership in the duties and responsibilities of the Government of our Nation, both on the national and the local level. I have also urged the adoption of the equal-rights amendment, as proposed in House Joint Resolution 62 which I introduced, which would render all laws discriminating against women because of their sex null and void.

We have recognized the equal rights of human beings to live and work in a Nation where they will not face discrimination because of race, color, and creed, and even now seek legislation to strengthen the guarantee against discrimination. But we have ignored discrimination against women because of their sex. And we will never achieve our goal of equal rights for all our citizens until we have removed all existing discrimination against women and adopted the equal-rights amendment to the Constitution to assure women of their equal rights under the law of the land.

One of our outstanding women of Los Angeles, Calif., Adele I. Springer, a member of the New York and California Bars, and a past president of the National Association of Women Lawyers, recently delivered an excellent address on Woman's Role in the Machinery of Government which not only is a review of the historical progress of women, but also shows the difficulties encountered and overcome by women in achieving recognition in the professions, as proof of what women can do, and the need for their valuable contribution to government.

I urge that all Members of Congress give serious consideration to the following address by Adele I. Springer:

WOMAN'S ROLE IN THE MACHINERY OF GOVERNMENT

(Address by Adele I. Springer, past president, National Association of Women Lawyers, member of the bars of New York and California, delivered before the Los Angeles Council of Business and Professional Women, February 21, 1957, in Los Angeles, Calif.)

The greatest unreleased power in the world today is—womanpower.

It is, therefore, fitting that the subject of my talk before so distinguished a group of business and professional women, representing the trained and skilled womanpower in this area, should be—the role of women in the machinery of government—past, present, and future.

The women of America now constitute more than half of the voting population and more than one-third of the United States labor force. When a class is so numerous as to include one-half of the human race, the proper administration of justice requires that their voice be heard in the world councils.

Men, and women, both, must be prevailed upon to accept woman as a vital part of the machinery of government.

In discussing the relative absence of women in the conduct of the American governments, it must be remembered that these governments number not only the United States itself, but also the governments of the 48 States, Territories, and possessions, and numerous local, county, and municipal governments, also international tribunals.

Let us look at the record.

In the Nation's Capital, over the entrance to the Supreme Court of the United States, are engraved the words, "Equal justice under law."

Not one woman has ever sat in that Supreme tribunal which has the last judicial word. Yet, men claim that women always have the last word.

On the legislative side of our Government: Only 16 of the 531 Members of the new, 85th Congress, are women—1 less than last year's all-time high. The United States Senate still has but one woman Senator. Of the 435 Members of the House of Representatives, the women number 15—and none from this great State of California.

On the executive side of our Government: The President's Cabinet now remains stag.

The record in the State governments is no better.

There is no woman governor of a State or Territory. Some of the States do not have even one woman in the State legislature.

And few of the States still exclude women—along with lunatics and criminals—from service on juries in the courts.

Although justice is universally symbolized by a woman, holding balance scales, a majority of the States do not have even one woman judge. Altogether there are about 50 women judges in the United States, and these serve on inferior courts without even 1 on the bench of the highest State courts.

These discouraging figures exist, despite the fact that a recent census poll records millions more women than men, of the adult, voting population in the United States.

They are in face of the fact that there is an increasing number of college graduates among the women, and that today they have a most important part in the legal, medical, journalistic, and other professions, as well

as in the conduct of various business and sundry enterprises.

This is notwithstanding the fact that women are estimated to own 70 percent of the total wealth of the Nation, control 47 percent of corporate stock, inherit 80 percent of life insurance, own 65 percent of savings accounts, 40 percent of the real estate, and control 85 percent of all consumer buying, and that women have achieved recognition in all the occupations listed by the Bureau of the Census.

It required over 50 years of strenuous effort before the 19th amendment to the Constitution of the United States was adopted, to permit women to share in the election of our public officers, Federal, State, and local.

Yet, in the 36½ years since ratification of the suffrage amendment, we have made no greater progress to date in the management of the machinery of the American Government than thus outlined.

When we reflect on this, it is to be kept in mind also that women had had a right to vote in a number of States for years prior to the 19th amendment.

Why should all this be, when equality before the law and equality of economic opportunity are synonymous with the words "United States of America."

Why should women countenance men's monopoly of government when men do not have a monopoly on the qualifications for government.

For example: The listed occupations of the Members of this Congress show that 60 percent of all the Congressmen are lawyers. But there is only 1 woman lawyer among the 257 lawyers in the House of Representatives and none among the 57 lawyers in the Senate, notwithstanding the more than 12,000 women lawyers in the United States well equipped by training and experience for lawmaking, many of whom have made a place for themselves in Who's Who in Law and in Who's Who in America.

The stated occupations of the other Congressmen are equally enlightening. They include businessmen, publishers, teachers, farmers, and other pursuits.

The occupations of the feminine contingent in Congress are, to say the least, comparable. They include two teachers, two congressional secretaries, a businesswoman, lawyer, psychologist, realtor, social service worker, research director, former State legislators, housewives, and a so-called society leader. Their record in Congress, too, at least matches.

All the lady legislators—9 Democrats and 7 Republicans—are married women, yet found time to campaign and get elected, in addition to their work and rearing their children and running successful homes. Some of them are even grandmothers.

Yet, the men, constituting less than half of the population in America, have been able to limit the participation of women in the operation of the machinery of government.

The equal rights amendment, still before Congress, is expected to pass.

The President of the United States, in a recent pronouncement, made a declaration of policy for equal rights. The President can make the phrase a fact, by appointing a woman to fill the chair on the Supreme Court of the United States made vacant by the retirement of Associate Justice Reed.

The Nation's highest ranking woman judge, Judge Florence Allen,, who now sits on the United States Court of Appeals in Ohio, has proved that women have what it takes for elevation to the Nation's highest Court. Her 37-year record on the bench of State and Federal courts is an enviable one. Her record as a woman is as great.

The record of most of the women judges throughout the United States compares most favorably with most of their male colleagues on the bench.

Let us take to heart the words of that great jurist and statesman, Justice Brandeis, that "the greatest menace to freedom is an inert people."

That your association is conscious of its responsibilities, is made evident by this assembly of thinking women, and by your dedication of this meeting to the theme of law and lawyers.

Law is a most indispensable profession. Lawyers have always been in the front ranks as defenders of individual rights and in directing social movements, in overthrowing tyranny, exposing intrigue, unmasking corruption in high places, enacting laws and maintaining our constitutional system of Government. Great lawyers and judges of yesteryear and of our present day, have been an inspiration to the bar and to the public.

It is noted that 25 out of the 56 who signed the Declaration of Independence were lawyers; that 50 percent of the signers of the Constitution were members of the bar; and that of the 33 Presidents of the United States, 25 have been from the ranks of the bar.

This same theme of law and justice embraces the role of women in the machinery of government.

The long struggle of women for equality is a part of the increasing striving for human liberty. In continuing to fight for equality in economic, civil, and political opportunity, we are advancing the cause of law and justice, and the cause of men and women alike. It is not right alone, or as an end in themselves, that we seek. What we seek is to do our part in furthering the destiny of our country.

The guidance and activity of women are greatly needed in government housekeeping. In family life the greatest success and happiness lie in a true partnership in which the qualities that belong especially to men or women complement and supplement each other. This is equally true in communal life.

Women have had no easy road to recognition in their chosen fields. The prejudices and obstacles were many which women in the professions and in other endeavors have had to overcome in their march to a distinguished position. Yet, the fact that, notwithstanding, women have won recognition, proves that success is not a respecter of sex and that mind has no sex.

We are the successors of those great and courageous trailblazers of history, those heroic pioneers who fought, and won, against seemingly insurmountable odds, the "battle of the sexes," which opened all doors to the women of our generation.

It is heartwarming to recall some of the valiant women who fought the good fight to enable them and succeeding generations to invade the traditional male strongholds. A brief review of the difficulties encountered in their struggle, shows what determined women can accomplish.

The story of woman's campaign to gain entrance into the legal profession, for instance, is a heartening one:

Arabella A. Mansfield became the first woman lawyer, when admitted to practice in the State of Iowa in October 1869. But it was Myra Bradwell of Chicago who was the first woman ever to apply for a license to practice as a lawyer in America, or, in fact, in the world, when she applied to the Illinois court in 1869. Her application was denied, by reason of the disabilities imposed by her status as a married woman. Undaunted, she took the case to the Supreme Court of the United States, but was denied "equal justice under law" on the same ground of coverture.

Thereupon, an unmarried young woman applied, in 1871, but was similarly denied a law license by the Illinois court, even without the excuse of coverture. Determined, she took her case to the legislature, and after much effort, succeeded in getting a law enacted that "no person shall be precluded or debarred from any occupation, profession, or employment, except military, on account of sex."

This was the first enabling law in the Nation.

Following the Illinois legislative victory, gallant women in a number of other States took up the standard, some in the courts and others in their legislatures, for admission to the practice of law.

It was still at the turn of the century, in 1900, that the Delaware supreme court denied a Philadelphia woman lawyer the right to conduct a case in Delaware, even at a time when women lawyers were by then already appearing in the highest Court of the Nation.

The first woman to practice before the Supreme Court of the United States was admitted in 1879. Her application for admission was made in 1876 but was denied because of sex disqualification. Refusing to recognize defeat, she drafted a bill providing for the right, which Congress enacted in 1879.

Even the bar associations were adamant in disallowing women lawyers to membership. The first woman to apply for membership in the American Bar Association was an Iowa lawyer, in 1902. Today, the membership of the American Bar Association not only includes many women but they serve on, and head, committees, and for the past decade women lawyers have been officially recognized even with a delegate to its august governing body, the house of delegates.

When I was elected to serve as a lone delegate of the women lawyers to the American Bar Association's house of delegates, and served also in New York as an officer and on the executive board and on committees of the predominantly male bar associations, I felt as an heir-at-law of those early valiant women who broke down the barriers.

And when it was my privilege to have been the first woman ever to serve as counsel to any congressional investigation, I, too, felt as a standard bearer.

Today women lawyers are no longer on trial. More than a decade ago women lawyers achieved full recognition.

From Shakespeare's Portia, to the Portia of today, is an ideal realized.

The story of women in medicine is an equally gratifying one. When women doctors were denied a hospital in which to work, that did not stop them; they built their own.

The common cause of our sisters-in-law and sisters-in-medicine was pointed up by an enlightened Wyoming judge in 1870, who, while swearing the first women jurors in any court, told them not only that "the eyes of the world were upon them as pioneers," but also recorded: "You shall not be driven from the temple of justice as your sisters have from some of the medical colleges of the land. It will be a sorry day for any man who shall endeavor to deter you from the exercise of those rights with which the law has invested you."

But it did not deter them, when women were refused admission to the medical schools. In 1850 the first woman's medical college was created in Pennsylvania. Its all-women medical graduates are the living proof.

When, 1 year before, the medical profession's first woman doctor, Elizabeth Blackwell, was graduated in 1849 with honors, she found every door closed to her. So she established her own dispensary; then in 1857 opened the New York infirmary for Women and Children—the first hospital to be staffed entirely by women.

Since that time the infirmary, a monument to medicine's women pioneers, has made great strides in setting the pace for the medical world. The many firsts of this all-woman staffed hospital prove that women in

medicine have been more progressive than their male colleagues.

For instance, their first training classes of nurses were requisitioned by the Government during the Civil War. Other hospitals did not establish nurses training schools until 1872. The first medical social service was established by the infirmary, and the first visiting nurses service was created.

These are but a few of the many outstanding accomplishments of this unique institution, which is one of the few in the world staffed entirely by women, but which despite limited funds, has consistently earned the approval of the American Medical Association, American College of Surgeons, and the welfare departments.

Today, women doctors not only are recognized in the medical associations, but the question of appointment of women doctors was brought to a conclusion in 1943, with legislative enactment, commissioning women doctors in the Army.

Though the intrepid ladies who pioneered in medicine for women preceded by two decades the pioneering Portias, their aims and gains were the same.

That their kindred spirit still prevails, is manifested by this great association of business and professional women who have banded together for cooperative effort. The fact that your own program chairman of this meeting, Attorney Selma Moidel Smith, of Los Angeles, is today a member of the national board of that first woman's medical college in Philadelphia, further illustrates such professional sisterhood.

The story was the same, with little variances, in other fields. A further example is the journalistic field:

There is scarcely any newspaper position, from cub reporter to editor and publisher, which is not now filled by a woman journalist. But it was not always so.

The first woman newspaper publisher, Anna Zenger, in 1733, became known as the mother of freedom of the press in America. That Thanksgiving is a national holiday is due to 20 years of effort by another woman editor, in 1837. And it was a woman who first published the Declaration of Independence.

Since a century ago when the press gallery precincts opened for the first time in 1850 to the woman correspondent, the women in journalism have distinguished themselves in all departments, including radio and television.

Womanpower and power of the press, a formidable combination.

It is certainly no longer to be questioned that in the many other fields of endeavor, women, similarly, are on a par of excellence with men.

In the business and industrial field, a million United States women are business executives or owners.

Of the 22 million women working in America, the largest number in our history, half of them are married. In fact, 30 percent of all married women now have outside jobs, and contribute substantially to family income.

Thus, in every age, women have proved the diversity of her genius, to this very day. No one can deny that American women have become an important and valuable force.

It is pertinent to consider, therefore, why does woman allow man's monopoly in government to exist and to continue?

Let us look at the record:

Masculine leadership has involved the world in bloody strife. Men, alone, twice within our generation, have embroiled the women and children of the world in conflagrations. They are still trying to achieve perpetual peace through perpetual war. The reverberation of gunfire in Asia and in other parts of the world, provides daily evidence that few, if any, of the struggles and problems affecting this confused world, have been solved. The threat of atomic and germ warfare stalks the earth. The United Nations, which soon will celebrate its 12th birthday, still has no teeth. The U. N. still fails to furnish the machinery for maintaining world peace.

I am not here to recount to this intelligent audience the centuries-old struggle of mankind. But let us face squarely the fact—the world is sick almost unto death.

Also, let us not overlook President Lincoln's admonition, that we have more to fear within our own borders than from without?

In our own country, we are today confronted by unparalled conditions in the fiscal field. Let us ponder the famous remark of Chief Justice Marshall that "the power to tax is the power to destroy." Too many governments have been wrecked on the rocks of loose fiscal policy. Women in the home have performed near miracles on small budgets. Government housekeeping requires the same skill. The national welfare demands a sound fiscal policy—a reduction in public expenditures, debts, and taxation.

With concerted action, women can be a powerful force in the world of today and in the nation of the future.

This leads one to wonder why the world cannot have a government of laws and not of men; why law cannot displace force in the settlement of international disputes; why nations cannot take their cases against each other to a world court, just as people sue one another in local, State, and Federal courts; and why proper measures cannot be taken for the enforcement of judgments by a world tribunal, just as people are forced by police to obey the laws of God and man.

I repeat: Why should women—who create and not destroy life—be denied a share in the establishment of a workable system of law and order in the world.

The world can be enriched, as the home has been endowed, by having both sexes contributing to the well-being of this Nation.

In the words of George Washington, in the Constitutional Convention—as true today as in 1787—"Let us raise a standard to which the wise and honest can repair; the event is in the hands of God."

Public Health Service Award to American Export Lines

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. MAGNUSON. Mr. President, as deserved recognition of the outstanding record in the maintenance of sanitation, achieved by the American Export Lines, Inc., it is fitting that the attention of the United States Senate and of the public generally be called to the Special Citation awarded by the Public Health Service, United States Department of Health, Education, and Welfare.

Especially is it noteworthy that American Export Lines is the first to win this coveted award for two years consecutively. Its fleet includes luxury liners and other passenger ships maintaining regular cargo and passenger service to the eastern Mediterranean Sea. The most favorable acceptance which its service has received by citizens from many countries throughout the world has reflected credit to the United States of America. President John F. Gehan and Mrs. Charles U. Bay, Chairman, of American Export Lines' Executive Committee, deserve the commendation of our citizenry for their accomplishments in the administration of maritime affairs over the years. It is significant that recently another thoroughly experienced executive of proven worth, Frazer A. Bailey, has been named managing director of this successful organization.

In order that the full record resulting in the decision by Dr. Leroy E. Burney, Surgeon General of the United States, in awarding the citation, may be preserved, I ask unanimous consent that the text of this special citation be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE PUBLIC HEALTH SERVICE—SPECIAL CITATION TO AMERICAN EXPORT LINES, INC.

Granted in recognition of the company's contribution to public health as evidenced by the award of a Public Health Service Certificate of Sanitation to each vessel operated in its fleet during 1956.

[SEAL] L. E. BURNEY,
Surgeon General.

FEBRUARY 20, 1957.

The Diplomatic Shifts

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. HUMPHREY. Mr. President, for some time, both as a member of the Foreign Relations Committee and as an American citizen interested in the conduct of our foreign policy, I have been disturbed by the continuing emphasis on the monetary qualifications for our highest ambassadorial posts. I am particularly sorry that President Eisenhower in his ambassadorial appointments has seen fit not only to continue, but to increase the number of instances where financial contributions to political campaigns seem to outweigh other qualifications in qualifying men for ambassadorial posts.

In this morning's New York Times there appears an article by James Reston, entitled "The Diplomatic Shifts," in which some of President Eisenhower's new appointments are examined in this perspective. I ask unanimous consent that Mr. Reston's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DIPLOMATIC SHIFTS—A DISCUSSION OF THE EXTENSIVE TRANSFERS BY EISENHOWER AND REASONS FOR THEM

(By James Reston)

WASHINGTON, March 4.—Since the November election President Eisenhower has changed almost every major United States ambassador overseas and is now working on a long list of minor post changes.

In the Cabinet and in almost all home-front jobs, the President has retained the men who wanted to stay on for the second term, but he has appointed a new Under Secretary of State, a new Deputy Under Secretary, and new ambassadors in London, Paris, Bonn, Rome, New Delhi, Tokyo, Cairo, and Jakarta.

Changes also have been made, or are about to be made, in the leadership of diplomatic missions in Belguim, the Netherlands, Norway, Australia, New Zealand, the Philippines, Burma, Hungary, Luxembourg, Vietnam, Ceylon, Haiti, and in several Latin American countries.

All this adds up to the biggest wholesale move in United States diplomatic representation ever taken by a President who was reelected. And it is taking place during the period of the most lively diplomatic negotiation since the war.

BOHLEN MAY BE SHIFTED

The only mayor posts not changed, in fact, have been Moscow, Vienna, and Madrid, and there is considerable speculation that Ambassador Charles E. Bohlen will be moved from Moscow before the end of the summer.

There are a number of reasons for this striking contrast between retaining the Eisenhower team at home and sweeping it out overseas, including that old familiar reason, politics.

President Eisenhower, apparently has adopted the rule of inflation to political payoffs. This is that a contributor's money no longer buys as much as it used to in the realm of diplomatic appointments. Specifically, the rule now seems to be that unless a political diplomat proves to be unusually successful (or politically powerful), he is expected to make way after one term to a new group of political contributors.

Thus Ambassador Frederick M. Alger in Belgium, who was generally thought to be doing a good job, and who wanted to stay on, was asked to resign in favor of J. Clifford Folger of Washington, chairman of the Republican National Finance Committee.

THE ENVOY TO PARIS

Thus, too, Amory Houghton, chairman of the board of the Corning Glass Works of Corning, N. Y., who is listed as having contributed $6,000 to the Republican treasury in the last election, received the key ambassadorial post Paris. He comes from a distinguished family with a long diplomatic record, and is himself highly regarded, though he suffers from the handicap of not being able to speak French. This has not amused the officials in Paris.

There is nothing new in all this except the unusual number of changes between administrations of the same party. The normal thing is to retain a political ambassador from one term to another if he is doing a competent job, particularly if important negotiations are in progress with the country concerned.

It does not follow that large contributors are replacing career ambassadors or that they are necessarily less competent than the men they are replacing. The opposite in the case in some of the new appointments.

For example, the naming to London of John Hay Whitney (who contributed $24,500 and whose wife added another $9,000 to the Republican treasury during the 1952 campaign) is generally regarded here as an improvement on Winthrop W. Aldrich, who was ambassador there during the first Eisenhower term.

The same is thought here to be true of the appointment of the experienced Democrat, David K. E. Bruce, to take Ambassador James B. Conant's place in West Germany, though Mr. Bruce, like Mr. Houghton, does not speak the language of the country to which he has been appointed.

SOME SOUGHT RETIREMENT

The President had no choice but to appoint new Ambassadors to several posts. Two vacancies were caused by death and several others—for example, Mrs. Clare Boothe Luce in Rome—insisted on retiring. Also it is regarded as normal that career Ambassadors change posts at regular intervals, often at the end of a presidential term.

Nevertheless, there is a heavy emphasis on politics in these appointments. The ratio between career and political ambassadors has been retained about as it was in the first Eisenhower administration, but there is a general feeling here that the President is adding quite a few new, inexperienced second-term ambassadors just when some of the first-term political diplomats were getting on top of their jobs.

In short, General Eisenhower has, in an era of lively diplomatic negotiation, perpetuated the old political ambassadorial system and, if anything, made it more political than it was under President Truman. And this has been something of a surprise.

His commitment to the voters when he first ran for the presidency was based on a statement which he repeated in many parts of the Nation:

"We will call to the high offices of the Government," General Eisenhower said, "the best men and women, the ablest and most reliable in the land."

No President has ever achieved this ideal in this century, and General Eisenhower is clearly no exception to the rule.

Federal Aid to Junior Colleges

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, March 5, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Federal Aid To Junior Colleges," published in the Freeport, Ill., Journal-Standard of January 4, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL AID TO JUNIOR COLLEGES

Before determining the wisdom of Federal aid to education as a general proposition, and before allocation of Federal aid to poorer States which urgently need funds to build elementary schools, the issue of Federal aid to junior colleges is arising.

Senator CASE, Republican, of New Jersey, says he will submit a program for 2-year "community colleges" to provide higher education for the "300,000 to 600,000 presently destined to go without college educations in the next 5 years." He sees the community college as an institution that will serve a national interest.

It will be of interest to Freeport to watch progress, if any, of a Federal project for aiding junior colleges. It may not come at once, nor soon, but it is as close to a future certainty as anything in this uncertain world.

Like all desirable things, Federal aid to junior colleges will not be an unmixed blessing. It has its own special disadvantages, in addition to those which attach to Federal aid to education in the elementary and high schools.

Educators have pointed out, for example, that living away from home is part of the whole business of acquiring higher education, and those who do not get away from home are losing out in one of the vital aspects of preparation for a good future.

That is true, but it is also true that some people are finding it impossible to get away from home to attend colleges and universities. It is, moreover, a fact that many of the reputed advantages of campus life and activity are of doubtful value, and are even hindrances to some types of students.

Undoubtedly an ampler higher education for the average citizen, with emphasis on technology, is coming more and more to be considered necessary for defense, if not for national survival. It is also more essential to the individual in preparation for the competitive life he must expect as the population increases.

Since it is one of the paradoxes of this age that there is both more leisure time and stiffer competition for the rewards of business or the professions, higher education will continue into adult years for many who are married, have children, and yet feel the need for further study and self-improvement.

Extension and correspondence courses are are of some assistance in meeting that need, but the junior colleges already in being and the many more to come will satisfy it much more completely.

Passport Service Improvements

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. FASCELL. Mr. Speaker, under unanimous consent, I am having printed in the Appendix of the RECORD an article entitled "Passport Service Improvements," which appeared in the New York Times on Sunday, March 3, 1957.

This article highlights some of the vast improvements which Miss Frances Knight has brought about in the State Department's Passport Office. In addition to applying a humanizing touch to what used to be a bureaucratic ordeal Miss Knight and her staff have cut the waiting period for a passport from 3 months or more to an average of around 3 days. And this has been accomplished while a tremendous backlog of old applications also had to be processed. Miss Knight and her staff are to be congratulated on a difficult job well done.

The article follows:

PASSPORT SERVICE IMPROVEMENTS—THE HUMANIZING TOUCH LIGHTENS THE BURDEN OF AN OLD ORDEAL

(By Morris Gilbert)

Applying for an American passport to go abroad has had a reputation for decades as an ordeal only exceeded by that of facing the internal-revenue fellow. But now there has been a switch. The New York passport offices, on the mezzanine floor of 630 Fifth Avenue, are reconditioned, redesigned, expanded, and humanized. The purpose is to speed and simplify delivery of passports, and to make the process less trying for applicants.

Miss Frances G. Knight, Director, since May 1, 1955, of the State Department's Passport Office, has thought of almost everything which has to do with getting passports. After all she had to produce almost 560,000 last year with a staff somewhat less than the present 353. She has thought of so many things that nowadays passports, in average cases, are issued within 3 days of application. When the big rush comes next April, May, and June, this period will extend to 10 days, although Miss Knight hopes to

get it down eventually, even in such seasons, to a week.

MANY CHANGES

Miss Knight, who looked over the New York field office a while ago, has instituted many changes and developments since she took charge. Washington headquarters has been moved into three floors of a handsome air-conditioned Government building at 1717 H Street NW., from a musty, inadequate, antique called the Winder Building. She and her staff have filed a backlog of 1 million unfiled or partially filed documents from the old regime which had been stored in scattered boxes, under tables and atop cabinets. They have instituted an improved so-called shelf-filing system to replace the earlier cabinet files, involving 6,500,000 files.

By simply returning birth evidence and other private documents to applicants for passports, instead of storing them away, great space has been saved as well as much unconstructive correspondence and a good deal of paperwork.

EFFICIENT FIELD OFFICES

But the major developments, as far as average applicants are concerned, are in the field offices, notably here. A new field office has recently been set up in Los Angeles. Streamlining of the Chicago field office is getting under way, to be followed by similar complete reorganization in San Francisco, New Orleans, and Boston.

"The whole purpose," said Miss Knight in the New York offices recently, "has been a general humanizing of the business of supplying passports. It had to be done some day, because the crowding and delay were getting beyond belief."

On the day of the interview, 456 new applications were processed at the New York office, an average of more than 50 an hour. When the peak days arrive, this quantity is expected to rise to 650. Applications for passport renewals which, of course, must also be processed, run about 10 percent of the new ones.

The first essential, Miss Knight pointed out, was more space, and the quarters were much expanded. This allowed a separation of functions. Whereas, formerly, applicants had to queue up to get application forms and a sheet of instructions from the agents on duty, these are now available in a simple, clearly marked rack in an outer room, just beyond a newly installed information counter. Thus the first queue was abolished.

Spacious counters are placed in the outer room where applications can be filled out. If an applicant has brought two passport photographs (one of Miss Knight's innovations is that these can even be smiling ones), a birth certificate or other similar document, and a witness to identify him, he can pass right on to the agents' counters in a second spacious office for immediate processing.

FUNCTIONAL COUNTERS

The new counters were designed after considerable study. They were zigzagged so that each agent's section allows for two people—the applicant and his witness—to stand together before him in comparative privacy, while the queue for that compartment stretches at an angle behind.

Under average circumstances, the swearing in of the applicant and witness and the processing of the application, plus the payment of the $10 (for a first passport, $5 for a renewal) can be comparatively speedily accomplished.

A series of cushioned, comfortable benches has been installed in a wide area of the inner room, where applicants or members of families can relax quietly. These, too, are innovations. Two huge wall maps of the world adorn the inner and outer rooms. They are marked with symbols indicating the situation of American embassies, legations, consular agencies, special offices, and missions around the world.

Passports themselves are processed here, as well as in the other bureaus, and Miss Knight installed a series of pickup windows where applicants who prefer not to have their passports mailed can get them.

Miss Knight's exploration of the convenience of passport seekers has extended to obtaining expert advice on colors for the walls of the office. "Cool colors keep people calm and not so conscious of the time," Miss Knight said, "so the general wall color scheme is a cool gray. But we want to keep them happy, too, so one wall is bright." It was a strong brownish red.

The year 1956 showed an increase of close to 6 percent in passport applications over 1955, despite the fact that requests for passports dropped last November and December below the level of those months the previous year, thanks to the Suez crisis. Last January, Miss Knight said, the workload was 12 percent below that of January 1955, thanks to the same cause.

"But," she said, "the slightest change in the international or economic atmosphere can have a chain reaction. The passport offices must be ready for a bigger inrush at any time."

In fact, Miss Knight is looking ahead to the commercial jet age, which she estimates will be well underway by mid-1959.

BIG INCREASE EXPECTED

"It will be quite possible by then," she said, "for people to think in terms of weekend visits to Europe. Businessmen will be planning to get back and forth for a day's meeting, or a 2-day conference, overseas. The proposed jet planes will be carrying 150 passengers instead of the current 90 passengers seated in the big piston transports; and the jets will go almost twice as fast as present piston planes." In view of those prospects, Miss Knight estimates that passport applications in 1960 will have jumped more than 45 percent—that is, to 814,000—over last year's.

Long-Term Policy Needed on Scrap Exports

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. McCORMACK. Mr. Speaker, on March 28, 1956, I placed in the CONGRESSIONAL RECORD some statistics showing that we exported iron and steel scrap for a 3-year period, as follows: Calendar year 1953, 307,673 short tons; calendar year 1954, 1,507,310 short tons; calendar year 1955, 5,047,942 short tons.

I have had my staff prepare the export figures for calendar year 1956 and find that an unprecedented 5,929,115 short tons were shipped during this period. Of equal importance to the quantity shipped was the fact that 56 percent, or 3,350,695 tons, consisted of "steel scrap, heavy melting No. 1." which is admittedly in short supply for our domestic needs.

Under leave to revise and extend my remarks I am placing in the RECORD the statistics showing 1956 exports by grades to various countries:

Iron and steel-scrap exports, calendar year 1956

Country	Steel scrap melting No. 1	Steel scrap melting baled	Steel borings, shovelings, turnings	Iron scrap	Iron and steel scrap, not elsewhere classified	Tinplated scrap	Rerolling material	Total	Percent of total
Canada	96,652	52,169	27,758	455,404	28,495	21	5,815	666,314	11.2
Mexico	206,524	43,260		23,300	15,141	497	61,615	350,337	6.0
Argentina	3,360			10,616				13,976	.2
Norway	6,720							6,720	.1
United Kingdom	341,308	218,145		4,058				563,511	10.0
Netherlands	32,003	3,022			1,212			36,237	.6
France	218,388	119,503	46					337,937	6.0
West Germany	144,729	67,998	123	23,121	2,805			238,776	4.0
Austria	17,439	2,311						19,750	.3
Italy	726,393	452,925		73,572				1,252,890	20.1

Total	3,350,695	1,491,425	85,901	835,375	67,672	2,718	105,329	5,929,115	
Percent of total	56.4	25.2	1.4	14.1	1.1		1.8		100.0

The February edition of Military Review issued by the United States Army Command and General Staff College contains an excellent article entitled "Pivot of History," by O. Edmund Clubb. The article, based upon the author's 20 years' experience as a Foreign Service officer in Asia, describes the ambitious plans of the Soviet leaders to develop and industrialize the vast and virtually untouched deposits of natural resources of Soviet Asia in order that the area will become the Eurasian heartland.

A footnote to Mr. Clubb's fine article states:

At a time when the United States is within sight of depletion of some of her most essential minerals, the Soviet Union is just beginning the exploitation of Asia—a rich new continent now in metamorphosis.

I am keenly aware of the necessity for furnishing our friends and allies materials which they need in their economy and which will foster reciprocal trade. I am also keenly aware of the necessity for maintaining our scrap collection facilities in the United States for peacetime and for emergency purposes. I am, however, concerned with the fact that a long-term policy based upon thorough research has not been developed with respect to the export of a material which is indispensable in this modern, industrial era. As always, I take the position that if we must err we should err on the side of strength and security for this and for future generations.

In 1953 the Secretary of Commerce took steps to establish a task group to advise him with respect to exports of iron and steel scrap. The group represented scrap dealers, brokers, exporters, foundries and consumers in order to give the Secretary a cross section of opinion. It was the original intent that the group should meet quarterly and render advice as to action to be taken for the subsequent quarter. I find that the group met 4 times in 1954 and twice in 1955—the last meeting being on August 3, 1955. There were no meetings in calendar year 1956. I find from study of the minutes of meetings of this important task group that at the fourth meeting—November 4, 1954:

With one exception, the task group members recommended that there should be a limitation on iron and steel scrap export beginning with the first quarter of 1955 based on 90 million tons of ingot production, the export figure to be determined by the Department of Commerce, with 7 members recommending 1 million tons and 2 members 2 million tons.

At the fifth meeting—March 1, 1955—it was stated that the Department of Commerce after discussing the group's previous recommendation with other agencies had decided against the imposition of quantitative controls on the export of scrap until a better evaluation could be made as to the place of ferrous export in the metallic balances of the iron and steel industry and trends in the export market could be proven.

As one would judge, there is a sharp cleavage of interest and opinion between scrap dealers, brokers and exporters on the one hand and consumers on the other with respect to the imposition of either quantitative or qualitative export controls on iron and steel scrap.

Fortunately many Members of Congress became concerned over the large scrap exports and inserted in section 2 of Public Law 631, 84th Congress—June 29, 1956—a requirement that the Secretary of Commerce make a complete survey of iron and steel scrap now available and potentially available.

The law required that the report be made to the Congress not later than January 31, 1957.

The Commerce Department employed the Battelle Memorial Institute to make a survey and analysis by contract dated September 7, 1956. Obviously there was not much time for such a complicated survey and report, although in my opinion the institute rendered an excellent piece of work on January 17, 1957, which states in the letter of transmittal:

In spite of the shortcomings of the data available, and the compromises and assumptions that had to be made in order to meet the time deadline, this survey and analysis represents a major step forward toward a better understanding of the complex problem of the supply of and the demand for obsolete iron and steel scrap. The data and analyses presented in this report represent the most exhaustive study of this problem to date and do give same indications of the future supply-demand relationships, but they cannot be considered conclusive.

One of the major objectives of the study was to estimate the total availability of obsolete iron and steel scrap for consumption for the year 1956. We were able to estimate the obsolete reservoir of iron and steel as of January 1, 1956. It was not possible, however, in the time available for this study, to develop all the date necessary to identify the amounts of iron and steel in the obsolete reservoir and in the replacement crop that are actually available for consumption as scrap. Further study will be needed on the many factors influencing the transfer of iron and steel from the obsolete reservoir into scrap-consuming channels. This is discussed in detail in the summary and recommendations section of the report.

It is noted that the Commerce Department has now stopped granting export licenses for heavy melting iron and steel scrap and they are to be commended for this action pending additional study.

Despite the recent fluctuations in iron and steel scrap prices, it is my opinion that further study should be made as recommended by the Battelle Institute report and after thorough exploration the Commerce Department should submit to the Congress a comprehensive long-term policy on the export of iron and steel scrap.

Report of the New England Governors Textile Committee

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and annual report to the Conference of New England Governors on Textiles in the New England Economy:

THE NEW ENGLAND GOVERNOR'S TEXTILE COMMITTEE,
Cambridge, Mass, February 26, 1957.

The Honorable THOMAS J. LANE,
United States House of Representatives, Washington, D. C.

DEAR CONGRESSMAN LANE: I am sending you under separate cover a copy of our annual report to the Conference of New England Governors on Textiles in the New England Economy. This includes a research report.

I also enclose a release of the New England governors of February 25, in which they raise certain issues about local finance and various textile items. Included is a memorandum issued by the governors, which spells out the details of the State and local financial problems. The governors, I am sure, would appreciate very much anything you can do to implement these recommendations.

Sincerely yours,

SEYMOUR E. HARRIS,
Chairman.

REPORT OF NEW ENGLAND GOVERNORS' TEXTILE COMMITTEE

To President Eisenhower and the Members of the New England Congressional Delegation:

THE CONDITION OF STATE AND LOCAL FINANCES

We submit for your consideration a memo on the financial condition of State and local government and relevant measures that are required. The financial problems are of serious proportions and strong measures are needed.

On December 11 Governor-elect Furcolo, in a letter to all governors, stressed the need of setting up a revolving fund to provide capital for State and local governments at reasonable rates. In this memo we support his suggestion and add some other proposals.

How else are the $42 billion of capital estimated by the Department of Commerce and Labor of the Federal Government, as required by State and local governments in the next 10 years for schools, and $200 billion in all, to be found?

TEXTILES AND THE NEW ENGLAND ECONOMY

1. Tariff on woolens and worsteds: We respectfully bring to your attention the following: We are disappointed that the relief given on imports of woolens and worsteds which provides a rise of rates from 25 percent to 45 percent for woolen imports once imports exceed 5 percent of production, is on an annual rate. That means that we get only temporary relief, for each first of the year the tariff automatically rises to 45 percent. Our suggestion is that the allocation of imports relative to domestic production be put on a monthly basis. We remind you that the industry has lost 50 percent of its jobs since the tariff cut of 1948. Of course, the tariff cut was one of the several unfavorable factors.

2. Japanese quotas: We urge you to scrutinize imports to be sure that the quota arrangements of January are kept. The industry had a bad year in 1956, at least in part, because of the rapid rise in Japanese imports and the accompanying fear. We appreciate your efforts to correct the situation.

3. Dumping of raw cotton abroad: We bring to your attention the sale of vast supplies of cotton by the Government at large discounts abroad, often as much as 25 percent. Then the foreign producers of textiles and apparels compete on our market with cotton subsidized by the American Government.

4. Flood insurance: We are disappointed that, despite our requests, State governments have to share the costs. This will make the insurance unavailable to some New England States.

We also are fearful that the program is moving along too slowly. Policies are far from being available.

5. Other issues: We bring again to your attention the need of a good depressed area bill to help in textile and other towns where mills and factories close and lay off workers. We urge you to assure enforcement of mini-

mum wages and periodic revision as wages rise.

We are anxious that mergers undertaken to avoid taxes (and reduce jobs in New England) be discouraged—as a Tax Revision of 1954 requires.

Again we ask the administration to watch the abuse of tax exemptions and privileges which are used to make possible the building of mills in other sections as a means of alluring northern manufactures.

INTRODUCTION

This message is concerned with the deteriorating condition of State and local finance and what might be done about it; and relevant Federal legislation. The Conference of New England Governors is greatly concerned over these developments.

1. The facts

(a) Trends in revenues, expenditures, and debt;

Postwar growth of State-local and Federal revenues, expenditures, and debt

[In billions]

Fiscal year	State-local			Federal		
	Revenues	Expenditures	Gross debt	Cash receipts	Cash expenditures	Gross debt
1946	$13.2	$12.4	$16.0			
1947	(1)	(1)	16.8	$43.5	$36.9	$258.3
1952	25.3	27.8	30.0	68.0	68.0	259.1
1956	33.0	40.2	49.0	77.1	72.6	272.8
1957	(1)	(1)		[2] 81.7	[2] 78.3	[2] 270.6
Index post-war growth, 10 years	250	324	306	188	212	105

[1] Not available.
[2] Estimates, January 1957.

Source: Hearings, Joint Congressional Committee on Economic Report, Feb. 1, 1957 (W. Heller).

This table reveals that State and local outlays are rising at a rate of 1½ times Federal outlays and debt at 3 times the Federal rate. State and local expenditures are increasing at the rate of almost $3 billion yearly and debt at more than $3 billion yearly.

From 1952 to 1956, State and local expenditures rose relatively seven times that of Federal outlays. Earlier the Korean war had greatly inflated Federal outlays.

(b) The capital market: With this vast expansion of demands for capital and the dear money policy introduced to cope with inflationary forces, State and local governments are confronted with serious problems in the capital market.

First, the Federal Government (Department of Labor and Commerce) estimates that in 10 years these governments will need $200 billion for public works. In the last 10 years the outlays were only one-third as large.

Needed:	*Billion*
Highways	$92
Educational	42
Water and Sewage	25
Other non-Federal	23

The current rate of spending capital is about $12 billion per year.

Heavy construction demands have greatly increased costs. Since pre-war, construction costs have risen by 50 percent more than the cost of living. Since 1946, construction costs of buildings have risen by 88 percent; of highways, by 40 percent.

In part the increased demands are the result of a shift of construction responsibilities from the Federal Government to State and local governments.

New construction, 1952 and 1956

[In billions]

	1952	1956	Change, 1952–56
Federal	$4.81	$3.64	−1.17
State and local	6.10	9.79	+3.69
Percent State and local	56	73	

Source: Economic Report of the President, January 1957.

(c) The rate of interest: With heavy demands on the capital market and a dear money policy the cost of money has risen greatly.

The rise has been especially great for State and local government issues. With outstanding debt up from 16 to 49 billion dollars in 10 years and gross borrowing averaging $6 billion a year, the rate would probably have risen even in the absence of a dear money policy.

A peculiar factor has been a weakening of the special market for State and local issues—the tax-exempt market. Until recently State and local government could borrow more cheaply than Federal Government. A high income-tax payer could greatly reduce his tax cost of 60–80 percent of income, say, by buying tax-exempt issues. But now with the needs of the high-income groups saturated through these issues or the availability of new forms of tax avoidance, the tax-exempt issue has lost its appeal.

It is not surprising, then, that in 5 years the yield on municipal bonds has increased by 71 percent as compared with a rise of only 30 percent for United States Government bonds and Aaa corporation bonds.

(d) Future demands for revenue: In 1953 the Tax Foundation, a research organization for taxpayers, estimated that State and local expenditures by 1965 would rise from $30 billion in 1953 to $52 billion in 1965. Official figures show increases from 27 to 35 billion dollars, or a total rise of $32 billion, from 1953 to 1965—at the 1953–56 rate. At this rate the total would be close to $60 billion by 1965, or a rise of 70 percent from 1956 as compared with a 200 percent rise from 1946 to 1955.

The burden is especially severe for States. From 1950 to 1956, State tax collections rose from 7.9 to 13.3 billion dollars, or almost 70 percent. Pressures on State governments especially grow. In 1902 local governments spent 5.1 times as much as State governments; in 1927, 3.1 times; in 1953, 1.3 times. Deducting State contributions, local governments now spend less than State governments. A major reason for this shift is the inflexibility of local revenues, especially the general property tax; and the heavy burden of the school bill.

2. Proposals

(a) Federal loans and guaranties: We urge the Federal Government to consider seriously the possibility of borrowing on behalf of the State and local governments when the Federal Government borrows at lower rates. Until quite recently this was not necessary, but, with State and especially local issues yielding more than Federal, the situation has completely changed. In Minnesota, the rate on local school issues has risen from 3 to 4 percent in 1 year. This would be especially helpful for school districts; and the cost to the Federal Government would be negligible and might even yield revenue, for Federal bonds are taxable and State and local are not.

It is a striking fact that Federal credit (official estimate for fiscal year 1958) has risen from $40 to $85 billion since 1952. Yet local and State governments profit in only a small way from these loans, insurance, and guaranties. A guaranty system for State and local issues sponsored by the Federal Government may greatly reduce the cost of borrowing by these governments. A beginning in this direction is proposed in the pending school-construction legislation.

(b) Increased markets for State and local issues: The Federal Government should allow the unemployment insurance reserve to include investments in State and local governments in unemployment reserves. At present almost $9 billion go into Federal securities alone. Though these funds are the product of federally imposed taxes, they are, in fact, funds that belong to the workers of each State. At one time Federal issues earned more, and hence this policy could have been justified; but this is no longer true.

(c) Dear-money policy: We are aware of the proper use of dear money to contend with inflation. But insofar as this is necessary, its uneven incidence should be considered. The State or local government paying higher rates cannot pass these costs on to the consumer or in a reduction of Federal taxes paid, as corporations can. Therefore the strong case for measures suggested above.

(d) Unilateral actions: We ask the Federal Government to consider our proposals seriously. On our part we may improve the situation by gradually substituting State and local bonds for the Federal issues of $16 billion now held by State and local governments; by economizing on and centralizing the $10 to $15 billion of cash held by local and State governments; and by improving the overall supervision and advice in re local issues. The case for investment in State and local issues by these governments is enhanced as the rate on these issues rises above the Federal return.

(e) Pending Federal legislation and 1596 legislation: In some respects the problems are especially troublesome for New England. Last year we brought to the attention of the Federal Government the large drains of cash out of New England. Federal taxes cost us three times as much as we get back as compared to our more serious southern competitors.

In this connection, we are concerned over the effects of the amendment to the Defense Production Act of 1956, which might encourage an excessive concentration of industry in the South and West at our expense.

W are also watching the road program and anticipate that Congress will set up the Fallon formula as promised for the 13-year road program. This will make a difference of $500 million to New England over the next 10 years as compared to the amounts allocated under the Gore formula now in vogue.

In education, we are concerned that the administration bill hits New England rather severely. The payments to New England States under the two bills are given below. In part the differences are the result of larger appropriations under the Kelley bill. But note the payments for some of our competitive States. And note also that even with a distribution on the basis of children of school age, poorer States gain because they pay less vis-a-vis incomes and receive back more, since they have more children of school age relatively.

An example is given below:

	Income per capita	Children school age per 1,000	Administration bill per capita	Costs per classroom
Connecticut	$2,499	203	$0.92	[1] 100
Arkansas	1,062	275	3.72	50

[1] Index.

Connecticut with a per capita income 2½ times as high as that of Arkansas and almost as many children of school age in relation to population would get one-sixth as many schoolrooms built relative to school population.[1]

School aid allotments, per year

	School age population (thousands)	Kelley bill (thousands)	Administration bill		
			Total (thousands)	Per child	State matching requirements (thousands)
Connecticut	441	$7,174	$2,011	$4.56	$4,023
Maine	207	3,367	1,932	9.33	1,311
Massachusetts	975	15,861	6,872	6.96	10,779
New Hampshire	118	1,920	1,074	9.10	932
Rhode Island	164	2,668	886	5.40	1,316
Vermont	89	1,448	1,007	11.31	597
Georgia	944	15,356	11,926	12.63	5,962
North Carolina	1,123	18,270	14,615	13.01	7,306
South Carolina	646	10,509	8,727	13.51	4,363
Tennessee	846	13,762	10,144	11.99	5,071
Mississippi	600	9,760	7,772	12.95	3,885
Total	36,844	600,000	325,000	8.81	320,087

Source: Congressional Quarterly, Feb. 1, 1957.

How much better New England does under the Kelley than under the administration bill is revealed by the following:

Percent receipts under Kelley bill
(Administration bill 100)

New England	237
Maine	174
New Hampshire	179
Vermont	144
Five Southern States	127
United States	185

Again, New England's matching expenditures under the administration bill would be 155 percent of Federal allotment; that of the 5 Southern States, 50 percent (or one-third as much relatively); for the Nation, roughly 100 percent. Only Vermont (60 percent) approaches the southern ratio. (New Hampshire, 87, and Maine, 69.)

It is well to remember that even the Kelley bill (without equalizing features except adjustments for number of children of school age) has a built-in equalizing feature since many States pay in more than they get back. In New England, disbursements under Federal program were but 82 percent of taxes borne in 1954 (Report to Conference of New England Governors: New England Textiles and the New England Economy, 1956, p. 147).

We Can Make Our Dollars Behave

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. McDONOUGH. Mr. Speaker, there is a very definite and urgent need for a thorough review and investigation of our monetary policy and of the financial institutions of the United States.

As a member of the House Banking and Currency Committee, I supported the appointment of a commission as recommended by President Eisenhower rather than a committee of the House as recommended by Mr. WRIGHT PATMAN, because I believe a commission made up of qualified private citizens together with Members of the House and Senate could and would do a more thorough job than a committee of Members of the House of Representatives alone.

I am submitting herewith an article entitled "We Can Make Our Dollars Behave," recently published in Nation's Business, which reviews this problem quite thoroughly:

WE CAN MAKE OUR DOLLARS BEHAVE

Our dollars don't always behave as the traditional rules say money should, or as they used to behave.

This behavior creates the need for a group such as the National Monetary and Financial Commission the President has proposed.

To be effective, such a study needs to review the working of the entire economy, not just financial institutions. If it yields to temptation merely to set up new rules rather than to find out why our present controls don't always work as they are supposed to, it will fail.

It will contribute much if it can answer three questions:

How to make monetary controls operate in areas which are relatively immune to monetary pressures.

How to make controls operate promptly in both the short-term and long-term markets, and in all areas;

How to make all important financial institutions complement each other and function effectively, promptly, and fairly.

Individually, most of the units of our monetary system are functioning well.

The creation of farm banks, of the Home Loan Bank System, the Securities and Exchange Commission, and other institutions has meant better financial service.

Insurance of deposits in banks and savings and loan associations, combined with better practices and better supervision, has built up confidence in these institutions. Neither farmers nor home owners need fear wholesale foreclosures again.

So each financial need, by itself, is well served by dependable institutions.

The Federal Reserve System and other institutions have also learned much about how to handle their responsibilities. The more important mistakes made in the twenties and thirties will not be repeated. The institutions are still learning. The problems of 1955–56 were similar in many ways to the problems of 1952–53, but the experience of that period has not been repeated.

Our difficulty is that the changes in our system have been made piecemeal. Each has meant improvement in the area it was intended to serve but has added little to the smoothness of the operation of the system as a whole and has sometimes detracted from it.

There has been little basic change in the coordination of financial institutions since the Federal Reserve Act of 1913.

The Federal Reserve Act was a great document. But today the Nation has moved to a high-employment, peacetime economy of a size and complexity that the framers of the Federal Reserve Act—or the framers of the deposit insurance, farm and home credit, and securities acts of the thirties—never envisioned.

As a result of these changes, the money market now are vastly different from those of 45 years ago.

When the Federal Reserve Act was passed, and for many years afterward, financial institutions and to some extent individuals operating as financial institutions, provided the money and credit that the economy required.

Farmers went to local banks, or to insurance companies, if they wanted to borrow. If money was scarce, or interest rates high, they didn't borrow.

If would-be homeowners wanted to build, they, too, had to go to the money markets. This frequently meant commercial banks. Mutual savings banks were well established in New England but elsewhere savings and loan associations were relatively unimportant, though growing, and insurance companies made only conservative loans.

Consumer credit, particular the credit handled through nonfinancial institutions, was almost unknown. Charge accounts were available to middle- and upper-income families, but most purchases were on a cash basis.

Business firms could get funds through the banks, insurance companies, or the "streets"—La Salle Street, Wall Street, and others. But these sources were closely affected by credit conditions. If credit became scarce, it becomes harder for business to borrow.

Rules which operated quickly and effectively in that simple economy not only work more slowly under today's complex conditions; they often have effects exactly opposite those intended.

In 1913, for example, an increase in interest rates was expected to reduce demands for money. That is less true today.

For instance, farmers are not dependent for funds solely on local commercial sources. A national farm credit system has been set up. When interest rates rose in 1956, agricultural lending institutions increased rather than reduced their volume of lending. This may have reduced the overhead per dollar of money lent, and so helped hold down interest rates on farm loans. This was obviously contrary to theory.

The home-building field did not behave as expected, either. In theory, again, prices rise for commodities in short supply and hold steady or fall for commodities in ample supply. This reduces demand for goods in short supply. In theory, too, a drop in prices encourages demand.

The system actually worked in reverse last year in the home-building field. Supplies of brick and of lumber for housing became adequate. The supplies of machinery and equipment for industry became more and more inadequate. But the shortage of money and higher interest rates diverted funds from housing—from the purchase of lumber and of brick—and toward machinery and equipment. The volume of housing dropped and orders for machinery and equipment rose.

Several things contributed to this phenomenon. With significant exceptions, money still flows toward the markets which will pay the most for it. That is particularly true of money rented by and from large finanancial institutions. The cost of making $10,000 or $20,000 loans is much higher per dollar lent than the cost of making a $1-million or a $100-million loan. As money gets dearer the lender may be tempted to reduce the number of small loans and to keep the larger, more profitable ones, rather than raise interest rates on the smaller loans.

Similarly, the home-mortgage loan may have been marginal to larger institutions. Unless the interest rate is raised on such loans to keep the return, after overhead, comparable to the return on large industrial loans, the volume of home loans may decline in the competitive money market. The large institutions may make such loans in volume when there is an adequate supply of credit and to a lesser extent when the supply of money and credit is less than the demand.

A large corporation can also handle a financial transaction more efficiently than a home buyer can handle one. This handicap

may be more important in a marginal financial market than the fact that commodity prices are rising in one market and not in another. Corporations may find it advantageous to borrow at higher interest rates even when the prices of goods they buy with the borrowed money is rising.

Another reason credit controls don't work as expected is the growing size and complexity of business enterprises. This causes them to become bankers in fact, if not in name.

This occurs in many ways. One of the simplest happens quite naturally in any large corporation with many subsidiaries, branches, or even departments. Money may be flowing into one office faster than it will be used. Other offices may need funds. Interoffice, interplant, or intercompany transfers can be worked out.

If the businesses which needed funds had been independent organizations, they might have been forced to go to some financial institution. The interest rate, or the terms, might have deterred some of them from borrowing.

A further difficulty is the growing fuzziness of money and credit, or what can be turned into money and credit.

A steel company, for instance, may want money to expand. The money market may be unfavorable. But a large manufacturer who uses steel may advance the steel company part or all of the desired funds in return for guaranteed steel deliveries. The money market has been bypassed.

Or the volume of money and credit may be modified by changes in terms agreed upon between firms. Payment may be made in 60 days instead of 30. Discounts may be increased for prompt payment, or prompt payment may be required. Industry, which always serves as its own banker to a great extent can modify its credits and liabilities somewhat independently of financial institutions.

A few figures illustrate these developments. Cash in banks held for the credit of corporations totaled less than $20 billion at the end of 1945, and about $32 billion at the end of 1956. This was an increase of about 60 percent. But receivables from other than the United States Government increased from $23 billion to more than $84 billion, an increase of 265 percent. Cash and deposits are relatively less important today than they used to be.

Even if companies cannot get money in the market place, they may be able to resist the currents the Federal Reserve Board is creating. In 1954, when business dropped off, corporations offset some of the financial strain by cutting their cash and Government security accounts by $1 billion in addition to reducing inventories.

In 1956, when money was harder to get, they reduced their cash and Government security accounts by $5 billion. Corporations get by with smaller balances in relation to the checks handled, and they made their money work more effectively in other ways. In general, the velocity with which deposits were used outside of New York City is estimated to have increased about 5 percent in 1956.

That is one way of saying that $100 of deposits did about as much work at the end of 1956 as $108 did at the end of 1955.

The point is simple. When monetary, or tax, or regulatory authorities try to restrict action, people and firms try to escape the new fetters. In the monetary field, they may ward off many of the effects for months, and some of the planned effects for a year or more.

Another and possibly more serious defect lies in the fact that it is difficult to restrict long-term credit with short-term tools. Most of the tools at hand—such as reserve requirements, discount rates, open-market purchases—operate through the short-term market. As credit was tightened in 1955–56, the average rate for short-term bank loans to selected business rose from an average of about 3.6 percent in 1954 to about 4.14 in June, 1956, or 15 percent. But the yield on long-term issues rose from 3.51 percent in 1954 to 3.75, or only 7 percent. The yield on 200 common stocks, which in 1954 was 33 percent above the short-term bank rate; was 3 percent below that rate by June 1956.

Despite the pressure on the monetary system, bank loans and mortgages to corporations, which went up to $4.4 billion in 1955, went up $6 billion in 1956. The sale of new issues, which yielded $7 billion net in 1955, brought in $8 billion net in 1956. With all the pressure that was exerted in the short-term markets, plant and equipment outlays (long-term outlays) rose from $24 billion in 1955 to $30 billion in 1956, and inventories grew from $4.6 to $6 billion. The two together rose $7.2 billion, or 25 percent more in 1956 than in 1955.

Difficulties of controlling the short-term market itself are great, too. For instance, the tools that work in the short-term market may be blunted by the process of getting money for short-term purposes in the long-term market. Obviously, banks with a large supply of Governments, or other long-term paper, can sell such assets and use the money obtained to make short-term loans if these are more profitable. It may be even more difficult to discourage certain corporations, such as acceptance corporations, from getting funds in the long-term market, and relending the money in the short-term market, than to discourage banks from doing this.

As if all this did not make monetary control difficult, consider the fact that the apparent short-term interests of the Federal Treasury, and the national long-term interest in economic growth and price stability, may not always match. The Federal Government had about $277 billion of various forms of debt or guaranteed issues outstanding at the end of 1956. An increase in interest, considered necessary to help fight inflation, therefore can be expensive to the Treasury.

Due to the size of its debt, the actions of the Treasury can either support or partially offset actions of the Federal Reserve in the monetary and credit field.

This points up a major issue. If the Treasury or the administration feels that its policy is being frustrated by semi-independent or independent agencies, such as the Federal Reserve Board, the Government may be tempted to try to obtain authority over the dissenting agency. It may attempt to do this through appointing men to responsible posts whose views follow those of the administration. Or it may attempt to change the laws or the administrative orders under which the agency operates.

Coordination of the policies of all agencies has obvious advantages. In periods of great strain, such as during wars, coordination may be necessary. But in peacetime, coordination could cost heavily.

When policies are centralized a major decision affects the entire economy. If it is a good decision, all benefit. If it is a bad decision all suffer.

As matters now stand, the Treasury can act in one way, the Federal Reserve in another, the Home Loan Bank Board in a third. The fact that responsible, well-informed, and skilled agencies disagree means that there is real doubt as to what policy is going to be best.

If the administration controlled the Federal Reserve Board and the Home Loan Bank Board, political expediency might dictate an inflationary policy which would be difficult to reverse. If the Federal Reserve Board were able to control, it might decide the housing market was oversupplied, and be relatively indifferent to the effects of its actions on that market.

On the other hand, it will usually be safe to proceed with divided councils for a time. Under such conditions, there is less chance of taking an irretrievable step which, if wrong, would have such an impact on the entire economy as to be impossible to reverse. The chances of making a major mistake are greater under a centralized than a noncentralized system.

Nevertheless, coordination is desirable when it can be had without the loss of necessary safeguards of the sort inherent in our competitive economic and our constitutional political systems. Those who can discover a happy compromise which will give the most advantages of both coordination and checks and balances will be performing a service which is essential to any long-lasting improvement of our monetary and financial system.

We do not need just a better Federal Housing Administration, or Federal Deposit Insurance Corporation. We need a system into which all financial institutions fit; a system in which financial, corporate and individual actions can mesh. That means a review of the problem in the light of the working of the entire economy.

Pension funds, for instance, are growing faster than any other type of investment. They are taking more and more funds from the economy, but today they are highly restricted for practical reasons, at least, in the areas to which they can channel funds. This may interfere with the growth of the economy, as well as with effective monetary control.

The problem is complicated but not hopeless, because the basic problem is understood. The supply of money and credit must grow fast enough to permit the economy to grow in a healthy fashion, without encouraging inflation. Institutions must be developed or created which will operate so that those who demonstrate that they can make the best use of the money will get it.

There can be honest debate about how a study should be sponsored, how it should be organized, and how it should be carried on. But there can be no question that a basic new study is needed of the overall responsibility of the Federal Government, of the environment in which financial institutions work, of the overall policies, practices, rules, and laws that guide their operation, and of the general supervision that these institutions need.

ROBINSON NEWCOMB,
Economist and Business Consultant.

A Home Is Where Happiness Abides

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. SANTANGELO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a speech made by the Honorable Carmine DeSapio, Secretary of State of New York, at the annual dinner dance of the St. Ann's Parish held at the Hotel Commodore in New York City on Thursday evening, February 21, 1957:

A HOME IS WHERE HAPPINESS ABIDES

It is always a very great personal pleasure for me to accept your gracious invitation to share with you—the reverend clergy, the members, and the friends of St. Ann's Parish—in the joyous occasion of your annual dinner dance.

As some of you may know, my daily activities bring me into frequent contact with a great many civic, political, educational, and religious organizations dring the course of the year. And while many of the functions which I regularly attend are, indeed, very beautiful, very stimulatnig, or very inspiring, I seldom have the opportunity to share in an occasion in which all three of these happy qualities are blended as they have been in each of the evenings which I have been privileged to spend with you.

I have tried to analyze the question of why this should be so. What is there, I have asked myself, that sets this particular gathering of men and women slightly apart from so many of the others?

Why is it, I have tried to discover, that I should somehow feel more at home here among you—less like a visitor who is greeted courteously but with that indefinable and certainly unintentional sense of reserve which so frequently mars the relationship between host and guest.

For the answer to these questions, I found myself going back, in memory, to the days of my childhood * * * where, as the modern psychologists tell us, the answers to so many personal questions lie forgotten until they are stirred, many years later, by some seemingly unrelated event.

And, as I recalled some of the incidents of my early boyhood, I remembered a family who used to live next door to us, down on the lower west side. To a youngster in grammar school, they seemed to be a very odd family indeed. They were quite poor; and, I realized even then, they often did not have enough food to go around. Yet, despite their poverty and despite what must have been a difficult—and perhaps even discouraging—daily existence, they were a wonderfully jolly group.

They enjoyed being with people, and people enjoyed being with them. Now I have heard it said that some people are born to be hosts and that others are born to be guests. And, to some extent, that may be true. But in the case of these people, it was more than mere hospitality which accounted for the fact that their living room—it was always known as the parlor in those days—was almost always filled with more people than it could comfortably accommodate. Sometimes these gatherings were very festive; sometimes they were marked by very earnest and serious discussions; and, on occasion, they were quite solemn.

But always, when you entered that room, you had the feeling that you were at home, that you were among friends, and that you were welcome there.

And the secret of the atmosphere of warmth and good feeling which was so tangible that you almost could reach out your hand and touch it stemmed from the simple fact that, to the people who lived there, it was not a cramped, sparsely furnished, ill-heated tenement apartment, but rather, it was a happy home.

I believe, quite seriously, that those people could have brought their personal warmth to Madison Square Garden and made that arena a comfortable place in which to live and visit. For their hospitality, of which they gave so freely and so artlessly, was totally independent of external surroundings.

They were, in effect, so eager to share what they had with others that they often were totally unaware of how little they had themselves. This was God's blessing to them, and certainly it was more precious than all the worldly gifts which hundreds of less fortunate families could accumulate during the course of a generation.

My friends, I hope you will not consider it presumptuous of me to suggest that something of that same blessing seems to have been bestowed upon the people of St. Ann's Parish.

For, although the external circumstances may be very different, the sense of family solidarity, of good will, and of natural hospitality is very similar.

There is the same unity of purpose, the same bond of brotherhood, the same underlying strength which derives from the instinctive knowledge that here among you repose the virtues of kindness, humility, justice and love—and the unshakeable belief in the wisdom and goodness of Almighty God—which are the basic principles upon which our Catholic faith is founded.

It is not for me to recite the long list of achievements which you of St. Ann's Parish have written into the history of your community. That history records many instances of unselfish dedication, of courage and of personal sacrifice which speak far more eloquently than I can of the spirit which unites this very wonderful and great-hearted family.

But I would like to take this opportunity to join with each of you in offering my congratulations to one of our very dear mutual friends, the chairman of your dinner-dance committee, former State Senator Alfred E. Santangelo, who now represents St. Ann's Parish in the Congress of the United States, and who, I know, undertakes his new and very serious responsibilities with the personal blessing of everyone present here tonight.

My friends, my gratitude to you this evening is two-fold. For not only have you given me a very happy and beautiful evening among the family of St. Ann's Parish, but you also have enabled me to revisit, however briefly, some of the happiest scenes of my own childhood.

Thank you very much and God bless you all.

Comity and Commonsense in the Middle East

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. VANIK. Mr. Speaker, I would like to direct the attention of the Members of the House to the following speech delivered by the Honorable JOHN F. KENNEDY, Democratic Senator from Massachusetts, at the 1957 Brotherhood Year Observance of the National Conference of Christians and Jews in Cleveland, Ohio, Sunday evening, February 24, 1957. His speech was entitled "Comity and Commonsense in the Middle East."

Under leave to extend my remarks in the RECORD, I include Senator KENNEDY'S speech and commend it as evidence of commonsense in these uncommon times:

COMITY AND COMMONSENSE IN THE MIDDLE EAST

(Remarks of Senator JOHN F. KENNEDY, Democrat, of Massachusetts, 1957 Brotherhood Year observance, the National Conference of Christians and Jews, Cleveland, Ohio, February 24, 1957)

It is a rare honor and privilege to be with you tonight upon the occasion of the national brotherhood banquet sponsored by the National Conference of Christians and Jews, and the presentation to A. M. Lunts of the national human relations award which he so richly deserves. The national conference and its annual brotherhood observances, which I know have a special meaning to Cleveland, have long ago proven to be a permanent, valuable part of American life, enriching our heritage, stimulating our conscience, and overseeing the progress of human relations in our land. We honor here at this dinner tonight a principle—a principle we call brotherhood—in the hope that all Americans will honor this principle in their hearts all year round.

Brotherhood, tolerance, enlightened relations between members of different ethnic groups—these are, after all, simply an extension of the concept upon which all free organized society is based. Some call this concept comity or sodality, or reciprocity. Some find it in the Golden Rule, others in the teachings of Hillel, others in Rousseau's social contract. Our Declaration of Independence calls it "the consent of the governed." Political leaders refer to "the art of compromise, or the concurrent majority." The ancient Greeks and Romans called it civitatis philia, or civic friendship.

It is upon this principle and practice, by whatever name it may be called and regardless of what form it takes, that free societies function, governments operate, and orderly, amicable relations between civilized human beings go on. For although the continued presence of sanctions is a necessary part of any legal structure, we depend, in the last analysis, not upon our police force and our jails for the preservation of law and order, but upon voluntary observance and self-restraint. We all pay taxes to Secretary Humphrey without a court order (with a few notable exceptions); comply with laws we bitterly dislike; and respect the rights and privileges of others even when those rights and privileges necessarily interfere with our own.

The family also functions on this same basis of comity. Sanctions are available in the home, too, as I recall, but obviously a child is not to be beaten into observing every customary rule of conduct from morning to night. On the contrary, we take it for granted that such observance comes as a matter of course.

What is true in the relations of the family at home can be equally true, I believe, in the family of nations. Without some supersovereign, some police force, some guaranteed enforcement and punishment, most scoffers say, there can be no such thing as international law and order. But such an attitude fails to recognize that comity, not sanctions, is the basis of law and order among free equals.

Actually we generally overlook the myriad ways in which nations make adjustments and concessions with each other every day, respecting their own obligations and the rights of others, without ever suggesting a resort to war, sanctions, or even litigation. Diplomatic privileges, for example, commercial treaties, internaitonal arbitration decisions—all are observed as a matter of course by nations politically antagonistic as well as friendly, even when the result is domestically unpopular.

This worldwide concept of civic friendship or comity, it seems to me, and not war or sanctions or even legalism, is the true basis of an orderly international community. A great Secretary of State, Elihu Root, expressed it this way just 50 years ago:

"Just as the true basis of the peace and order in which we live is not fear of the policeman but the self-restraint of people and their willingness to obey the law and regard the rights of others, just as the true basis of business is not the sheriff with a writ of execution but the voluntary observance of the rules and obligations of business life, so the true basis of peace among men is to be found in a just and considerate spirit among the people who rule our modern democracies, in their regard for the right of other countries, in their desire to

be fair and kindly, in their willingness to recognize facts and to weigh arguments which make against one's own country as well as those which make for one's own country."

It seems to me tonight that this Nation would do well to bear in mind this concept of civitatis philia as we consider the tense and troubled situation in the Middle East. For it is unfortunate, I think, that our chief concern has been with sanctions and hostilities, with troop authorizations and constitutional powers. In the Senate we have spent nearly 2 months debating the President's Middle East resolution. I have supported that resolution in committee and will vote for it on the floor. But once it is passed, signed and proclaimed to the world, we will still not be one step nearer than we were 2 months ago to a solution of the real problems of the Middle East—including access to Suez and the Gulf of Aqaba, homes for Arab refugees, permanent national boundaries, development of the River Jordan resources, political and economic instability, and an end to continuous border raids and tension. For the resolution we have been debating has absolutely nothing to do with those problems. It offers guns and money—but guns and money are not the Middle East's basic need.

Similarly, the invocation of sanctions by the United Nations, or the adoption of denunciatory resolutions, upon which the world's attention is presently concentrated, will not—regardless of their effect on the immediate crisis in that area—contribute anything to a long-range solution of the major problems of the Middle East. The U. N. must, of course, take prompt and effective action to meet aggression—but let no one be deceived into believing that the Middle East crisis will be over once Israeli troops are pulled back and the Suez Canal cleared. Little is to be accomplished by merely restoring the muddled and frictional situation out of which the present crisis came.

What we clearly need in the Middle East, and need quickly, in my opinion, is a final entente, a permanent settlement of all major problems which reasonable men and nations can accept—a settlement, in short, based not on armed truce but on comity, accepted not out of fear but out of civic friendship.

Such a settlement cannot and need not give any nation all she would like—each side will have to make concessions. But recall, if you will, the Webster-Ashburton Treaty of 1842 between the United States and Canada—how unpopular it was on both sides of the line; how both Mr. Webster and Lord Ashburton were denounced for sacrificing the rights of their people. (Indeed, Webster and Ashburton finally convinced the Senate and Parliament respectively, it is said, only after each had used a different map to pretend that he had in reality cheated the other.) And yet the peace and prosperity to both countries flowing from that much abused settlement for more than a century have been worth several thousand times as much as the value of all the territory that was in dispute.

I am convinced that if Arab, Israeli, and world leaders can once agree in a spirit of civic philia and endure the obloquy from home that was endured by Webster and Ashburton a permanent settlement can be reached in the Middle East which will be worth in terms of peace and prosperity for both sides in terms of men and money devoted to something more constructive than war many million times the value of all the disputed points that keep them apart.

It is not enough to say as our own officials have repeatedly said that we are willing to discuss long-range solutions once all other current problems have been met. For the two are not unrelated. In Indochina and elsewhere western nations have in the past taken this attitude of delaying discussions for a permanent settlement until after hostilities cease—only to discover that the absence of such an agreement aggravated the hostilities until finally a settlement had to be reached after needless harm to our cause had been done. We have the responsibility now to deal with basic causes of conflict as well as the conflict itself. We have the responsibility now to approach the problem as a whole not on a piecemeal basis—to let Israel Egypt and all the world know that we look for a solution ending all outstanding differences not simply Egypt's current grievances against Israel.

I do not wish to oversimplify endlessly complex problems or load unnecessary burdens upon our troubled diplomatic officials. But I respectfully urge that the Government of the United States—through its Department of State, its United Nations delegation, and perhaps through a Presidential declaration of a status equal to the less long-range declarations on the Gulf of Aqaba and Communist aggression—promptly set forth, after consultation with Arab, Israeli, and other world leaders, a specific and comprehensive formula for a permanent Middle East settlement—a settlement to be offered and accepted in a spirit of civic friendship—a settlement based not upon force of arms or fear of men, but upon commonsense and comity.

Permit me to suggest some of the principles and procedures which I believe to apply.

First, let us consider the problem of the Suez Canal. In our concern over its obstruction we have very nearly forgotten what started the dispute in the first place. Whether Egypt's rights flow from sovereignty, suzerainty, or dominion is not as crucial as an accommodation by both Egypt and all user nations, by which the canal will be in full operation, benefiting Egypt through the revenues it provides and benefiting the world by offering free and open transit to the ships of all nations without discrimination or political interference. The canal can be enlarged and deepened to make its continued operation even more profitable to Egypt. The dues and charges on canal passage can be mutually agreed upon; the proportion of net income to be allotted to further canal maintenance and development can be mutually agreed upon; and all unresolved disputes concerning the canal in the future can be referred for impartial arbitration. Discussions can begin with a clean slate, not on the basis of legal fictions or ancient treaties or aggressive threats, but on the basis of mutual benefits and comity.

Secondly, let us consider the inseparable problems of national boundaries and aggression. Instead of devoting our efforts to determining what kind of arms balance at what level will maintain existing armistice lines, permanent boundaries must be fixed, not necessarily along the present lines. This is not an unprecedented problem—the United States and Canada, as mentioned, and scores of other neighbors, have successfully settled such boundary disputes time and time again, including those that had caused or seemed certain to cause an outbreak of war. I would recommend consideration in this regard of the familiar device of an International Boundary Commission, staffed by impartial experts in geography, economics, and history as well as diplomacy and international law, men who can draw reasonable, practical lines that both sides can live with, ignoring sentimental claims and giving neither side all it seeks.

Once such boundaries are determined, the United Nations and the United States could sponsor a security guaranty or exchange of treaties formally fixing those lines, and preventing their alteration by force. Such a solution would immediately reduce not only tensions but the need for armaments expenditures both in Israel and the Arab States. The same treaties fixing boundaries could renounce the use or threat of force for aggressive purposes, and provide for progressive limitations of armaments. A special United Nations Commission on Arms Traffic could be established to prevent outside nations, Communist or otherwise, from renewing the Middle East arms race; and a more permanent United Nations force could police the area, much as it is now, until all threats to peace have vanished. The mutual benefits flowing to the entire area—in terms of a higher standard of living, new economic development, and an end to constant fear and slaughter—would be immeasurable. The achievement of such benefits requires only the spirit of philia.

Third, let us consider the problems of Arab Palestinian refugees. Their impoverished and tragic existence in makeshift camps near Israel's borders offers a constant source of national antagonism, economic chaos, and Communist exploitation of human misery. Stop-gap solutions are frequently offered, and there is talk of forcing either Israel or the Arab States to take all of them. But let us apply the spirit of brotherhood and comity. Let those refugees be repatriated to Israel at the earliest practical date who are sincerely willing to live at peace with their neighbors, to accept the Israeli Government with an attitude of civitatis philia. Those who would prefer to remain in Arab jurisdiction should be resettled in areas under control of governments willing to help their Arab brothers, if assisted and enabled to earn their own living, make permanent homes, and live in peace and dignity. The refugee camps should be closed. Those who suffered actual losses of property or bank accounts in flight should be compensated by Israel. New water utilization and arable land projects should be instituted to assist their resettlement in Arab countries.

All of this will require financial assistance. Israel will need assistance in making compensation payments; the Arab States will need assistance in developing land and water projects. The means for such assistance I shall mention in a moment. But I want to stress again the mutual benefits that flow from a settlement of comity—the removal of an obstacle to peace, the dispersal of a threat to Israel, the elimination of a condition depressing Arab wages and living standards, the development of Arab resources—such a settlement should not be impossible of conclusion. Certainly this country, populated from the beginning by refugees, exiles, and immigrants, should not think it impossible.

Fourth, what about economic and resource development and assistance? Mutual economic benefit is the key I have stressed with respect to Suez, boundaries, disarmament, and refugees. But these benefits are not limited to the Middle East alone. The entire world, and certainly the United States, will obtain considerable economic advantage in the prevention of war and the end of an armaments race in that area. Thus all nations, led by our own, should be willing to invest the funds necessary to attain this goal.

I would propose, therefore, a Middle East Regional Resources Fund, under the auspices of the United Nations and the World Bank, for assisting in the stimulation, initiation, and financing through loans and grants of resource development and other projects in the area. Soil projects could include harnessing the waters of the Nile for the benefit of the Sudan, Ethiopia and Uganda as well as Egypt; coordinated development of the resources of the Jordan River Valley for the benefit of Israel and the three Arab States through which it flows; the development of arable land and irrigation projects for the resettlement of refugees, and a loan to Israel to help her make compensation payments to refugees; and a Middle Eastern

nuclear center, similar to the Asian nuclear center already proposed, which could bring untold benefits in energy utilization to former deserts and wastelands. These projects would be developed and administered under the auspices and control of the nations in the region, who would also participate in their financing wherever feasible (and many of these nations are not poor), much as our States participate in Federal grant programs which assist and stimulate them to greater action. The burdens would once again be shared—the benefits would once again be mutual. Conflicting rights would be involved, of course, just as they are in disputes between our States over the rights to our great rivers—but such disputes can always be resolved.

The problems I have discussed tonight—Suez, boundaries, arms, refugees, and economic development—are all closely interrelated. It is to be expected that one or both sides will find objections to one or more of the solutions outlined. But I am convinced that as a permanent "package," there is no single obstacle to the achievement of a comprehensive Middle East solution, based upon comity and common sense. It is time for this nation to take the lead in seeking such a solution, instead of devoting all of our efforts to warnings and debates about temporary, symptomatic crises that cannot be ended apart from the whole pattern.

I realize the danger of idealizing hard, practical problems or discussing bitter national emotions. I realize we have been talking in grandiose terms about comity and civic friendship and reasonable men. It is easier to propose than to implement a new start on Suez, an International Boundary Commission, a United Nations security guaranty, a special commission on arms traffic, a permanent United Nations police force, repatriation and resettlement of refugees, a Middle East national resources fund and an Asian nuclear center, to mention some of the specific proposals I have offered tonight. But these concepts which we have been discussing are no more unrealistic than the concept of American brotherhood—the task is no more insurmountable than that once facing the National Conference of Christians and Jews—and if we dedicate ourselves to that task with the same kind of determination and patience and understanding, we can achieve in that troubled Middle Eastern area the permanent peace that every man and nation desires.

Thurmond Chatham

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greensboro, N. C., Daily News, dated Thursday, February 7, 1957:

THURMOND CHATHAM

In the sudden death of Thurmond Chatham, North Carolina and the Nation lost a citizen who served them well.

His contribution was greater and more enduring because of its diversification, thus attesting to his wide interest, vision, and energy.

As an industrialist, Mr. Chatham did much to make that name a household word wherever blankets are used. The great industry which his family developed and continues to operate at Elkin is one of the major segments of northwestern Carolina's economy. Along with his industrial leadership, however, went a corollary interest in agriculture and conservation of the State's, and then the Nation's, natural resources. In development of cattle raising in the State, Mr. Chatham pioneered and exerted an influence which continued throughout his life.

Those at all familiar with his career and his traits know that he had a strong sense of public duty. It was that duty which led him to enter the political arena where he moved from local responsibility to the Congress of the United States. His interests were widespread in Congress, where he served four successive terms, but his particular concern was in foreign affairs. He knew the horrors of war from personal experience and he recognized that any rights, privileges, and opportunities which we have can be assured or exercised only under peace. That conviction he showed not only in Congress but by joining the Nation's Armed Forces for active duty in both World Wars.

As representative from the Fifth District, Mr. Chatham left no one in the dark about his convictions. Whatever he believed in he had the courage to stick to and to vote for. Outside of saying that he was an internationalist, it is difficult to classify him. Sometimes he voted with liberals and other times with conservatives one of the factors which certainly had some part in his defeat last fall was his refusal to sign the so-called southern manifesto. He knew the political potentialities of that refusal but nevertheless he held fast to it as a matter of principle and outstanding courage.

Those who knew Thurmond Chatham best will, over and above his civic, industrial, military, and political record, hold fondest memories of his warm, radiant personality, his fine fellowship and his human qualities. He was never happier than when out on his farm or in eastern Carolina fishing waters with a group of his friends around him.

Home Builders Ailments Diagnosed "Discountitis"

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. FASCELL. Mr. Speaker, Mr. Vincent DeMeo, president of the Home Builders Association of south Florida and a resident of Miami, interestingly portrayed a nightmare that is very real to every American home builder. The story was printed in the Miami Herald, of Miami, Fla., Sunday, February 24, 1957.

The Miami Herald headline writer chose to title Vincent DeMeo's story, "Home Builder Tells Grim Fairy Tale," and a grim tale it is.

I join with my good friend, Vincent DeMeo, in assuring you that all of us who are familiar with the problems facing the home-building industry know the thoughts set forth in the following story to be very real.

The article follows:

HOME BUILDER TELLS GRIM FAIRY TALE

(EDITOR'S NOTE.—We are going to take you inside the troubled mind of Vincent DeMeo, president of the Home Builders Association of South Florida. It's a word picture of his recurring dream.)

There is the story of the home builder who, for several years, had to pay premiums of money to obtain mortgage funds wherever he could. In FHA and conventional financing, he attempted to increase the sales price to overcome this loss in his operation. In the case of VA, he could not absorb this loss in his sales price because VA set the sales price. This mortgage financing loss, for want of a better name, was politely called discount.

As time passed—and as mortgage money grew scarcer—he was compelled to pay higher and higher discounts to stay in business. This all happened to him even though the country was in a period of ever-increasing prosperity.

His account ledgers started to show red ink marks. As a result, he experienced palpitations, shortness of breath, and loss of sleep. He worried about his financial condition.

After a long period of suffering, his mortgage broker advised him to see a lady doctor—Dr. Fannie May.

Dr. Fannie May was a specialist in the field. She had been treating the ailments of home builders for several years, and many builders swore by her treatment and results. Her fees left no doubt that she was a specialist.

She immediately diagnosed his difficulty. It was "discountitis."

In order to alleviate his suffering the doctor prescribed the routine prescription which worked successfully in the past with other builders suffering from the same ailment.

The prescription was rose-colored glasses.

Sure enough, with these glasses the builder was able to continue in business because he was unable to see that his accounts were in the red. His worry was gone, except he thought that her fees were bordering on the outrageous. But he felt relatively content.

Early this February Dr. Fannie raised her fees another half a point. This shock was so great that the builder was caught with his discount down.

The rose-colored glasses shattered. Now the builder was able to see his ledger books in their true perspective for the first time in many months.

Now he has discountitis worse than ever.

He was recently seen stuttering and mumbling something about Dr. Fannie May, something to the effect that she was neither a good doctor nor a lady.

Streamlining of United States Passport Office by Mrs. Frances G. Knight

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1957

Mr. ALLOTT. Mr. President since Mrs. Frances G. Knight accepted the position of Director of the Passport Office in the State Department in May of 1955, many remarkable changes have occurred in this hard-working office. Recently Robert L. Chase, of the Rocky Mountain News, in Denver, wrote a column on the achievements of Mrs. Knight in streamlining the Passport Office, saving the taxpayers' money, and providing better service to applicants for passports.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rocky Mountain News, Denver, Colo., of February 28, 1957]

STREAMLINED PASSPORT SAVES DOLLARS

(By Robert L. Chase)

I've just caught up with the fact that Uncle Sam has been streamlining our passports and I want to cheer about it.

For a long time I've been wondering why we needed those thick books—mostly blank pages—in a United States passport.

It's true the Passport Division uses some of them to make amendments and specify restrictions and such. And it takes pages of white paper to receive all the stamps and notations and whatnot to record the approval from various governments for visiting their lands.

But I have yet to see a passport which has in the 4 short years for which it can be made valid used up anywhere near all the pages in the book.

Most of us fortunate enough to get across a national boundary from time to time wind up with notations on maybe half a dozen sheets and all the rest of the book blank.

Anyhow the passports used to have 32 pages and then the Passport Division of the State Department decided that 20 would be enough.

In my book, 20 pages not only is enough but it is even better than 32 because it will be a handier little document to carry around and show to foreign officials and innkeepers.

But that isn't all. It isn't even the best part.

The rest of it is that the move saves $48,000 a year net of the taxpayers' money.

Now $48,000 isn't much money as Federal budgets go these days. But it still would probably pay your Federal income tax for quite a spell. And it would take the income tax payments of a lot of average American citizens to provide it.

So let's give a big cheer for the savings of this money, even aside from the fact that it does improve the product.

The Passport Division, incidentally, has been doing other things with your pocketbook and mine in mind.

For one thing, I read, it has discontinued the requirement that passports be mailed out by registered mail.

Half a million passports were being sent and it was found that only about 3 a year—sometimes fewer than that—were getting lost.

So it dropped the registry of these documents in the mail and the Post Office Department—which runs in the red all the time—saves $150,000 a year.

It takes a lot of these size savings to make a dent in public expenditures these days. But we have to remember that we got to these heights by adding a little bit here and a little bit there.

Now if Uncle Sam, plus the State, the city, the schools, and the rest of the tax spenders will just remember that we have to save every dollar possible we might get back to a level we can take.

Resolution Marking the 39th Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Lithuanian Alliance of America, District 7, Pennsylvania, on the occasion of the 39th anniversary of the independence of the Republic of Lithuania:

LITHUANIAN INDEPENDENCE DAY FEBRUARY 16, 1957

Whereas February 16, 1957, marks the 39th anniversary of the independence of the Republic of Lithuania, which was first recognized by the United States of America; and

Whereas the occupation of Lithuania by the powerful and ruthless forces of the Soviet Union has resulted in the arrest trial and death of many of its citizens, without due process of law and without any concept of the principles of freedom and liberty; and

Whereas the anniversary is an occasion of importance to Americans of Lithuanian origin in whose hearts there burns brightly the light of hope that Lithuania eventually will be restored to its former place among the independent nations of the world: Now, therefore, be it

Resolved and it is hereby resolved, That this resolution sponsored by the Lithuanian Alliance of America, District 7, Pennsylvania, be adopted and an appeal be made to the President of the United States, the United Nations, the Congress of the United States and the Secretary of State, asking their intervention in behalf of the enslaved peoples behind the Iron Curtain, that they continue in their endeavors to bring freedom to the world until every country, including Lithuania, is free again.

The Condition of Farmworkers in 1956

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Honorable Frank P. Graham, distinguished citizen from North Carolina, together with the accompanying report, which is of such interest that I am sure many Members who would otherwise not see it would be interested in reading it in the RECORD:

NATIONAL SHARECROPPERS FUND, INC.,
New York, N. Y., February 20, 1957.

DEAR FRIEND: I am pleased to send you enclosed a copy of the fund's annual report, which I believe will be of interest and concern to you.

May I call your attention particularly to the sections dealing with economic pressures against Negroes in some of the States, the increase in numbers of imported contract farmworkers, and the serious problems confronting our Nation's farm families.

Please feel free to use this material in any way which will help to spread knowledge about these problems.

With every good wish,
Sincerely yours,

FRANK P. GRAHAM.

THE CONDITION OF FARMWORKERS IN 1956—REPORT TO THE BOARD OF DIRECTORS OF NATIONAL SHARECROPPERS FUND, INC.

(By Fay Bennett, executive secretary)

"We have known humiliation * * *. We have been plunged into the abyss of oppression. We are tired of the conditions we experienced for so many years."

Thus spoke a Negro leader in Montgomery, Ala., in 1956. With the backing of Federal courts and with the sympathetic support and help of men and women of good will throughout the land, Negroes move ahead toward a greater share of the democratic heritage due them. But progress has not come without pain.

GROWTH OF WHITE CITIZENS COUNCILS; ECONOMIC PRESSURE AGAINST NEGROES

From an estimated 250,000 members a year ago, the white citizens' councils, dedicated to the maintenance of white supremacy, have grown to approximately 350,000 in all the Southern States. Although many of its officers appear as responsible leaders in their local communities and eschew violence, the movement has drawn its largest following from the Black Belt (rich farming soil) areas where there exists the greatest contrast between wealthy plantation owner and poor farm folk, both white and Negro. In these areas poverty and lack of education have produced the most bigotry and the most easily aroused white mob. In contrast, the Negro has demonstrated a civilized restraint in the face of severe provocation.

These councils have acted in two ways to preserve the status quo: (1) Overtly, by mob action, to prevent enforcement of court orders for school integration; (2) covertly, by economic pressures against Negroes who are enrolled voters or otherwise indicate their insistence on rights guaranteed them by the Constitution.

An example of the former is the Clinton, Tenn., mob which, aroused by the outsider, John Kasper, almost succeeded in overthrowing civil law in that community because 12 Negro students were enrolled in its high school. This mob was made up primarily of the poor farm folk in the hill country outside Clinton.

Numerous cases of the latter, the covert economic pressure, have come to the attention of National Sharecroppers Fund. In many of these, after proper investigation, NSF has made non-interest-bearing loans to tenant and independent small farmers who were about to lose their property, farm equipment, and other possessions. One case involved a man's voting right; another his membership in the NAACP; a third his leadership among local Negro farmers working to set up a cooperative organization for their mutual help.

CONTINUING POVERTY ON THE LAND

There are nearly 1½ million farm families in the United States with incomes of less than $1,000 a year. Of these, nearly 1 million live in the South. Although Negroes constituted only about one-tenth of the total of the 5,226,000 farm families in the country in 1954, they made up almost one-third of these 1 million in the South with annual incomes of less than $1,000. Very little is being done to help this group of Americans whose living and health standards and educational opportunities are clearly inadequate for them to realize their best potentialities as citizens and human beings.

Today the greatest contrast between wealth and poverty in our country has shifted from yesterday's captains of finance and the factory worker to today's corporate farm owner and the men and their families who work in the fields. The world's most efficient producers of farm products—Americans—have not eliminated dire poverty among those who work on the farms.

FAMILY FARMS

All family farms—not just the lowest income group—are approaching crisis. Government programs, while admitting their serious plight, are permitting over 100,000 family farms yearly to go out of business. Many of these are young farm families, former GI's who started farming hopefully after World War II. Though given Government aid to get started, they have been abandoned to a policy or lack of policy which permits

them to be squeezed out before they can become firmly established. According to the 1955 Census of Agriculture, commercial family farms dropped by 11 percent from 1950 to 3,193,000 units while industrialized factory farms increased by 26 percent to 134,000. There was a drop of 353,000 in the number of owner-operated farms, a drop of 276,000 in the number of tenant-operated farms, and an increase of 32,000 in the number of part-owner operated farms.

A House of Representatives' subcommittee, under the chairmanship of CLARK W. THOMPSON of Texas, reported in August 1956, after a 3,000-mile tour of grassroots family farms that more than 600,000 of them had failed in the last 4 years. It stated that they were forced out by the industrial-type (corporate) farm invasion.

Family farms are generally defined as those where an owner-operator and his family furnish at least one-half of the farm labor, with gross sales of less than $25,000 annually. Disregarding the cultural value of these family producing units, it should be emphasized that they constitute the major element in the farm-labor force and the backbone hitherto of America's private-enterprise economy. They need not be wiped out. They can produce efficiently and compete effectively with the corporate farms through wider use of electric power and increased mechanization if they can get equal treatment in Government subsidies and credit, and if all domestic farm labor is not exploited by lack of Government protection and by Government promotion of foreign-contract labor.

THE CORPORATE FARM

The corporate—or industrialized—farm warrants a full current study that cannot be made here. Its influence on the labor market is indicated in various sections of this report. The vast amount of Federal subsidy these enterprises receive is illustrated by two examples:

Delta & Pine Land Company of Mississippi received a $1,292,472.25 Federal loan on its 1954 cotton crop. Louisiana Irrigation & Mill Co. received a $486,725.77 price-support check on its 1954 rice crop.

It is the food and fiber producers such as these which throw the sharecropper and small farmer into the migrant stream, which support an imported labor program that is the key factor in keeping the wages of farm labor at less than one-half the American average and in preventing effective union organization to better farm-labor conditions, and which receive the bulk of Federal subsidies.

CONTRACT LABOR

The imported contract labor system, begun as an emergency wartime measure, continues to grow apace. At peak employment in 1956, there were 458,038 foreign contract workers in agriculture. Of these, the vast majority, 445,197, came from Mexico with whom the United States has an international agreement. This number was a 21-percent increase over the 367,481 Mexicans who worked legally under contract in 1955.

At the same time, the number of illegal entrants ("wetbacks") has been declining steadily for the past 2 years due in part to the vigilance of the border patrol's activity. Apprehensions during the fiscal year 1956 totaled 72,442. The Government's policy has been one of clamping down on illegal entry and encouraging the importation of workers under contract.

[1] The Department of Justice reports that there were 7,210 Canadian agricultural workers in the United States under contract in the fiscal year 1955–56. This is unaccounted for in the quoted 1956 calendar year totals supplied by the Department of Labor.

Of the other imported contract workers, 8,504 came from the British West Indies and 3,870 from the Bahamas. Some came from Canada.[1] This entire program is supervised by the Department of Labor with 67 compliance officers authorized in the current budget. Many of these officers have other duties to perform.

A new development in the contract program is the importation by air from Japan of 386 farm workers (out of 918 who had been certified for employment). These workers were admitted under a section of the Immigration Act which permits entry to an alien "who is coming temporarily to the United States to perform * * * temporary services or labor, if unemployed persons capable of performing such service or labor cannot be found." Under the Japanese program, there is no agreement between Governments but only between the individual Japanese workers and the growers' association which hires them. Enforcement of the provisions in the agreement rests with the Immigration Service which has even fewer compliance officers than the Department of Labor. "All of the inequities of the Mexican program and more are likely to befall the Japanese worker, with more than 3,000 miles of ocean between his place of work and his homeland.

If a contract labor system is necessary for agriculture (which NSF doubts), a striking example of how it might work fairly and effectively is seen in the Puerto Rican program. An all-time high of 14,876 of these island Americans worked under agreements formulated and supervised by the Puerto Rican Department of Labor in 1956. This was almost 28 percent more than the 11,629 who came in 1955. It is estimated by Puerto Rican authorities that another 14,000 came on their own, having learned their rights from previous contract employment.

The Puerto Rican contract not only guarantees 160 hours of pay in each 4-week period but protects the working and living conditions as well. It is carefully supervised by the Migration Division, which opened 9 new offices during the year, 8 of which were in the Middle Atlantic and New England States where most of the Puerto Ricans work.

In contrast, here is an example of what happens under the foreign contract system:

In Phillips County, Ark., in June of 1956, United States workers were paid 35 cents to 40 cents an hour. Farmworkers in the county that month were made up of 1,000 United States workers and 1,055 Mexicans. The Mexican workers theoretically were receiving 50 cents an hour, the minimum to which the Mexican Government will agree. By July and August the rate for United States workers had fallen to 35 cents an hour.

While National Sharecroppers Fund is concerned for the well being of the imported worker for whom the "hospitality" extended usually falls far short of the rosy promises made, it is even more gravely concerned with the conditions under which the domestic farmworker and his family live, which are far below the minimum for most urban workers. Can there be any doubt that the wages of United States workers will remain depressed when growers know they always have available a steady supply of contract workers imported from countries whose living standards are far below those of the United States, who have no bases here, and who can, therefore, be threatened with deportation if they do not accept what is offered them.

Because of the seriousness of this importation program, the board of directors of National Sharecroppers Fund wrote on November 8 to Secretary of Labor James P. Mitchell calling for a public investigation of it. The letter stated in part: "The whole contract importation program for agricultural labor is an anomaly. Superimposed on our free labor system by wartime necessity, it continues, according to repeated charges, for the benefit of the corporate farmer and to the detriment of the American farmworker." The letter concluded: "We strongly urge that this program be thoroughly aired in public hearings in which labor, farm interests, Government, and citizen organizations are invited to present all facts available. We would be glad to cooperate with such public hearings." The board's letter received wide attention in the metropolitan and labor press.

On December 28, 3 days before it was due to expire, the international agreement between Mexico and the United States was extended to June 1959, bringing a storm of protests from Mexican agricultural and business leaders, as well as from labor and other groups in this country.

MIGRANT LABOR

The million domestic migrating workers who (usually with their families) pull up stakes constantly as they search for employment on the land is causing increasing public concern. The President's Committee on Migratory Labor, under the able direction of Henry K. Arneson, has made significant progress working with a small budget. During the year it published suggested regulations for agricultural labor camps and for transportation of agricultural workers. With no power to secure State adoption of these regulations, the Committee nevertheless did valuable work in bringing them to the attention of public and private groups for action. What is needed is an expanded appropriation for the work of this Committee, plus legislation on National and State levels.

One decided victory for migrant labor came during the summer when Congress passed a law providing for the regulation of migrant farmworkers during interstate transportation. Though the law as it finally passed was whittled down by the opponents of all regulation (it only covers workers if the distance traveled is more than 75 miles), it marks a long step forward. A large part of the credit for its passage is due the organizations, including NSF, which vigorously supported it. Transportation of farm workers within a State is still largely unregulated.

For the worse came changes in the social-security law which in 1955 had included coverage for some farmworkers for the first time. An amendment now reduces the number of workers covered by specifying that a worker must earn $150 from the same farmer (previously it was $100), and that he must work 20 days during the year for a single employer on a time basis, thereby excluding most migrants. Another provision permits the crew leader to be listed as the employer instead of the farmer, giving the crew leader a status and responsibility which he usually is unable to fulfill.

ORGANIZED LABOR—NATIONAL AGRICULTURAL WORKERS UNION

The merged labor movement has let a year pass with no program on behalf of farm labor. Nevertheless, sugar and rice workers in Louisiana continued their struggle to organize through the leadership of the National Agricultural Workers Union despite many obstacles. One of these obstacles was the backing given by the State labor council for right-to-work legislation (denying a union agreement) to apply to agricultural workers in exchange for repeal of this law as it affected industrial workers. Thus, workers on the bottom of the economic ladder were given a thrust downward by their fellow workers who were one step higher on the ladder.

There was an increase in activity on behalf of small dairy farmers in Louisiana, Pennsylvania, Minnesota, and Wisconsin. Small local unions of cotton plantation workers still exist in Arkansas, Alabama, and Mississippi where the National Agricultural

Workers Union was first started nearly 25 years ago as the Southern Tenant Farmers Union—interracial when it began, and interracial today. NSF continues to give substantial financial assistance to this union whose leaders and members, despite years of discouraging setbacks, have never lost their faith in the strength of the farmworker to help himself through organization.

MIGRANT CHILDREN

There were several more summer schools conducted for migrant children in Colorado, New York, and Michigan, with State and private support. These alleviate the educational problem for a small number of these children. Of greater significance are the year-round programs to integrate migrant children into the regular school program wherever they may be. The Florida-Virginia project toward this end, sponsored by a number of organizations including NSF through the National Council on Agricultural Life and Labor in cooperation with the two States, has entered its third year with every indication that its pioneering program will serve to stimulate such efforts in other areas. The Migrant Children's Fund, initiated by NSF, is cooperating with other agencies in working to establish a similar project in the Spanish-speaking stream of migrants in the Southwest.

NATIONAL COUNCIL ON AGRICULTURAL LIFE AND LABOR

Bringing together the major national organizations with an interest in this field, NCALL is admirably suited to coordinating and developing programs and projects to secure maximum support. NSF is an active cooperating member of this council. A major accomplishment during the year was its all-day round table on farm policy and social welfare attended by representatives of 55 National and State organizations and agencies. NCALL provides its member organizations with information of important developments on the farm front.

NATIONAL SHARECROPPERS FUND

On October 27, 1956, Dr. Charles Spurgeon Johnson, president of Fisk University and vice chairman of NSF, died suddenly of a heart attack at the age of 63. His death shocked and saddened men and women of good will throughout the world for Dr. Johnson had achieved a unique role as social thinker, educator, and contributor to understanding among all people. His passing is a deeply felt loss to the board of the fund.

New board members elected during the year are Miss Angela Bambace, Mr. Martin Gerber, Mr. Gardner Jackson, Dr. C. B. Powell, Mr. A. Philip Randolph, and Miss Vera Rony.

RECOGNITION

When NSF raised a substantial sum in a two-week period in December to prevent the foreclosure of a valuable farm in Mississippi owned by Negroes who were facing stiff pressure, a leader in one of the organizations bearing the brunt of the struggle for Negro rights wrote "* * * I am quite lost in admiration at the effectiveness with which you manage somehow to achieve these minor miracles. I think that the ultimate value to the general cause in which we are all engaged is likely to be inestimable." National Sharecroppers Fund cooperates with a number of religious and other groups in carrying forward this effort.

With its activities on a number of fronts in support of economic justice and civil rights for Negroes and whites in the South, NSF proudly notes its listing among a specially selected group of six organizations and individuals "who have done the most during the year to advance the cause of harmonious race relations." A distinguished panel of judges made the selection.

NATIONAL SHARECROPPERS FUND PUBLICATIONS

NSF reports and publications and other pamphlets it distributes are reaching an ever-widening audience. Currently available are:

Strangers in Our Fields by Dr. Ernesto Galarza. Based on a report regarding compliance with the contractual, legal and civil rights of Mexican agricultural contract labor in the United States; 80 pages, 50 cents.

Down on the Farm—The Plight of Agricultural Labor. A popular presentation of the people and problems involved in planting, cultivating and harvesting the Nation's crops; 14 pages; 25 cents.

The Condition of Farm Workers in 1956. Single additional copies of this five-page report to the board of NSF available free.

Since its inception nearly 20 years ago, National Sharecroppers Fund has lent its moral and financial support to projects and programs designed to bring a better way of life to men, women and children who produce the Nation's food and fiber, but who receive so little of the fruits of their labor. It has been a slow, uphill struggle, and the end is not yet in sight. But progress is being made. More and more Americans are becoming aware of this deep well of poverty amid our Nation's prosperity.

Wilshire Young Republicans Endorse Free Enterprise; Oppose Government Competition With Private Business

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. McDONOUGH. Mr. Speaker, it is of the utmost importance that the Federal Government be kept out of competition with private business if we are to preserve free enterprise in the United States and encourage the expansion of small business throughout our Nation.

I have introduced H. R. 4797 to establish a Federal policy concerning the termination, limitation, and establishment of business-type operations of the Government which may be conducted in competition with private enterprise for the purpose of keeping the Government out of those fields of private enterprise where the Government's needs for materials and services can be met by private business.

I have received an excellent resolution on this matter prepared by the legislative committee of the Wilshire Young Republican Club of Los Angeles, Calif., which I am including herewith. This resolution points up the need for immediate action on this legislation:

WILSHIRE YOUNG REPUBLICAN CLUB—REPORT OF LEGISLATIVE COMMITTEE

The legislative committee recommends the adoption of the following resolution:

"Whereas it has been recommended on numerous occasions by those highly qualified to do so, including President Eisenhower, congressional leaders, the Commission on the Organization of the Executive Branch of the Government and responsible national groups that Government operations in competition with taxpaying private enterprise be curtailed; and

"Whereas the elimination of those activities of Government which can be economically and satisfactorily performed by private enterprise is in harmony with Republican principles; and

"Whereas although much has been accomplished in this regard by the Eisenhower administration, there is need for continued effort to remove the Government from competition with its citizens: Now, therefore, be it

"*Resolved*, That the Wilshire Young Republican Club commend the recent action of Budget Director Percival Brundage in ordering:

"1. A review to determine whether any of the commercial types of service establishments now being operated by Government agencies may properly be eliminated; and

"2. That no new services be undertaken by Government agencies without first determining that the service cannot be performed by private enterprise; be it further

"*Resolved*, That the President and Congress be urged to support this action in every way possible; and be it further

"*Resolved*, That to this end, the secretary be instructed to forward copies of this resolution to the President, to Senators KNOWLAND and KUCHEL and Congressman McDONOUGH and LIPSCOMB."

Resolution passed February 14, 1957.

Mortgage and Finance Conference

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. MULTER. Mr. Speaker, it was my pleasure on March 1, 1957, to participate in the mortgage and finance conference of the Group Five Savings Banks Association at the Hotel St. George in Brooklyn, N. Y.

My remarks on that occasion were as follows:

STATEMENT BY HON. ABRAHAM J. MULTER, MEMBER OF CONGRESS, 13TH DISTRICT, NEW YORK, MADE BEFORE THE MORTGAGE AND FINANCE CONFERENCE OF THE GROUP FIVE SAVINGS BANKS ASSOCIATION ON MARCH 1, 1957, AT THE HOTEL ST. GEORGE, BROOKLYN, N. Y.

Mr. Moderator, distinguished guests, panel members, and friends, I appreciate the privilege extended to me to attend this conference and to talk to you.

This conference is well named, "A Mutual Approach." Although the subtitle for this panel discussion is "Housing, 1957," I will take the liberty to stray slightly but briefly from that subject.

At the outset, I wish to compliment all the sponsors and participants in this conference. It is a truly mutual effort. Only by cooperation between all segments of our economy can we continue to make progress.

A cooperation which seeks only to increase our own profits or to improve our own particular activities will defeat its very purpose. The public interest must never be overlooked even though the protection thereof many times may require us to give up some of that to which we may believe we are entitled.

NATIONAL MUTUAL SAVINGS BANKS

It was the public interest that caused me to introduce H. R. 4296, which authorizes the organization of national mutual savings banks and permits State savings banks and savings and loan associations to convert to national mutual savings banks. The obvious purpose of the legislation is to make available throughout the Nation the benefits which have been heretofore enjoyed by residents of those States where mutual savings

banks now exist. Such banks not only promote thrift but they mobilize savings for productive, conservative investment and, more particularly, for long term or mortgage investment.

It was most heartening to me to find such unanimous support for this bill from one end of the country to another. It is also pleasing to note, that not a single savings bank in the State of New York has indicated any opposition to the bill. Most of them have indicated whole hearted support.

INTEREST RATES

There is much respectable opinion in favor of increasing mortgage interest rates in both the FHA and VA programs. I understand their argument, that it requires increased rates in order to bring more money into the mortgage market.

Let me make plain that I believe that more mortgage money is needed in the market. It is my belief that home building is one of the basic pillars of our economy. Home building, directly or indirectly, affects almost every industry and all those connected with it. It is not only the materials and labor that go into the home, but it is all of the incidentals that are required in order to make a house a home.

As a member of the House Small Business Committee, I am keenly aware of the fact that a cessation of activity in any field of endeavor, affects first the small-business man. The small builder, the local supplier of building materials, the local dealer in appliances, are the first to be hit when the building industry slows down.

This country needs not a cutback in new starts in home construction, as was evidenced in 1956, but an increase of the number of new starts in home construction over and above that which we had in prior years.

I will also agree that without mortgage money, you will not get this increase and you will not even get as many new starts as we had in 1956.

I will not agree, however, that the increase in mortgage interest rates on VA and FHA housing will supply the additional mortgage money.

I do not intend to get into any discussion with you here today about tight money, who is responsible for it and how we should relieve it, if we should.

I start with the premise that we are all in agreement that money is tight. I am not even concerned about quibbling with those who say money is not tight but that there just isn't enough to go around. The trouble is that when faced with the situation of either tight money or not enough to go around, the lenders obviously will place their money in those markets paying the biggest return for the shortest term.

Mortgage money traditionally and properly comes primarily from savings accounts or insurance funds which, in large part, serve a dual purpose, one of which is thrift.

When the commercial banks, however, are permitted to use their savings accounts for short-term loans there is no incentive for them to compete with the savings institutions for mortgage loans. The only means of competition that remains between them is the interest they pay on savings accounts.

I contend that an administration that had the public interest at heart, an administration that understood the need to keep savings available for long-term mortgage investment, would never have permitted the commercial banks to increase the interest rate on savings accounts. I say that supervisory banking authorities should require the proceeds of savings accounts to be invested only in long-term loans. I urge that, not solely to make those moneys available to the mortgage market, but as a matter of safety to the depositor and stockholder of the commercial bank.

I understand the desire of builders to bring more money into the mortgage market and of savings bankers to have more money deposited so that they can put it into the market. But they are on more solid ground when, instead, they urge that the public interest is against increasing the interest rate of savings accounts in commercial banks and against permitting commercial banks to use savings accounts for short-term loans.

Similarly, it is the public interest which causes me to oppose any increase in interest rates of FHA and VA mortgages. I do not believe that the increase in these interest rates will make more money available to the mortgage market. If the matter can be solved that simply, then the banks and lending institutions have it within their power to prove the correctness of that theory.

Except for the usury laws, there is no limitation on the right of a lender to charge any interest rate the mortgagor will pay. Let lenders bring to the mortgage market all the funds at their disposal at the highest rate that they can obtain.

They have no right, however, to seek the higher rate on mortgages guaranteed by the Government. Those guaranteed mortgages are just as good as Government bonds. They should bear no higher interest rate than Government bonds, plus only the additional charge that must be made to cover the incidental and necessary cost of administration, processing, servicing, and insurance.

I can already hear the lending officers and the builders shouting conventional mortgages are not the answer because the increased interest rate is only part of the story. What about the small downpayment on the purchase of the house? A conventional mortgage with a small downpayment will not comply with the investing requirements, as fixed by law, for most lending institutions. My answer to that is that you should address yourselves to changing that law.

I remember when lending institutions frowned upon amortizing mortgages. They complained such mortgages were too costly to service and did not give the stability to investment that the institutions required.

The Federal Government through the Home Owners' Loan Corporation, more than anything else, caused the lending institutions of the country to modernize their thinking on that subject, with the result that amortizing mortgages are the order of the day.

Isn't it time that you asked yourselves—hasn't the Federal Government again taught our financiers that low downpayment mortgages are good, safe investments?

If I am right, then address yourselves to removing the cause of your trouble rather than relying on a palliative.

That brings me to another pet theory of mine. I am opposed to government, National or local, engaging in business of any kind that private enterprise can do just as well or better.

Insurance, whether it be of mortgages or guaranties of credit, long or short term, is private enterprise and the sooner we get the Government out of that business, the better off we will be. The cries against the Federal Reserve Act and against the Federal Deposit Insurance Act were that they were steps toward socialism and nationalization of our banking system. No one has raised that cry against our system of Government insurance of mortgages.

I warn you, however, that that is getting closer to socialism and nationalization of lending, than anything that has heretofore happened in this country.

The Federal Government has now proved that that kind of a program is a good one, a profitable one, and there is no reason why the financial institutions of the country shouldn't take it over as private enterprise and get the Government out of it. When that happens, you will not have to go to the Congress to fix your interest rates.

Until that happens, I will continue to urge that the interest rates on Government insured mortgages should be comparable to that paid on Government bonds.

Nor do I agree with those who contend that interest on veterans loans should be the same as on nonveteran loans. I think there should be a difference. I think the veteran is entitled to some help in acquiring a home and part of that help should be a lower cost of acquisition as reflected by a lower interest rate on his mortgage.

HOW TO GET MORE MONEY INTO THE MORTGAGE MARKET

I have two suggestions as to how we can get more money into the mortgage market, apart from the matter of requiring commercial banks to put their funds into long-term investments.

In the 84th Congress, and again in this Congress, Congressman KEOGH joined with me in introducing a bill, H. R. 804, which would grant tax exemption on the interest received from loans to veterans, provided the interest rate on those loans did not exceed 3½ percent.

By such a simple enactment, the veteran could get a 3½-percent loan and the lender could get a net return free of taxation. There is nothing mandatory in that bill. It is entirely permissive. I am sure it would bring large sums of money into the mortgage market.

The loss of revenue to the Federal Government because of such tax exemption would be so small that it is hardly worth talking about.

If the cost of servicing a mortgage is about one-half of 1 percent, then a 3½-percent tax exempt veterans mortgage will yield a net of 3 percent to the lender.

My second proposal, to bring additional money into the mortgage market—covered by my bill, H. R. 3074—is to provide direct loans for veterans housing.

I know that my banker friends won't like that. The only assurance that I can give them is that it is an emergency expedient to cover the present temporary situation caused by a lack of mortgage money. If there is no lack of mortgage money, there is no need for the bill. By the same token, if there is ample mortgage money, there is no reason to increase the interest rate on VA mortgages.

If the money is available, it should be lent to these veterans at the lower rate. If there isn't enough available for both FHA and VA mortgages, let the lending institutions put their money into the FHA mortgages at the higher rate and while the dearth of money continues, let the Government make direct loans to the veterans. You ask, "Where will the money come from?" The answer is: "Out of insurance funds." Every insurance company and every pension fund, puts the bulk of its money into long-term mortgages.

The United States Government holds almost $7 billion as trust funds of the National Service Life Insurance Fund and of the United States Government Life Insurance Fund.

Let us take $1 billion of that money and lend it directly on VA mortgages at the same rate as Government bonds are paying, plus the additional sum necessary to cover the cost of processing, servicing, and guaranteeing. It will be less than 4½ percent to the veteran.

That will leave the lending institutions of the country free to use all their available funds for conventional mortgages and FHA insured mortgages. As soon as the market

changes and additional funds are again available for both FHA and VA mortgages we can then suspend the direct-loan program. All of the organizations participating in this conference are quasi-public institutions. I know that they have the public interest at heart. I know that the profit motive is not their sole reason for existence.

I trust that my suggestions will not fall upon deaf ears.

It Isn't Too Late

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. ULLMAN. Mr. Speaker, on February 26, 1957, there appeared in the East Oregonian, an independent newspaper published in the Second Congressional District of Oregon, an editorial which I believe reflects the attitudes of the vast majority of the people in the Pacific Northwest.

Mr. Speaker, the editor of this newspaper, Mr. J. W. Forrester, Jr., has long had a deep interest in the full utilization of our natural resources. I believe his statement on the Hells Canyon Dam project merits consideration by the Members of this Chamber and consequently I ask that it be included in the RECORD:

IT ISN'T TOO LATE

Although the case Idaho Power Co. made for the permit to construct three lowhead dams in the Hells Canyon stretch of the Snake River was found unacceptable by a Federal Power Commission examiner, the Commission decided in favor of the company. In order to come to that decision the Commission had to concede to the company's argument that the greater storage that a high Hells Canyon Dam would provide and the greater power it would produce at lower cost to consumers were not the key factors on which a decision should be made.

Since that decision was made there have been some political developments that have put it in a new light. Last November some people were elected who had argued violently with the Federal Power Commission's decision in the Hells Canyon case. Among them were Senators FRANK CHURCH, WARREN MAGNUSON and WAYNE MORSE, and Representatives AL ULLMAN, CHARLES PORTER, EDITH GREEN, and GRACIE PFOST. Another not insignicant development was the appointment of Fred Seaton to succeed Doug McKay as Secretary of Interior.

Through a combination of his own convictions and the inference he drew from the election results, Mr. Seaton has decided that getting as much storage as possible now on the middle Snake River is of extreme importance. He has asked the Federal Power Commission to delay its decision on an application submitted by the Pacific Northwest Power Co. (a combine of four private power companies) for permits to construct Pleasant Valley and Mountain Sheep Dams on the Snake below Hells Canyon.

Mr. Seaton has said that he wants a thorough study made of the storage picture on the Snake to determine whether it would be advisable for the Federal Government to build a higher dam at Pleasant Valley than Pacific Northwest Power Co. proposes in order to capture maximum storage at that site. If a higher Pleasant Valley Dam were built it would flood out 1 of the 3 dams Idaho Power Co. has a permit to build upstream.

Secretary Seaton is catching Old Ned from both sides of the fence now. Pacific Northwest Power Co. is objecting to his intervention. And the people who have wanted a high Hells Canyon Dam are more convinced than ever that it should be built. We are, too.

As readers of this column know, our case for high Hells Canyon always has been made on the premise that it was the best place to capture the maximum in storage on the middle Snake. Secretary Seaton's decision to try to do something at Pleasant Valley before all the storage possibilities in the river are abandoned is admirable. We think, however, that he's looking for a lock for the barn door after the best horse has been stolen. Hells Canyon could have provided maximum storage and adequate low power and the Pacific Northwest Power Co. could have proceeded with construction of Pleasant Valley and Mountain Sheep.

It isn't too late to correct the error of the Federal Power Commission's decision. Idaho Power Co. claims it has spent some $16 million on Brownlee Dam and uses that as an argument that Hells Canyon cannot at this date be given further consideration. It would be far better to write off the $16 million to a bad decision and start all over, we are convinced.

Secretary Seaton by his request that getting more storage at Pleasant Valley be thoroughly considered is admitting that the Hells Canyon decision was a bad decision. In the light of present circumstances we suspect that representatives of the Pacific Northwest Power Co. would concede that it was a bad decision. Of course they can't say so because that would be an extremely cruel thing to do to Idaho Power Co.

If Secretary Seaton is determined to do the right thing on the middle Snake without consideration for political idealogies—and in view of his second look at Pleasant Valley, we believe he is—he will back up all the way and ask that high Hells Canyon be built. It isn't too late.

Resolutions by Polish-American Political Club, of Glassport, Pa.

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the following resolutions adopted by the Polish-American Political Club, of Glassport, Pa., which is in my congressional district.

The meeting was held February 24, 1957. I have been requested to present and sponsor and exert every effort in behalf of the working people of our great country in seeking passage of both resolutions:

POLISH-AMERICAN POLITICAL CLUB
OF GROUP 750, PNA.,
Glassport, Pa., February 25, 1957.

Hon. ELMER J. HOLLAND,
House of Representatives,
Washington, D. C.

HON. CONGRESSMAN HOLLAND: The Polish-American Political Club, at a meeting held on Sunday, February 24, adopted the following resolutions requesting you to present and sponsor and exert every effort in behalf of the working people of this great country of ours in seeing that they are passed.

1. To increase the dependent allowance from $600 to $1,000 per person for income-tax purposes. We feel that $600 is not sufficient to feed, clothe, carry sufficient insurance, and especially try to educate our children in a fashion best known to all us Americans.

2. To increase the social-security benefits from the present maximum of approximately $108 for the people on pension to correspond with the present-day cost of living increases.

Sincerely yours,

THE POLISH-AMERICAN POLITICAL CLUB
NICHOLAS G. SINDELA,
President.
FELIX ZYRA,
Vice President.
JOHN TUDEK, *Secretary.*
WALTER SZPANKA,
Treasurer.

Republic of Liberia

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD the following statement by Dr. George W. Harley, who represents the Methodist Mission Board in Liberia. Dr. Harley addresses himself to the gains made by Liberia as an independent nation:

It was very disheartening to find in a recent issue of the CONGRESSIONAL RECORD excerpts from a sermon by a Methodist minister in Georgia containing several erroneous allegations concerning the Republic of Liberia and its people. It has been my privilege to represent the Methodist Mission Board in Liberia for almost a third of a century. As one who has come to understand the Liberian people, their history, and their Government, I feel an obligation to set the record straight. This is particularly desirable, I believe, because of the close bond of friendship which exists between our two countries and the importance of Liberia to the hopes of the United States that the peoples of Africa now taking their place in the family of independent nations will follow the example set by Liberia.

The Republic of Liberia, first independent nation in Africa south of the Sahara, is an example of the dynamic progress and achievements that can be attained by self-governing African nations. Today, under President William V. S. Tubman, the country is experiencing the greatest prosperity in its history, and President Tubman predicts "that revenues will nearly double in the next 5 years."
